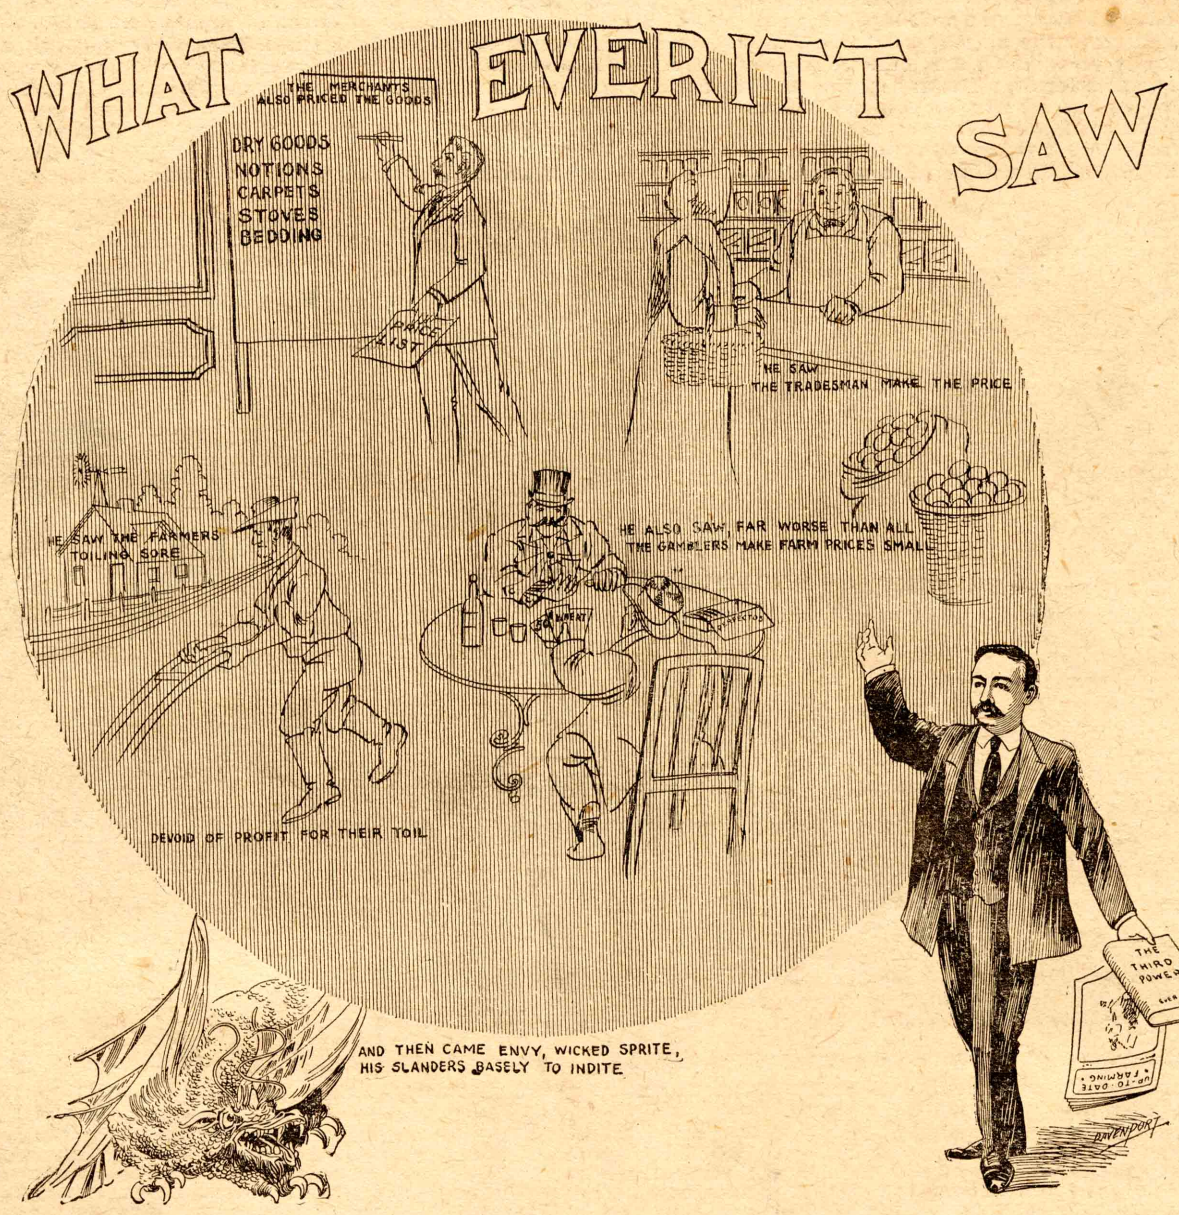
Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, JANUARY 1, 1908 | Number 1



WHAT EVERITT SAW

Here are the things that Everitt saw,
While pond'ring over Equity's law,
And solving problems few undertook,
As he wrote the mighty Third Power book.

He saw the tradesmen make the price
On all they sold, with a profit nice;
The merchants also priced the goods
Whose sales brought them their livelihoods.

He saw the farmers toiling sore,
Each year producing more and more,
And rush their products in a pile,
Devoid a profit for their toil.

He also saw far worse than all,
The gamblers make their prices small,
And then as wager for a bet,
Hoard up as cash the farmers' sweat.

All thes and more, did Everitt see,
And organized the A. S. of E.,
Devised a grand and noble plan
Of Equity from man to man.

But then came envy, wicked spite,
His slanders basely to indite,
And make the simple folk believe
No honor Everitt should receive.

They said he published Up-to-Date
To make himself both rich and great,
Which, if 'twere true, would only be
Like other men less wise than he.

All other gain he sacrificed
The Equity plan to thus devise,
And men must make a livelihood,
E'en when they work for human good.

But Everitt finds his fortune waned,
Ere half he hoped for is attained,
And yet he stands for Equity,
Against the foe's iniquity!

All hail! say we to Everitt!
Can grateful farmers him forget?
Nay! such a man may Heaven bless,
And grant him honor and success.

August W. Kruger,
Sec. Arco (Minn.) L. U.

THE FRIENDS OF EQUITY

The long struggle to save the true principles and plan of the Society of Equity for farmers is nearing its end. After this number we don't expect to refer to the recent unpleasantness, except to continue a brief chapter to Conspiracy and Rebellion in each issue. We feel that this story should be told completely as a warning to present and future generations to guard their Society from those who would divert it out of the straight line to first accomplish its objects for farmers.

Reviewing the past year we cannot claim that the troubles the Society has experienced have not been without compensatory advantages. That it must go through such an experience history is an eloquent testimony, hence it is better to have it over in 1907 than to be longer delayed. Also the recent troubles have had the effect of arousing the lethargic to the danger of procrastination and to the necessity of completing the Society without much further delay. Thus, while some time has been lost, we believe the work of organization will go forward more rapidly in 1908 than ever before.

When the next issue of Up-to-Date Farming reaches the readers it will give evidence why we have such great faith in the future. We expect it to be a number of inspiration to all true members, and to all farmers not members.

Many handcaps have also been thrown around Up-to-Date Farming and we have not been able to make it all it should be. It is not necessary to explain here but we ask our readers to be charitable and believe that we have done the very best we could under the circumstances. In the future, if we can continue uninterruptedly toward accomplishing the mission of this paper, we will promise the finest and largest paper for farmers ever printed, as our readers now say it is the most helpful.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

PRESIDENT WM. McKINLEY said:
"I am familiar with Ridpath's History of the world, and cordially commend it to the scholar as well as to the plain people generally."

PROF. W. F. WARREN, Pres. Boston University, said:
"I should be glad to see it placed in the library of every young person in the United States and even in the English-speaking world. In families where there are bright children it will render excellent service."

THE Publishers Failure IS Your Opportunity

PRES. BENJ. HARRISON SAID:
"Dr. Ridpath's labors are deserving of the highest praise. I most heartily recommend his History of the World for study and convenient reference."

PROF. E. H. LONG, Supt. Public Schools, St. Louis:
"I unhesitatingly commend Dr. Ridpath's 'History of the World' as the ablest work on that subject which I have ever examined."

Up-to-Date Farming Readers are Offered the Opportunity of a Lifetime to Place in Your Homes the World Famed Publication

RIDPATH'S HISTORY OF THE WORLD

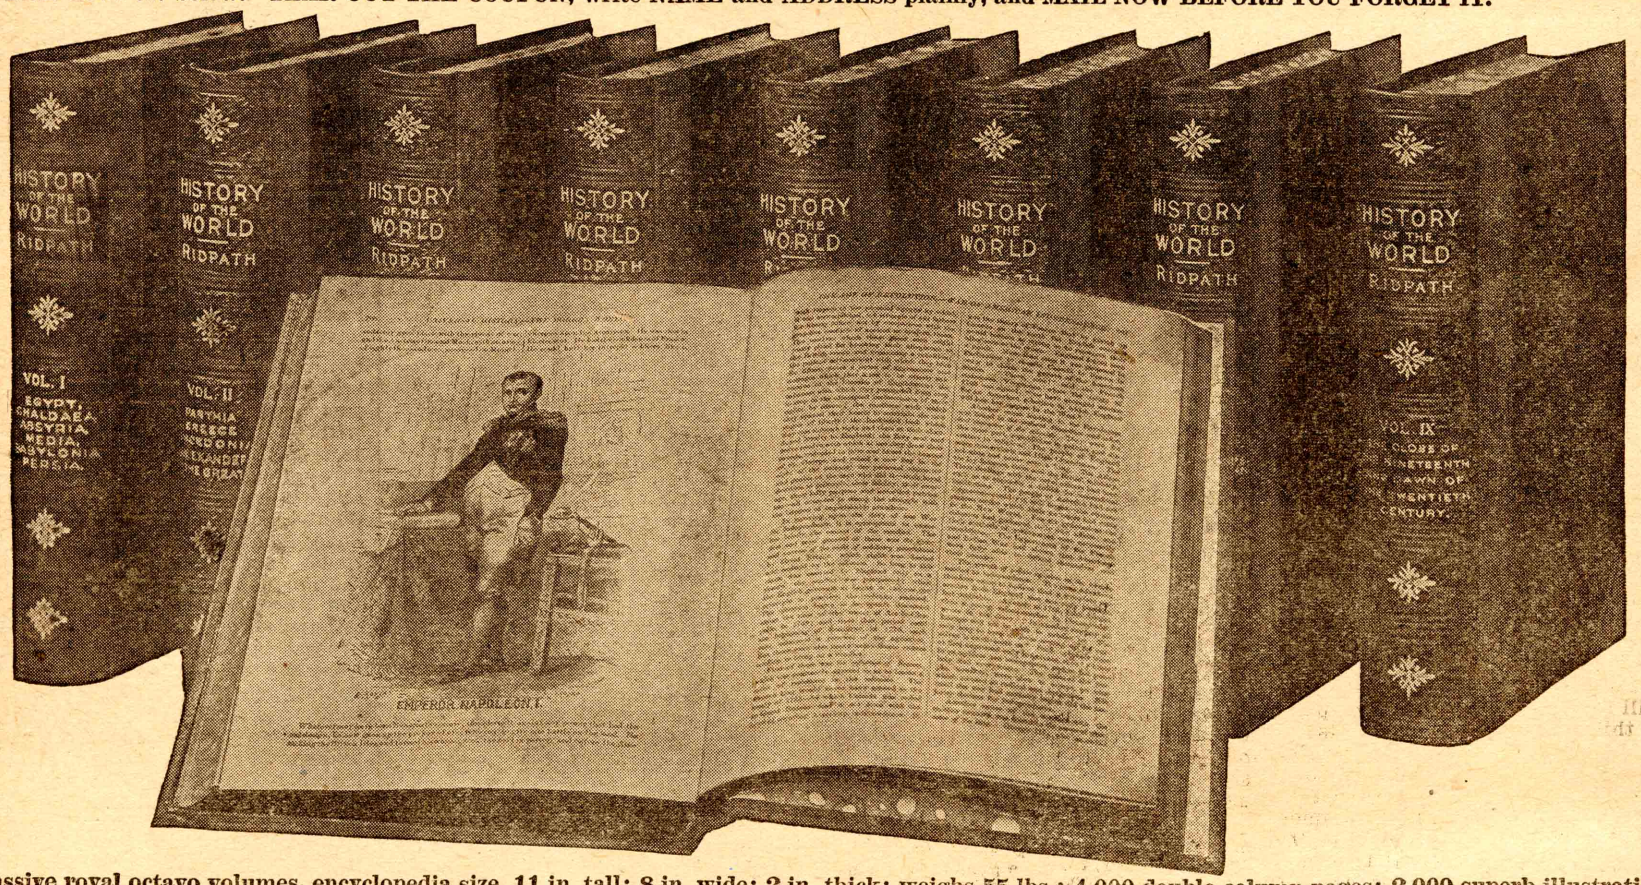
Brand new, latest edition brought right down to date, including Peace Treaty of the Russian-Japan War, beautifully bound in Half-Morocco. We are selling them while they last, first come first served,

At LESS than even DAMAGED SETS were ever sold

UP-TO-DATE FARMING IN REVIEWING THIS GREAT WORK SAID: "Ridpath's History of the World may be regarded as a complete library in itself. In those nine volumes may be found the equivalent of thousands of ordinary books. Right in this statement lies the value of such a set of books. The average individual desires to have his library as well stocked as possible. To select from the maze of books of numberless subjects now on sale, those which will be the most useful and cover the most ground is a task not for an ordinary person. Dr. John Clark Ridpath is generally admitted as America's greatest historian. We cheerfully recommend this famous History of the World to our readers. It is a work that should be in every home."

HERE IS YOUR OPPORTUNITY to secure Ridpath's History of the World at the lowest price ever offered—and on easy terms. It will cost you nothing to inspect the beautiful specimen pages and let us give you full particulars of our offer.

Dr. Ridpath is dead, his work is done, but his family derive an income from his History, and TO PRINT OUR PRICE BROADCAST for the sake of more quickly selling these few sets would cause great injury to future sales. We will NAME OUR PRICE only in DIRECT LETTERS to those SENDING THE COUPON below. TEAR OUT THE COUPON, write NAME and ADDRESS plainly, and MAIL NOW BEFORE YOU FORGET IT.



9 massive royal octavo volumes, encyclopedia size, 11 in. tall; 8 in. wide; 2 in. thick; weighs 55 lbs.; 4,000 double-column pages; 2,000 superb illustrations.

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake**; to circumnavigate the globe with **Magellan**; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know **Napoleon** as you know **Roosevelt.**

RIDPATH in your home means you need never spend a lonely evening. You can associate with the world's heroes; you can cross the Rubicon with **Caesar,** after which Rome was free no more. You can sit at the feet of **Socrates,** the loftiest genius of the ancient world. You can kneel at the shrine of **Lincoln,** "the greatest character of all time; the gentlest memory of our world." It is ennobling to commune with these children of destiny. To be associated with great men and events is to be great one's self, and you will add to your store of knowledge, which is power, and to the richness of your life. You owe it to yourself and family to place this book in your home.

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendour; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and aspiring was ever written by man.

RIDPATH throws the mantle of personality over the old heroes of history. **Alexander** is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. **Xerxes** from his mountain platform sees **Themistocles** with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sails, and help to mould the language in which this paragraph is written. Rome perches **Nero** upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; **Napoleon** fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. **Bismarck** is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says, "You shall not." **Washington** is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false face friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world-figure of his time.

Volume XI **INDIANAPOLIS, INDIANA, JANUARY 1, 1908** **Number 1**

A grand old year has run its race,
And now another takes its place.
The old year dies, though loth to go;
Time, with his scythe, has brought him low.
—DICKERMAN.

The Old Financial Trouble, Crop Movement

Speaking of the need of a more elastic, if not a better regulated, currency, the President, in his recent message to Congress, says: "The recurrence of each crop season emphasizes the defects of the present laws." And again: "All commercial interests suffer during each crop period!"

The President does not mean that "crop periods" are misfortunes, though they do, in his opinion, cause "all commercial interests to suffer." The farmers' crops have too often been referred to as the means of saving the country from financial disaster and turning the tide of prosperity to usward. What the President desires is that some monetary reform may be effected which shall give us a currency that will meet the heavy demands made upon it by the movement of crops, and yet leave an adequate supply to meet all business emergencies everywhere so that no commercial interests need suffer.

In this the President is only calling attention to a well-known fact of commercial history. During the winter, while the farmers are planning and preparing for their crops, and during the spring while they are planting them, and the summer while they are cultivating them, the currency gravitates to the East, where a more active business is done in other lines; and then when the autumn comes with its harvests and marketing there is a scarcity of money in the crop producing centers, and an interference with business follows its withdrawal from the East to permit its more profitable, but, as usual, temporary use in the West.

Will any of the proposed plans meet this annual disturbance? Is not the real trouble one of marketing rather than of money supply? People consume no more in the autumn than during the winter, spring and summer, nor do the mills need more then of the farm-produced raw material they use. Hence no more of the crops need to be bought or transported during the autumn than at any other season.

But unfortunately farmers have drifted into the habit of rushing their stuff to market directly from the harvest, and out of that habit have grown more evils than any other habit that has been indulged on the farms. It not only disturbs the monetary situation of the country, but it taxes transportation to its utmost capacity for a brief season, often resulting in loss to the railroads by abnormal demands they cannot meet, and the wasting of produce consumers actually need in distant places. It gave birth to speculation in life's prime necessities, a speculation that has degenerated into a species of the most harmful and demoralizing of all gambling, the winnings of which are ruthlessly taxed against both producers and consumers, a taxing power which carries with it the ability to determine what the farmers' earnings shall be and how much of the consumers' earnings may be left after his needs have been supplied.

No changes of currency nor shifting of business centers can reach these evils. They are all the result of a vicious system of marketing, and in a change of that system alone can relief be found. FARMERS MUST PROVIDE MEANS FOR STORING THEIR CROPS, AND MUST MARKET THEM AS CONSUMPTION DEMANDS THEM. It is just as practical and much more logical to store crops on the farms or in the centers where they were produced, as it is to store them in the centers of speculation. In the former case the money performing the ordinary requirements of business would be adequate to "move the crops," and the normal railroad equipment would transport them, not all at once or in a brief season, but as consumption required them during the year. And it would destroy the vicious gambling in prices the whole world deplores, give farmers just and reasonable profits, and supply consumers at prices that would give them coveted opportunities to save something out of their earnings.

THE GREATEST WORK FOR FARMERS TODAY, AND FOR AGRICULTURAL COMMUNITIES, IS TO PROVIDE STORAGE FACILITIES FOR THEIR CROPS so that they may be marketed as the products of the shops, and factories, and mines, are marketed, not a year's supply in a brief period, dragging after it such a crushing train of evils, but a year's supply to meet a year's demand. The Government no doubt does well in opening waterways and in irrigating arid regions, but it would do better, benefit millions more, if it helped this paper in encouraging storage facilities on the farms and in the agricultural centers, and keep the crops out of the hands of speculation.

THE FARMERS' RELATION TO PANICS

The recent financial flurry, though severe and threatening at the time, and a great lesson if studied intelligently, is now so nearly a thing of the past as to make further reference to it almost superfluous. But so much has been, and still is, said concerning the farmers' relation thereto, and to financial panics in general, that UP-TO-DATE FARMING feels justified in one more remark concerning it. Mr. John G. Shedd, of the great business house of Marshall Field & Co., had this to say in a recent number of the Saturday Evening Post:

> In speaking of the farmer there is only one word to say: he is the basis of the structure today, and if he pursues a normal course the currency flurry will soon be smoked out. He has the real tangible and basic wealth; the world at large wants it and stands ready to pay good prices for it. If the farmer takes his profits and does the natural and normal thing with them—puts them in his local bank, just as he has been doing right along—then he and the merchant and the railroad and the city banker will be all right. But if the farmers of the whole country should allow themselves to become frightened and withhold their money from deposit and from circulation they can make trouble. The responsibility of the outcome, not of the origin, of the situation seems to me to be clearly in their hands. And I believe that they are big, broad and far-sighted enough to recognize this and act accordingly.

Again waiving the fact that the glowing accounts of the farmers' wealth are based on figures made after the crops have passed from the farmers' hands, we repeat what we have said time and again that farmers are not hoarders of money, and we are glad they are not, for it would be unfortunate if the class to which the nation looks for its increase in wealth should minimize the value of that increase by hiding it away and destroying its general usefulness.

But after the farmer has earned money and sold his toil for it, usually at prices made by somebody else, it is straining reason and good taste for other people to ask him to put that money in the bank for somebody else to use, without absolute security against loss. The local banks must use the money or it is a burden to them to have it, and their custom of depositing it in the city banks at a premium, places it in the whirlpool of speculation of which the farmer or local depositor knows nothing, and when the time is reached that the richest banks make a limit to the sum they will return to depositors, the limit sometimes running as low as $10 on any one day, country people cannot be blamed for becoming alarmed. Give the depositors the security the banks themselves require when they part with money, and there will be no hoarding among farmers, nor will there be any panics, for investments will be more carefully guarded and the big hoarders for a purpose will be beaten before they have fairly entered the race.

Postal Savings Banks, for all of whose deposits the government would be responsible, affords a very effective remedy. No one would hesitate to deposit in Postal Savings Banks, nor would any one become frightened during Wall Street or any other financial tangles.

Another and just as effective a remedy is one proposed by many financiers, to require the banks receiving deposits to contribute to a guarantee fund to be controlled by the government. This fund made up of small contributors from the several banks, would stand good for all losses to depositors in any bank. Hence all the banks, at least to the extent of the guarantee fund, would stand sponser for every bank. This would not only make the depositors secure, but it would lead to a system of greater care in handling deposits. Thus secured, neither farmers nor others would need any urging to keep their money in the banks.

MISTAKEN, OR BAD

Of course everybody knows which side of the business or financial proposition the Wall Street Journal represents, but in one very important matter either it or the treasury department is seriously mistaken. That publication is quoted as follows:

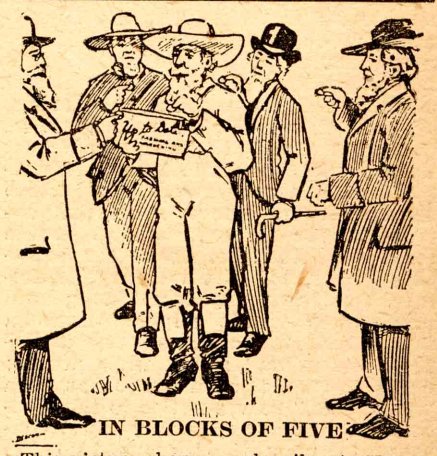
> "The treasury department is pledged to do all it can to facilitate the movement of crops, but it has laid down the rule that it will not advance a dollar to aid in the holding of products for higher prices."

Either the Wall Street Journal is mistaken as to any such rule being laid down by the treasury department, or the treasury department is mistaken as to the purport of the movement for the holding of crops for higher prices so far as the farmers are concerned; or the ruling is essentially bad—the worst ever made by any department of the United States government.

The farmers, as has been so often said, and as is universally conceded, constitute the most important class of our people; and, unlike all other classes, their income or the remuneration for their toil depends entirely upon the price they receive for their products. Heretofore, again unlike any other class, they have had nothing to say concerning the prices at which their products should sell. Custom, if not tradition, compelled them to accept whatever was offered. This placed them, so far as income or reward was concerned, entirely at the mercy of whoever made the price. It is too late to say, as used to be said, that the prices were determined by a law either natural or commercial, or even in accordance with a rule deducible from any established or known condition. Prices have been changed within a few hours, so as to make a difference in the aggregate of millions of dollars, when there could be no possible change either in the supply or demand. Such prices are made arbitrarily by two contending speculative forces, and whether the price tend upward or downward depends upon which of these forces may, for the time being, be in the ascendant.

Against this system the farmers have very properly, but quietly, mild-

WITH UP-TO-DATE'S PUBLISHER



IN BLOCKS OF FIVE

This picture shows a subscriber to UP-TO-DATE FARMING in the act of getting five subscribers for $3.00. Go and do likewise.

Read carefully in "Question Box" about subscriptions expiring the end of the year.

According to the annual report of the Secretary of Agriculture 1,500,000 people attended the farmers' institutes during the past year. Not a large number, considering the fact that these institutes, as now conducted, are supposed to attract the women of the farms. What would have been the total if the educators had spent as much of their time in explaining to the farm producers how they could secure more profitable prices for their products as they did in telling them how to increase their yields?

Publishers and their assistants, from the very number and nature of the problems they must solve, become very expert But one of the hardest propositions we have to contend with are the letters with insufficient address. What do you think of twenty-five leters a day that must be filed in "insufficient address" file to await a chance to discover the writer? Well there are many such days. Moral:—Write your address and write it in full and distinctly.

We have just sent a *special limited offer* to about 30,000 subscribers of this paper. If *you* receive one this is to remind you of the time limit, January 6th, 1908. If you have not embraced it do it *NOW*.

On the publisher of this paper has fallen the great burden of forcing recognition of the great principles of The Society of Equity. If the Society would have done as much without the aid of UP-TO-DATE FARMING the cost would have been hundreds of thousands of dollars in excess of what it paid. If this statement is true and it is, the promoters of the *new* official paper may well stand appalled at the stupendousness of the task before them, that an established paper would have.

On Monday, December 16, eighty-four (84) members' reports come to this office saying "we paid our 1907 dues." But the report and the money did not reach us, consequently credit was not given on their subscription. The Farmers' S. of E. plan of direct reports from the secretary or organizer to headquarters will remove this trouble. Then only one person will be between the member and headquarters and the responsibility cannot be shirked.

We have a special edition of the Third Power book printed on fine paper and bound in fine silk cloth. Price $1.00 postpaid.

Read in this issue "Infernal Intellect."

A subscription blank in your paper is not a dun unless you are in arrears. If in arrears it is a polite invitation to pay up, and if not, then send a new subscriber on it.

127097
Feb. 18. 1929.

ly, and in an entirely business way, revolted, and propose to gain their point by controlling the marketing of their crops; that is, to sell when the price is on an equitable level with general values, and to hold when it is not; to sell to fully supply the demand at a reasonable price, but not to glut the markets and destroy the price for the benefit of speculation. This is what farmers mean when they talk of holding for higher prices. They do not hold for speculative prices, nor to encourage speculation, but to prevent it; nor do they hold to make high prices to consumers, but to insure to them as well as to the producers steady and equitable prices. It must not be forgotten that the high prices consumers are compelled to pay are made after the stuff leaves the hands of the farmers, for the same speculative forces that make arbitrary low prices for the farmers to receive, make arbitrary high prices for the consumers to pay, the difference between being the reward of the speculators.

If the treasury department understands this situation and the purpose of the farmers in holding their crops, and if the Wall Street Journal is correct in its assertion that the department, while it proposes to aid in the movement or purchase of crops, "has laid down the rule that it will not advance a dollar to aid in the holding of products for higher prices," it is, as we have said, the worst and most unjust rule ever made by any department of this government. It is true the farmers have never asked the government for financial aid to enable them to hold their crops for equitable prices, but the treasury department has, on many occasions, placed millions to enable crippled financial institutions to continue very doubtful business and retain their profits; and this rule, if such a one has been "laid down," serves notice to the agricultural millions that they must continue to pour their crops into the greedy maw of speculation at whatever price such speculative greed may offer them.

We do not believe such is the purpose of the treasury department. Either the Wall Street Journal misrepresents the department, or the department misunderstands the doctrine of controlled marketing.

FALSE AND PERFIDIOUS

Mr. Everitt asks no quarters. If he has in any respect betrayed any trust in any way reposed in him by the American Society of Equity; if he has failed to work incessantly and unselfishly for the building up of the Society; if he and UP-TO-DATE FARMING have been unfaithful in teaching the doctrine of controlled marketing to maintain profitable prices for farm products; if he failed to provide machinery and facilities to print a paper adequate to the needs of the rapidly growing Society, as he was compelled to do by the contract entered into with him, then he asks no consideration. But he does plead for the truth. All he asks is the truth.

A paper published at Menomonie, Wis., that calls itself Equity, name borrowed from Mr. Everitt, and that sports in its headline a design created by Mr. Everitt, is just about as false and unjust as a publication could be. It is filled with innuendoes intended to give entirely false impressions. It makes no allegation as to what Mr. Everitt had done, but like all his enemies, it devotes itself to what he was going to do. The charge is that the Society began with few members and these were friendly to Mr. Everitt, because he suggested the idea and first taught the doctrine; they made UP-TO-DATE FARMING the official paper because it was at that time the only paper in the world devoted to profitable prices for farm products to be secured by control of production and marketing; to justify Mr. Everitt to make the necessary investment in machinery, etc., to publish the kind of paper required, they gave him a contract for a term of years, which it is in positive proof Mr. Everitt accepted with reluctance because of the very fact of the great expenditure required.

This is the sum and substance of Mr. Everitt's offending, as brought out by all his enemies; and every one of them is creditable to the self-sacrificing devotion of the man whose incessant labor brought those people themselves to the front, and without which they would have been as completely unknown today as they were before the Society was organized and UP-TO-DATE began its world work of education.

But onto the above they hang a terrible scarecrow of what Mr. Everitt is going to do—to establish a great paper, to have powerful influence with the farmers and to become a valuable property. Those who made this wonderful discovery and seek to prevent it by the establishment of another paper—is it possible they think "the other paper" will become what they prophesy for UP-TO-DATE, that it will give them tremendous power and influence, and that it will afford them a covenanted opportunity to "buy and sell and get gain?" Or will they hold the other paper down so it will not command such influence as UP-TO-DATE? If that is their purpose, they will find it easy of accomplishment.

But the trouble with these people is not any selfish act Mr. Everitt has done, or anything for his personal gain they expect him to do. It is because he stands for the American Society of Equity as it was originally organized, and as the world has been compelled to recognize it, an organization for the benefit and protection of farmers, and not for the schemes of everybody else under the sun. Under his leadership they knew they could not make a personal machine of the Society, nor could they drag it into any other camp.

That this was their purpose is clear from the following statement of who constituted the late convention as told by one of Mr. Everitt's opponents and printed in the paper to which we have already referred:

> Besides myself, there are other labor men here. There is a general organizer for the American Federation of Labor, an organizer for the United Garment Workers of North America, an organizer for the Boot and Shoe Workers' International Union, a delegate from the Chicago Federation of Labor, and the business agent of the Kenton and Campbell (Ky.) Trades and Labor Council, the latter being a member of the Typographical Union and editor of the Commonwealth, a labor paper. District Manager Mulholland for the Society is an active member of the machinists' union, a delegate from Michigan City, Mich., is of the same organization, and one of the Indiana delegates has just had issued to him an honorable withdrawal card from the Brotherhood of Electrical Workers.

UP-TO-DATE FARMING is free to admit that it is not in favor of any such conglomeration. It is in favor of the American Society of Equity, for farmers and their friends, to bring the farmers out of the disadvantages under which they labor as to the pricing of their products and the management of their business, and that is the whole offending of this paper.

It is pleasant to note, and we mention it for the consolation of this Wisconsin Equity (?) paper, that as many solid members in that State endorse the course of UP-TO-DATE FARMING as in any other State. And we are glad to have such expressions from them. It shows that farmers know what they want, that they have minds of their own, and that they are not afraid to express themselves.

CONFUSED PRICE-MAKERS

J. Ogden Armour, king of the packser, says prices paid farmers for livestock must go lower. He says we must get down to a basis where living is more economical, and, like all of his class, he looks to the producers to stand the reduction. Everything has been on a high scale, he says, and with all the livestock on a lower basis it will ultimately be reflected beneficially to the consumer. Mr. Armour does not choose his words well for his side, but on the side of truth he chooses them better than he thinks. Lower prices for livestock might "ultimately," finally, after a long time, in the wind up, be "reflected," thrown back dimly, from the real benefit of the packers, and result in a kind of moonshine benefit to the consumers. Mr. Armour knows how often prices of livestock go down and prices of meats go up at the same time.

To explain this has been a frequent source of worry to the arbitrary price-makers. Mr. Cudahy of Omaha, says the trouble is that hides have gone down on an average of about $5.00 to the hide, and the packers have to charge more for the meat to make up for what they lose on the hide. Then when you get after the shoeman for the high price of shoes, he tells you the price of leather has gone up. It is next in order to get an explanation from the leather man, and he dodges Cudahy by saying tan bark is getting scarce, and meat is so high it costs more to live, and he must, therefore, charge more for leather.

And there you have it. Everything finds an excuse to elevate his prices except the farmer, and he, poor man, can give no cogent reason why his should not be reduced. He may kick and growl, and feel that there is a wrong done him, but all the same he rushes his stuff off as soon as it is ready for market, and dumps it at the prices offered. And if anybody attempts to show him a better way and arranges a plan by which he could save himself from the greed-made low prices, he turns the toe of his high-priced boots, made of high-priced leather, tanned from low-priced hides, upon that meddlesome fellow and "boots" him one or two—maybe half a dozen!

And then he sits down and sweats while he listens to Mr. Armour declare that "The farmer is the fellow who has been making the money by getting high prices, but it looks as though he will have to sell his stuff lower." Always lower for the farmer, but higher for everybody else. The farmer could "turn the tables" if he would. Who is to blame if he don't?

COUNTRY MERCHANTS MUST BE MAINTAINED

UP-TO-DATE FARMING stands for the prosperity of all rural interests, hence we are glad to hear the President of the United States say in his message to Congress: "I believe it is good policy for our Government to do everything possible to aid the small town and the country district; it is desirable that the country merchant should not be crushed out."

We have often said that the prosperity of the farmer and the prosperity of the country merchant are so closely interwoven that neither can suffer without the other feeling a reflex effect thereof, and we have always regretted the antagonism that sometimes intrudes itself between country merchants and farm organizations. In the first place, the country merchant should apply to his trade and prices the principles of equity, and then the farmer should feel in bounden duty to support the country merchant. Any prosperous agricultural community ought to be dotted here and there with thriving towns and villages, whose business is done by prosperous merchants, and such towns and villages should be beacon lights pointing to still greater prosperity for the surrounding country. The solid farm organization that will accomplish most for farmers will be friendly to and support all the local interests rather than interests that center in distant cities.

NATIONAL GRAIN INSPECTION

Congressman Watson of Indiana must be specially gratified by that part of the President's recent message which refers to grain inspection. On that subject the President says:

> The grain-producing industry of the country, one of the most important in the United States, deserves special consideration at the hands of the Congress. Our grain is sold almost exclusively by grades. To secure satisfactory results in our home markets and to facilitate our trade abroad these grades should approximate the highest degree of uniformity and certainty. The present diverse methods of inspection and grading throughout the country under different laws and boards, result in confusion and lack of uniformity, destroying that confidence which is necessary for healthful trade.
>
> Complaints against the present methods have continued for years and they are growing in volume and intensity, not only in this country but abroad. I therefore suggest to the Congress the advisability of a national system of inspection and grading of grain entering into interstate and foreign commerce as a remedy for the present evils.

That is very closely in line with Mr. Watson's own work in the National Congress. His bill in a former Congress, and now pending in this one, complies fully, we believe, with the President's recommendation, and we shall be glad to see it made a law.

MY THANKSGIVING

BY THE REV. CHARLES STELZE

For the joy of work. For the chance to hit hard—when necessary. For the goodness and the grit of the fellow who may disagree with me. For the test that shows wherein I may grow stronger. For the thought that "each new day may be as the beginning of life." For the power and influence of Christ whom I serve. For the final victory which I know shall be mine.

Patronize our advertisers and that will assist us. We can then improve UP-TO-DATE FARMING and that will help you. This will be co-operation of the right kind we are sure.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE $1.00 PER YEAR. A CLUB OF FIVE FOR $3.00
Foreign Subscriptions, including Canada, $1.50 per Year.

Clubs. Five subscribers for $3.00. This applies for one person five years or five persons one year each.
Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The latest date shown with your address is the date to which your subscription is paid Subscribers are urged to keep their time paid *IN ADVANCE.*

A. S. of E. Members will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

How Ambition O'erleaps Itself

The New "Official" Paper

It is the same old story. The mountain in travail has given birth to a very little mouse. Perhaps it is better so. The best meaning people are sometimes deceived, and do things they could not be induced to do if they understood the motives behind what was proposed. All who have seen a copy of the pretended new "official" paper surely cannot be deceived any longer. If any one could have heretofore doubted the motive and animus of the fight on Mr. Everitt and UP-TO-DATE FARMING, he can certainly doubt it no longer after reading the initial number of the paper they propose shall take the place of UP-TO-DATE, which is read and appreciated wherever the English language is spoken, and wherever German and Norwegian are read in this country.

We will not insult our readers by asking them to compare the so-called "new paper" with UP-TO-DATE FARMING, for not one of them will find a comparison possible. And yet that is the paper a few unhappy schemers propose to force upon the membership of this Society, and be paid for out of the dues the members pay to support the Society, whether those members wish their money so applied or not.

And the members are flatly told in this first issue, over the names of Mr. Barnett and Mr. Pauley, that if they expect another issue they must put up $1,000 cash before they get it. That is very different from anything UP-TO-DATE ever said to the Society; for UP-TO-DATE, freighted with valuable truths its readers could not get from any other paper, visited them four times a month without once asking them to contribute a cent to its expenses and accepted in full payment therefor one-half its regular subscription price.

But these new printers promise to issue shares of stock to those who pour their money into the new printers' coffers. They know they cannot do that legally, for they are not incorporated, and if they were it would not be the A. S. of E., as they are trying to make the members believe, but another corporation entirely. And they cannot issue such shares of stock in the name of the American Society of Equity, because printing and publishing is no part of the corporate purposes of the Society. UP-TO-DATE FARMING has always warned its readers against all foreign capital stock schemes, and it is doubly our duty to give them warning in this case.

But the members are informed that these special stock subscriptions will not be required after the members pay their 1908 dues. That is a frank confession that the 1908 dues are to be used to promote this publication scheme, just as the 1907 dues were so largely used to promote the Exchange schemes, so that the convention found an empty treasury when it assembled in October. The 1908 dues are to be used to pay editors, printers, clerks, postage, etc., which, under the Society's contract, was always paid by Mr. Everitt himself, only 50 cents a year (the dues) of the Society's money being used to pay the subscription to the paper and nothing more. Whatever job work was done was done on order and paid for, if at all, the same as to any other house.

Fortunately, while the members still have their money, they have a right to demand the constitutional use and application of it. They are, after all, the final judges. If they do not believe it will be applied according to their wishes, they have the right, according to the laws of God and man, to keep it in their own treasuries or in their pockets.

But let us see a little further into the motives of these people. Their work in the convention and this issue of their paper are all directed against Mr. Everitt. He gave them a Society, brought them from obscurity and gave many of them employment, but he would not approve their stock gambling schemes, and he must be got rid of. They wanted the Society to furnish them machinery and material, and hire them to print a paper, which they could not do so long as Mr. Everitt was printing for the Society such a great paper as UP-TO-DATE, entirely at his own expense, and furnishing it to the members at one-half the subscription price. Hence to make room for them and their stock-jobbing scheme, UP-TO-DATE FARMING must be repudiated and Mr. Everitt must be slandered, and, if possible, got out of their way. This is not an inference or conclusion. Their first paper makes it so plain that it needs no confirmation.

"Come, now, and let us reason together," sayeth the Scriptures. If Mr. Everitt ever wronged the Society; if he ever wrongfully used a cent of the Society's money, these men are more guilty than he. They must have known it. They were with him, some of them, almost from the beginning. They had the ear of the convention all the time. Mr. Everitt was there entirely in the open, and could have been proceeded against either day or night. If they knew of such things as they talked about, and as they are now insinuating in their paper and letters, and did not proceed against the wrongdoer in the interest of the Society, they betrayed the convention that stood by them, outraged the Society, concealed dishonesty, and became particeps criminis, or partners in the crime.

On the contrary, if they know of no wrongdoing, and yet created the impression that there had been wrongs done simply to injure a fellowman and promote their own schemes, then they make themselves common slanderers, the most contemptible of human beings. We do not like to talk so of any one, but the actions of these people in the convention and before it, and the contents of their paper and letters going out from headquarters, compel them to accept one or the other of the horns of their own dilema, and it matters little which they take.

We may well leave it all to the calm, second thought even of those who were at the convention, and of those who read their paper. Indeed the convention expressed itself while in session. On motion of Mr. Bourland of Kentucky the convention tendered Mr. Everitt a UNANIMOUS RISING vote of thanks for his magnanimity and efficient service to the Society. This is admitted by the paper which so outrageously slanders him, and we may well let it go at that, for conventions do not often give "unanimous rising votes of thanks" to bad men, or to officers that have wronged them or failed in the discharge of official duties.

We now turn to the much talked of contract for the publication of the official paper. In November 8 issue of UP-TO-DATE FARMING we published this contract in full, with the facsimile signatures, and all the circumstances leading up to it, together with the reasons why it was made. We are glad to note that the new paper prints the contract also.

The insinuation that Mr. Everitt got around him a few men who would do his bidding is a shameless insult to all the noble characters and great minds that helped to mould this Society, and gave plans to the world that have revolutionized thought on the subject of pricing and marketing farm crops, among them being as prominent citizens as are known to the State of Indiana.

All who have read the contract must see that it is eminently fair to the Society. Mr. Everitt's paper was chosen because it was the only paper that favored the Society or advocated the doctrine, and the long term was made because to comply with the contract involved a large outlay of money which, not the Society, but the Publisher, was required to make. Mr. Everitt has complied with the contract; no one has ever pretended to intimate that he has not. Hence the contract was valid when it was made, it has been acted upon as valid by both parties to it for five years, and IT IS A VALID, SUBSISTING AND BINDING OBLIGATION UPON BOTH PARTIES TO THIS DAY, and will be so until a competent court shall declare it otherwise, which no court of competent jurisdiction will ever do.

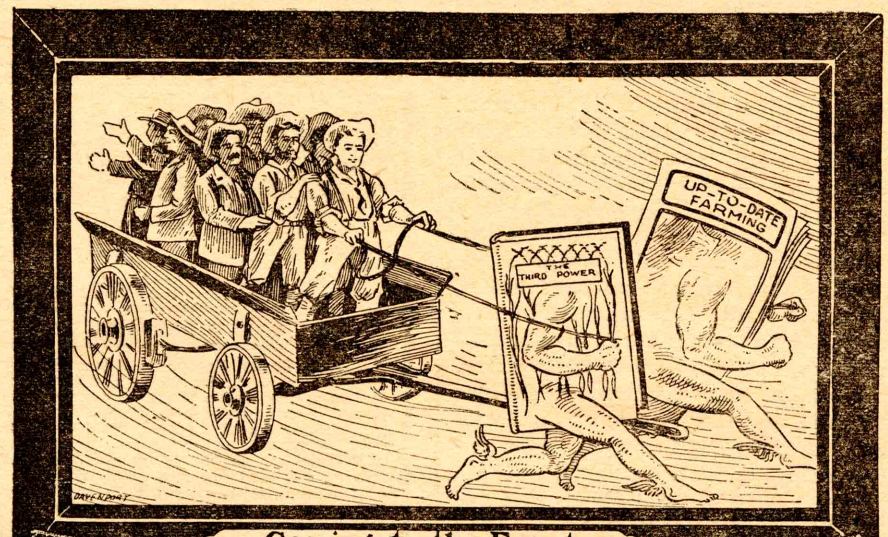
Consider very briefly the reasons: The main claim of illegality is the fact that official position made Mr. Everitt a party on both sides of the contract. This of itself does not make the contract either void or voidable. Men often thus act in two capacities, as an official and as an individual. The whole thing hinges upon whether the double capacity was used to make a contract unfairly onerous as to the party officially represented, and unfairly favorable to the individual. In this case the individual party is the only one bound to a specific performance, the only one whose obligation involves an expenditure of money and labor, the sole obligation of the other party, the party of the first part, is an obligation of permission, coupled with a promise to pay a certain price for certain services rendered and goods furnished. And the element of intent, always an important element in such cases—the element of intent to be fair is the fact that the party of the second part, the individual party, fully discharged the obligation imposed upon him, and never exacted but one-half the contract price from the party of the first part.

The technical point that a corporation cannot contract with one of its directors is fully answered in the convention's own legal advice. A director cannot make a contract with his corporation "over the objection of a stockholder." In this case there was no objection of a stockholder. There was no stockholder to object. It was not a capital stock corporation. There was no opposing personal interest. The contract had to be made with the president, an ex-officio director, or not at all. The terms of the contract were favorable to the corporation, and during the entire operation of the contract the party of the second part made it still more favorable to the party of the first part by according the members the club rate for the paper by the contract required to be published, whereas the contract allowed the full subscription price.

No court on earth will annul a contract under such circumstances, so made and so complied with, involving one of the parties in a heavy outlay of money to enable him to discharge the obligation placed upon him thereby.

Hence, UP-TO-DATE FARMING IS THE OFFICIAL PAPER OF THE AMERICAN SOCIETY OF EQUITY OF NORTH AMERICA.

It is but fair to Mr. Everitt to say the above article was not written by him, but by one who has known him for years, who has watched the American Society of Equity from its inception, and who is as devoted to its principles and as familiar with its history as any person living.



Coming to the Front

Farmers are Coming to the Front

THE year 1908 is going to be the greatest year for farmers organizing ever known in the country.

For five years conditions have been shaping for this time. Farmers have been getting a new education in these years through the two great mediums, UP-TO-DATE FARMING and THE THIRD POWER book. These are bringing farmers right to the front, where they belong.

EVERY SUBSCRIBER TO UP-TO-DATE FARMING GETS A COPY OF THE THIRD POWER BOOK FREE IF HE ASKS FOR IT

Except at the low price made in clubs of five or more, 10 cents additional must be sent for mailing each one.

If you, Mr. Farmer, want to come to the front with the rest of us, you can get in the wagon when you read this paper and book.

Yearly subscriptions to Up-to-Date Farming.....$1.00
A club of two, or one subscriber two years..... 1.50
A club of five, or one subscriber five years..... 3.00

The Third Power book has 320 pages, is cloth bound, and is illustrated, printed on good paper. *Not sent unless asked for.*

UP-TO-DATE FARMING

Dept. A1. INDIANAPOLIS, IND.

Many acres that may now be a drug on the market because of stumps left on them when the timber was cut off can be quickly and cheaply cleared with Smith's famous stump puller. One horse and a man can pull a stump 3½ feet in diameter. Don't allow stumps to bother you. Clean them out and your property will increase in value several times the cost of the clearing. Send for information to W. Smith Grubber Co., Dept. C8, La Crosse, Wis.

Have you evergreens about the house? How nice it is to have these signs of summer with their rich green color even tho it is midwinter with the ground snow covered. Six hardy evergreens will be sent free by the Gardener Nursery Co., 19 Nursery Ave., Osage, Ia. Send a postal card for them.

A very handsome book received from the Vermont Farm Machine Co., Bellows Falls, Vt., describing and picturing the famous U. S. Cream Separator. Send for a copy of this catalog, which is number 187. It is free.

If you have stumpy fields, the Hercules Mfg. Co., Dept. 11, Centerville, Iowa, has something to sell which will interest you. Their Hercules Stump Puller will do the work. It enables you to get rid of the large stumps as well as the small. It is made of steel and the manufacturers claim that it has 400 per cent more strength than other pullers. It is sold on a three-year guarantee with special concession on first order from any locality. Send for free Hercules catalog if you have a stump problem on your hands.

High Grade Door ONLY **80c**

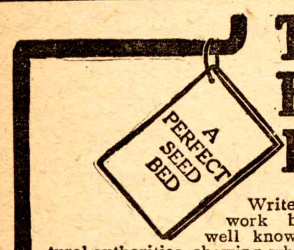
2-0 x 6-0, All White Pine. Regular Price, $2.00

If you have any use for doors, windows, storm sash, moulding, porch brackets, columns and millwork, for your own buildings, or as contractor, **don't buy elsewhere** at any price or under any circumstances until you get the **Grand Millwork Catalog** which makes a clean saving of 50% on any dealer's prices. It makes no difference where you live. If you intend to build, or if you need millwork for any purpose, do not think of buying until you get our estimate. Our goods are high grade as well as wonderfully low in price. Our lumber is first air-dried and then, as an extra precaution, is put through a scientific drying process. Joints are made with heavy hardwood dowel pins, glued with imported glue, pressed together by heavy steam power press. There is no "come apart" to our work.

Door panels have a heavy raise on both sides. The panels are sandpapered on a special machine of our own invention before the door is put together, and the entire is then smoothed with fine-grained sandpaper. We guarantee our goods to be strictly up to the official grade adopted by the Sash, Door & Blind Manufacturers' Association of the Northwest.

We operate the **largest** mill in the world—163,000 feet of floor space (four acres)—have been in business since 1865—own our timber lands, sawmills and lumber yards. We carry a large stock and can therefore ship promptly. We have no traveling men—sell only for cash. We are the **only** large manufacturers of sash, doors and blinds selling direct to the consumer. Our prices will astonish you. Don't buy anything in our line until you get our catalog, **the grandest woodwork catalog published.** It's Free—write for it today. Address

GORDON, VAN TINE CO.
451 Case Street, DAVENPORT, IOWA



THIS BOOK FREE

Write today for work by several well known agricultural authorities, showing why the Harrow is much more important than the Plow. Also illustrates and describes

THE "ACME" HARROW

The Riding Harrow that cuts and pulverizes the plowed ground. Coulters or teeth work as a gang plow. *The only harrow built on correct principles.*

Sent Free On Trial

Ask your dealer to let you see the "Acme" Harrow. If he hasn't it we will send you one for free trial. No expense to you. Don't forget to write for book.

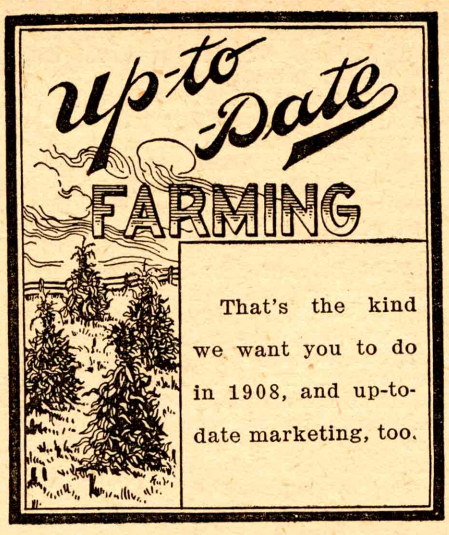
GRIND YOUR OWN FEED

with a Star Feed Grinder and stop waste. Makes ideal feed. Grinds all grains. Speedy, strong, durable and built for service. Simple and geared sweeps. Belt powers from 2 to 10 H. P. Lowest prices. Strong guarantee. Send for book.

THE STAR MFG. CO.
68 Depot St., New Lexington, O.



That's the kind we want you to do in 1908, and up-to-date marketing, too.

CROP VALUES AND FARMERS' RETURNS

The annual report of the Secretary of Agriculture for 1907 was the same pleasing story that is always issued by that department of the Government. It contained the usual imposing array of grand totals of farm production, employed the same old platitudes regarding the farmers' independence of all other lines of industry, told how the nation's foreign credit is sustained mainly by the farmers of the country, carried the impression to the country at large that the pockets of the farmers are fairly bulging with bright yellow coins, and almost convinced the business men of the country that for actual, attractive returns the vocation of farming has every other means of acquiring a livlihood beaten a mile, to use an expression of the day. All of which leads to the conclusion of the man who read an account of his own death and burial—it is important if true. The figures are so stupendous that, even if in a large measure they are mere guesses, no one is in a position to disprove their correctness. It is announced that the total value of the seven leading cereal crops of the country for the year 1907 is $7,412,000,000. The crops may be worth that much but to whom? It makes a big difference where these crops were located when their value was estimated. If this total was based on the prices paid by the consumer, the figure showing the actual returns to the producer, the farmer who tilled the soil, seeded and harvested the products, would show a discount from the department's official estimate of the "worth" of the year's crops that in itself would make somebody's pockets bulge. The crops of the country may have been worth $7,412,000,000, but they did not return the farmers that amount. If they had, or if the portion of this total that found its way into the coffers of the army of volunteer middlemen had not been so great, the stilted expressions and the word bouquets that Government officials have been handing out so freely of late would not sound as hollow mockery.

MINIMUM PRICES

The following minimum prices were agreed upon as fair and equitable for the 1907 crops at the annual convention of the American Society of Equity, October 22-25, 1907:

Wheat—No. 1 Northern and No. 2 red, on basis of Chicago market, per bushel	$1.20
Corn—Until January, 1908	.55
Thereafter to April 1	.60
After April 1	.65
Oats, per bushel	.60
Barley, per bushel	1.00
Rye, per bushel	.60
Buckwheat, per bushel	.85
Flax, per bushel	1.50
Irish Potatoes—Until January 1	.70
After January 1	.80
Sweet Potatoes	.80
Beans, white	1.50
Beans, red	2.00
Hogs, per pound	$0.06½ to .07
Sheep, per pound	.05½ to .05¾
Lambs, per pound	.06½ to .07½
Cattle	.06 to .06½
Hay, No. 1 Timothy, per ton	17.00
Clover Seed, per bushel	$11.00 to 12.00
Timothy Seed, per bushel	3.00
Wool, at country markets, per lb	.30

Department of Elevators and Warehouses

Local unions should concentrate into one good strong union at the sipping or market town rather than meet in school houses. This will be a move toward marketing the crops when sufficient organization and pledging is secured.

We recommend that an Equity hall be built in every town to serve as a meeting place. Also when marketing, according to the Equity plan is undertaken there must be an office for the secretary which will be open constantly every day. If the building is made two stories the lower floor may be rented out until the Society needs it.

No delay should occur now in deciding on the granaries that wil be erected on the farms and elevators and warehouses that will be needed at the shipping point. The question should not be, will we build them? but, are they needed? Farmers have got to have the facilities to control their crops, this means to store them over the time when the genuine demand don't need them.

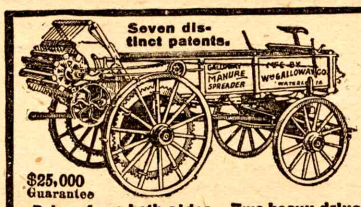
If anything can be gained by delay we fail to see how to figure it, but everything may be lost by delay or failure to do this important thing. Take the matter up at your next meeting or call a special meeting.

"One plows, another sows,
Who will reap no one knows."

Our Equity people around Shipp Landing will soon have a cleaning plant for peanuts and will then send out a man to sell them for us. I believe we can find a direct market for our crop with the assistance of the cleaner. We would like to hear from other sections where peanuts are grown.—William Everitt Shulz, Cuba Landing, Tenn.

Send reports of elevators, warehouses, cleaning plants or Equity halls built, or in contemplation, to this department.

Railroading appeals to some young men. If you are interested, send for full information about the possibilities in this line. Tell your friend to if *he* is inclined that way. Address Wenthe Railway Correspondence School, Box 506, Freeport, Ill.



$25,000 Guarantee

Drives from both sides. Two heavy drive chains. The only successful Wagon Box Spreader. Built to work, not to sell.

SPEND 1 cent MAKE $50

Spend one cent for my Big Manure Spreader book. 55 illustrations; live, interesting reading matter. It tells you how to make more money on the farm. Get the book and ask for my plan by which you may partly or entirely pay for your machine. There could not be a better time than right now. Spend the cent and start 1908 right by making $50.00 on first cost.

THE GALLOWAY WAGON BOX MANURE SPREADER

The Galloway Wagon Box Manure Spreader will make you more money than any implement on the farm. It will save you time and labor and make your manure go three times as far. It fits on the wagon gear you already have. Let me send you one on 30 days' trial with the money in your own pocket. Haul out 900 loads of manure, if you have that much, and decide for yourself that it is the lightest draft, most durable and best working spreader on the market. **Try it with your own team.** You will find that double drive, and the endless apron force feed feature will give you perfect satisfaction. Why not use the half of the spreader which you now have on your farm and make $50.00 at the outset on the price of the machine? It is strongly built; it is an assured success. Let me prove it to you on your own farm, on your own wagon gears with your own horses. **Made in four styles** from the 50-bushel size up to the entirely new 70-bushel spreader; the only one with wide track wagon running gear. I will ship immediately; no bank deposit; no scheme; no money down.

The Wm. Galloway Co., 509 Jefferson St., Waterloo, Iowa

The Celebrated DeLoach Mill

The World's Standard for 20 Years

Saw Your Own Lumber

For lumber is lumber nowadays, and you can do it better than the other fellow, with our help.

We Set the Pace —Others do the Best They Can

A 15-year-old boy can operate successfully. Two hands cut 5,000 feet per day. 15,000 mills in use the world over. Variable Feed, Friction Set Works, Automatic Steel Triplex Dogs and Diamond Track produce results impossible with other mills. Send for catalog of Saw Mills up to 200 H. P., Steam Engines and Boilers, Gasoline Engines, Portable Corn and Feed Mills, Planers, Shingle Mills, Wood Saws and Water Wheels. Prompt shipment and we pay the freight.

DeLOACH MILL MFG. CO., Box 850, BRIDGEPORT, ALA

MANSON CAMPBELL, President, The Manson Campbell Company, Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill Will Pay for Itself in a Year

You can prove this by simply taking my proposition and **cleaning your grain** —before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in Ohio and Michigan alone each season by selling and sowing **dirty grain** is a low estimate. You **won't** haul it to **be cleaned** before you sell your grain, so you are "docked" on the price because of **dirt** in every bushel. Just take me up on my offer—get a **CHATHAM Fanning Mill** and save its price easily by using it on your place. Take 30 Days' Free Trial first.

HERE'S WHAT IT DOES

Cleans all kinds of grain—Separates Oats from Wheat better than any mill you can buy—Cleans Red Clover—Takes out Buckhorn Plantain. Cleans Alsike Clover and Alfalfa—Cleans Beans, Oats, Barley—Grades Corn—Cleans Timothy Seed—Takes all chess and cockle out of wheat.

Chatham Free Book Tells You My Plan On 30 Days Free Trial

This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you **30 DAYS' FREE TRIAL**—and our wholesale price—we have simply **got** to give you a **CHATHAM Fanning Mill** that does all we claim for it. Our business life depends on our mill's making good. Remember that

I Prepay the Freight

I'll send you a **CHATHAM Fanning Mill** on 30 Days' Trial to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them, and Agricultural Papers recommend them to subscribers. So why take **low prices** for dirty, mixed grain, or sow seed that **grows weeds** and **mixed crops?** Write for full particulars prices and New Catalog Free—Address me at nearest city to you—**MANSON CAMPBELL, President**

MILK CANS ROB YOU

Look through a microscope at milk set to cream in pans or cans and you'll see how they rob you. You'll see the caseine—the cheese part—forming a spidery web all through the milk. You'll see this web growing thicker and thicker until it forms solid curd. How can you expect all the cream to rise through that? It can't. This

caseine web catches a third to half the cream. You stand that loss just as long as you use pans or cans for they haven't enough skimming force to take out all the cream. But, just the minute you commence using Sharples Dairy Tubular Cream Separator, you stop that loss.

Sharples Dairy Tubular Cream Separators have 10,000 times more skimming force than pans or cans, and twice as much as any other separator. They get all the cream—get it quick—get it free from dirt and in the best condition for making Gilt Edge Butter. Caseine don't bother the Tubular. The Tubular is positively certain to greatly increase your dairy profits, so write at once for catalog J-136 and our valuable free book, "Business Dairying."

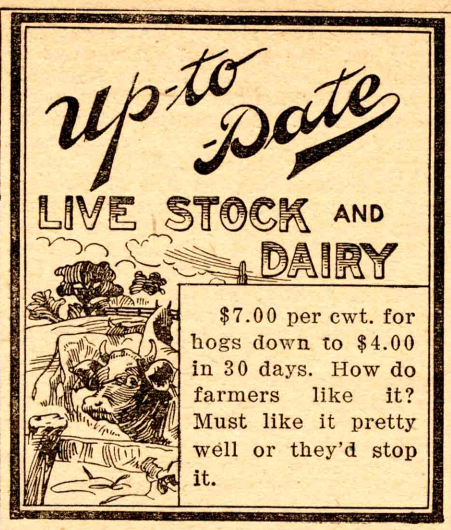
Detroit Veterinary Dental College, Dept.) Detroit, Mich.



$7.00 per cwt. for hogs down to $4.00 in 30 days. How do farmers like it? Must like it pretty well or they'd stop it.

"Now feed your hungry creatures well,
And safe in shelter let them dwell;
Of hay and grain to take their fill,
When wintry winds are blowing still."
—DICKERMAN.

ADVANTAGES OF THE SEPARATOR

Not only does the machine secure practically all the butter fat, but it delivers the skim milk in a sweat, warm and undiluted condition ready to be fed to the calves. Very few dairy utensils are needed as the milk is separated as soon as it comes from the cow and the skim milk is fed at once. Less work is required to handle the milk in this manner than with the other methods.

The cream delivered from the separator is of uniform richness; it has all the fibrous and foreign matter removed. The milk has not absorbed bad flavors and odors from standing around and the cream is in excellent condition for ripening. Thus there is a gain in the quantity and quality of butter obtained, not only is the centrifugal separator of advantage in the production of fine butter but it is equally advantageous in the purification of milk and cream for direct human consumption. Dairies improve the quality of their milk very much by running it through the separator and then mix the milk and cream before bottling it. H. M. Bainer of Colorado Agricultural College says:

The average farmer cannot afford to haul the whole milk to the creamery, even if he is within hauling distance and the roads are good. The skim milk often comes back in a cold, half-sour and contaminated condition, which is unfit for feeding purposes. Even if it does come back in good condition, it is impossible to feed it regularly, and it is far from being equal to hand separator milk. Too much time is required to haul it to the creamery compared to the length of time required to separate it at home by hand. The hand separator cream, by careful handling, need not be hauled to the creamery oftener than every other day during the summer and perhaps not oftener than once in three days during the winter months.

BUYING FEEDING CATTLE

The time is close at hand when the cattle feeder who is not a producer will begin looking around for feeding stock necessary for the new years operations. In a bulletin of "Beef Production," the Purdue Experiment Station enumerates the advantages resulting when a cattle feeder is compeled to buy his feeders in his immediate locality as follows:

There are no expenses for traveling, feed, yardage, commission and freight.

It is possible to know the previous treatment cattle have had.

The cattle are acccustomed to farm conditions and know how to eat grain.

The catttle are quiet in the feed lot.

If equal in other respects, native cattle will do better than others.

They have no soreness and stiffness due to shipping to overcome.

The disadvantages in buying locally are:

The difficulty in securing uniformity in age, type, condition, color and breeding.

The producer wants to sell all of his calves or feeders, at the same time, usually depending upon the good ones to sell the poor ones. This makes it necessary for the buyer to take undesirable steers.

The average farmer is not thoroughly acquainted with market prices and is unable to price his stuff accordingly.

The advantages of buying feeding stock in central markets are:

It is possible to get uniformity in age, color, weight, condition, breeding and quality.

By going to market, the breeder learns what the market demands in finished stock and can buy accordingly.

At times all markets are glutted and it is possible to buy cattle at really less than they are worth.

It is possible to get in touch with a reliable commission firm which will keep the feeder posted as to when to buy and secure the best values. He should describe the kind of cattle he wants and let them buy for them. The charges amount to about five cents per hundred, which is more than repaid by the commission man's knowledge of prices, shipping facilities and sorting of cattle.

The disadvantages of buying in a central market are:

There is no way of telling what previous treatment the steers have had.

Steers which have become stale are apt to find their way to the feeder pens.

It requires a week or ten days to recover from soreness and bruises received in the yards and in shipping.

In buying fleshy feeders in the yards it is necessary to bid against butchers and packers.

It is possible that some of the feeders have previously been in the feed lot and failed to thrive.

MANAGEMENT OF BROOD SOWS

With the approach of cold weather the sows on the farm of W. H. Rowe of Illinois, famous for its large hogs, are removed to a blue grass pasture, where they are confined to two acres of land, with suitable shelters provided. The brood sows are fed in winter about four pounds a day of mixed grains. Last winter this consisted of ground rye, shorts, oilmeal and corn. In the absence of rye, bran is used. They are also fed clover hay. This amount of feed keeps them in thrifty condition, but does not fatten them.

WONDER WHY?

"At times all markets are glutted and it is possible to buy cattle at really less than they are worth," says a recent bulletin from one of the government experiment stations. Having the interests of the farmers so much at heart, why is it that these stations cannot do something to change the conditions under which it is officially admitted that the consignors of cattle are sometimes robbed? Why is it not as much the province of the agricultural department to show the farmers how they can secure profitable prices as it is to show them how to increase their yield?

LIVE STOCK NOTES

It is impossible to harvest a better crop than you sow. The man who starts with a scrub bull can hope to harvest nothing but scrub calves and a loss in feed. It is during the winter season that farmers realize more fully than ever before the loss resulting from feeding scrub stock. It is then that the desire for improvement is the strongest and the wise man will act. The easiest and quickest way to solve the problem of better stock is to secure a good bull of the desired type. Get a good one—don't let $25 to $50 stand in the way of getting an animal that will be the means of your making a success in your efforts to improve your stock.

* * *

It is not enough to provide warm quarters for the cattle; the barn should be well ventilated. While it may be too cool to have the cattle out in the open it is not so cold that they should be shut up closely and compelled to breathe impure air.

As a result of experiments in fattening steers at the Pennsylvania station it was concluded that the weather is seldom too cold in this climate for steers on full feed to be out of doors, provided the feed lot is dry and the animals are protected from the winds. Some of the steers were given warm shelter, but others were kept out of doors and given plenty of bedding. It was found that the fattening steers kept out of doors required scarcely any more feed than those given shelter.

* * *

According to Prof. Thomas Shaw, oats make good feed for milk cows. If they were not so high in price, they would be used to a much greater extent than at present. He says they are a good food for the pregnant cows. Pound for pound, they are so good for milk production as bran, and some dairymen consider them better. Even in the form of hay, when cut at the proper stage, they are a satisfactory food.

It has always been the custom as long as you and I can remember to use a soft cloth and hair sweat pad under a horse's collar. Or sometimes we did without the the collar and expected the pliable leather to be comfortable. But extra hard work would very often make sore shoulders and it required frequent attention to keep the animal in good condition. All of this is past now for those who use Metal Adjustable Hameless Collars. The metal will not retain the sweat and soften the skin and cause the acid in the sweat to eat the flesh. The skin becomes hardened just as ones hands do by work. The rigid metal perfectly distributes the pressure evenly all over the collar and not at two places as with the old style. It will pay every farmer to write the Johnston-Slocum Co., 426 State St., Caro, Mich., for full particulars of their metal collars. They want agents also.

Begin the New Year right. Decide to get all the money out of your dairy that there is in it for you. Don't sell cream as milk. The only way to save all the cream is with the use of a separator. A good kind, that will pay for itself if you have three or four cows, is the Sharples Tubular. Send a postal card and ask them for catalog number 136. Address The Sharples Separator Co., West Chester, Pa. You can pay for the machine as it makes you extra profits.

IT'S ALL IN THE "AWL"

Made entirely of metal- nickel plated

Automatic Sewing Awl

¶ A simple, practical, labor saving device. Sews anything from a belly band to a buggy top; and sews it to *stay* sewed. Sent prepaid upon receipt of price—$1.50. Agents wanted

1908 may bring a good crop of fruit. Farmers must be organized if it is to bring them good prices.

FRUIT GROWING PROFITS

A. Van Helderbeke, formerly fruit commissioner of Washington, declaring that there is more money to be made from fruit raising than ever before, and maintaining that buyers will pay prices in accordance with the attractiveness of the display, gives these reasons why some growers are not as successful as others or they themselves should be. First, planting the wrong varieties according to markets, climate and soil; second, fruit lacking the proper plant food and care to grow to perfection; third, the fruit grower does not know how to place his fruit in the proper package and the most attractive way.

In this last reason is the barrier that keeps so many fruit growers from getting the returns that they are justly entitled to. If when the grower is getting ready for market he would stop a minute and study the workings of the mind of the average consumer he would be a little more careful as to condition and appearance of his selling package. In buying anything, most people rely on their eyes. A man buying a suit of clothes will stand before the glass and scrutinize its appearance, taking the dealer's word as to quality; the knife that "looks good" opens his pocketbook when he may know nothing of the temper of the material. It is the same way with fruit; an inferior article, if tastefully presented, may easily command a better price than a better grade, presented less attractively. Therefore look to the package and manner of offering to get the first demand and to quality to keep it.

WINTER PROTECTION FOR TREES

As showing the value of some kind of a mulch as a winter protection for orchard trees, the Ohio station reports that in one instance the ground froze to a depth of 18 inches on bare soil, while under a thin covering of grass and weeds it froze only to a depth of 8 inches. On the bare soils in the following spring the peach trees started into growth slowly, and many of them were seriously injured, while the trees in sod suffered no apparent injury, all making a healthy, uniform growth.

The injury in orchards which had been given clean cultivation throughout the year was much greater than where cover crops were plowed under each year. Trees which had received even a slight dressing of stable manure within a year suffered noticeably less from the cold. In one instance, a grower was able to protect his trees by banking a few forkfuls of manure around the base of the trees, while the trees left without this simple treatment died almost to a tree.

THE ONE SURE WAY

It is an old but a true saying that "you can't teach an old dog new tricks." The solution of many problems now confronting the agriculturists of the country must be accomplished through education and there is no surer and quicker way of making educational work effective than by centering efforts on the rising generation. In his report to the Illinois Horticultural Society, Secretary Burrows hit upon the right idea regarding spraying. He spoke of some ways in which he thought interest in horticulture and horticultural meetings could be increased. He mentioned an instance in which he, as a director in a country school district, had talked to the children along the line of diseases and insect pests that injure trees. The next year he asked the children to tell him why they had no good apples on the trees on their farms. The children, naturally, named all sorts of reasons, and were greatly interested. Some time after, a neighbor came to him wanting to know what kind of a spray it was he put on top of his trees to keep the worms out of the apples. His little child had told him of the talk in school.

The father then asked him if he could tell him how to make it. Mr. Burrows could and there was another convert to spraying and a whole family interested in horticulture. Interest the children in horticulture and the attendance at horticultural meetings will increase materially and in a comparatively short time there will be a generation in the field that will take better care of their orchards and gardens than their fathers have.

FREIGHT RATES AND HIGH PROFITS

Railway transportation has placed southern fruits and vegetables in all northern markets, but at a tremendous cost. Between the high price of freight and the exorbitant profits demanded by middlemen and grocers, it is impossible to buy southern fruit in northern cities at anything like reasonable prices. Good oranges in Chicago cost 60 cents per dozen, and other fruits in proportion. The same oranges may be bought in the orchards for 60 cents per bushel. This is a ridiculous condition of affairs that needs attention. Last fall when peaches were rotting on the ground in Missouri they were so scarce and high priced in Chicago that people in moderate circumstances could not afford to buy them for family use. The growers do not get the profits. The bulk of money goes to railways, express companies and middlemen.—Farm Press, Chicago.

ORCHARD NOTES

While the winter months are not the time for active orchard work, it is the time to plan for the coming season. Decide on the location of your orchard if you are thinking of setting out a new one and study the different varieties and come to a decision as to which is best adapted and promises most in your locality.

* * *

If possible, secure tree stocks of a nurseryman in your own locality. Dealing with a fruit tree agent is dangerous; you may order one variety and find after they come to bearing that you have something else, a variety that may not appeal to you in the least. If you are compelled to patronize a distant nursery, send for the catalogue of one that has an established reputation, one that sells and delivers trees true to name.

A NEW HARNESS-SEWING DEVICE

It is the Peacock Automatic Sewing Awl, a practical tool, made of metal, nickel plated, making it an attractive as well as a strong and durable tool. It takes the place of the old and slow way of sewing with an awl and waxed ends.

Good work can be done with the awl from the start, as its simplicity recommends it to everyone. The needles used are made expressly for the company and are the finest that can be produced.

It is really a remarkable tool, sewing as evenly and strong as a machine. It can also be used to repair shoe soles, mend carpets, dash boards, buggy tops, and in many ways it will prove its worth as a time and money saver. Write the Foster Mfg. Co., 631 Security Bldg., Los Angeles, Cal., for information.

It is a good time to invest in a manure spreader. You ought to investigate the claims of the several manufacturers. Be sure to look into the Galloway. It is made to fit your trucks or you can buy a complete machine. Sent on 30 days free trial and guaranteed by Mr. Galloway who backs this with a $25,000 bond. Catalog and full particulars free; also a plan by which you can get your machine partly or wholly without cost. Address The Wm. Galloway Co., 509 Jefferson St., Waterloo, Iowa.

SAMPLE CREAM EXTRACTOR FREE

To introduce their Peaples Automatic Cream Extractor in each locality where they have no agent, the People's Supply Co., Dept. 183, Kansas City, Mo., is offering to give away absolutely free, one complete machine. The People's Cream Extractor is meeting with great success Over 100,000 in use. The manufacturers are liberal in their offer, and are willing to send one Extractor in each community to the first person who writes for their generous advertising offer.

MARKET POULTRY CULTURE

In scalding poultry see that the water is not too hot.

Much is lost by careless dressing and handling of poultry.

Capons are always in constant demand in the winter and early spring season.

The demand is greater for 2½- and 3½-pound chickens than for larger ones.

If the skin rubs off on scalded poultry, there is a patchy appearance to the carcass that hurts its sale.

The capon will put on from 20 to 30 per cent more flesh and fat than the rooster in a given time on the same amount and kind of food.

In dressing capons for market, be sure that they are fat, and do not kill until the crops are empty.

A thin capon is not as good as an ordinary chicken.

The name "broiler" is derived from the fact that the bird is usually split down the middle and the halves broiled.

A fat broiler is quite a rarity; the best that can be done, in general, is to have them plump, for the natural tendency of the chick is to use all nutriment for growth and development.

The raising of broiler chickens until the finishing period is reached is practically the same as the raising of chickens for other purposes. The main point is to keep them growing rapidly.

In dressing capons they should be dry-picked, and the feathers allowed to remain on the neck, wings, legs and rump, and the tail and wing feathers should be left in.

It is not profitable to dress capons that will weigh less than seven pounds each.

For roasting, a young fowl about full grown, but still soft meated, is used, and to roast satisfactorily it must be moderately fat. Roasters are roughly classed as "small roasters" and "large roasters." The greatest demand is for small roasters weighing from four to five pounds each, though the demand for large roasters weighing from eight to nine pounds each is steadily increasing. Yellow skin and yellow legs are more demanded than white skin and dark legs.

Pure-bred stock matures quicker, lays earlier and more abundantly, fattens more readily, weighs more, sells better and for more money than scrub birds. This is why the mongrel stock on the farms is being replaced by thoroughbreds.

Fowls fattened on food mixed or moistened with skim milk instead of water, produce white flesh and a superior flavor.

There is no ration better for fattening poultry than sweet potatoes and cornmeal. Cook them, and just before removing from the fire, add cornmeal. Feed when cold. About a pound of cornmeal to a half peck of sweet potatoes makes a good ration.

The man who caponizes scrubs and runts cannot expect to make profitable birds out of them.

Any of our market varieties will make desirable capons if they are in healthy condition and well fed and raised.

A capon is at its best when a year or fifteen months of age.

A capon does not crow, nor does he grow a comb; but "slips" do.

A "slip" is neither a cockerel nor a capon, but a bird on which the operation has been only partially successful.

It is marvelous the amount of money you can spend breeding fowls for "profit" on the "no-experience" mismanagement basis.

DISEASES

Genuine roup is classed as a blood disease, and is considered hereditary.

It is not advisable to use fowls, "apparently cured" of roup, in the breeding pens.

Epsom salts is recommended for roup. It is placed in the drinking water. One writer says: "You cannot give them too much." However, we should not like to use more than a tablespoonful to a quart of water, and would prefer beginning with but half that quantity.

Canker in the mouth may extend to throat and become diphtheria. The diphtheria of fowls and man are different, according to veterinarians, but attendants on sick birds have been known to take poultry diphtheria.

Chopped up pumpkin seed is said to be a good remedy for tape worms in poultry.

For constipation, Dr. A. C. Cary recommends epsom salts, 20 to 30 grains in one tablespoonful of water; or castor oil, one to two teaspoonfuls; or calomel, one to two grains; and soft food.

A sensible remedy for bumble foot in fowls is to place the bird in a case bedded with straw, and each day anoint the foot with a liniment composed of equal parts of sweet oil and spirits of turpentine.

"SURE HATCH" TO THE FRONT

The output of "Sure Hatch" Incubators and Brooders last year was far in excess of any previous year, and with its splendid new factory, the sales for 1908 will undoubtedly be larger still.

The "Sure Hatch" Incubator is built of finest California Redwood, equipped with the Hot Water Heating System made of indestructible Solid Copper. Its Heat Regulator is at the side, making it a convenient Table Top. The "Sure Hatch" Safety Lamp never smokes.

This machine hatches every fertile egg and is so simple and easy to operate that no experience is needed. Thousands of men and women everywhere are making money raising chickens with "Sure Hatch" Incubators and Brooders. The Company has just issued a valuable Free Book on Poultry Profits that everyone should read. You can get a copy by writing a postal to the Sure Hatch Incubator Company, Box 28, Fremont, Neb., or Dept. 28, Indianapolis, Ind.

A wooden hen! Have you ever heard of one? Of course it is an incubator, truly a hen made by man. It will not lay the eggs—at least we haven't heard of one that will—but it beats the hen at its own business when it comes to hatching. The Excelsior Incubator or Wooden Hen made by Geo. H. Stahl, Quincy, Ill., is one of the leaders. Send for Mr. Stahl's new catalog. It is free if you mention *Up-to-Date Farming.*

OF INTEREST TO FARMERS

Every farmer is interested in the fence problem, because he wants his land properly fenced, and wants it done as cheaply as possible.

The manufacturers of the famous Carter Wire Fence Machine, with which a farmer or his boy can weave forty rods of fence a day, have gotten out for free distribution a booklet which shows how the farmer can build his own fence without any trouble, and how much money he will save by so doing. This catalog also tells how all kinds of fence wire can be bought at wholesale prices. Write the Carter Wire Fence Machine Company, Box 96, Mt. Sterling, Ohio, for a free copy.

Anybody Can Make Money

$50.00 a Month made by Some

There's good money in raising chickens if you get started right, if you get the right advice and help, **and above all,** if you get the right incubators and brooders.

We've been in the chicken-raising business a good many years. That's what got us into the incubator business.

We couldn't get machines that would give us the results we wanted, so we made our own after our own **practical** ideas. Since then we've sold over 80,000 successful machines.

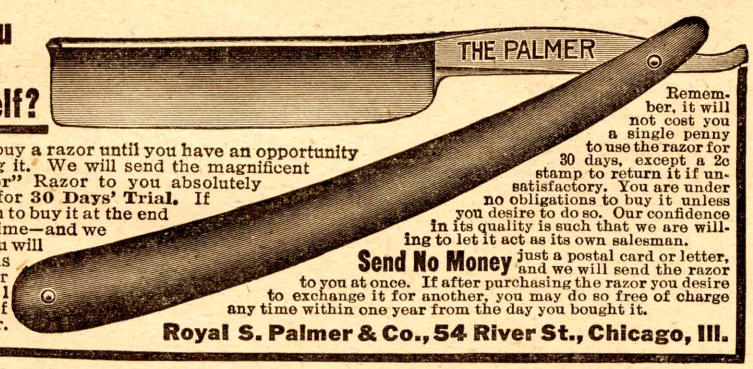
Queen Incubators are **successful** because they are **practical—run themselves**—hatch vigorous chicks and lots of 'em—**pay for themselves** with one hatch.

That's why their users are making from $30 to $50 from each machine they operate. Just send for our big, 100-page **Free Queen Book**—tells all about our **3 months' trial** plan with **5 Years' guarantee.** You can't fail with the Queen.

We help you get started right and help you as long as you want help. Write for book today.

QUEEN INCUBATOR CO., Box 19, Lincoln, Neb.

Do You Shave Yourself?



Do not buy a razor until you have an opportunity of trying it. We will send the magnificent "Palmer" Razor to you absolutely **FREE** for **30 Days' Trial.** If you wish to buy it at the end of this time—and we think you will—send us $1.75, our special price of the razor.

Remember, it will not cost you a single penny to use the razor for 30 days, except a 2c stamp to return it if unsatisfactory. You are under no obligations to buy it unless you desire to do so. Our confidence in its quality is such that we are willing to let it act as its own salesman.

Send No Money just a postal card or letter, and we will send the razor to you at once. If after purchasing the razor you desire to exchange it for another, you may do so free of charge any time within one year from the day you bought it.

Royal S. Palmer & Co., 54 River St., Chicago, Ill.

Up-to-Date HOME ON THE FARM

1898

Let's get together and help the men get good prices and then we'll get many new things for the home.

THE SNOW STORM

Announced by all the trumpets of the sky,
Arrives the snow; and driving o'er the fields
Seems nowhere to alight; the whited air
Hides hills and woods, the river and the heaven,
And veils the farm house at the garden's end.
The sled and traveller stopped, the courier's feet
Delayed, all friends shut out, the housemates sit
Around the radiant fireplace, enclosed
In a tumultuous privacy of storm.
Come see the north wind's masonry.
Out of an unseen quarry, evermore
Furnished with tile, the fierce artificer
Curves his white bastions with projected roof
Round every windward stake, or tree, or door
Speeding, the myriad-handed, his wild work
So fanciful, so savage; nought cares he
For number or proportion. Mockingly
On coop or kennel he hangs Parian wreathes,
A swan-like form invests the hidden thorn;
Fills up the farmer's lane from wall to wall,
Maugre the farmer sighs; and at the gate
A tapering turret overtops the work.

RALPH WALDO EMERSON.

PROTECTING THE FLOWER BEDS

If you have not already put a covering on your perennial flower beds, it would be a good plan to do so at once.

The best mulch for beds is well-rotted stable manure. Next spring, when this is spaded into the ground, it will give new strength and vigor to the plants on account of its rich supply of plant food.

All borders should have a mulching of this manure put on two or three inches thick. On peonies and other plants that do not show above ground all winter, put a mulch about six inches deep.

Bulb beds do not absolutely need a covering, but better plants will result if there is one. This should preferably be of leaves covered with manure to hold them in place.

Care must be taken in the removal of the mulch in the spring. Of course being covered all winter renders the plants much more susceptible to frosts. The covering should be taken off gradually, leaving some protection until all danger from frost is over.

USEFUL HELPS FOR THE KITCHEN

CONTRIBUTED BY M. A. P.

A woman should have all the appliances that will lighten the labor in her kitchen. Many of these things are quite inexpensive and help to make the kitchen work go much more easily and smoothly.

A small whetstone should be the constant companion of the cooking-knives, and one should have the best cutlery their means will allow.

A shelf fastened up on the wall over the kitchen table, at a convenient height for reaching, will save hundreds of steps a day, as the little things that one uses constantly can be kept on this shelf, while the articles placed on the shelf can be protected from dust by a small curtain of some thin material.

The small brushes that can be bought for a trifle are a great help in the kitchen, as they are excellent for washing glassware having uneven surfaces. Then the dirt can be removed much more quickly and effectively from potatoes, turnips, and such vegetables, with a brush than simply washing in water.

The kitchen table, biscuit board and rolling pin can be kept beautifully white by scrubbing with hot suds to which a tablespoonful of borax has been added, then rinsed with boiling water. A little borax put in the water in which dishes are washed and rinsed will help to keep them shining, and the dishwashing will not be so hard on the hands, as the borax softens the water and keeps the skin from becoming rough and tender.

When heating milk for toast, there will be no danger of its sticking to the pan or scorching, if an asbestos mat is put on the stove under the pan. Place such a mat under the pan in which you cook custard or oatmeal, if you do not have a double boiler.

There is nothing better for keeping the hands soft and white than to rub them with a little cornmeal, after washing and drying them. The meal should be rubbed on the hands until it is entirely dry and falls off.

"PATCHES"

It is an excellent thing when making your small boy's trousers, to place in the seat a patch like the goods then being used. When the hole comes, as come it certainly will, the patch is there all ready to be sewed in for good, with no trouble of hunting up some of the same material.

Many mothers try this plan of putting in a patch beforetimes in the knees of the little one's stockings. This not only protects the child's knees but holds the stitches in the stockings closer, thus keeping the hole from stretching to large dimensions.

When cooking starch, drop in a bit of lard. This will keep the starch from sticking.

If you suffer from hiccoughs, try sticking out your tongue at regular intervals for a few minutes. The hiccoughing will cease.

To paper white-washed walls first wash with very strong vinegar, the acid of which causes the lime to become rough. To this rough surface the paper will easily adhere.

Never sweep "dry." It takes twice the time and energy and is not nearly so sanitary, the dust often causing catarrh. On your dark carpets use damp tea leaves and on the light sweep with bits of damp paper thrown about.

CONVENTIONAL COURTESIES

How many times we overhear parts of conversations on the cars, or in the streets; hear people talking about things from the wrong standpoint and seeking to impress their incorrect ideas upon others. How gladly would we set them on the right track, but not having been introduced, we are afraid of being denounced as rude.

Again, our neighbors across the road perchance are rude, rough, uncouth people. We do not care to make them our daily associates, but we hate to see their children growing up in the wrong way. We would like to help these people, but here again we are afraid of being classed as intruders.

Our country sisters are not so apt to hold back with their helpfulness and their ideas as the poor "fearful" town folks. Did they but have the courage, it would be better perhaps to try to do the good and accept the rebuffs as their pay.

The great reformers of the world have been far above conventionalities and have had the courage to shout their convictions so all might hear; have been brave enough to go into the most vicious of families, rescueing them all. It were time we all follow their example.

The number of people in the country who are now transacting their business with out-of-town banks are numbered by tens of thousands. They are proving the simplicity and safety of banking by mail every day.

As for the safety of sending money through the mails, perhaps the best proof is the fact that the tremendous exchanges between banks of different cities, amounting to tens of millions of dollars a day, are handled entirely through the mails without loss.

Banking by mail is fully explained in book K published by the Cleveland Trust Co., Cleveland, O. This strong company pays four per cent interest on deposits of $1.00 or more.

It used to be that when the farmer wanted to talk to his neighbors or get anything from town, he had to neglect his work for anywhere from an hour to a whole day. This is all changed—our modern farmers use the telephone. The marvelous modern science of electricity places the farmer in as close touch with his neighbors and the country and city store, as though he made a special trip to them. Realizing the demand for farm telephones, the Julius Andrae & Sons Co., 134 Second St., Milwaukee, Wis., have made a close study of the problem, and have built up their business very largely on supplying farmers and independent lines with telephone systems and all their accessories. The Andrae Company makes a telephone especially for farmers' use, constructing this instrument in such a manner that it is extremely durable, and not easily put out of order. We would recommend our readers to write to the Andrae Company for the large book on telephones that they are giving away free.

SOME GOOD CANDIES

Here are some fine recipes:

Pinouchi — Boil four cups of dark brown sugar, one-half cup of milk, and a lump of butter the size of a walnut until this mixture hardens in cold water. Remove from the fire and flavor to taste with vanilla. Beat until the candy is creamy. After adding nuts to suit, pour into buttered pans to cool.

Toffee — Heat two cups brown sugar, one-half cup butter and four tablespoons of vinegar slowly. When the mixture begins bubbling, stop stirring and cook until brittle when tried in water. Put three-fourths cup of walnuts in buttered pans and pour the syrup over. Mark into squares when slightly cool.

Uncooked Candy—Take one teaspoonful cream, the white of one or two eggs and stir in confectioner's sugar until a paste thick enough for kneading is formed. Flavor to taste. Knead until quite firm, then roll into small balls and press one English walnut kernel on the top of each. This is also a fine filling for dates. A variety may be made by putting in coloring also.

THE TAKING OF CHRIST OUT OF THE SCHOOLS

For some time past our newspapers have contained the opinions of well-known men concerning the taking of the Bible and all mention of Christ's name out of the curriculum of the public schools of several of our great cities. From the newspapers, one would infer that all the world, except the local Jews and the various school boards, was against this evil procedure. But of course the school boards must have been well backed by influential persons or they could not stand out against the storm of criticism which has met them on every side.

Personally, we cannot understand the reason for this suddenly hostile attitude on the part of the Jews. We have many Jewish friends. We have taught Jewish children in school and never were Christmas poems and stories recited prettier than by these same Jewish children. What is more, their parents came to hear the poems. But Jews in Indianapolis and Jews in Chicago and New York must be of a different sort. Those that are the broader minded, I leave you to judge.

It seems to us that this taking of Christ entirely out of the schools is a deadly blow at life itself. If the spirit of Christ were not abroad in the land today, life would not be worth living. Hearts are bad enough even with that softening influence.

The morals of our large cities are just about at ebb-tide now; why do the school boards wish to make them lower? That is what they are surely doing when they remove the Bible and its precepts from the public schools. Children from the slums, from non-religious homes, will not grow up law-abiding, moral citizens unless they are given the right standard of living. And children from religious homes will not have the respect for the Bible that they would have, were it referred to now and then in school. For the school to a young child is vital and what he learns to respect there, he will respect all his life.

We would like to hear from our readers on this question which means so much to us all. The best articles will be published in a future issue of the paper.

SEND US YOUR IDEAS

Now that UP-TO-DATE is to be a semi-monthly, you will have a little more time to write that article for the Woman's Page. Let that be one of your New Year's resolutions. Don't only resolve to write, but write. Address all articles to Editor "Home on the Farm," UP-TO-DATE FARMING.

LONG TIME SUBSCRIPTIONS

The subscription price of UP-TO-DATE FARMING is $1.00 a year. But we will send it two (2) years for $1.50; five (5) years for $3.00; or for life for $5.00, and give a Third Power book free in either case *if it is requested.* There is only one exception to this offer and we require those in clubs of five at 60 cents each to send 10 cents extra for mailing the book. Those who read this paper find that it helps them more in their business than any other paper. This copy is a fair sample. Use the below blank:

SUBSCRIPTION BLANK

To Up-to-Date Farming, 227 W. Washington St., Indianapolis, Ind.:

You will please send your paper ..... years to the following address (or for life) and I enclose $..... in payment. Shall Third Power book be sent? .....

NAME .....

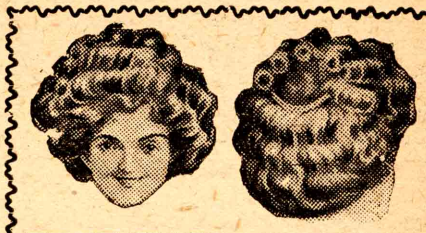
Band and musical instruments of all kinds, from a mouth-harp to a piano, illustrated and described in the large new Wulschner-Stewart Music Co. catalog. Send for edition H. Address 133 N. Pennsylvania St., Indianapolis.

CHANGED THEIR NAME

It is not very often that a manufacturing concern finds it necessary to change its name for the reason that caused the Pinkerton Mfg. Co. to change theirs. This company are the well-known makers of the Queen Incubators and Brooders, and it seems that the exceptional merit has made such a deep impression upon their customers, that when they write to the company, the greater percentage address their letters "Queen Incubator Co." This suggested to the company the advisability of changing the name. We suggest that readers who are interested in poultry and incubators send for their latest catalog. Address Queen Incubator Co., Box 19, Lincoln, Neb.



FREE HAIR GROWER

To Prove It, I Send a Trial Package Free by Mail.

Foso grows hair, stops hair falling out, removes dandruff; insures a new growth of eyebrows and eyelashes, and changes gray or faded hair to its natural color.

Every lamp warranted. Write our nearest agency for descriptive circular if your dealer cannot supply the Perfection Oil Heater or Rayo Lamp.

Standard Oil Company

(Incorporated)

SPECIAL SOCIETY PAGE

THE FARMERS' SOCIETY OF EQUITY

Its first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the Society developes.

Send all reports to The Farmers' Society of Equity, Indianapolis, Ind.

Officers elected by the A. S. of E. of N. A. convention. They will direct The Farmers' Society of Equity:

President—W. H. Mitchell, Hutchinson, Kansas.

Vice-President—J. A. Everitt, Indianapolis, Ind.

Secretary and Treasurer—I. C. Rous, Indianapolis, Ind.

Directors—President and Vice-President, ex officio, and W. A. Harding, Winnebago, Minn.; Z. S. Morgan, Bozeman, Mont.; C. W. Peckham, Haven, Kan.; U. S. Holdridge, Hersey, Mich.

DON'T GIVE UP

If you've tried and have not won,
Never stop for crying;
All that's great and good is done
Just by patient trying.

THE PROGRAM FOR 1908

To get one million members for the Farmers Society of Equity; to pledge as many of the 1908 crops as possible; to have enough granaries, elevators and warehouses built to control enough crops to compel the profitable prices. To accomplish these things all our energies will be directed.

The Farmers Society of Equity will have something to offer the members in the way of development the coming year, which will be appreciated.

We intend to get busy and make this the banner year, so far as organization work is concerned.

It is possible to increase the membership to a million in 1908—this is what we shall aim for.

Plans are almost completed now for the most aggressive campaign that Equity has ever known.

These plans contemplate making the work of organizers much more permanent than in the past, and include provisions for sustaining or keeping up local unions alredy organized—a feature that has been neglected heretofore.

With this amply provided for and the organization of new unions in every county progressing, with many live, wide-awake and up-to-date suggestions for local benefits to be brought about by local organizations, and with a large force of competent, well-paid workers in the field, there is no question of ultimate success.

Then, with a practically completed organization, strong enough to cope with every problem, and with every class of farm crops well represented, we shall be able to undertake the details for marketing as outlined in the original plan of the Society.

How much more such a plan as this appeals to the members, than anything that was offered or provided for by the so-called majority delegates to the late national convention.

Instead of becoming hopelessly involved in great distributing corporations for the sole benefit of consumers—especially when we have sufficient strength to carry it through—instead of instituting exchanges, at this time, which have not and cannot improve conditions, let us proceeed to lay a permanent foundation upon which to complete a structure that take care of all the details necessary to perfect and establish industrial freedom for the greatest class on earth.

Such is the plan of the Farmers Society of Equity.

Has your local union held a meeting since the late national convention?

Urge your local officers to call a meeting at once and instruct them to forward dues to the Farmers Society of Equity.

Every member and local union of the country should go on record as favoring UP-TO-DATE FARMING for the official paper. Hundreds of them have already done this and practically all others will. Let's get busy.

Plans are about completed for an aggressive campaign of organization. These plans provide for assistance to local unions that may not be in a healthy and growing condition. Also for establishing new locals in all sections of the country.

Are you an organizer with an established record in Equity work? If so we have something good in store for you and we want to hear from you at once. Address Dept. of Organization, Farmers Society of Equity, Indianapolis, Ind.

We are leaving all the troubles behind us now, in the great effort for forward movement in keeping with the true principles of Equity. We consider the interests of the farmer more important than the interests of the consumers, at this critical time, and our efforts are directed along these lines.

Write it Farmers Society of Equity, or for short, F. S. of E.

Many expressions are coming like this: "We like the new name better than the old and I hope we will always retain it."

Mr. Stelle thinks that we can improve on the provision regarding representation in state and national conventions, which is as follows: A delegate must be a producer of $500 worth or more of crops a year and may be required to take an oath before being seated, etc." He recommends that the specific sum be omitted and that he may be required to make oath that he is a bonafide farmer, etc. All these matters can be decided at the next convention.

The dues are $1.20 a year, payable in the case of old members, the first of the year.

The fee to join the F. S. of E. is $2.00, payable at the time of joining and this pays one full year in advance **and not to the end of the year** as under the old plan.

UP-TO-DATE FARMING wants the dates of meetings. Organizers and unions take particular notice. Also if you propose to build a warehouse or elevator let us know. This paper will help you.

What would you do if a neighbor would slander you or spread false reports about your family? What should you do with farm papers that oppose your Society and do all they can to prevent its development?. Let each farmer answer as becomes him in view of the fact that the plan of the Farmers' Society of Equity is the only one ever given to farmers to gain their industrial independence.

Many serious things have an amusing side. For instance a member of the Seminway (Ky.) Local Union writes that the A. S. of E. headquarters are justifying the raise in membership fee and dues because of a debt of $12,000 to Mr. Everitt. This reminds us of the saying: "He that does amiss never lacks excuses." Thinking such a report may have been widely circulated, we will say that the Society does not owe Mr. Everitt such a large sum, also they did not have payment of the debt in mind when recommending a raise in the membership fees and dues. But since the members are protesting against their action they try to make Mr. E. the scape goat as they have tried in a hundred other cases. Can they fool any of the people all of the time?

"Men of folly are men of sin."

Men who insinuate rather than make direct statements are like the people who don't look you in the eye when talking. You know how to treat such.

Members of the A. S. of E. should be slow to accept the advise sent out by a few secretaries of State unions. These secretaries are still badly deceived or they are in the cnspiracy. We are led to make this observation on receiving a circular letter by W. I. Lothian, secretary of South Dakota State union, and addressed to the local unions of the State.

MICHIGAN STATE MEETING

We open our forms to report that the Michigan State Union in session at Grand Rapids December 18th and 19th refused to recognize the present national headquarters of the A. S. of E. and will not support it. They continue to recognize UP-TO-DATE FARMING as their official paper. The old fees and dues are to prevail, viz., $2.00 the fee and $1.20 the annual dues. Complete report will appear in next issue.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION. *We organized our local union about the time of the national convention and we were promised two official papers—Up-to-Date Farming and our State paper—but we have not received either. We want to know why? When we paid $2.00 each we expected to get the papers for one year, but lately we received notice to pay $1.50 dues at once.—H. M. Bates, Secretary, Wyocena, Wis.*

ANSWER. Your name has not been sent to the publisher of UP-TO-DATE FARMING. There is no lawful reason why, but the people in charge of the A. S. of E. doesn't regard law or equity. Demand return of your money or the goods you bought, is our advice. We will be pleased to send this paper to each member on receipt of 50 cents each from the Society.

Q. *This union was organized July 20th, 1907. At our last meeting the most important subject discussed was whether we would stand by Mr. Everitt and Up-to-Date Farming, or go with the gang of rebels. I am happy to report that our union passed resolutions unanimously that we stand by you and your paper. All the members want you to send Up-to-Date until next July as was promised to us when we joined. We all like your paper and it certainly would be hard to beat.—O. M. Shipley, Secre-tary, Hampden (N. D.) L. U. No. 4815.*

A. We have received many letters that brought up the same question about the date of expiration of subscriptions, so subscribers will understand this matter, I will explain as follows:

The arrangement made by the board of directors with the publisher for the year between the 1906 and the 1907 conventions was 50 cents for each annual subscription. This was done immediately following the annual convention at East St. Louis. That it was then intended to give each member a year's subscription from his membership fee is evident, because the balance of the money was definitely apportioned to other funds. But last March a majority of the board ordered that UP-TO-DATE should receive only 40 cents for the second quarter, 30 cents for the third quarter and 20 cents for the fourth quarter. All subscriptions were, therefore, *paid to the end of the year only.*

I am aware that many members did not understand this and they paid their money expecting a year's subscription.

Now I want to be fair and it is one of my mottos in business to "do more than fair dealings demand." I received payment for subscriptions only to the *end* of the year, and I could not prevent the majority of the board of directors making the ruling. Neither were the organizers, who may have promised the paper a year, or failed to explain about the expiration date, my agents. Yet I will, whenever specifically requested to do so hereafter, extend the date of expiration to equal a year.

Let all subscribers understand (1) that I have not extended the time on any requests to date. (2) But I will on all such requests that come in the future and since the subscriber understands the case exactly. (3) Please remeber, however, that to extend the subscription would not effect the dues. This is a matter for the Society and it should be clear that the publisher cannot suspend them or any part of them. (4) To extend the date of expiration of some papers now will lead to complications and as, in the future, the fee will pay for a full year from date of joining, I do think the dates should not be changed but all present members start in the first of the year for a fair deal all around.

Q. (1) *To whom shall membership fees and dues be sent for the Farmers' Society of Equity?* (2) *Since we joined the A. S. of E. will it be proper to send the 1907 dues to the F. S. of E.?—O. A. Naplin, Scanlon, Minn.*

A. (1) Full instructions were given in Dec. 8th paper. Send to I. C. Rous, Secretary Farmers' Society of Equity, Indianapolis, Ind. (2) Also answered in same paper, but will say yes. You are not obliged to follow the other people in uncertain schemes. In other words you have a right to decide where you will send your money.

Q. *Where can I buy a pet fox?—J. T. Cotton, Paris Ark.*

A. Write, Hunter-Trader-Trapper, Box 239, Columbus, O.

Q. *Must members of the A. S. of E., to become members of the F. S. of E., pay the initiation fee $2.00.—Frank York, Secretary, Adams County Union, Strong, Prairie, Wis.*

A. No. They will be expected to pay the dues only. The dues for the Farmers Society of Equity are $1.20, the same as formerly for the A. S .of E. The dues are payable the first of the year. Members joining the F. S. of E. will get credit for a full year from date of joining.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper two or more times. Also send us names to whom we will send sample copies. We can help you very much. Use this paper. Forms close ten days before date of issue.

LENAWEE (MICH.) COUNTY UNION will meet at Cedar, Mich., January 4, 1908, at 10 A. M. Each local in the county is entitled to one delegate from each ten members and one at large. Credentials should be delivered to Frank Zerts, secretary, Provemont, Mich. Notice is hereby given to all locals in the county to hold a meeting to select delegates.

JOHN BELANGER, President.

[In local union meetings held from Dec. 22 to 31, the special business referred to elsewhere in this paper can be attended to at the same time.—Ed.]

BARRON COUNTY (WIS.) UNION NO. 86 will meet at Barron on Friday, January 10, 1908, at 10 A. M. Object to elect officers for the ensuing year and to decide the policy of the A. S. of E. in this county. Every local union should send a full delegation.

MACOUPIN COUNTY (ILL.) UNION will meet in Carlinville January 18, 1908, for the purpose of electing officers. A full representation from all locals in the county is desired, as important business will come before this meeting.—O. P. Smith, R. R. 3, Box 35, Carlinville.

R. R. Sherod, Keosauqua, Ia., will hold a meeting at the South Lebanon schoolhouse January 15, 1908. All farmers in the community are urged to attend and hear Mr. Sherod explain why prices of farm products have been better than before and how long the good prices will continue.

PURDUE UNIVERSITY, Lafayyette, Ind., first annual fruit show, Jan. 13 to18, 1908. Cash premiums to the amount of $300 are offered for exhibits of fruit, and in addition several special premiums have been secured. Open to every fruit grower in Indiana. For full information mention UP-TO-DATE FARMING and address C. C. Woodbury, Experiment Station, Lafayette, Indiana.

SHERMAN IN KANSAS. Hon. H. B. Sherman is in Kansas now and open for engagements where large audiences will come out to hear him. A man of Mr. Sherman's ability cannot afford to touch the low spots, but get up a rousing mass meeting and send for him. He has frequently held 5,000 people for two hours while he expounded the gospel of Equity to bring salvation to the farmers. Address him H. B. Sherman, care C. W. Peckham, Haven, Kansas.

BUTLER COUNTY (Ky.) COUNTY UNION will meet the first Saturday in January (Jan. 4) at the court house in Morgantown at 10 a. m. All locals in the county are urged to send delegates. officers will be elected for the ensuing year. —W. H. Kitchen, president, Dunbar, Ky.

FRANKLIN COUNTY (Mo.) COUNTY UNION will meet at Spring Bluff, Jan. 4, at 10 a. m. All locals in the county are urged to send delegates. Spred the news. Mr. Brown, delegate to the national convention, will report.—James B. Hulsey, president, Elmont, Mo.

TWELFTH ANNUAL POULTRY SHOW of the National Fanciers and Breeders Association will be held January 22 to 29, at Chicago. Liberal cash prizes, and general prizes.—Fred L. Kimmey, secretary, 105 S. Clinton St. Chicago.

NELSON LOCAL UNION NO. 2069 will meet Tuesday, Jan. 7, at 8 o'clock at its usual place of meeting. Purpose, election of officers for the next year and transaction of other business.—John A. Sjognist, Sec., St. James, Minn.

CONSPIRACY AND REBELLION—No. 5

Some Inside History of a Conspiracy Againt the A. S, of E. and the Influences that Established It.

By J. A. Everitt

"I've always noticed great success
Is mixed with troubles more or less;
And its the man who does the best
Who gets more kicks than all the rest.
James Whitcomb Riley

The Story of the Conspiracy and Rebellion began in November 15th issue. Back numbers can be obtained at 5 cents each as long as supply lasts. Read carefully.

Instead of continuing this story by printing the correspondence between headquarters and their co-conspirators over the country, I must digress to give attention to matters of very recent occurrence as contained in the following:

In justice to one of the principles in the article that follows, I will quote him, Mr. Barnett, as follows:

"Mr. Everitt I begin to see that you have been greatly wronged. I want to say that the defamatory literature sent out from headquarters was sent without my knowledge or approval, also that I am your friend and you can depend on me standing by you."

This statement was made to the writer Thursday evening, December 19th, '07, and at another place, practically the same statement was made to another person.

INFERNAL INTELLECT

The New Headquarters of The A. S. of Prostituted to the Consummation of the Conspiracy Begun by the Old. Evidence of Falsity Submitted—Charges Refuted

God shall send them strong delusions that they should believe a lie; that they all might be condemned who believe not the truth, but had pleasure in unrighteousness.
2 Thes. 2, 11, 12.

Rev. Dr. Bellows once said: "There is probably no place known in the world where could be found a greater gathering of INFERNAL INTELLECT than in Washington, D. C."

If Dr. Bellows had been at a certain spot in the city of Indianapolis, Ind., for twelve months past and if he could have known all the activity that centered at that spot, he might have extended his observation and said "and for a small spot there is no place in the country where centered more INFERNAL INTELLECT than at the headquarters of the American Society of Equiety."

"Equity." What a misnomer this word has come to be! We have written about "BROTHERLY LOVE," "GOOD WILL TO MEN" and "PEACE ON EARTH" as the natural result of the establishment of the Society. We may well ask, where are we drifting to when the only movement the country ever knew to establish justice and equity amongst all classes is debased to the level of the present headquarters? Is there no longer any "brotherly love" amongst humanity? Is "good will to men" as proclaimed by the Master turned entirely to hate? Shall we never hope for universal "peace on earth?"

I am led to make these observations because of the recent false reports and charges circulated by the headquarters of the American Society of Equity reflecting against my character. I have promised members of the Society that all charges against me would be answered in due time. The time has arrived. At the convention I could not learn what the charges were. Since then I have been gathering them from various sources, until now, I probably have the complete list that was used to poison the minds of the delegates as they were herded at the Lorraine Hotel during the convention. If the charges had been made openly at that time and if I would have been given an opportunity to refute them then, it could have been very easily done and the results might have been very different. Some may say: "Why were you not at the meeting Friday night, where Tubbs, Speer, Mulholland, Drayton, Nelson, Crawley, et al. attacked you?" I will say, as I have said before, "I was then engaged in the second convention to save the Society and my friends would not permit me to go." Besides, I was given to understand that these matters would not be brought up then. Also the convention was practically over then, the harm had been done and if I would have appeared, the program would have been changed. Also the story of "Conspiracy and Rebellion could not have been told that evening as it is being told through this paper.

About December 1, 1907, headquarters sent out a circular over the signatures of C. M. Barnett, national president, and O. D. Pauley, national secretary-treasurer, to "The Agricultural Press of the United States." The circular was headed, *"A Circular Letter Report Issued by Authority and With the Approval of the National Officers of the American Society of Equity."* Above the officers signatures, in order to give it greater weight and make it appear unquestionably authentic, was printed "THE COMMITTEE OF ONE HUNDRED" and *"Approved and Issued by Authority."*

Besides being sent to all farm papers of the country this circular was sent to all the delegates to the convention and to many other people. In the circular referred to was the following:

CHARGE 1. MEMBERSHIP: It was charged at the convention that I was not a member of the Society and never was. I replied that I was a member and always have been. I, and all the other incorporators, paid our membership fees and my certificate was framed and hung in my office until the summer of 1907, when Secretary Tubbs asked me for it to hang in the reception room of the A. S. of E. headquarters. Since then I have not seen it. Did he put it away to destroy evidence? My last dues were paid on May 14, 1907, as shown by the accompanying facsimile and as proven by the accompanying affidavit:

State of Indiana, Marion County, ss:

Personally appeared before me Mr. I. C. Rous, who on his oath says, that on the fourteenth day of May, 1907, he was treasurer of the American Society of Equity of North America and that on that day he did, as an officer of said Society, issue to J. A. Everitt, president of such Society, a receipt for 1907 dues paid on that day, and that affiant did place such dues properly to the credit of the Society.

I. C. Rous.

Subscribed and sworn to this 9th day of December, 1907.
(Seal) Josh E. Florea, Notary Public.
My commission expires March 16, 1911.

When I was confronted with this charge at the convention I replied as follows:

The charge was made that I am not a member of the Society.. I carry a membership card date of May 14th, showing my dues paid until December 31, 1907. For verification of this see your ex-treasurer, I. C. Rous, who issued the card and placed the fee (money) to the Society's account. Why no record at headquarters was kept, I know not, and thousands of others are unable to explain why headquarters has not a correct account of their membership. If the majority of this convention have a drop of Equity blood coursing through their veins, they would make me an honorary member during my life.

In the circular was the following:

It was shown that while under the law he (Mr. Everitt) might be recognized in court as a member of the Society at the time of, and by reason of being an incorporator of the same, yet he has never formally joined the Society nor paid any dues; that if by the construction of the court he had ever been a member, he had long since ceased to be by reason of non-payment of dues. That he has not been a member since 1903.

While my enemies were thus falsely representing me the Society owed me a large sum of money. They knew that I was carrying 30,000 of their members on the official paper subscription list for which I had received no money for a year; that I had served them three years as president for nothing and two years at a nominal salary of $1,000 a year, which is not all paid to this day. Is this Equity? Is this gratitude or does not gratitude spring from the human beast any more?

CHARGE 2. GRAFT: In the same circular is this:

It is shown by his own handwriting that he (Mr. Everitt) instructed the clerks in the office of the national secretary that in the division of the moneys received from certain new membership fees, his publication should receive fifty cents, himself one dollar and twenty-five cents, and the national union twenty-five cents, a clear steal of $1.25 for himself.

In publishing Up-to-Date Farming I sent out a number of circulars at my own expense. When doing this I always aimed to secure members to the Society rather than only subscribers to the paper. As the Society got the paper for members at one-half the subscription price (50 cents instead of $1.00), I could not afford such expense except I would receive a larger part of the receipts. Therefore it was agreed with Mr. Tubbs that the organizer's fee should go to me to help to defray the expense. This was only in unorganized States, and was satisfactory to Mr. Tubbs until the first meeting of the board of directors in March, when, as I have since learned, Tubbs represented that I alone made this arrangement. This is as false as hundreds of others of his representations.

But let us take a business-like view of the matter. The subscription price of Up-to-Date Farming was $1.00 The membership fee was $2.00, including the paper. I paid all the expense of securing the members and when the order came in the division was made a sfollows:

To the Society	$0.50
To the official paper	.50
To the organizer (myself in this case)	1.00
Total	2.00

All the money to the Society from these campaigns was clear gain, as is evident.

But the board of directors changed this at its meetings in March. Then the illustration was like this:

To the Society	$1.50
To the official paper	.50

Or, the Society realized $1.50 from each member without an effort or the investment of a cent, while they paid me, not the full price of the subscription that I

Don't Pay Two Prices for your Gasoline Engine

Buy Direct from the Factory and Save from $25.00 to $80.00

Be your own dealer, and keep the profit in your own pocket.
Select your engine and try it thirty days free. Remember our engines are the best in the world and are sold under our binding guarantee.

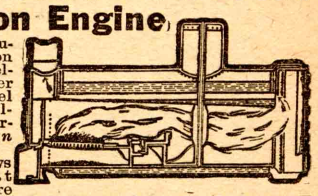
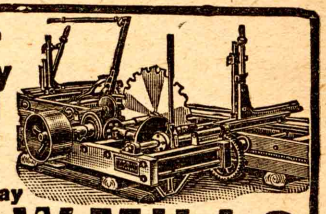
The Caldwell & Hallowell Mfg. Co. Waterloo, Iowa

The Most Powerful Traction Engine



The "New Huber" Traction Engine develops *most* power with *least* fuel because its boiler is the perfected "*return flue*" type.
The cut shows you how heat from the fire passes *forward* in a large fire flue through the water and then comes through tubes to the smokestack in the rear. Thus, the heat goes through the water *twice*, giving *double* heating capacity. There are many other exclusive features about the "New Huber." We tell you about all of them in our new "School for Threshermen", which we send FREE on request.
No matter who you are—nor where you are—nor how you wish to use a Traction Engine—before making up your mind which one to get, you should send for this new book which we mail to you FREE and *postpaid*. Write for it today.
THE HUBER MFG. CO., Dept. M, Marion, Ohio

Our Pony Mill 2,000 To 6,000 Feet a Day



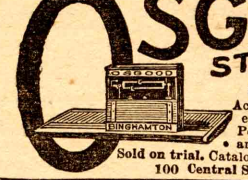
SAW MILLS

From this size up to largest, standard mills with variable friction feed. Favorites in every lumber district. Cut most with least power, easy to handle. Edgers, Trimmers, Lath Mills, Shingle Mills. Cut off and Rip Saws, etc. Send for free catalog.
American Saw Mill Mch'y Co.,
136 Hope St., Hackettstown, N. J.,
637 Engineering Bldg., New York City.

Get the FREE BOOK "EASY DIGGING" today and learn about the wonderful fast-digging Iwan Post Auger that bores right into the **hardest clay** or gumbo. Works equally well in dry or wet soil. Easiest Auger to unload. Saves cost in **two** days. Makes post setting a snap.

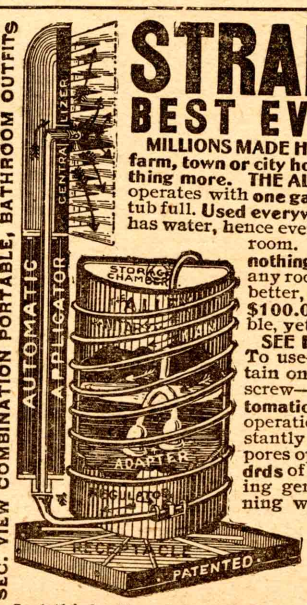
THE IWAN AUGER
is made on the only successful, scientific principle. Has sharp double blades of hardest steel. Digs twice as fast as any other Auger. Money back if it doesn't "make good." Write **this very day** for "Easy Digging" to
IWAN BROS., Dept. 27, STREATOR, ILL.

OSGOOD STANDARD SCALES



Accurate, simply constructed, durable. All kinds: Portable, Pit, Pitless; Steel and Cement construction.
Sold on trial. Catalog free. Osgood Scale Co., 100 Central St., Binghamton, N. Y.

STRANGE INVENTION! NEW PECULIAR APPARATUS BEST EVER HAPPENED! CAUSING GREAT EXCITEMENT



MILLIONS MADE HAPPY. Wonderful but true, **no more farm, town or city homes without a bathroom and something more. THE ALLEN PORTABLE BATH APPARATUS** operates with **one gallon of water,** yet does more than a tub full. **Used everywhere that water exists.** Everybody has water, hence everybody can now have their own bathroom. **Cost but $3.75** ready to use—**cost nothing to operate.** Makes a bathroom of any room at home, or when traveling—even better, **does more than bathrooms costing $100.00.** Sounds strange, even impossible, yet its being done.

SEE HOW SIMPLE, EASY, CONVENIENT: To use—place Metallic non-corrosive fountain on wall or shelf—fill with water—turn screw—**that's all**—thereafter **it works automatically.** A bath, **hot or cold,** in one operation, **5 minutes' time,** your skin constantly flushed with **clear running water,** pores opened, cleansed, invigorated by **hundreds** of little soft **self-cleansing teeth** working gently, thoroughly. Only clear, running water touches the body—a delightful, tingling, sparkling spray that refreshes while it cleanses.

CLEANSING, FRICTION, MASSAGE, SHOWER BATH ALL IN ONE—same time. What a pleasure—Could anything be more perfect? Just think—**No tubs** to clean, **bowls** or **buckets** to fill—**No wash rags or sponges**—No dirt, splashing or muss. No plumbing, tools, valves—not even a screw to set. Move it about at will. Simple, durable, handsome, sanitary. Saves time, expense, labor, space. The ideal bathroom for town and country homes, travelers, roomers. No experiment.

USED AND PRAISED BY THOUSANDS.
INSURES CLEANLINESS WITHOUT DRUDGERY, inconvenience, annoyance—promotes health, beauty, happiness, sound sleep—prevents colds, La Grippe, contagious and other diseases.
C. R. MARTIN, PA., writes: **"Outfit is a marvel** of effectiveness, convenience, simplicity, Certainly will create a sensation."
H. H. CRAFT, KANS., writes: **"A God-send** to any family."
W. W. DRURY, O., writes: "Exceeded my expectations. Mechanically perfect, attractive. Can bathe in **one-fourth the time** of ordinary methods."
Guaranteed by an old, reliable house, capitalized for $50,000.00. Price complete, ready to use, only $3.75 and up. Sent to any address. Order now,—you'll be satisfied. Send card anyhow for full description, valuable book, catalogue, testimonials—ALL FREE.

BIG MONEY FOR AGENTS SALESMEN, MANAGERS—at home or traveling, all or spare time. **Here's proof: M. G. Stoneman, Mont.,** writes: "My sales run **over $1200 per month.** Best seller on market. **Enclose order for $6187.00." W. A. Macoubrie, Kans.,** writes: **"Made $50.00 in 4 hours."** Hundreds making big money. You can, its easy. This invention new. Millions everywhere eager to buy. **Write to day for EXCLUSIVE Agency proposition, stories of success. All free.**
THE ALLEN MFG. CO., 1250 ALLEN BLDG., TOLEDO, OHIO

had secured, $1.00, but one-half the price, 50 cents.

Was this fair and equitable? By this act they defrauded me out of hundreds of dollars from circulars that I had sent out at my own expense. They knew it was not an equitable deal, but they did not care for that. *Anything to kill Up-to-Date Farming* was the thought of the schemers and now they call it A CLEAR STEAL. I call on any reader, would you require your board of directors to force me into a deal of this kind? It is a similar case to the wheat campaign contract that they made and then went into another room and secretly agreed to repudiate it, as explained in November 22nd issue, "Conspiracy and Rebellion."

If this was a clear steal, I will ask them what they call it to receive money from thousands of members who expected to get UP-TO-DATE FARMING as the official paper and got nothing but a promise of a sheet that they don't want; or to retain money for hundreds of renewals to UP-TO-DATE FARMING and which is specifically provided in the by-laws of the Society, shall be paid to UP-TO-DATE FARMING? I ask members of the Society what they think of such actions? I might also ask them what they are going to do about it? I cannot take any action, but the people who paid the money can.

Of course, under the conditions imposed by the directors I was forced to discontinue the effort to get members, because, if I got a member, I received one-half the subscription price and was compelled to give the Society $1.50. But I built the future campaigns for subscriptions, and when I got a subscriber I could keep the full amount, $1.00. In this way they killed the goose that was laying the golden eggs, just as they killed the wheat campaign later.

CHARGE 3. SEED WHEAT. In the same circular is the following:

It was shown that he (Mr. Everitt) had advertised in his paper and through other papers a certain Columbia seed wheat and that to fill his orders he bought wheat by the carload common No. 2 mixed wheat out of a grain elevator at Fort Branch, Ind., at 71 cents a bushel and had the same shipped to Vincennes, Ind., where it was tagged and reshipped as Columbia seed wheat. The evidence on this point is so clear and deliberately fraudulent that only the statutes of limitation interpose to save him from prosecution.

The whole story above is the rankest kind of falsehood. If any person ever delivered me, or the company I represented, wheat that was not the kind I represented it to be, he perpetrated a fraud on us. I challenge Chas. A. Speer, who is the author of this story and whose home is at Fort Branch, to produce an order from me or J. A. Everitt, seedsman, corporation, to the owner of the elevator at Fort Branch for "Common No. 2 Wheat," or an order for any kind or grade of wheat other than the kind and grade we represented it to be when we sold it to any grower or handler. The fact is, I or the corporation I was the head of, never bought a carload of wheat at Fort Branch, Ind.

But this matter admits of explanation. The year 1904, when this is supposed to have occurred, the wheat crop in central Indiana was almost a failure, while the crop was good in southern Indiana. The New Columbia wheat was originated at Allendale, Illinois, by E. K. Adams, and I have bought a great many carloads of the variety from him and he will, no doubt, be pleased to testify regarding the care and caution I exercised in buying from him. I have not heard from Mr. Adams for three or four years, but I still refer any interested person to him.

Naturally the growth of an excellent variety of wheat, as good as the New Columbia, spread over the section of country where originated and this variety was grown extensively in Gibson county, Indiana, in 1904, where Fort Branch is.

Wm. H. Small & Co. are in business in Evansville, Ind. This firm is a large handler of grain and seeds. We had dealt with them for many years and we knew they handled much of the wheat grown in southern Indiana and that they had their agents all through this section. Naturally we would turn to them to buy and ship to us this variety of wheat of which our trade demanded large quantities. We contracted with them for New Columbia wheat and also for some other varieties and they did ship several carloads to us in July, August and September, 1904. Where the wheat was bought or of whom I do not know. We had confidence in the integrity of the house and have not, to the best of my knowledge, had any complaint about the quality of the wheat except the complaint by Chas. A. Speer.

In view of this explanation the reader can judge how unprincipled are the people who conceived the conspiracy to ruin me and my paper, so I could not expose them. But they will fail. Their motive is so evident and their procedure so clumsy that they simply bring down on their own heads the condemnation of even those whom they for a time, succeeded in deceiving, and who they claimed as their friends and co-workers.

And this is the truth about what your national president and secretary tell you *is so clear and deliberately fraudulent that only the statutes of limitation interpose to save him from prosecution.* If it is possible for me to waive the limitation, I will do it and give these human hyenas a free hand to prosecute. These people may soon wish they could have the shield of limitation to protect them.

CHARGE 4. ALFALFA CLOVER: My name was on a bulletin issued by the Department of Agriculture with more than a dozen others for having sold adulterated aifalfa clover. This is seed that is not grown in Indiana. I bought my supplies and was ignorant of any adulteration and it could not be known until it grew. Practically every seedman's name has been on these bulletins, also the same occurs with wholesale grocers, druggists, etc. Only a fool would attempt to exploit a mistake like this that is liable to occur in any well-regulated business house.

CHARGE 5. THE FIFTY YEAR CONTRACT. This has been explained several times and I need not refer to it here. In December 8th issue I said I would not surrender the contract to the convention, but will always leave it to the members.

CHARGE 6. MISMANAGEMENT. I have been charged with mismanagement of the Society resulting in A PAINFUL LACK OF FUNDS when the convention met, and the present officers still charge that *my mismanagement has resulted in a lack of money to issue their official paper, etc.* How much justice there is in such charges you can judge after reading the following:

The board of directors at the March meeting passed the following:

The National Secretary shall have charge of the national office and perform the duties prescribed by the constitution and by-laws and in addition he shall have charge of the Consumers' Department.

The Director of Organization shall have full charge of his department in accordance with the constitution.

The constitution says:

A Director of Organization . . . shall take complete charge of the general work of organization outside of organized States, and co-operate with the State officials in organized States. He shall plan the work of organization and provide the necessary force of general field and local organizers, attend to the correspondence in connection with his branch of the work and be the central head of this department, but subject to the Board of Directors.

I ask, what management was left for me? In fact I had none except the wheat campaign, which was reluctantly given to me, and was thrown down by the conspirators as soon as it showed success. But this campaign of about eight weeks is the only creditable thing the Society can point to between the two annual conventions of 1906 and 1907.

After the meeting of the board in July I again earnestly tried to help conduct a campaign to organize the bean and potato growers and to pledge their crops. Every advance of this kind was repelled. Following are extracts from a letter written to me by Speer, director of organization:

(A) *Mr. Mulholland has been in charge of a potato campaign for some time. . . . If you have any additional suggestions to make in regard to a potato campaign, Mr. Mulholland will, no doubt, be pleased to receive them. . . . I am getting a number of men interested in the bean campaign in Michigan simply by getting some of the local papers to publish a little article which I sent them. I will be glad to receive any suggestions from you in regard to anything that may be done to get the organizers more fully enlisted in this camptign.. . . .*

Is there any doubt about who was in authority? They would only accept "suggestions" from me, without any intention of using them.

Also the following from Secretary Tubbs under date of July 10:

MR. J. A. EVERITT:

(B) *I received this morning a letter from you giving certain orders and instructions as to what may and what may not be done, etc. Similar communications from you to those employed in this office have been referred to me in the past, but I have given them no attention. I considered that you had no jurisdiction in the matter. This letter is to inform you that, by action of the national Board of Directors the Secretary was given charge of the work at the national office, hence any communications relating to the work or its conduct should be addressed to the Secretary.*

In another communication from Secretary Tubbs to me August 24th, he says:

Mr. J. A. Everitt:

(C) *It is wholly within your right to suggest, recommend, advise, plan and assist, in fact it is your duty to do so in every possible manner, but you have no right to insist that any of your recommendations be put into effect. Other people's duties are specifically defined and they, not you, are accountable for results, hence they must determine what agencies, instrumentalities, methods and assistants are best suited to carry out their own plans and ideas. . . . At each meeting the directors empowered me to do certain things and officially recognized me as in charge of the national headquarters. . .*

The constitution says under "Duties of Officers":

The president shall have general supervision of the work of theSociety and may perform any other acts and duties that properly devolve upon an executive officer.

I may be censured for not asserting my authority. But how could I when the majority of the board of directors were opposed to me and they had cast our constitution and by-laws aside. No provision had been made to call a national convention and the only other recourse would have been to the courts. This step I did not want to take.

I have been charged with *being out of acocrd with other officers and some of the directors.* This is true. If I would have agreed to go with them on their wild-cat schemes and helped them to raid the treasury, I would have been in accord with them. Do my critics say that I should have done this? In short, if a person stands true to his principles and for the protection of those he represents, is he to be condemned? Must a person turn traitor to win commendations?

CHARGE 7. ARRESTS. In the circular refered to, by Barnett and Pauley, is the following:

(1) *It was shown for a period of more than twenty years the Postoffice Department has had Mr. Everitt under surveillance for attempts to use the United States mail for fraudulent purposes and that he had been arrested therefor;* (2). *that he was formerly in the seed business in Pennsylvania and was arrested there;* (3) *that he was practically driven from said State for said crookedness, and* (4) *that when he came to Indianapolis the postal authorities warned the office here to be on the watch for him and* (5) *that he has been and is still under surveilance, and* (6) *that he has also been arrested here for violation of the postal laws.*

The above is a terrible indictment. If I am guilty, I will never ask or expect the confidence of mankind. If I am falsely accused, all mankind owes a debt to me, which is to see that I am vindicated. Vindication will come through contempt to those who may be guilty of this crime of false accusation, if it is false, equal to the contempt that I would expect to be heaped on me if I am guilty, as charged.

I admit that the best place to try a case of this kind is in the courts and I will take it there. But no self-respecting person can afford to let such charges go unanswered or live under the odium of them.

I am told that some members and local unions that had already expressed themselves in favor of UP-TO-DATE FARMING as the official paper, and expressed their confidence in me, have since recinded their action. I don't know if this is true but such action would not be surprising. The charges are so grave that, it would appear that no person would make them without full knowledge of the facts, and that they were true. The circular was so carefully drawn and apparently so completely supported that the reader would not be a normal person if he did not credit the statements "by authority and with the approval of the national officers of the American Society of Equity I quote this from the circular; is signed "The Committtee of One Hundred," above the signatures of "C. M. Barnett, National President," and "Attest: O. D. Pauley, National Sec.-Treas.;" and then it says again, at the end, "Approved and Issued by Authority."

Understand, this circular was sent to all farm papers, to all the delegates to the recent convention and perhaps to all local, county and State unions. The plan was to give it as wide distribution as possible. The desire was to put the contents before every farmer in the United States and brand me a thief, a committer of frauds and a violator of the laws of the country. Notwithstanding all this, when the principals were confronted with the possible consequences of this hellish work, one of them disclaims all knowledge of it or responsibility for it.

It was not intended that I should hear these charges, consequently I would not have an opportunity to reply to them. Even my friends would hesitate, if not refuse, to send them to me volutarily. But I heard that such a circular was issued and I wrote to a few people to send them to me when they complied.

(1) "It was shown." Where was it shown, or proven? Has there been any evidence that there is a vestige of truth in this statement? Postoffice Inspector Fletcher of Indianapolis, has been given as authority for this statement, but when confronted with it he emphatically denied it. Where is the proof? Who have Barnett and Pauley got to substantiate this statement? The've got to shift it or stand for it themselves. But suppose it is true—suppose the United States Government officials have had me under surveilance—watched my every act—is this not a splendid testimonial? In twenty years I, or the company I was the head of, has done an enormous business reaching many times 1000 or more orders daily and amounting to over $100,000 yearly. Do they want to say that during that time my every act was watched and nothing wrong was found, unless some of their charges are true?

Where is there another business man, who, if he did the amount of business I have mentioned, would have stood the test they admit I stood and all the time I did not know I was under surveilance? Therefore, if I escaped, it was not because I knew I must be good, but because I wanted to obey the laws. I would not ask for a better recommendation.

(2) (3) I began business in a small town in Pennsylvania,and removed to Indianapolis because of its central location and for no other reason. I WAS NOT ARRESTED THERE. If my accusers will secure court records or any other evidence to prove their assertion, I will print them in this paper so every reader may know. In view of all that has been printed, is there a single reader of this paper who will believe anything the band of conspirators will say in the future. The truth is not in them. They have no use for the truth for they can only hope to accomplish their base conspiracy through falsehood and deceit. I wonder how the 200 or more delegates who were at the recent convention, and who were poisoned, will feel at this time? Are we to assume that all or part of them are honest men? A safe test will be, whether they repudiate the gang who have engineered the conspiracy or still stand up for them. Ask the delegates when you meet them in social or business ways and in meetings of your union. Have these people ever offered any creditable proof to supoprt their charges? Have I ever charged conspiracy that I did not back up every statement with undisputable evidence?

(4) and (5) are answered in (1).

(6) I was arrested in Indianapolis, but not for violating any law and no discredit can be attached to it. Perhaps I cannot do beter than quote from the Indianapolis Journal what was printed at the time as follows:

J. A. Everitt, of Everitt & Co., dealers in seeds and publishers of the Agricultural Epitomist, was arrested yesterday afternoon by Postoffice Inspector Stewart, on the charge of violating the postal laws. The accused was brought before Commissioner Van Buren, who heard a portion of the evidence and then continued the case until this morning at 10 o'clock. The evidence was to the effect that Mr. Everitt, among those whose mail is the heaviest at this postoffice, has been having trouble with Postmaster Jones for several months. For several years it has been the custom of the firm to send out every winter and spring several hundred thousand catalogues advertising the seeds in which they deal. The catalogues were always arranged in size so as to be carried through the mails for 1

DEAFNESS CURED
By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, DR. GUY CLIFFORD POWELL. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 407 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

cent, and last year, according to Mr. Everitt's evidence, he got along very well with the postoffice officials. This year, after he had mailed about 50,000, the stamp clerk in the office claimed that they were too heavy to be carried for one cent. The edges of the pamphlets were trimmed and the postal authorities then said the weight was not to much for one cent. But the postoffice people again objected to the catalogues he mailed, and leaving out an envelope he had enclosed in that of a circular, he was informed that these packages were not too heavy. But it is said that after this a large number with envelopes were again mailed, and a third time the postoffice officials complained.

Mr. Everitt then says he went to the postoffice and called the attention of the officials to the fact that the scales on which they were weighing the mail matter were not balanced, but he was not treated courteously by the employees. Seeing it was impossible to get his mail matter sent out through the Indianapolis postoffice he made arrangements with the postmaster at Lawrence and the postmistress at Brightwood to have his circulars mailed from those offices. Accordingly 21,000 circulars were delivered at the Brightwood office and 3,000 at Lawrence. The Brightwood postmistress, taken sick soon after receiving the circulars, was unable to mail them promptly. Finding that several thousand had not been mailed Mr. Everitt took them from that office and brought them back to his place of business. Commissioner Van Buren held that the defendant had committed no offense by mailing his catalogues at Brightwood and Lawrence even though they were too heavy to mail at 1 cent.

The trouble arose from some of the employees putting their heads together to keep the catalogues from going through the office. The reason for this was that the postoffice force would change soon because of change of administration (at that time, to the victor belonged the spoils) and the clerks did not want to do the work. This was the explanation made by some of the other employees and I recall a statement made to me by Mr. Vickers, who was in charge of weighing second class matter, he said: "Mr. Everitt, there is no use of you trying to get your catalogues through this office, because the boys up front have entered into a conspiracy not to handle them."

To accomplish their purpose they had one scales that weighed too heavy. I discovered this when, one day I took rejected catalogues to another scales in the same room and they weighed within the limit. After this I consulted an attorney, J. E. Florea, who advised me to mail the catalogues at other offices, which I did.

The charge was "for carrying mail past an established office and to another office to mail." The case was dismissed after hearing. Parties further interested are invited to examine the records in the Indianapolis Federal Court and if they have no better success than I have had, they will not even find a record of the case. On December 5, 1907, I sent a party to get a certified copy of the case and he reported as follows:

I have examined the records of the Federal Court for the case referred to and, with the assistance of a clerk, we could not find any record of it. This is accounted for by the rule, as the clerk said, that where an indictment is not returned a record is not kept.

L. W. Henly, Indianapolis, Ind.
Dec. 5, 1907.

Is it necesary to make any further comment? I am writing to intelligent people and, in the main, fair-minded people. All I ask is fair play and I call on all those who believe in justice and equity to render their veridct in accordance with the evidence. On one side you have good evidence, if not indisputable evidence, on the other side none. The fact that these people would commit themselves to making such grave charges without going to the trouble of first verifying the rumors shows conclusively that their sole motive is to injure me and UP-TO-DATE FARMING and they probably refused to investigate for fear their only excuse to circulate the base, slanderous literature would be removed.

There have been other charges, but none as grave as those printed above. For instance, in a letter sent out recently over President Barnett's signature is this:

As a matter of course Mr. Everitt will now try his best to break up the Society if he can.

And the fact is, I am giving all my energies, day and night, TO SAVE IT. In the circular by Barnett and Pauley referred to are also these statements:

We have no inclination to withold from Mr. Everitt the chief credit of instituting the Society and promoting it so grandly in the years that have followed, and we do most sorrowfully regret that the disclosures of his methods at the recent convention were such as to warrant us in suddenly and forever closing any further relations with him.

The old hypocrites! Why, nothing would please them more than to see me ruined in business and in a poor house because I won't turn traitor to the Society.

Also this:

When we came to this convention not over a score of people out of three hundred delegates had any idea that there was anything wrong at headquarters. Almost to a man we were thoroughly in love with Mr. Everitt.

The question arises what changed the love to a condition that made it possible for the convention to treat Mr. Everitt as it did? There must have been a reason for this. And when was it evident? Was it not evident, the lack of love, and the enmity to Mr. Everitt, on Wednesday morning when the order of business was changed making election of officers first? Was it love for Mr. Everitt that removed him from the presidency on the second day of the convention instead of on the last day and there has scarcely been a precedent for such proceeding? Was it love for Mr. Everitt that he was prevented from delivering his annual address, or was it fear of him and hatred?

And if fear on the part of some and love turned to hate on the part of others are responsible for these things, why this fear, and love turned to hate?

Ask the "score of persons out of 300 delegates." These were the people who feared me, and who succeeded in turning the love of the others to hate. The fear was that I would expose their wrongs against the Society, in my address. To accomplish their end they poisoned the minds of the balance of the 300 by relating such false charges as are now coming to me for the first time. I knew all through the convention that something like this was going on, but I could not learn what the charges were. I believe they did not reach the dignity of charges then, but were mainly insinuations. It is only lately, driven to desperation, and bold because they have not been prosecuted, that they have become bold enough to commit the charges to paper. I have only been waiting to get the evidence.

To accomplish their ends Secretary Tubbs traveled through Kentucky and Illinois before the convention visiting members and officers; Drayton and others attended the Omaha convention with the same motive (and I will prove this by their own letters to be published in the story of "Conspiracy and Rebellion,") and later went to North Dakota and Michigan; Mulholland made a trip to Michigan; Speer spent quite a time in southern Indiana and Dr. Touhy and Nelson visited Minnesota and other places.

To accomplish their base purposes Secretary Tubbs caused the following to be published in October 15th number of UP-TO-DATE FARMING:

The Denison Hotel, corner Pennsylvania and Ohio streets, one block west and one block north of the convention hall, has been selected as headquarters. They have given us a special rate and will furnish first-class accommodations.

And what did they do? They had their runners to meet all trains and steered all the delegates except those KNOWN to be fair and friendly to me and the true A. S. of E., to the Lorraine Hotel, corner Washington street and Capitol avenue. In that hotel, I will say again, " the delegates were herded." As many as six or more slept in one room. And there the poison was dealt out to them.

There has also been sent out recently a circular containing statements claimed to be made by an irresponsible person by name of Martin Wade, which charges fraud in selling seed corn and makes other absolutely false statements that possess, if possible, even less foundation on fact than the ones made by Speer. The circular charges fraud in corn bought of Mr. H. M. Stout, Trafalgar, Ind. As the case is very similar to others, I will not lengthen this article by a detailed reply, but will submit the following copy of a statement from Mr. Stout:

(Copy)

"Indianapolis, Ind., Dec. 5, 1907.

"To whom it may concern:

"This is to certify that I received from the American Society of Equity, by John Mulholland, district manager, under date of Dec. 2, 1907, *a certain letter making inquiry about J. A. Everitt, and my dealings with him. Also a circular letter beginning "Undisputable Evidences," etc., which letters I have this day delivered to Mr. Everitt.*

"I want to say emphatically that all my dealings with Mr. Everitt have been entirely satisfactory. I have always considered him an honest, upright business man inclined, if any doubt existed, to do more than fair dealings demanded.

"I consider the attacks made in these letters and the insinuations, as entirely unwarranted and I cannot too severely condemn all such people and their actions.

"H. M. Stout, Trafalgar, Ind."

And in the same circular, after all the false charges and insults heaped upon me, President Barnett (but he repudiates it now) and Secretary Pauley say:

"It is due from us by right of truth and courtesy to say for Messrs. Tubbs, the retiring secretary; Speer, the retiring director of organization, and others of the force at headquarters, as well as the retiring board of directors, that we have no word of fault to find with anything they have done."

I wish now that members would recall my statements that *the new fficers were selected by the old combination and were pledged to carry out their schemes and to protect them from exposure;* and my prediction that under such influences *another year of failure was inevitable.*

In the above statement the present officers endorse everything the old officers and directors have been guilty of, as is being shown in the story of "Conspiracy and Rebellion," including Equity Exchanges, raiding the treasury to promote wildcat schemes, incompetent employees, etc., etc. This endorsement puts them where I thought they were and is sufficient motive for their campaign of vilification against me.

I cannot close this without making one more reference to that circular. They say that 1906 was the first delegate convention of the Society, etc. This is false. But it is the first one where the delegates had, or assumed to have, full power. My original plan was for *members* to vote on important matters and for officers, and send the votes by delegates or by mail. Two such conventions were held and the Society may well regret departure from the plan. To the board of directors' advance committee on constitution and by-laws, of which I was the chairman, I recommended a plan that would give every local union representation. It gave one or more local unions the right to send one delegate to cast as many votes as he represented local unions. The convention rejected the proposed amendment and have actually refused local unions any representation at all. Think of this, members; a society of the people to be governed by the people, but direct representation has actually been taken away from you. These people prefer a convention made to order, of miners, clerks, professional men and all the fraternal delegates from labor unions and visitors they can ring in, as in the last convention, and some farmers. That's the kind of a convention that was held lately and all such people voted.

My enemies are unexcelled in cunning, deceit and treachery. They professed love for me, yet they were stabbing me with their insidious weapons. They profess loyalty to the Society, yet they have assassinated its true principles and plans, the only hopes farmers had to gain their industrial freedom. They endorse the administration of Tubbs, Drayton, Sharp, Scott, Speer, Mulholland, Walrod, Emmerton, Touhy, et al., yet every one of them are guilty of treason to the Society as has been shown in the story of "Conspiracy and Rebellion," and I will say, as said the Queen of Sheba, "the half has never yet been told." The present officers say over their own signatures, "that we have no word of fault to find with anything they have done."

Let us ask members who may be inclined to support the presnet active headquarters, how much wrong will you submit to? For the present headquarters of the A. S. of E. to ask the support of any true member after the exposures of some of the old officers, directors and employees, which people they endorse, is adding insult to injury.

In conclusion. All I ask is a fair deal and equity to all. Don't think for a moment that I object to removal from the presidency. I never asked for an office from the Society and never expect to. But I do object to the way the removal was brought about and I did object to many other acts of that convention, which I knew were not for farmers' interests. I decided then, with the assistance of true and loyal members, on a plan of action and the plan has been faithfully carried out. It was to save the Society and I consider we have accomplished our task. The American Society of Equity was born on the 24th day of December, 1902. Five years later to the day we may say, its principles and plan were saved to the farmers of America, even though it may be necessary to recognize them under the name of Farmers' Society of Equity in the future. The name is not the essential part, but in the final analysis it comes to this, what does the Society stand for? And this, is the Society for farmers or against them?

The farmer's environments, his comparative isolation, his honesty and trustfulness disqualify him to correctly judge human nature. He has always been led and can be largely led now. But by what leaders? No wonder the confiding sheep are perplexed. In their perplexity can they do better than adhere to the original plan that has carried part of them safely over? Is this the time to embark in untried plans and help everybody while you perish yourselves? Be not deceived. Be slow to believe evil and always ask for proof, as there are many wolves in the land appearing as sheep, and ready to rend the people when they have promise to become mighty in their stand for equity in business. Also don't think irreparable harm has come to the Society. These times come to all good movements. In our case it might have been delayed a year or two, but we could not escape. Hence is it not better to have it over now? If we have learned from that teacher, Experience, we have been wise and we may put our faith on high and say:

"God's in His heaven,
All's right with the world."

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Dollar an hour or sample returnable. Automatic Curry Comb. Sample postpaid. 40c. Particulars free. Clean Comb Co., Dept, B. Racine, Wis.

Agents make money selling household and kitchen specialties. C. V. Thompson & Co., Knotsville, Ky.

Agents Wanted for quickest seller ever sold to farmers. Over thousand sold in one county. Write today before someone else secures agency for your locality. Farm Record Company, Newton, Ia.

Permanent profitable employment. Really good opportunity for salesman or farmer handling Silo, Seed, Feed Specialties. necessities, great demand. Lake Erie Seed Co., Buffalo, N. Y.

Badges & Banners

A. S. of E. Badges, Banners etc. for conventions, Parades, Celebrations and local use. Prices right. Show your colors. Illustrated catalogue free. E. G. Staats & Co., La Crosse, Wis.

Dogs and Pet Stock

Collie Pups. Nelson's, Box B, Grove City, Pa.

For Sale Thoroughbred Scotch Collie pups. Best farm dogs on earth. H. R. Miller, Lowelle, Ohio.

Farm Lands

A Great Opportunity Texas has recently passed new School Land Laws. Settlement no longer required in most counties. Ten million acres to be sold by the state, $1.00 to $5.00 per acre; only one fortieth cash, and 40 years time on the balance; low interest rate. Land equal to Oklahoma. Only $48.00 cash required by the state to buy 640 acres at $3.00 per acre. Greatest opportunity for Investors or Homeseekers. Send 50 cents for Book of Instructions and new State Law, J. J. Snyder, School Land Locator, Austin, Texas. Reference, Austin National Bank.

Big Money is being made by truckers, fruit growers and poultry men in South Jersey. Climate and soil particularly adapted to fruit, berries, early truck, vegetables, poultry and squabs. Produce marketed much earlier than other localities, thus bringing highest prices. The best markets, Atlantic City, only 17 miles away; Philadelphia and New York are handily reached. Five-acre farm plots in choice locality, $100,--$5 down $5 monthly. Title insured. Three main line railroads. Good roads. Pure air and water. Two large manufacturing towns nearby. Prosperous community. Write to-day for free booklet. Daniel Frazier Co., 718 Bailey Building, Philadelphia, Pa.

Cheap Farms—Western Oklahoma. Write, C. A. FISHER, Custer, Okla.

Cheap Farm. Central Minnesota. Write Ed. Landwer, Gardena, N. Dak.

Farms Any size; nice, smooth farm land; soil a good sandy loam and productive. Prices low. Particulars free. Bicknell & Brown, Hannon, Mo.

For Sale Sightly, Home-Like, well improved, gently rolling prairie, mortgaged 80 acres in Ills. ¾ miles to good railway town, $50 per acre. Terms. Marshall & Staley, Mt. Vernon, Ill.

Hog Heaven Come to Oregon perfection hog-raising country, where there is green grass and mild weather all year round; where hogs can be quickly fattened on rutabagas, the best hog food; where pork is the highest price. The hog-raiser's paradise; can be raised cheaper than ducks. Address Chamber of Commerce, room 1162, Astoria, Oregon, for particulars.

Michigan Farms, Stock, Grain, Fruit Farms, Selling Cheap, Good Schools, Ideal Climate, write for list No. 9. C. B. Benham, Hastings, Mich.

Texas Panhandle; black land $8 to $16 per acre. Moody Lands Co., 125 E. Market St., Indianapolis, Indiana.

Farm Products For Sale

Ohio hay under national union label. Graded and weight guaranteed by public weighmaster. J. H. Harpster, Millersburg, O

For Sale 100 tons nice prairie hay. Write your wants to Wm. Storm, Artesian, S. D.

OUR GRAND 1908 OFFER

New Lumber

BIG SPECIAL SALE

FIFTY MILLION FEET AT REDUCED PRICES.

Bought at Forced Sales from Manufacturers. It Makes us Headquarters for Thousands of Genuine Bargains in Lumber and Building Supplies.

Save 30 to 60 per cent. Buy Direct.

Balustrades. Barn Sash. Bath room Outfits. Beams. Boards, all Sizes. Building paper. Casing. Ceiling. Cement. Flooring. Gable Ornaments. Glass. Green House Material. Hardware. Heating Apparatus. Hot Bed Sash. Imitation Brick Siding. Joists. Lathing.

The Chicago House Wrecking Co. purchased at forced sales, 50,000,000 feet of new lumber. We are making special concessions to those who buy at once. Our prices today are far **lower than lumber prices have been for years.** Order now for immediate or future use. Quick action will save you **big profits.** Remember prices elsewhere, which are even now high, are bound to rise. We can quote you 30 to 60 per cent better prices for the same lumber than can be sold by your local dealer. We guarantee every carload to be exactly as represented. Closest inspection of our lumber stock invited.

Call at our warehouse and yards at Chicago and see the lumber we are offering and you will recognize that it is all we say of it. Make your own selection and see it loaded. It is not necessary to come to Chicago, however, unless you wish to. **We can fill your order by mail with just what you want and guarantee you absolute satisfaction.** Ours is the largest direct to consumer **lumber headquarters in the world.** We sell millions of feet annually. Orders filled from every part of the United States. No matter where you live you can save money by supplying your building wants here.

We do not figure fancy prices, but quote figures **that command your patronage.** Whether your order is large or small we can save you money on it. Our tremendous business of millions of dollars annually is your best guarantee of complete satisfaction of every purchase from us. In our enormous stock of new lumber of every kind we have just what you need for every purpose. Don't buy a stick of material until you get our prices. We offer you everything in the lumber and building supply line needed for **residences, farm homes, stores, churches, barn, out-buildings of every kind, sidewalks and fencing.** In short **any kind of a structure requiring lumber, at from 30 to 60 per cent less than your local dealers or lumber yards, ask for it.**

Building Supplies of Every Kind.

Mantels and Fire Places. Moulding. Nails. Paint. Pipe. Plumbing. Material. Porch Work. Roofing. Scantling. Sheathing. Shingles. Siding. Stair Work. Storm Windows. Studding. Timber. Water Supply Outfits. Window Frames. Window Sash. Wire.

FREE—BUILDING AND BARN PLANS—ARCHITECTS ADVICE—FREE

"MORE COMING"
Nevada, Mo
Will say I am very much pleased with material, especially the dimension. Have had several contractors to see the lumber and they were well pleased with it. Will order 8 or 10 cars in the spring
J. FOWLER.

"EVERYTHING SATISFACTORY"
Paw Paw, Ill.
Carload of lumber arrived. Everything satisfactory. Our lumber merchants inspected the lumber and admitted for the purpose we wanted it was a very good bargain. We had ten big loads. Very glad we sent our order to you as we got better value for our money than expected.
Mrs. CHARLES JONES.

"A GOOD ADVERTISEMENT FOR US."
Ainsworth, Ind.
I received my carload of lumber from you and it was O. K. in every respect. It will advertise itself in my locality and I am sure it will bring you several orders from here,
Wm. RASCHKA.

"ANOTHER SATISFIED MAN"
Brighton, Ill.
Hope we can deal together again for I am pleased to know that you are an honest Company and do what is right. If I need any more lumber will be sure to deal with you.
ALEX CAIRNS.

IMPORTANT! Send us your Lumber Bill for our Estimate

Make up a list of what you need. Send it to us for our price. If you are putting up a building of any kind whatsoever let us figure with you. **Our prices talk louder than words.** Have your carpenter or contractor send us your list of what is needed if he has charge of your building. Don't pay exorbitant prices to the lumber trust with their long line of lumber yards all over the country. Don't let the local dealer soak you with his heavy profit. Remember: **CHICAGO HOUSE WRECKING COMPANY** buys millions of feet at a time under circumstances of forced sales which mean sacrificed prices and enables us to sell even as low as cost without loss. You take no chances in dealing with the **CHICAGO HOUSE WRECKING COMPANY.** Whether for $1 or for $10,000 your order will be filled carefully. Our lumber and supplies are guaranteed exactly as represented.

If you have no need for a whole carload yourself, **get your neighbors to club in with you.** By buying a carload you can **save all kinds of money on freight charges.** We have railroad trains running through our main warehouses and buildings and can load car to good advantage for you. You can include in this same car, **pipe, plumbing material roofing, wire, fencing, furniture, hardware and merchandise of every kind.**

We also furnish you building and barn plans absolutely free upon request. Write us for any information or advice you want and we will have our staff of architects answer every inquiry promptly. Our free book of plans is sent if you mention this paper. **We simplify your building proposition.**

Our business demands quick action. We must keep our stocks moving. This means prompt shipment—no annoying delays Let us help you lay out your plans. We will relieve you of every detail, That is what our **special builder service** is for. Be sure and send us your lumber bill for estimate. Feel free to write for anything you want to know along the line of building and building supplies. All questions cheerfully answered.

Hundreds of Big Money Saving Bargains For Every Builder.

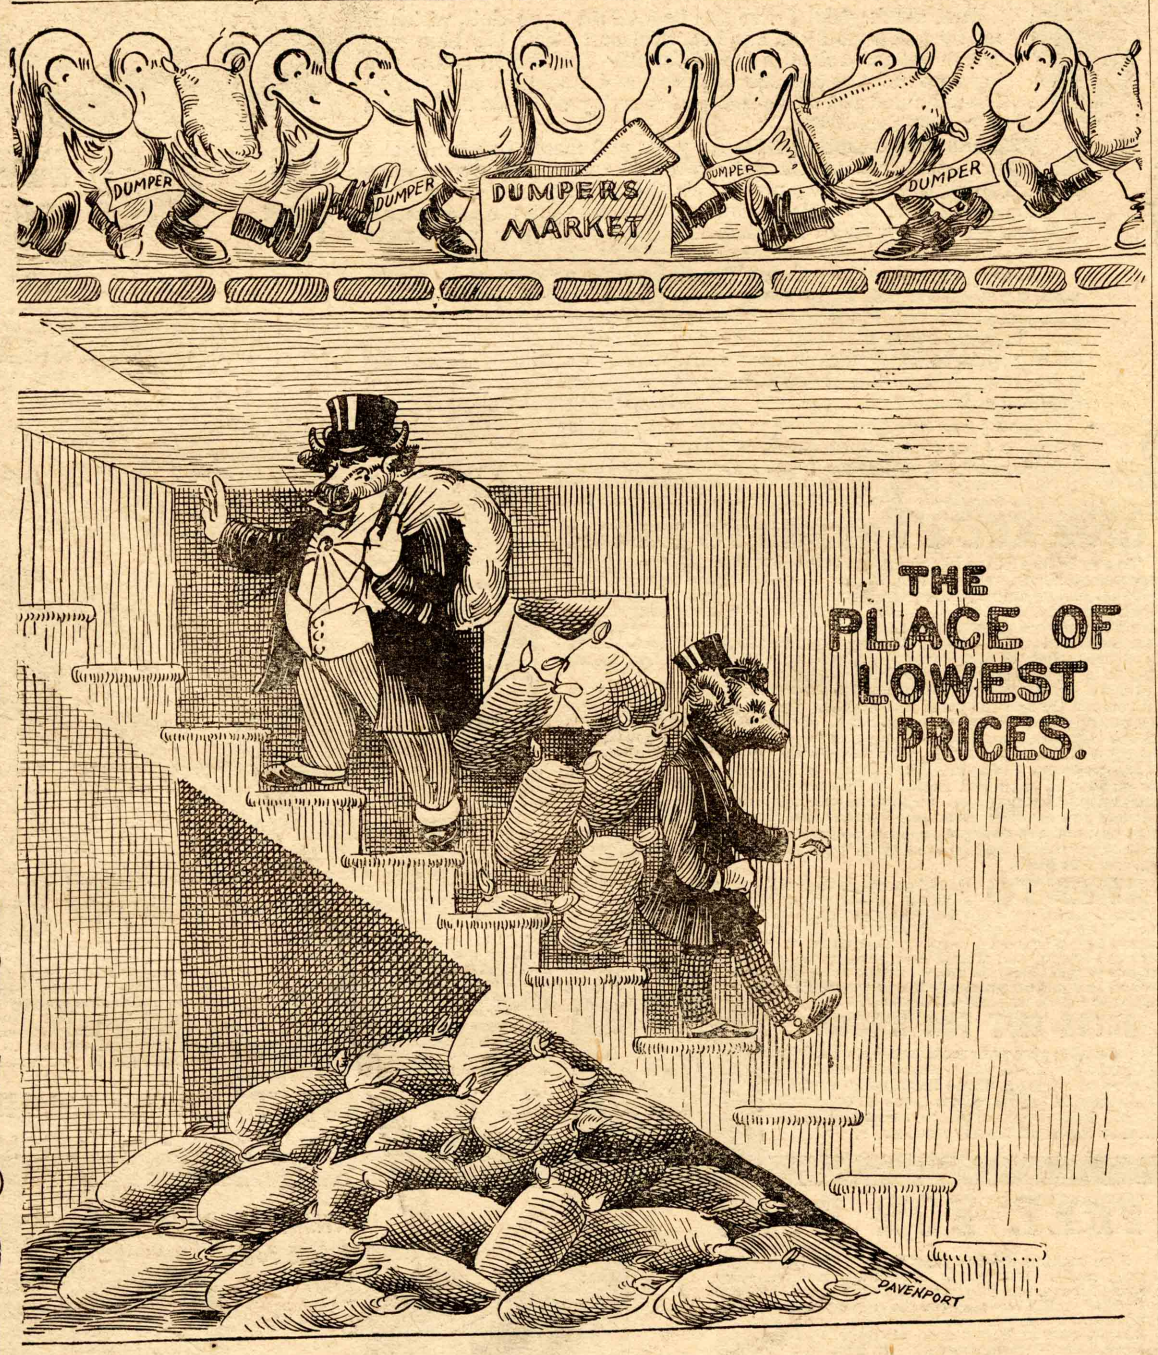
Volume XI | INDIANAPOLIS, INDIANA, JANUARY 15, 1908 | Number 2



TO THE CELLAR AND BACK

This picture was suggested by the article in November 15th of this paper, "To the Cellar and Back." To make it unnecessary to refer to that number we will repeat the article. In fact it is well worth repeating at this time, considering the condition of the market:

"Mr. C. A. Windle has a humorous way of putting even serious things. He says the bulls and bears are like two fellows passing up and down stairs to and from garret and cellar. They are both bulls and both bears, depending on which way they are going. They never travel together, but always pass each other in the middle—each goes up a bull but comes down a bear. The bull is loaded but the bear is empty. The farm crops are in the cellar, where the dumpers have piled them, and where they command a very low price. The empty bear gets in and loads up at the lowest possible prices. He then starts up. He is a bull now, and every step he takes he wants a little higher price. In the middle he meets an empty bear coming down. They stop long enough to gamble a little on the price, and then each goes his way. When the bull gets to the top he unloads, sells out at the highest price he can force. He at once becomes a full-grown bear and starts for the cellar, growling and clawing at the prices as he goes. Half way down he meets the bear he met coming up, but he is a bull now, tail, horns and all, and he is boosting prices at every step. And so it goes. Prices are never boosted in the cellar. There is where the farmer has unloaded, and he always gets it 'cut fine.'"

Are you one of the dumpers dumping your crops in the hopper "Dumpers' Market" that connects with the cellar where the bear changes to a bull? If you quit it, it will be useless for the bears to go to the cellar and they must load up higher up.

In this number we invite particular attention to the following:

Page 3. "The Two Most Important Classes;" "The Cycle of Accumulation;" "The Money in Hiding;" and "Arrested."

Page 4. "Federal Grain Inspection and Classification." People interested in this bill should correspond with Congressman James E. Watson, Rushville, Ind., and give him all the aid possible in his effort to secure a good law for farmers.

Page 6. "Which Side of the Line Are You On?" This article gives information that is often requested by our correspondents. Study it and file it for future reference.

Page 14. "Who Owns It?" Being a review of the second number of the bastard paper alleged to be the official paper of the A. S. of E.

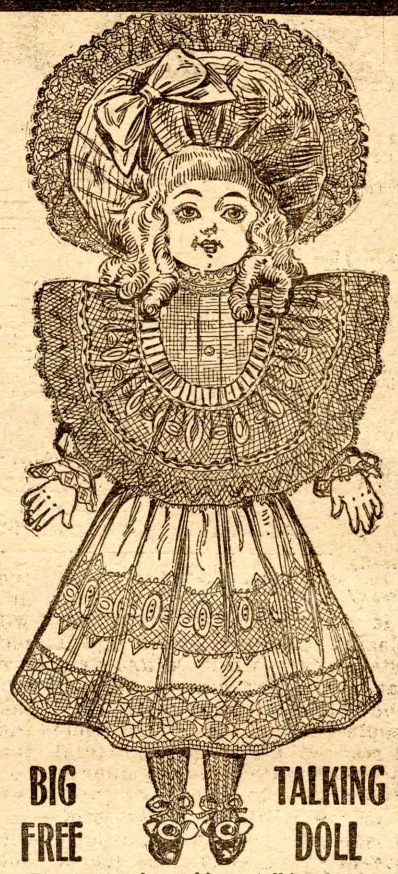
Page 16. "Conspiracy and Rebellion." This is the most sensational of all the installments to date. To consider how the Society was betrayed in the past by trusted representatives and then for these same people to pose as present directors and leaders is an insult to every member of the Society.

Read all the departments and don't neglect the advertisements.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

3 BIG PRESENTS FREE TO GIRLS

Every girl and young lady should write to Mr. Bowen at once and accept his generous offer of a great big Doll, grunting Teddy Bear and a beautiful china Tea Set free of charge. They do not cost you one cent, now or any other time if you write at once; he will also give you a handsome present as an extra gift.



Talking Doll, Tea Set, Teddy Bear—ALL FREE

Just think girls, I give this **beautiful bisque doll,** which is nearly half a yard tall, has beautiful curly hair, big blue eyes which open and shut, is **magnificently dressed** in satins and laces and a large hat, and has shoes and stockings that can be taken off and put on, so that you can play with this doll just as if it were a real baby.

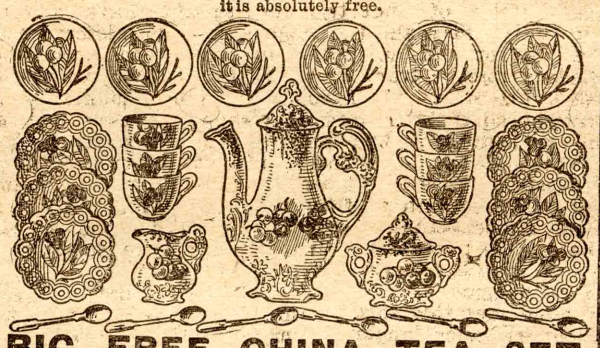
This wonderful talking doll says papa and mama so plainly and distinctly that it seems to others that you had spoken the words yourself. The big blue eyes, the pretty hair, the peaches and cream complexion cheeks and the little rosebud mouth makes this the handsomest and dearest doll you could imagine. Nothing could give a girl more delight than this doll, and **I want every girl to get one free.**

I also give a 27-piece China Tea Set consisting of 6 cups, 6 saucers, 6 plates, tea pot, sugar bowl, cream pitcher and 6 spoons, so that you can give a doll tea party and invite your friends to bring their dolls, too. It is not every girl who has a set of dishes for her doll, **but I want all my girls to have one,** so I am going to include this handsome set with every doll, which is beautifully decorated and the china clear and handsome, just like the real china in the large sets costing many dollars.

And I am not going to stop here, but I am also going to give a **real genuine Teddy Bear,** one of the big, brown and shaggy kind, with jet black eyes, movable head and arms, that sits up, lies down or stands on all fours, and grunts when you squeeze it, just as described. Some girls prefer the Teddy Bear to a doll, **but my girls can have both.**

BIG FREE TALKING DOLL

This big handsome bisque talking doll is the girls delight. It has beautiful curly hair, pretty rosy cheeks, red lips, and is nearly half a yard tall. It says mama and papa, goes to sleep, and when it wakes up, opens its eyes, just as natural as life. Dolly is magnificently dressed in silks and satins, and you can dress and undress her, take off her beautiful hat, shoes and stockings, and play with her just as if she were a real baby. You will be more than delighted with this magnificent present, and it is absolutely free.



BIG FREE CHINA TEA SET

This handsome tea set, small enough for Dolly, consists of 6 cups, 6 saucers, 6 plates, 6 teaspoons, tea pot, sugar bowl and cream pitcher. It is beautifully decorated, just like the large expensive china costing many dollars. I also give six tea spoons, so that you can give a real tea party and invite your friends to bring their dolls also. Tea set and spoons are free.

Big FREE Shaggy, Grunting, Teddy Bear

Teddy Bears are the great popular craze. The girls play with him, carry him to school, and give Teddy Bear parties. Even the grown up ladies carry him around, for he is all the rage everywhere. Some of the more expensive Teddy Bears **sell from $15 to $25 each,** but I am giving a bear away that I have had made **specially for me,** with which you will be delighted, as it has all the features of the big expensive bears, and any girl would be proud to own it.

It is a **big brown shaggy bear,** and I have had him made with special movable arms and legs, so that he can sit up, lie down, stand on all fours and be placed in all sorts of comical positions, just as if he were really alive. He has jet black eyes, and is so real he looks like the little cub bears you see in the parks or at the circus. By just giving him a little squeeze he makes a funny grunt that sets everybody laughing. You can have more fun with Teddy than anything you ever owned. This is the **real Teddy Bear** girls, of which you have heard so much, and I want to give him to you absolutely free. **Surely you would not refuse this Teddy Bear when you can get him for nothing.**

Read my generous offer and send me your name at once. You will be surprised how easy it is to get this bear, and also the handsome doll and tea set that I offer. **I give all three presents** and also pay express charges, so that they do not cost you one cent of your own money, I send you **all three at once,** so just stop and think all that you are going to get from me.

I could not afford to make this generous offer except for the fact that I do it to advertise my mammoth business. I want every girl to know me and say a good word for me, and I have stopped at no expense to get the **very best** Teddy Bear, the **very handsomest** Big Doll, and the **very finest** China Tea Set that I possibly could, for doing this little favor for me that will not cost you one cent of your own money.

Girls, just imagine the fun you can have with **all three** of these beautiful presents—**the big doll, the shaggy, grunting Teddy Bear** and the **handsome china tea set;** you and all your friends. Girls everywhere are delighted with these presents. Don't fail to write me, as they cost you absolutely nothing. Just send me your name and address, that's all. Do it today, now, this very moment.

I GIVE ALL 3 PRESENTS FREE!

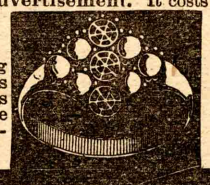
To any little girl (or big girl either) who will show my fine art pictures among her friends and neighbors. **You don't have to sell these pictures,** just go among your friends and neighbors and tell them the grand offer Mr. Bowen has made you and they will all take one or more pictures to help you earn your presents. The pictures are only 25 cents each, and you can easily dispose of 12 in a few hours time. They are 16 x 20 inches, in handsome colors with gold lithograph frames, all ready to hang on the wall in the parlor or sitting room.

I don't charge you anything for the pictures, as I send them free, and you can try and see what you can do, and if you can't sell them they can be returned and no harm done. However, I know any bright girl can earn these presents without any trouble whatever. **Just think, you get a big handsome doll, a grunting Teddy Bear and a 27-piece tea set and 6 spoons** all for this little work. It is the most generous offer ever made, and every girl reader of this paper should write to me at once and get the pictures. As soon as you have given them all away, I will send you the **Doll, Bear and Tea Set and Spoons absolutely free. I also pay express charges** on them, so they will not cost you a penny. Write to me today, and be the first in your neighborhood to get these beautiful **free gifts.**

PARENTS should encourge their children in this work. Your girls will think far more of this bear, doll and tea set than if they merely got them as a present from you or some other relative. There is no obligation, whatever, of any kind, remember, as I send the pictures free **without a cent in advance.** I take the pictures back if they can't be disposed of **and no harm done.** I also pay express on the presents so that **there is not a single cent that you would be out of pocket in having your girls answer this advertisement.** It costs nothing to try, so why not write me today.

EXTRA GIFT FOR MAMMA

You can also give your mamma a beautiful ring as an extra gift if you will write us at once. This is a nine stone ring, three large ruby doublets and six frosted pearls; given extra if you'll write at once. This beautiful ring is extra and **in addition** to the other three presents.



THIS OFFER MEANS WHAT IT SAYS

And is not an offer of just "your choice" of these presents, remember, but means that **you get all three of them**—the Teddy Bear, Big Doll and China Set, **all at the same time** for just the little favor mentioned. Show this grand offer to your parents. They will be glad to help you if you do not understand it. **Just write me** anyway. **It is not even necessary to write a letter** unless you want to. Just your name and address will do. I will know that it is in answer to this advertisement, and will have everything arranged for you to get these free presents, also extra present for mamma if you write at once. Send today and address plainly.

A. H. BOWEN, Manager Dept. 2279

46-48 West Monroe Street - - CHICAGO

BEARS EAT AT TABLE

Here is a picture of Jessie E. Melville and Jossie E. Melville, daughters of Judge Willis Melville of Brookfield, Ill., two happy children giving a delightful tea party. Read what they say, and this is only one of many letters received from happy children thanking me for the beautiful presents.

"My Dear Mr. Bowen—We want to tell you how delighted and pleased we are with the talking dolls, tea sets and Teddy Bears. They are great. We have doll and bear parties and many good times with these beautiful presents." (Signed) JESSIE E. MELVILLE, JOSSIE E. MELVILLE."

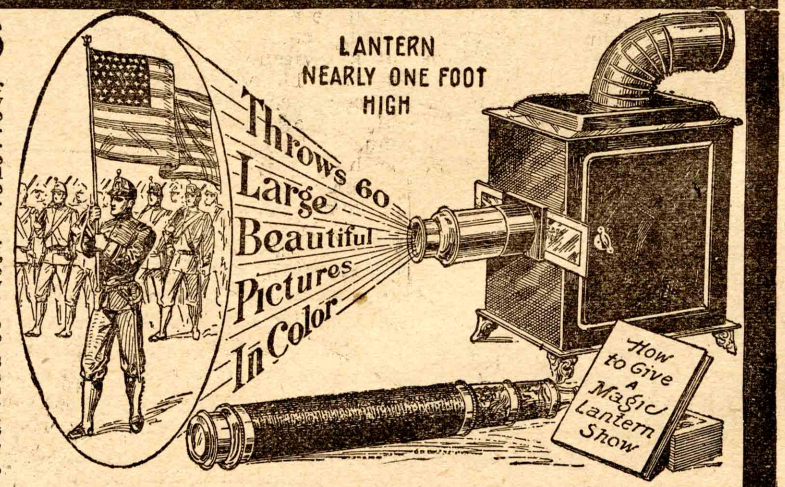
FREE FOR BOYS

I am making the biggest magic lantern offer even made. This magic lantern has been specially made for me, and I do not need to tell you that I have insisted on the best material throughout. **It is complete in every detail,** including a special large reflector, curved Russia Iron chimney, non-explosive lamp, and fine glass chimney. **It has two special strong telescopic lens,** so that the pictures are brought out large and clear and distinct. **I also include 60 pictures, all different in colors.**

Here is an outfit you would be proud to own, as no boy in your town would have anything like it. I also give an **instruction book,** telling how to get up an entertainment, and how to give a lecture about the different pictures should you want to make extra money by giving entertainments. You can give an entertainment lasting an hour to an hour and a half, and charge an admission fee.

The Magic Lantern alone would be a big present for the little service I ask, but in order to show the boys how generous George Harvey is, I am going to give, **in addition** to this magic lantern, 60 views, instruction book, etc., **THIS HANDSOME SPY GLASS** with which you can have a barrel of fun, as you can see objects far in the distance with it, also look at the moon, stars, etc. This spy glass is a good article, handsomely made, inside tubes polished brass with brass mountings, imitation red leather cover, fitted with good magnifying lenses, entire length 6½ in. It does not cost you one cent, but is given free with the lantern as an extra inducement.

I give both this great Magic Lantern outfit and fine Spy Glass to any boy (or young man) who will show my fine colored art pictures, size 16x20, with handsome lithograph frames all ready to hang on the wall, among their friends and neighbors and get only 10 of them to take a picture at 25 cents each. **It is easy** work to get rid of the pictures, as everybody can use them, and any bright boy or young man who actually wants a magic lantern and telescope free can do this little favor for me in a few hours time. **IT COSTS NOTHING TO TRY,** as I send the pictures free without a cent in advance, and if you don't succeed **there is no harm done. Try it any way.** The boys everywhere are delighted. The magic lantern and telescope are magnificent presents, so why not get them as long as they will not cost you one cent of your own money? As soon as you have disposed of the 10 pictures let me know and I will ship the lantern and telescope at once, all express charge paid in advance, so they won't cost you a cent, **even for express charges.** You do not even need to write a letter, just send your name and address. I will know that you have answered this advertisement and will send you the pictures at once, all charges paid, immediately on hearing from you. Write today.



GEORGE HARVEY Pres't, Dept. 2279, 46-48 W. Monroe St, Chicago.

UP-TO-DATE FARMING

Representing the Union or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume XI | **INDIANAPOLIS, INDIANA, JANUARY 15, 1908** | **Number 2**

THE TWO MOST IMPORTANT CLASSES

It is gratifying when the official head of a nation recognizes those engaged in manual or creative labor as the most important class of the nation's people. In his recent message to Congress President Roosevelt said:

> The two citizens whose welfare is in the aggregate most vital to the welfare of the Nation, and therefore to the welfare of all other citizens, are the wage-worker who does manual labor and the tiller of the soil, the farmer.

That is no disparagement of the other classes of our people. The United States has as few unimportant classes as any other nation, perhaps fewer, and the elimination of the parasitic people—though there are some—would scarcely affect the sum total of our population, yet the President's broad view that the welfare of those engaged in the productive industries is to be regarded first in importance is an eminently correct one and marks Mr. Roosevelt as a statesman of the most advanced school and one who does not hesitate to express advanced thought.

The two classes thus accorded pre-eminence have been the most important in all countries and in all ages, but they have not always been accorded that position. Their retirement and their hidden fields of industry, the farmers in the country and the wage-earners in shop or mine or forest, or scattered along lines of transportation, have kept them in the background, and too often held their children away from the educational opportunities that so loudly called to the children of other classes. These facts have too often been taken advantage of by the so-called more intellectual classes, and if there have been burdens to bear the farmers and laborers have been expected to bear them.

Let us hope that this sort of thing is not to endure much longer. Farmers and laborers are asserting not only their intelligence and their ability to plan and execute but their power also. It is this, no doubt, that has led to their recognition in high official station, all of which places upon them increased responsibility, and makes it all the more important for them to take advantage of every opportunity for improvement, not only in the performance of their labor, the execution of their tasks and the transaction of their business, but for the education of their children. To many important matters connected with their calling, the farmers particularly are but just awakening. Their energies have heretofore been devoted almost exclusively to production, and if they have produced much their ambition has been satisfied. In that they have been taught to consider their great aim accomplished. Now the importance of disposing of their products in a profitable market is sharing with the importance of producing the crops, and the recognition of this duty is at once placing farmers in the ranks of business men, making their calling a more certainly remunerative one, and giving them a higher position in our general citizenship. It is probable that this is what is giving them the greater recognition.

Be that as it may, the recognition to which we have referred makes it incumbent upon farmers and laborers to cultivate broader views of other people. They must see to it that they go not to extremes. While winning and defending their own newly discovered rights and privileges, and exerting their newly acquired powers, they must be careful not to invade the rights of others. It also behooves them to cultivate the most friendly relations with all other classes. They no longer stand alone; are no longer "hewers of wood and drawers of water"; they are now men among men, with responsibilities, ability and power equal to any, and all this must give them broadened views such as befit the equals of the best.

THE CYCLE OF ACCUMULATION

The press and the public talk about the Napoleons of finance, and wonder at the tremendous accumulations of wealth that many believe to be a menace to our free institutions. In a sense those great accumulations are wonderful. Legitimate earnings in many lifetimes could not aggregate them. Salaries the most princely pale into insignificance when we attempt to figure out the known wealth of certain individuals and corporations on a salary basis. The highest salaries known or imagined could not attain such wealth in the time alotted to man to labor. Whence, then, come the great aggregations of wealth? How is the money and property accumulated?

Those accumulations grow out of the very nature of money, and they are not peculiar to this country nor to this age; and those who fear them as a menace to human freedom and equality have their fears well grounded. The history of other nations that have been great and are not now, fully justify those fears.

When money was invented as a representative of values and a medium for the exchange of commodities, civilization was given a great convenience, but at the same time was created a most powerful instrument of inequality and oppression. "Money," sayeth the Scriptures, "is the root of all evil."

The thirst for great wealth soon discovered that to accumulate money by labor paid for in wages or rewarded by profits, was a comparatively slow process, and a speedier way was discovered through the manipulation of money.

The financial history of our country is flecked with panics — times when money becomes so scarce or dear that commodities will scarcely call it from its hiding at any value. At such times all commodities or property compared with money are low in price. This affords a key to the situation. Since the principal office of money is to effect the exchange of property by measuring and representing value, any change in the proportion of money and property must change property values as measured in money. Hence, if it were possible for any man, or men, or combination, to get possession of and withhold from circulation any considerable portion of the money, the prices of commodities would inevitably go down, and if sold at all they must sell for less money than if the entire money supply were in active circulation.

This offers the inducement for money manipulation, and opens the way to the inordinate accumulation of wealth by those who are in a position to control any considerable portion of the money supply.

Financial panics afford exactly that opportunity. The panics this country has suffered have been brought on by different causes, but the effects have been the same so far as offering a means for wealth accumulation is concerned. Those who can control the money hold it until property values reach so low a level that they feel justified in buying. The money then begins to go out slowly in the purchase of property, comparatively little money buying great quantities of property. When this process is completed, and the money and the property have, comparatively speaking, changed hands, those who had the money find they now have the saleable property, which they obtained at so low a price as to leave them still in possession of a large amount of the money. But the circulating money is now in the hands of the people, and the people become buyers of property or commodities, and, since the money in the hands of the people circulates freely, there is competition in buying, and the prices of property go up until it takes much money to buy little property. The erstwhile money holders are now sellers of property, and ere long they have their money back with great quantities of property still in their possession, because they bought so much more cheaply than they sold.

No matter what the cause of the panics, the pendulum makes this swing. As it goes down into what we call hard times, those who control the money accumulate wealth in property, and as it returns, bringing what we call prosperity, those who control the money accumulate wealth in money. And this swing of the pendulum has been repeated at irregular intervals ever since we have been a nation; and so long as we adhere to the same idea of money we now have, and submit to its control as we now do, we shall have the same recurrence of panics, the same periods of depression and of prosperity, and the constantly growing aggregations of inordinate wealth, until our nation, like imperial Rome, will be absorbed by the few accumulators of wealth, and perish amid its impoverished masses.

Each panic marks a cycle of accumulation, and they will come and go so long as the money is controlled by individuals or corporations.

ARRESTED

"President C. M. Barnett and Secretary Pauley of the American Society of Equity were arrested yesterday afternoon on charges of criminal libel preferred by J. A. Everitt. A warrant was issued for the arrest of Garrett M. Walrod * * *.—Indianapolis News, Jan. 8, 1908.

The board of directors are meeting now in this city. There are present C. M. Barnettt, Pres., O. D. Pauley, Sec., L. N. Staats, V.-Pres., C. O. Drayton, Ill., T. S. Morrell, Minn., Thos. Emmerton, Wis., James Hole, N. D., and J. E. Jones, Ind. This meeting was called at my request and in response to a general demand by members throughout the country that the two Societies at headquarters should get together and settle the trouble that arose through the late convention and subsequently to it. President Barnett promised me that this would be made one of the objects of the called meeting. (Mr. Webber of Minnesota joined in the request and was present when Mr. Barnett agreed.)

Incidently with the arrival of the directors began the appearance of articles in our daily papers misrepresenting the A. S. of E., UP-TO-DATE FARMING, and of a false, slanderous and insulting character against the writer, the same as during the annual convention. For two days they gave no evidence that they intended to consider the real vital concerns of the Society.

In view of these conditions, and the fact that I had given them many opportunities to retract the false charges which were responded to only by further insults, I concluded that all hope of reconciliation or compromise must be abandoned and I caused warrants to issue for the people named above. The matter is now with the courts of Indiana and another chapter in the unfortunate conditions surrounding our organization has been started.

If a full meeting of the board could have been had it might have been different. What hope, I may ask, is there for Equity being done by that headquarters when a call for a meeting of the board of directors, comprising sixteen members, only eight respond and seven of them known to be committed to complete the conspiracy against the Society and the influences that formerly surrounded it and made it great?

Evidences of approval of my past actions are multiplying daily and I hope this one will be as generally sanctioned. Nothing else could be expected. Business with UP-TO-DATE FARMING and the Farmers' Society of Equity now exceed any time with the old Society. Monday, Jan. 6, nineteen hundred and eleven letters came to our office and they nearly all had money for subscriptions or reports of members or dues and best of all, they breathed a confidence and loyalty that largely compensates for the ferocious, but unjustifiable attacks from my enemies and the enemies of the true principles and plans of our Society.

J. A. EVERITT.

Affidavit.

January 8th, 1908.

To the Members of the American Society of Equity:

Since the October, 1907, convention of our order, at which I was elected as your president, some matters have developed to which I desire to call your attention.

A circular prepared and printed by some one called "A Circular Letter Report, Issued by Authority and With the Approval of the National Officers of the American Society of Equity of North America," and was addressed to the agricultural press of the United States.

This circular was sent out with what purported to be an official letter of our order calling attention especially to the contents of said circular.

My name appeared—signed to said circular as national president, and the letters accompanying the circular were also signed with my name as national president.

In this circular, attack was made upon the honesty and integrity of our late president, James A. Everitt.

I now desire to state most emphatically under oath that I never signed said circular, nor did I ever authorize anyone to sign my name to any letter accompanying such circular, either as an individual or as an official of your order.

Said circular was not, as far as I have any knowledge, the official act of the officers of this order, and the use of my name to said circular as your president was wholly unauthorized and unknown to me, and I did not approve of the contents of said circular at any time.

Signed: CICERO M. BARNETT.

State of Indiana, } ss:
County of Marion, }

I, Cicero M. Barnett, being duly sworn upon my oath, say that the facts stated above over my signature are true, and I make them freely so that the public may know the facts.

Signed: CICERO M. BARNETT.

Subscribed and sworn to before me, Bernhardt E. Sattler, a notary public in and for said county and State by Cicero M. Barnett this 8th day of January, 1908.

(SEAL) BERNHARDT E. SATTLER,
Notary Public.

My commission expires Sept. 11, 1910.

Some farmers were stampeded by the fall in prices and dumped their crops. But did the decline make a market for a bushel or pound more? It positively did not. Those who dumped their crops simply transferred them to another set of people who will hold them until the real demand comes, and those who held on will have longer to wait. Thus dumping is a curse to those who indulge in it as well as those who do not.

AM I MY BROTHER'S KEEPER?

C. W. PECKHAM, Haven, Kan.

Am I my brother's keeper?
Or should my thirst for gold,
Deprive him of his treasure,
As pirates did of old?

Am I my brother's keeper?
When reading wars alarm,
'Twould seem that all our genius,
Is bent on doing harm.

Am I my brother's keeper?
Why are my voice and pen,
As silent as a statue,
In the defense of men?

Am I my brother's keeper?
Oh, what would Jesus say?
"Go lift his every burden,
And guide him on his way."

Art thou thy brother's keeper?
Do not his failures tell,
He may have done the best he could,
Go, thou, and do as well.

Art thou thy sisiters keeper?
To err, she may be prone,
Don't magnify her frailties,
Oh, do not, cast a stone.

Am I my brother's keeper?
May be, he'll go amiss,
I'll warn him of the danger,
That lurks in the abyss.

I AM my brother's keeper,
I'm parcel of his dust.
He'll find in me a brother,
Whom he can safely trust.

FEDERAL GRAIN INSPECTION AND CLASSIFICATION

There is a very general demand for reforms in the inspection of grain and grading or classification. We need not go into particulars now regarding the abuses that are present in handling grain, as many of them have been referred to in these columns before and every producer for sale knows that enough are practiced to call for reforms.

The popular demand turns to Government inspection. It is hoped, in this way, to establish a national system of inspection and grades that will be uniform all over the country. This, it is hoped, will prevent the buyers, say in Kansas or the Dakotas, from buying as No. 3 or lower and the handlers at Kansas City, Chicago or New York raising the same grain to a higher grade.

But grain raisers must not expect a law like proposed, even if properly enforced, to remedy all the abuses. The class of middlemen, and we include trusts and corporations, are very resourceful and when they are beaten on one track they take another. If grades are made uniform ,and if pricing remains in the hands of the buyers, what is to prevent them from making as wide a difference in price between different points as will give the same profits? Nothing at all, except you may say, "The farmers will know the prices in the various markets and will not allow them to make more than a fair profit."

This is exactly what we want the farmers to say and we want them to be in a position to enforce their demand. If the farmers will remain unorganized they will be imposed upon in the price even after such a law exists. Therefore, don't delay organization.

We give below a Federal Inspection bill introduced in congress by Hon. James E. Watson, our brilliant Indiana Congressman, which we believe comes nearest meeting the present emergency, and ask our readers to give it a careful reading. It is expected that this bill will be enacted into law by the present congress.

A BILL

INTRODUCED IN THE HOUSE OF REPRESENTATIVES JANUARY 11, 1907, BY MR. WATSON, WHICH WAS REFERRED TO THE COMMITTEE ON AGRICULTURE AND ORDERED TO BE PRINTED.

To provide for fixing a uniform standard of classification and grading of wheat, flax, corn, oats, barley, rye, and other grains, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture shall organize in his department a bureau of grain and seed inspection and shall appoint a chief who shall have had at least three years' experience in inspecting, buying, and grading of grain and seed and whose duty it shall be to have immediate control of such bureau and the employees thereof and to report upon the condition of the interstate trade and commerce in grain and seed of the United States and the principal foreign markets to which such grain and seed are shipped, their grading, weighing, and inspection, and to collect such information on this subject as shall be valuable to the agricultural and commercial interests of the country; that the chief of said bureau of grain inspection shall receive a salary of three thousand five hundred dollars per annum; and the Secretary of Agriculture is hereby authorized to empoy a force sufficient for this purpose, to be known as grain and seed inspectors, one of whom shall be stationed at each of the leading centers of interstate trade and commerce in grain and seed in the United States, said inspectors to have had at least two years' practical experience in the grading and handling of seed of the quality commonly marketed at the place where his duties are to be performed, and which inspectors shall be appointed by and shall be subject to all the rules prescribed by and shall receive the compensation fixed by the Secretary of Agriculture.

Sec. 2. That the said inspectors, as occasion requires, are hereby authorized to appoint, under rules prescribed by the Secretary of Agriculture, deputy inspectors, having the same qualifications as inspectors, who shall act under the immediate control and supervision of the inspectors and who are to be paid for their services from one thousand to three thousand dollars a year, according to the place stationed and the labor performed, and in a manner to be provided by the Secretary of Agriculture, from the fees collected from the inspection of grain and seed at the several places where the duties of such deputy inspectors shall be required to be performed, and that each inspector shall have the power to remove or transfer any deputy inspector acting under him upon good reasons shown, subject only to appeal and final review and order of the chief of the bureau.

Sec. 3. That each inspector of grain and seed shall, before entering upon the duties of his office, take an oath of office, as in the case of other United States officers, and shall execute a bond to the Government of the United States in a sum to be fixed by the Secretary of Agriculture, with good and sufficient sureties, to be approved by the Secretary of Agriculture, conditioned that he will faithfully and impartially discharge the duties of the office of inspector, according to the law and the rules and regulations of the Agricultural Department, and that he will pay all damages to any person or persons who may be injured by reason of his willful neglect to comply with the law or rules and regulations aforesaid; that each deputy inspector appointed as above shall be required to take a like oath and give such bond as may be required by the inspector for the protection of the latter and for the faithful performance of his duties as such deputy inspector.

Sec. 4. That it shall be the duty of said inspectors and their deputies to inspect and grade all grain or seed which at the time of inspecting and grading of the same has been shipped from any other State, Territory, or country than the State, Territory, or country in which the same is inspected or is intended for shipment into any other State, Territory, or foreign country before the same is unloaded from the car, vessel, or other vehicle in which the same was or is being transported, or before the same has been mixed with other grain so as to lose its identity, and there shall be charged and collected from the owner thereof such fees for the inspection of said grain or seed as may be deemed reasonable and fixed by the Secretary of Agriculture: *Provided,* That the inspection of any consignment of grain or seed may be waived as provided for in section eight of this Act.

Sec. 5. That the inspector and all deputy inspectors shall be governed in their inspection, duties by such rules and regulations as may be provided by the Secretary of Agriculture, who shall have the power to fix the rates of charges for the inspection of grain and seed at the several receiving and shipping points and the manner in which the same shall be collected, which charges shall be regulated in such manner as will, in the judgment of the Secretary of Agriculture, produce sufficient revenue to meet the necessary expenses of the bureau and inspection service. The Secretary of Agriculture shall fix the amount of compensation to be paid to each of said inspectors and deputy inspectors, within the limitations above prescribed, and prescribe the time and manner of the payment thereof, which compensation shall be paid out of the grain-inspection fund herein created and paid in the manner prescribed by the Secretary of Agriculture.

Sec. 6. That no inspector or deputy inspector of grain shall during his term of service be interested, directly or indirectly, in the handling, storing, shipping, purchasing, or selling of grain or seed in the market where he is employed as such inspector or deputy inspector; nor shall he be in the employment of any person or corporation interested in the handling, storing, shipping, purchasing, or selling of grain or seed in such market.

Sec. 7. That the Secretary of Agriculture is hereby authorized and required, as soon as may be after the enactment hereof, to determine and fix, according to such standards as he may prescribe, such classification and grading of wheat, flax, corn, rye, oats, barley, and other grains and seeds as in his judgment the usages of trade warrant or require, having reference to the standards, classifications, and grades now recognized by the several chambers of commerce and boards of trade of the United States: *Provided, however,* That the reference to such various classifications and grades shall serve only as a guide and suggestion in the matter of determining and fixing the United States standards herein provided for, but he shall not be controlled thereby, but shall determine and fix such standards and such classifications and grades as will, in his judgment, best subserve the interests of the public in the conduct of interstate and foreign trade and commerce in grains and seeds.

Sec. 8. That when such standards are fixed and the classifications and grades determined upon the same shall be made matter of permanent record in the Agricultural Department, and public notice thereof shall be given in such manner as the Secretary of Agriculture shall direct, and thereafter such classifications and grades and modifications thereof shall be known as the United States standards. All persons interested shall have access to said record at such convenient times and under such reasonable regulations as the Secretary may prescribe; and on the payment of such proper charge as the Secretary may fix a certified copy of the classifications and grades shall be supplied to those who may apply for same.

Sec. 9. That when changing conditions make it necessary to change or modify standards of grades, the same may be done after thirty days' notice by bulletin from the Secretary of Agriculture through the office of the chief inspectors, the limits of such changes to be clearly defined, and standards thus fixed to be substituted for the ones formerly adopted and to be operative at time to be fixed by the Secretary, but not in less than five days from date of adoption.

Sec. 10. That from and after thirty days after such classification and grades have been determined upon and fixed and duly placed on record as herein provided, such classifications and grading shall be taken and held to be the standard in all interstate tarde and commerce in grain in all cases where no other standard is agreed upon: *Provided, however,* That in interstate trade or commerce in grain when the consignor thereof or his authorized agent shall, by written order, so direct public inspection, classification, or grading shall not be required nor made when said grain or seed is consigned to the owner thereof or his authorized agent, or to a mill or private storehouse, or for deposit in a special bin, or to a public warehouse, the purchaser and seller consenting thereto, or if consigned to a market where the usages of trade recognize sales of grain and seed by sample, when the consignor shall direct its sale by sample.

Sec. 11. That it shall be the duty of any railroad company, steamship company, or other firm or corporation or private individual engaged in the transportation of grain or seed destined to any State, Territory, or country other than that in which it is received for inspection, or receive from any other State, Territory, or country than that to which it is consigned, to notify the United States grain inspector at the place of destination of any consignment of grain, within twenty-four hours after its arrival, that a shipment, cargo, or load of grain or seed is in its, their, or his hands at the place of destination of said grain and asking the said inspector to inspect and grade the same without unnecessary delay and before the same is unloaded from the car, vessel, or other vehicle in which the same was shipped: *Provided, however,* That if there is no such inspector located at the point of destination then the inspection shall be made at point of shipment or in transit, as may be designated by the purchaser; that it shall be unlawful for any person herein named to willfully unload or otherwise discharge any load, cargo, or consignment of grain which has been at any time during the period of its transit an article of interstate commerce prior to its inspection as herein provided for, and for each car so willfully unloaded a separate offense shall have been committed, and there shall be imposed a fine of not less than fifty nor more than one hundred dollars for each offense; that for each cargo so willfully unloaded from any water craft there shall be imposed a fine of not less than five hundred nor more than one thousand dollars; that for the willful unloading or discharging of any other vehicle there shall be imposed a fine of not less than ten nor more than fifty dollars.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE $1.00 PER YEAR. A CLUB OF FIVE FOR $3.00

Foreign Subscriptions, including Canada, $1.50 per Year.

Clubs. Five subscribers for $3.00. This applies for one person five years or five persons one year each.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY.* Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The latest date shown with your address is the date to which your subscription is paid Subscribers are urged to keep their time paid *IN ADVANCE.*

A. S. of E. Members will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

PRESIDENT BARNETT RESIGNS

Our forms have been opened after a few copies have been printed to insert the following from the Indianapolis Star of January 10th:

PRESIDENT OF AMERICAN SOCIETY EQUITY RESIGNS

Cicero M. Barnett, president of the American Society of Equity, has tendered his resignation to the board of directors of that organization to be acted on at the meeting to be held next month. O. D. Pauley, secretary and treasurer of the American Society of Equity, and the only officer of the organization in the city yesterday, would not discuss President Barnett's action yesterday afternoon.

CRITICS AND CRITICISM

BY THE REV. CHARLES STELZLE

Some criticism is fair and legitimate. Most of us need to be hit, and hit hard, sometimes, principally because we get the notion that we have a monopoly of wisdom. But criticism should be constructive, rather than destructive. True criticism does not necessarily mean a pointing out of weakness. It may be the discovery of virtue. But most criticism is of the other kind. It is just plain, simple "knocking." Criticism of another generally acts as a boomerang upon the unjust critic, because the critic is most apt to point out in another the failing which is peculiarly his own.

People who insinuate are like the people who won't look you in the eye when they talk to you. You know how to treat such.

We want to place a copy of The Third Power book in the hands of every subscriber and we want every farmer in the country to become a subscriber to this paper. To this end we are now making our subscription offers to include a copy of the book free See them.

We have a special edition of The Third Power printed on very fine paper and bound in fine silk cloth. This will make an admirable Christ- Price $1.00 postpaid, and, if requested, we will write your compliments in before mailing.

WITH UP-TO-DATE'S PUBLISHER

If you approve of what this paper is doing, drop a postal to us for a few sample copies to hand around.

Make your neighbor think like you do, and act as you do, by getting him to subscribe for this paper. This brings co- operation.

Banks have made some very onerous rules regarding collecting checks and we request our subscribers to please not send them in the future. Even drafts on large cities like Kansas City, Philadelphia, Boston, etc., for which the remitter probably paid a fee, we are charged another fee for collecting. Send the cash in a strong envelope well secured or registered letter, or postoffice or express money order or bank draft on Chicago or New York. When the Farmers' Society of Equity gets strong it will not allow onerous rules made against the public.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

It was a long struggle and a battle at every turn of the road, but UP-TO-DATE won. It will be even more in the hearts of the people in the future than in the past.

A new era is dawning for UP-TO-DATE FARMING and for farmers. The era of Equity in business has been ushered in. This paper has won its fight against those who would curb it in its progress to be a great power to demand and secure equal opportunities for all the people. A paper teaching what this one does and with the

mission UP-TO-DATE has, cannot have too much power.

When the circulation of this paper reaches a million or more it will compel justice and equity for farmers. The organization it represents then will be the greatest and best on earth.

Get together on two important propositions. They are the Farmers' Society of Equity and UP-TO-DATE FARMING.

Read in this issue "Which Side of the Line Are You On?" and "The Campaigns for 1908."

Our subscription manager says: *"tell all our readers to give full address every time they write, and to write it so plainly that no mistake need be made in reading it."* Please favor the manager.

Statements of subscription account were sent to over 60,000 subscribers in December and January. If your subscription is in arrears, and you have not responded to the statement, please do so now. We must hear from every such subscriber without delay as we have other important work —development work—that will make it extra burdensome to prolong the time of renewing.

Did you think of ordering UP-TO-DATE stopped? Think again and don't do it. We cannot afford to lose a single subscriber but must get new ones as rapidly as possible. And *you* know it.

"I don't receive UP-TO-DATE FARMING!" We get a good many such notices. To all such we will say that members who joined the A. S. of E. since the 1907 convention and some before that time, have not been reported to the publisher yet. We cannot send the paper until we get the name. The remedy: Demand the return of your money and send it direct to the F. S. of E., or UP-TO-DATE FARMING.

A great many members have written, "I paid my dues for 1907 and you did not change the expiration date of my paper." Eighty-four such letters came December 9th, and the same is repeated every day, some days more and some days less. In these cases no reports or payments were received by the publisher. The trouble came about through the complicated system of reporting, carelessness, and we're sorry to say, sometimes dishonesty. The remedy: We have credited all that have been reported, for their 1907 subscription and will continue to do this through this month (January). Therefore, if your subscription label does not give you full credit, let us know this month. Also, in the future, reports are to be made direct. Thus, there will be only the person you pay your money to between you and us. Carelessness, incompetency or dishonesty will be discouraged, and found out if practiced. How do you like direct reporting?

Bundles of any issue of UP-TO-DATE FARMING can be obtained, until further notice, in lots of 10 or more at 1 cent a copy.

"Don't borrow trouble; any of your friends (?) will gladly give it to you." We have found this true in our own case.

If any person knows that this paper has wrongly represented anything connected with the recent convention, or previous to it, or subsequent to it, we will give space to print proof of misrepresentation.

COMMENTS ON CURRENT EVENTS

Our old readers will recall how all the farm papers said "it can't be done," when the doctrine of controlled marketing to secure profitable prices was first taught by this paper. They can also recall the bitter opposition by such papers, and how UP-TO-DATE FARMING went along in its even course until it *was done.*

And now a change has come over them. They see it has been done in part and they *know* it can be done completely if the farmers are left alone. They now are very solicitous to help (?) farmers. But how? While they espouse the cause for which this paper labored so unfalteringly for five years, do they adopt the only plan that will give farmers industrial freedom? They do not. UP-TO-DATE FARMING is given no credit but continues to be insulted as it always has been, its motives impunged, and its accomplishments ignored. While they are making a pretense of helping farmers to secure profitable prices, they are not sincere, or they have very bad judgment, because they are creating doubt, discord and factions, instead of settling on the only true and tried plan. Each has its own pet idea to exploit. In this way they are doing as much now as they ever did to delay the farmers time of triumph.

We write above as a note of warning. The dangers ahead of farmers now are greater than ever before. Don't be lulled into a condition of false security. Don't let any editor deceive you. Don't give up independent thought. There is only one road that farmers may travel to the *front* and it is by the *original* Equity route.

Mr. John Thibos of Cadillac, Mich., sends clippings from Cadillac News-Express, Farm and Home and Cadillac Globe. In transmitting these he says: "The best way to get rid of those who oppose is to freeze them out by non-support.

The Ohio Farmer bitterly opposed the original Equity movement, but the new edition just about suits it. In their solicitation for the success of the Equity-Farmers, Consumers, Million-dollar-Hydra-headed-combination they have sent sample copies and a leter to members. Following is an example of how they were received:

"I find genuine pleasure in being able to inform you that the *best* people of our State stand firm for the principles of *Equity,* as expressed and taught by the *originator,* the Hon. J. A. Everitt, of Indianapolis, Ind. As for the head of the "Bolting Contingent," we must say that evidently they *have not the shepherd's voice,* for the *sheep,* (the true Equity people) are not following *them;* the farmers are awakened, never never to slumber again as in the past. They are being educated to their situation, they know their enemies, as well as their *friends.*. We Equity people, or as *you* are pleased to designate us "We Everitt people," are fully apprised of the work of the late national convention, through the official paper, UP-TO-DATE FARMING. We belong to the Farmers' Society of Equity, the above named publication is our official organ, and J. A. Everitt is our leader in the cause of *true Equity.* And no matter what may come in the future, no *so-called farm papers* (of which yours is a fair sample), will ever be able to blind the farmer to his true position. So, Mr. Editor, if you are one of the crowd who are making such frantic efforts to *sit hard* on the "lid," (and your editorial regarding the Society of Equity points you out as one of them), then we fancy you had better get off that "lid," for under it is working the combined forces of the organized farmers of our country, and some day the "lid" may blow off and with it, a big slice of your subscription list! No! We "Everitt" people don't want *your* sheet and we are glad we *don't;* 'tis a pity so many of your "specimen copies" were thrown away, when you tossed them in our direction, but then you see we farming people *can* distinguish *now* between the bone which is meaty and juicy, and the one that is bare of sustenance. See! You are tossing out the latter kind. Better get off that "lid," Mr. Eds.! Ha! Ha!"

MAE MANNING.

Ollivet, Ky., Dec. 25. '07.

P. S. Since writing the above, I have received your very *officious* communication, in which you state that the *exceedingly officious* Mr. C. R. Walrod had sent my name to you in order that you might forward your "specimen copies" to me, and he further states, so you have written, that "I will be glad to read this article at the next meeting of our local," and "that I will distribute the extras among members." I am sure if Mr. Walrod will attend strictly to the affairs over which he has charge, he may find steady employment. But when he officiously dabbles with the affairs of our union here he overleaps his jurisdiction, as we are not in his flock. In conclusion let me emphatically say that I wish no further communication from any branch of the *"Bolting Contingent".* Let me say this section is hot for J. A. Everitt, and the principles he teaches, and don't *presume* to fire any more of your papers, literature, etc., *this way* if you please! Our union repudiates your methods and principles with emphasis.

MAE MANNING.

Mt. Olivet, Ky.

C. O. Drayton has issued another circular to "members of the American Society of Equity." Yes, Mr. Everitt hired John Mulholland with consent of Secretary Tubbs, and without consulting the board of directors. After Mulholland proved himself incompetent, Mr. Everitt discharged him, and Tubbs, Drayton and Sharp kept him to assist them in the dirty work. Does Drayton want the members to think that the board of directors should always be consulted before a person can be fired? If not, then what does he mean? The board did repudiate the contract, because Mr. Everitt had a hand in it, and to distress Mr. Everitt, and then he was retained and is at headquarters to this time. Drayton says: "I am not alarmed at the personal filth flung at the old board of directors. Men do not throw mud when they have rocks, and when they begin throwing mud it is evident they have run out of rocks, or, more likely they never had any to begin with."

You're quite right, Mr. Drayton, we are throwing at you just what you stored up the past year, and we are printing the records. If it's mud and not rocks, it is your fault as you made it. How do you like the installment in this issue ("Conspiracy and Rebellion?" If mud won't defile you perhaps ancient eggs will.

KIND WORDS FROM THE PRESS

Those who furnish the public press with its column after column of matter for the multitudes to read, may sometimes err, but, trained to thought and accustomed to reason, they most generally arrive at wise conclusions. As was to be expected, the recent unaccountable, if not inexcusable, proceedings of the American Society of Equity has received its share of attention. We slip the following from the Sinilac County, Michigan Farmer:

"Viewed from an independent point, it is clearly notable that President Everitt has been the victim of place-hunters who covet the power centered in the official organ. Instead of correcting alleged abuses of office, the scheme seemed to be to fleece the president of his official toga, first, and explain the situation afterwards.

"A Society embracing as many members as the Equity boasts needs cool heads and resolute men devoted to the highest interests of the cause in order to keep it intact. Like all great bodies of men combined to co-operate, the Equity will from time to time feel the influence of malcontents who spread evil reports among the brotherhood, to the end that revolutionary principles secure seats in the front row.

"But here is where the rank and file should come in and assert themselves as parties who have interests higher than mere place and position in the Order. It is their business to let the revolutionary spirits understand for all time that the society was not organized for the express purpose of furnishing offices for ambitious men; that they have something valuable at stake, and that any move tending to disturb the equilibrium of the society is injurious to the entire membership."

As a comparison piece, we clip the following from The Co-Operative Leader, of Topeka, Kansas:

"The American Society of Equity has dethroned its president and sent their old secretary to the rear. That is a mighty good start toward destroying the organization. While the new men are learning the work the rank and file will get discouraged and disintegration will follow. They can find a home in the Farmers' Union.

"J. A. Everitt was about all there ever was to the American Society of Equity and now that he has been ordered to retire what is there left to hold that organization together?. There is possibly not another man in the whole country that can do what Everit has done, organize and hold his members to a will-o-the-wisp, a pipe dream.'

We thank our generous contemporary for the above kind expressions, but we are at a loss to know just what he means by "will-o-the-wisp, a pipe dream." The great central idea of the American Society of Equity is "Equity (fairness) in all the business relations of life." Its first great purpose is to secure profitable and equitable prices for all farm crops through co-operation and controlled marketing. Is this "a will-o-the-wisp, a pipe dream?" If so, pray for what does the Farmers' Union stand? It is not a question with us what prices other people put on their property. It belongs to them either by right of purchase or production, and they have a right to name the terms on which they will surrender that ownership to another. That right is conceded to every producer or owner of commodities of value except the farmer. And it applies without a protest to the farmers' products so soon as they pass out of his hands. UP-TO-DATE FARMING and the Society of Equity (the original Society) contends that this so nearly universal rule should reach one step farther back and apply to farm products while yet they belong to the farmer who produced them.

Is that the "pipe dream?" Then of all men the farmer is the most unhappy. If everybody else may price what belongs to him, including the results of his labor and his labor itself, while the farmer is not permitted to do so, it follows that, since somebody must price the things that come from the farms, the buyers must do it and thus hold the farmers at their mercy, and farmers, as of old, must be little more than "hewers of wood and drawers of water" for those who are privileged to make both buying and selling prices for those who raise crops.

But perhaps the "pipe dream" consists of the means proposed to secure to farmers this privilege so freely accorded to everybody else. It is the simplest thing that could be proposed, nothing but co-operation and controlled marketing—co-operation in the agreement as to a minimum price, and then sell when the price is offered and withhold when it is not. If that is a "pipe dream," for farmers, it is an important business reality for every other calling, and we can see nothing in soil cultivation or crop production which ought to make that business an exception to so universal a rule. We believe it would be well for our good friend, The Co-Operative Leader, to revise his idea of "a will-o-the-wisp, a pipe dream."

The Michigan Farmer has been one of the most unfair farm papers against the Society in the five years of its existence. It was one of very few to report false and scandalous reports sent out through the Equity Press Bureau maintained at headquarters. As a protest to this paper's unfairness, The Gleaner, another Michigan paper, contained the following in its issue of December 15:

It is a question if the agitation Editor Everitt has carried on for the past five years is not as great value to the farmers of this country as all the "howes, wherefores and suggestions" that have been published for the past ten years by the farm papers that are condemning him.

The thousands of Michigan members should not hesitate in their choice of State farm papers.

When people know they have done another a wrong, they feel bound to say something to justify their action; and when they get themselves in that fix they seldom pay much attention to the truth.

Some of the A. S. of E. State officers find themselves in a hard row of stumps, notably those of Minnesota and the State president of Illinois. They have been shown what they were very slow to see, that their members are opposed to their unjust and revolutionary course. Hence to save themselves they resort to their usual tricks and deception.

All that Mr. Everitt asks of his enemies is that they keep within the truth. He does not expect them to do that, though, for if they did their occupation would very soon be gone.

After reading all the "literature" of the "opposition," it is amusing to note that the "great wickedness" resolves itself into two things: Mr. Everitt would not allow some fellows to do everything they wanted to do, and he published a paper at his own expense and allowed the members to have it at half price! Let's see if the "other fellows" can do that.

Which Side of the Line Are You On?

Secretary Pauley Says Members Who Choose Up-to-Date Farming Will Not Be In Good Standing

If there still remains one critic against the Farmers' Society of Equity, he should be disarmed when he knows the true status of the Society down to date. Let us explain:

The A. S. of E. headquarters in more than two months has made no attempt toward new development. Harmony does not prevail among headquarter officers and employees. The department unions which should have all been maintained at headquarters, to help strengthen it, are all located elsewhere; some of the directors have resigned and the president has repudiated the conduct of his own headquarters since the convention.

They were heavily in debt at the time of the convention because of unconstitutional use of the Society money to establish "a consumers' department," and indebtedness has greatly increased since the convention largely for unconstitutional expenses also. Notes have been issued to extend this indebtedness "until 1907 dues come in." Thus the future has been discounted, and at the very best, the receipts must be used to square up old scores and no aggressive campaigns to organize can be undertaken, even though the desire and ability were present, for months, and then the best season will have passed.

This is the condition of the A. S. of E. headquarters, and it is clear that farmers cannot expect any help from it to market the 1908 crops profitably. It exists, but is powerless, to work out farmers' problems. As long as it exists it holds the old name. Therefore, if farmers want the benefits in 1908 that can only come through the Equity Society, they must not wait to step into dead men's shoes. You ask, "what shall we do?"

If the original plan of the Society was right; that is to organize the farmers; to control their crops; to secure profitable prices of their own making; then the only thing to do is to affiliate with the Farmers' Society of Equity which stands for all these things. Also the F. S. of E. is represented by ability to plan campaigns and conduct them; is not handicapped by debts; has not in any way discounted the future and it represented by the paper that is responsible for the existence of the Equity Society, and brought it into its late prominence and power.

The time has certainly come when each member must decide. We say "each member" because even some local unions are divided; while State unions, where they have expressed themselves, no two agree ON ALL POINTS.

To illustrate:

Michigan, in State convention, refused to support the present A. S. of E. headquarters; endorsed UP-TO-DATE FARMING as the official paper and will retain the balance of the money in the State treasury.

Oklahoma, in State convention, condemned many of the acts of the recent convention, but thought they ought to support the officers it elected. They endorsed UP-TO-DATE FARMING as their official paper.

Nebraska, in State convention, passeda resolution that three States should arbitrate the Society's troubles and left it to each member to choose which paper he preferred.

Kansas has not held a State convention, but in several important county meetings the Farmers' Society of Equity and UP-TO-DATE FARMING were endorsed.

Minnesota, like Kansas, has not held a State meeting, but in several county and district meetings, representing practically the organized portions of the State, they endorsed the Farmers' Society of Equity and UP TO-DATE FARMING.

In Kentucky, the home of Sharp; Illinois, the home of Drayton; Indiana, the home of Speer; Wisconsin, the home of Emmerton, Crawley and Kump; and North Dakota, the home of Pauley and Nelson; all of whom are among the chief conspirators, the most of the State officers have been in favor of the present A. S. of E. headquarters. But the members have largely been against them, and almost solid for UP-TO-DATE FARMING as the official paper. As the full significance of the conspiracy drawn on the members, and as they realize the danger of departing from the true principles of Equity for farmers, as the first convention committed the new A. S. of E to do, they are rallying to the Farmers' Society of Equity. This is not an idle boast. It is true, as every member must conclude there is no alternative if he shall hope for a speedy solution of his serious problems.

Then a few county unions, notably Ohio county, Ky., the home of ex-Director Sharp and President Barnett, have passed resolutions to support the present headquarters of the A. S. of E., while protests are pouring in from members that they will refuse to do so.

We want to please everybody, but the person who undertakes to do so, seldom pleases anybody. We want to say "amen" to Michigan's resolutions, and we will if the people will take hold and organize the State in 1908. We cannot, however, send such greetings to Oklahoma. The delegates to that convention certainly acted without a full knowledge of the facts. We might ask them how they can consistently uphold the present A. S. of E. headquarters when its own president has repudiated its conduct? Nebraska has put the time of a settlement in the indefinite future, while what is needed now is positiveness—action. A definite plan and speedy results. If we are to save the organization and develop it to greater proportions, the way must be present now, at the beginning of the year. This is why we said in December 8th number:

"Whatever is proposed now must be a clear-out proposition," and "To inspire the confidence that is now necesary to win, and win quickly, it wil be neccessary to present plans that cannot reasonably fail, that are simple and which will not impose any particular tax in money or of time to work out."

Kansas came out on this clear-out proposition. If all the other States would have done likewise the problem would be much simplified. Minnesota, likewise, as far as the members have been heard from, but the president and secretary are not so certain.

We don't believe in witholding the truth. We have a serious problem before us and it must be met squarely. The best movement the country had offered it is in jeopardy and to remove it from this jeopardy requires heroic treatment.

We believe every member will grant that the farmers problems cannot be solved except by ONE national organization, for ALL sections and for ALL the crops. Also that we have the right plan and that formerly we were moving in the right direction. Inasmuch as many of the benefits promised, were realized while working on that plan, we may claim that the plan has been proven correct. But the present A. S. of E. is sadly out of line. Each of its crop departments are practically distinct and separate from the head organization and each have their headquarters elsewhere than at the main headquarters, thus defeating the object that they give adhesive qualities to the headquarters and strengthen it. All crop interests were to center at one place and permit of perfect co-operation instead of, as at present, being a drawing apart. And now, pardon us for referring to this, come various States and unwittingly produce conditions that might make as many **sectional** factions as there are States.

As we said, we would like to please everybody, but how can we? The people participating in the various conventions were honest and sincerely thought in each case they were doing the very best thing. The trouble was they did not know what other States were going to do, with the result that no two are a unit ON ALL POINTS. This, however, is what might be expected when the individual States attempt to do what belongs to the national organization. If a deliberate attempt was to be made to thoroughly confuse, demoralize and disrupt the organization on national lines, no more certain course could be adopted. Therefore, we hope all will exercise a little patience until another national convention can be held, when rules and laws can be adopted that will harmonize in all the States.

To emphasize this even more, we need only to refer to Secretary Pauley's ruling that if any report is made to him of fees or dues that included UP-TO-DATE FARMING as the official paper such paper would not be sent, or members would not be considered in good standing if the part was deducted from the fee or dues to provide UP-TO-DATE FARMING, before remitting It is plain enough where the Nebrask and Oklahoma members will stand in the face of this rule. Also thousands in North Dakota, Wisconsin, Illinois, Indiana, and Kentucky. The idea is that the member must have that paper forced on him or forfeit his membership.

Which side of the line are you on? If still in doubt, you will probably not go far wrong if you make the following resolutions, adopted by the three counties, Wabasha, Olmstead, and Winona, (Minn.) in joint convention, your resolutions

Whereas, We deplore the fact that a few men, regardless of parliamentary law and the spirit of justice and fairness, got complete control of our National Convention, and used it in a manner to indicate that they were influenced by men that are enemies to our Society, and

Whereas, We realize that we have already derived benefits that demonstrate that its fundamental principles are correct,

Therefore, be it resolved that it is the sentiment of this convention representing Wabasha, Olmstead and Winona counties that we denounce and disapprove the actions of said national convention and will not be bound by such actions, nor the actions of the Board of Directors in attempting to discard "UP-TO-DATE FARMING" as the official paper.

Resolved, that we continue to carry out the true principles of Equity as advocated by the founder of our Society and will continue to recognize "UP-TO-DATE FARMING" as the official paper.

Resolved, that we deplore the trouble that has arisen in our organization and sincerely trust that some means may be found for a satisfactory compromise that may settle all difficulties.

We appeal to the officers of the State union and other unions that their efforts may be used in this direction.

Resolved, that if no such compromise is brought about, that we shall regard ourselves as a part of the Farmers' Society of Equity as advised and recommended by ex-President Everitt and others as being the true organization.

As the prospects for a compromise are not good at present, and as the organization must be maintained and extended, each member's duty, it would appear, is to step to the side of the line represented by the Farmers' Society of Equity. Also, if a compromise is effected it will include all members in good standing in both factions. But the declaration that members who choose UP-TO-DATE FARMING as their official paper cannot be in good standing in the A. S. of E. faction looks very encouraging that nearly all the members will now come with the F. S. of E.

To Whom Shall We Report?

1. If you believe in the original principles and plan of the Equity Society, and if you want its good objects for farmers accomplished first, then you better report to the Farmers' Society of Equity.

2. If you prefer this paper—UP-TO-DATE FARMING—the paper that established the Equity Society, and which has done so much to secure equity for farmers, then you must report to the Farmers' Society of Equity, because you will forfeit your membership if report is sent to the other people.

3. If you want your Society to be powerful to secure equitable prices for the 1908 crops, then report to the Farmers' Society of Equity, because its plans for the 1908 campaigns are all made and it has the ability to prosecute them.

4. And why should you report to, and uphold a headquarters that its own head has repudiated its conduct? We repeat what President Barnett said:

"Mr. Everitt, I begin to see that you have been greatly wronged. I want to say that the defamatory literature sent out from headquarters was sent without my knowledge or approval, also, that I am your friend and will stand by you."

And a letter to Mr. Everitt, dated December 27, 1908, was this:

"I have writtten a letter to the department * * * stating that I know nothing against you and that I have not circulated any defamatory charges against you."

In view of this, will it be consistent for any member, or local, or county union to encourage in any way a headquarters that has been responsible for all the trouble our Society has experienced?

5. And there are many more reasons why all members and unions should report to the Farmers' Society of Equity. If the union will not do it as a body, then do it individually. Also, while the present complications exist, send the reports direct to headquarters, except in Michigan and Kansas, where send to STATE SECRETARY as before.

THE MEMBERSHIP FEE IS $2.00 AS BEFORE.

THE ANNUAL DUES ARE $1.20 AS BEFORE.

FARMERS' SOCIETY OF EQUITY

INDIANAPOLIS INDIANA

N. B. Blanks for reporting sent on request.
N. B. State and county unions will be recognized as rapidly as they affiliate with the F. S. of E. and agree on uniform plans and policy, which are absolutely necessary for success.

"SURE HATCH" PRIZES

The Sure Hatch Incubator Company announces a Prize Contest for the year 1908 which will far exceed in liberality all previous contests.

The Company has divided the United States into six districts and increased the number of "hatching" prizes in each district to seven, making 42 prizes, besides numerous cash prizes for the best photographs showing the "Sure Hatch" Incubator in operation.

The majority of the prizes are "Sure Hatch" Incubators, which are well worth striving for, as these incubators are famous the world over for their splendid hatching qualities.

Readers of this paper who are interested in raising poultry for profit should write to the Sure Hatch Incubator Company, Box 28, Fremont, Neb., or Dept. 28, Indianapolis, Ind., for the "Prize Circular" and valuable book on Incubators and Poultry Profits, both of which are free, postpaid.

We want every farmer to know more about the Detroit Tongueless Disc Harrow. If you do not have one of these up-to-date farm implements, investigate the broad claim of the manufacturer. Sold on one month's free trial. Pay for it in easy payments if you buy it. Freight allowed. Machine guaranteed. You are safe in trying one. Write today to the American Harrow Co., 539 Hastings St., Detroit, Mich., for free catalog and attractive price and terms.

ADVERTISING PRIZE CONTEST

Many replies were received in the contest as to which was the best advertisement in the December 1st number. It was very hard for the judges to decide, but finally prizes were awarded as follows:

John L. Porter, Harmon, Ill., $5.00 cash; Oscar Tronsgard, Wyndmere, N. D., yearly subscription; J. J. Fox, Crofton, Ky., yearly subscription; A. H. Green, Arab, Ala., yearly subscription; O. T. Everhart, Hanover, Pa., yearly subscription; Geo. Rawding, Akron, N. Y., yearly subscription.

Mr. Porter, the winner of the first prize, selected the advertisement of the Johnson-Slocum Co., 426 State St., Cairo, Mich., as the best advertisement and his reasons were considered best by the judges.

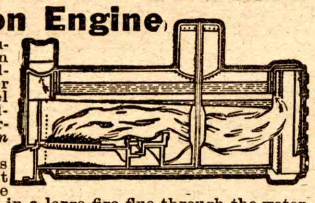
The Most Powerful Traction Engine



The "New Huber" Traction Engine develops *most* power with *least* fuel because its boiler is the perfected "*return flue*" type.

The cut shows you how heat from the fire passes *forward* in a large fire flue through the water and then comes through tubes to the smokestack in the rear. Thus, the heat goes through the water *twice*, giving *double* heating capacity. There are many other exclusive features about the "New Huber." We tell you about all of them in our new "School for Threshermen", which we send FREE on request.

No matter who you are—nor where you are—nor how you wish to use a Traction Engine—before making up your mind which one to get, you should send for this new book which we mail to you FREE and *postpaid*. Write for it today.

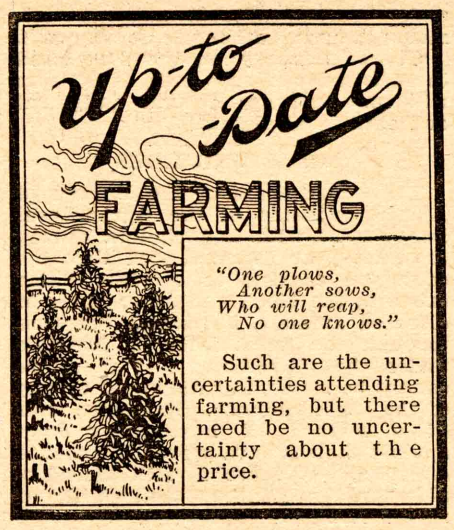
DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers



The farm's broad acres rest, but not in peace,
The hungry winds fight over them;
But calm they sleep till storms shall cease,
And then new wealth will cover them.
—STELLE.

AS WE HAPPEN TO THINK

Many a barn lot is a gold mine; the fields are a mint that will coin the "gold" into money. Get it to them.

See that water does not stand on any part of the wheat field. Standing water is worse than green bugs or chinch bugs.

The Department of Agriculture wants a heavy appropriation of money with which to fight the green bugs in southwestern wheat fields. The speculative bears destroy more wheat values than the bugs do. If Mr. Wilson had a few extra dollars would he take a whirl at them?

Don't let the stock tramp the meadows in the winter. Meadows so tramped soon become weed fields.

Most timberland farms have small creeks running through them. Keep the creeks open and prevent harmful overflows and washouts.

When the ground is frozen and the work is slack is a good time to draw the manure out to the poorer points in the fields. With a view to this it is is a good plan to clean up the lots and put the manure in piles when the ground is soft.

Every indication is for future good prices for corn. Since crib corn is provided on almost every farm, and the corn is safely housed therein, don't be in a hurry to sell. Wait until the market wants it. If there is profit in corn culture, the farmer ought to have his share of it.

It will be a happy day also when there is granary room on every farm in which to store the small grain. It is shameful mismanagement to dump the crops and glut the markets.

Out on the farms, as we note the frantic squirming of the few schemers who thought they could, at a single turn of the wrist, scoop in a man's life work, we wonder if those fellows know how it feels to "get left." Farmers knock around among the clods, but they have learned not to strike their toes against every stump.

UP-TO-DATE, early and late, tells us what we want to know; and when a "bird" we never heard, pipes up to sing, we listen? No!

We keep our way, refuse to stray in paths where Truth disdains to walk; a safer guide is at our side in UP-TO-DATE's more genial talk.

That "stitch in time" pertains to the woman's work, but a post in time belongs to the men, and a post in time may save a whole fence; and a crop.

COTTON, WHEAT AND RYE

The readers of UP-TO-DATE FARMING know that we do not put much reliance in the preliminary crop reports of the Department of Agriculture, and that we do not believe it is in the interest of farming, that they are published as they are; but since they are published, and since the speculators take advantage of them to advance or depress prices, it is well that they be considered to show what evil they do, if for no other purpose.

The cotton report shows a total productin for 1907, of 11,678,000 bales of 500 pounds each. The leading cotton producing States are credited as follows: Virginia, 14,000 bales; North Carolina, 604,000 bales; South Carolina, 1,091,000 bales; Georgia, 1,898,000 bales; Florida, 64,000 bales; Alabama, 1,216,000 bales; Mississippi, 1,536,000 bales; Louisiana, 712,000 bales; Texas, 2,490,000 bales; Arkansas, 796,000 bales; Tennessee, 298,000 bales; Missouri, 40,000 bales; Oklahoma, 919,000 bales.

So palpably exaggerated is this report considered in the south, and previous reports have caused such tremendous losses to the planters in reduction of prices, that a southern congressman has demanded that the Department lay before congress the information upon which the reports are based.

The December report on wheat is to the effect that the area seeded last fall is nearly two per cent, or 596,000 acres less than a year ago, and that the condition in December was three per cent below that of the same time 1906 and 1905, and two per cent below the average for the past ten years.

Of the principal wheat growing States, Kansas and Indiana have the same acreage of a year ago, and the December condition in Kansas is the same, but that of Indiana drops 4 per cent below its condition last year. Nebraska and Illinois have a greater acreage than a year ago, but the condition of the crop in Nebraska is 5 per cent below what it was a year ago, and in Illinois it is 3 per cent below. Ohio has only 96 per cent of last year's acreage, and the condition of the crop is 13 per cent below that of December last year. Texas has only 78 per cent of last year's acreage, and the condition of the crop is one per cent below that of a year ago.

Hence, if the report means anything, it means a short crop next yyear, and those who hold their crops may do so with heavy assurance of remunerative prices.

The acreage of rye reported in December is 2.2 per cent less than that of 1906, and the condition of the crop is 5 per cent below that of last year. Minnesota has increased her acreage two per cent, and Wisconsin maintains hers the same, but all the other rye producing States decrease their acreage, and all show a reduced average condition.

Bale hay! Ask The Auto-Fedan Hay Press Co., Box 42, Topeka, Kan.

Gordon, Van Tine & Co., 451 Case St., Davenport, Iowa, if you want lumber and mill work of any kind. Write them before you buy.

The harrow is much more important than the plow, say many well-known agriculturists. Learn all about the perfect seed bed. Send for free book to Duane H. Nash, Inc., Box 41, Millington, N. J.

If your farm needs new fences or old ones repaired, look over the wire fense advertisements in this issue. Write for lowest prices, direct from the factory.

A good plow—as good as can be bought—can be gotten direct from the factory. Plows, harrows and all farm implements made and sold by Hapgood Plow Co., D 2, Front St., Alton, Ill., are good. Send for big catalog.

Scientific Feed Mills are recognized as the best power mills. If you need a mill, write for catalog telling about them and why they are superior to others. Fifty styles and sizes made by The Foos Mfg. Co., Box 127, Springfield, O.

Look over the advertisements of Seedsmen and Nurserymen in this issue. Be on the lookout for the newest novelties. Nothing is too good for Our Up-to-Date People. Write our advertisers for catalogs, which they are usually glad to send free.

Low down wagons with wide tired wheels build up roads, save your back and make labor easier for your horses. They are the kind to have. A set of electric wheels will convert your present wagon into a new up-to-date one. Send for book showing the many advantages of low wheels. Electric Wheel Co., Box 170, Quincy, Ill., will mail it free.

If your local hardware merchant buys goods of a wholesale house in Cleveland or any other city, he sends his check by mail to pay for them. You can send money to the bank by mail in exactly the same way without any risk at all. The Cleveland Trust Company pays 4 per cent interest on deposits of $1.00 and more. It is safe and earns 50 per cent to 100 per cent more than local banks pay. Send for book K. Address Cleveland Trust Co., Cleveland, O.

For a great many years "Columbus" when applied to buggies and carriages has signified the highest quality. The name itself is a very valuable asset. The vehicles made by the Columbus factory must be up to standard, as the manufacturers *could not afford* to attach the name to an inferior article. If you want a buggy or vehicle of any kind or harness either, send to The Columbus Carriage and Harness Co., 2030 S. High St., Columbus, O., for full and complete catalog.

"Why not accept my offer and try a Detroit Tongueless Disc Harrow free for a month?" is the way Mr. W. W. Collier starts his advertisement. And why not? There is no *good reason* why every farmer who does not have one of these up-to-date harrows should not accept his offer. Read the great proposition advertised in this number. At least write a postal for catalog and full particulars. Write W. W. Collier, Mgr., American Harrow Co., 539 Hastings St., Detroit, Mich.

Over 15,000 De Loach Sawmills are in use throughout the world. For twenty years they have been standard. With a De Loach mill a man can saw his own lumber or do custom work at the very minimum expense. The machine is so simple a 15-year-old boy can operate it just as successfully as a grown man. The capacity of a De Loach mill is 25 to 50 per cent more than the guarantee calls for. If you are in the market for a sawmill, we suggest that you write to the De Loach Mill Mfg. Co., Box 850, Bridgeport, Ala., for their free illustrated catalog.

Every farmer who has a Fanning Mill finds it a good investment. If it is a Chatham Mill, it is doubly so, because Chathams are leaders. It cleans all kinds of grain, separates oats from wheat, cleans red clover, takes out buckhorn and plantain, cleans alsike and alfalfa, cleans beans, oats, barley, grades corn, cleans timothy, takes chess and cockle out of wheat. And *this mill is sold on thirty days free trial.* FARMERS, GET BUSY. Send for big free book. Write The Manson Campbell Co., 5 Wesson Ave., Detroit, Mich. They have twenty-four branch warehouses and pay the freight.

The German Third Power book is now printed. All orders on hand will be filled as rapidly as possible and new orders will have immediate attention. Price $1.50, but special price to readers of UP-TO-DATE FARMING, 50 cents postpaid.

My Catalog Will Quote You Prices That Save You 33⅓%

I want to send you my big, new 1908 Book, containing 192 pages of **Split Hickory** Pleasure Vehicle Bargains, and full line of Harness. A postal addressed to me will get it **FREE**, postage prepaid. I will quote you prices that I guarantee to save you 33⅓ to 50%, and will send you any vehicle made by my Company on **THIRTY DAYS' FREE TRIAL** and guarantee it **TWO YEARS**—this guarantee backed up by my two big vehicle factories, in Cincinnati and Columbus, Ohio.

SPLIT HICKORY VEHICLES

Are Known and Used Everywhere

I will build you a buggy just as you want it, trim it like you want it trimmed, paint it any color you want, stripe it to suit you, give you correct proportion whether you want a light, medium or heavy buggy, and I will save you 33⅓%. My line of vehicles consists of all kinds and all styles of Top Buggies, Automobile Seat Two-in-One Buggies, handsome Runabouts with fancy seats, regular seats and automobile seats, Phaetons, Carriages, Surreys, Spring Wagons, and Harness. Write for my big free Catalog today. Address me personally, and I will see that you get one promptly, by return mail. Address

The Cream of Cream Separators

The Sharples Dairy Tubular is the cream of cream separators—the pick of the whole bunch. Supply can waist low, you can fill it with one hand. All gears enclosed, dirt free, absolutely self-oiling—no oil holes, no bother—needs only a spoonful of oil once or twice a week—uses same oil over and over. Has twice the skimming force of any other separator—skims twice as clean. Holds world's record for clean skimming.

Bowl so simple you can wash it in 3 minutes—much lighter than others—easier handled. Bowl hung from a single frictionless ball bearing—runs so light you can sit while turning. Only one Tubular—the Sharples. It's modern. Others are old style. Every exclusive Tubular feature an advantage to you, and fully patented. Every Tubular thoroughly tested in factory and sold under unlimited guaranty. Write immediately for catalog J-136 and ask for free copy of our valuable book, "Business Dairying."

WHY NOT FINISH STOCK?

The writer recently heard an old live stock commission man, in conversation with a number of his patrons, ask, with a note of sadness in his voice, "Why don't feeders finish their stock as was the old-time custom?" He went ahead to explain that the big bulk of the stock that the commission men handle in the course of a year is made up of half fatted stuff that is classed as fair to medium. He commented on the fact that in these days a consignment of fully finished stock at most of the receiving points is such an oddity that it causes a slight sensation and will result in a congregation of all the salesmen around the pens in which they are held.

"The premium which fully finished stock commands in the open market over ordinary stuff is so large," he continued, "that it looks like the good business men would go after it. A top load of cattle will bring fully 50 cents more per hundred than the usual top on any given day. In that extra 50 cents is to be found the reason why no feeder should market his stock before it is ready to go. I have about concluded that the daily paper is not really the boon it was. He pays too much attention to the market page; is influenced too much by the daily fluctuation in prices there recorded. He notes a downward tendency in the price of live stock and if it happens to continue for a week or more he begins to get shaky and the desire to realize before the bottom drops out of the market seizes him with the result that he rounds up his holdings and starts them to market to find that his action is but the action of hundreds of other misguided feeders. The downward tendency continues, much as the big packing houses had figured it would. It is all right for the feeders to read, but it almost seems natural for them to be stampeded by what they read about the markets. Maybe if the daily paper had only one market report a week we would have more finished stock to handle and the feeders would receive more money for their labor and investment."

VALUE OF A MILCH COW

We love to write for the ordinary farmer, the one that needs the most help. Experts and those well-to-do can get along any way.

A friend of ours, a renter, has a small cow, more scrub than anything else, but she is a good milker. Twenty-five dollars would be a fair price for such a cow where he lives, but for this one he has been offered $40 on account of her known milking qualities. The other day he sold from her a five weeks old calf for a veal at $10, 25 per cent of her special price—40 per cent of her actual market value.

If the cow made no other return, the money invested in her is much better than if it were invested in a United States bond. But for at least nine months in the year she will give milk enough and make butter enough to do himself and wife and five small children!

There is nothing specially remarkable in this. We write it only to show that farmers are in position to make more profitable small investments than any other people on earth.

There is money on the farm, and there is independence in it, if farmers will only exercise a little judgment and skill in attaining it.

IMMUNIZING HOGS

The experiments of the Bureau of Animal Industry of the Agricultural Department with hog cholera during the past year demonstrated that the contagion consists of a virus which exists in the blood and other fluids of diseased animals, but which can pass through the finest filter, is invisible under the microscope, and therefore cannot be isolated or discerned by any of the usual methods. Extensive tests of a method of immunizing hogs against cholera have proven this means effective, but there is still considerable question of the practicability of this method of controlling a disease that causes such an enormous loss to the farmers of the country during the course of a year. By this method hogs that have recovered from cholera or that have been exposed without contracting it are injected with suitable amounts of virulent blood from diseased hogs, and in this way their immunity is heightened. The blood serum of these immunes is then used in vaccinating the hogs which it is desired to protect. The method giving the best results is to inject blood from diseased hogs simultaneously with the immune serum. By this method of vaccination hogs are protected for three and a half months or more, while by the use of serum alone the protection cannot be expected to last longer than three weeks. It is claimed the immunized hogs retain for several months their power to furnish a potent serum. To prove a successful curative agent the serum must be administered within four days after actual infection.

Have your hides tanned by The Crosby-Frisian Fur Co., 116 Mill St., Rochester, N. Y. Good reliable work at moderate prices. Finely illustrated catalog explains.

"Grind your feed" is certainly good advice. "Select your mill carefully" is good too. Before buying investigate the Corn Belt Mill made by the Spartan Mfg. Co., 1084 Main St., Pontiac, Ill.

FEEDING DAIRY COWS

Dairy cows require different feed than beef cattle.

We should not feed much fat forming foods as our cows would lay on fat instead of producing milk. Feed more silage or roots in the winter season.

Daily feed for a 1000 pound cow, give 40 pounds of silage, seven pounds clover hay, eight pounds of grain.

The cows that are soon to calve should be fed on succulent feed such as silage or roots, bran, linseed meal with a little oats. Keep the bowels open and do not feed very heavy on grains just before or after calving. After calving give bran mash and warm the drinking water for a few days. Allow the calf to suck for about two days and then feed his mother's milk from a pail for about two weeks about three quarts twice a day; after that reduce it with skim milk or warm water, so that at the end of the fourth week the calf will be getting all skim milk, or half whole milk and half warm water with some reliable stock food to aid digestion. Keep a supply of good clover or alfalfa hay within reach and also some ground oats with a little linseed meal mixed with it. After the calf eats the ground feed, gradually get him used to eating whole oats as this is the best for him up to six months old. The heifers should not be bred until about 15 or 18 months old.

A good time to do your dehorning is to dehorn your calves with a good dehorner when they are a few days old. Mark them with an aluminum ear mark so you can keep a record of them.

Keep a record of the breeding of each cow so you will know when she is due to calve and then allow her to go dry six weeks before calving.

The dairy bull should be fed like a working horse and should receive plenty of exercise. Work him in a tread power.

The milking is one of the most important parts of the dairy business. The cows should be milked quickly, clean and quietly. Do not excite your cows or they will not let their milk down. Don't lick a cow because she kicks. If she kicks there is some cause for it. Look for the cause and remedy it. It may be a core teat, it may be an inflamed udder, or it may be that she has been misused and regards her milker as an enemy that she must fight. If such is the case treat her kindly and she will soon learn that you are not going to harm her.

Clip the long hair off the udder and flanks and tail and wipe off the udder with a damp cloth before milking and you will be surprised to see how much cleaner the milk will be.

Weigh each cow's milk with an accurate scale and test the milk with the Babcock tester and you will be able to see how many of your cows are paying for themselves.—Dr. David Roberts, Cattle Specialist.

Agents wanted to sell the Automatic Sewing Awl. Will sew anything from a belly band to a buggy top. Simple, practical and needed on every farm. Write for information. Foster Mfg. Co., 644 Security Bldg., Los Angeles, Cal.

Isn't it time for you, Mr. Farmer, to be thinking of your butter gold mine, right at your home, ready for the working, capable of yielding big and constant rewards, if only you work it properly? If you think "yes," write to the Sharples Separator Company, West Chester, Pa., for their "Business Dairying" handbook and regular catalog number 136. Both free, if you mention UP-TO-DATE FARMING. Both books will help you in getting ready to gain largest possible profits from the butter gold mine.

Chas. E. West, Gotebo, Okla., writes Nov. 15, 1907. I purchased ABSORBINE and applied it according to directions as given for Bog Spavin and had grand success. One bottle was enough to do the work. I shall recommend it for Bog Spavin above all other medicines and I tried a good many different kinds."

ABSORBINE penetrates to the seat of trouble promptly and effectually, without blistering or removing the hair. Does not require the horse to be laid up. Mild in its action but positive in its results. $2.00 a bottle. Manufactured by W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

BUTTER-MAKING ESSENTIALS

A farmer's wife who has had marked success as a butter maker says that the three main essentials in producing fine butter are, cattle that are healthy in every respect, the feeding and care of the cows so that the best results can be obtained and absolute cleanliness in every step of the process from the drawing of the milk until the butter is delivered to the customer.

SHEEP ARE PROFITABLE

Sheep may be the best live stock that a farmer can have—best for the land and best for the bank account—but it seems to be next to impossible to convince the small farmer that such is a fact. It is estimated that there are but 50,000,000 sheep in this country, a small number when it is remembered that our population exceeds 80,000,000. Market receipts during the current year show a decrease compared with last year. The large grazing areas of the West are practically filled so that any increase in sheep husbandry must result from operations on the small farms. The majority of farmers raise other live stock that requires more care and attention and produces poorer returns. It is hard to see how a farmer who goes in for raising a few sheep can lose if he will avail himself of the experience of others, which is always available. The demand for mutton must steadily increase and the tariff on wool assures him of a very fair return for this commodity. Their service in maintaining the fertility of the soil must also be considered. As a matter of fact the sheep's natural enemy, the dog, furnished the reason why so many farmers refuse to carry sheep. Very often it is an excuse—is a danger that is not very formidable. Many of the States have dog laws that insure sheep owners against loss by their depredations. About the only way to get round this drawback, where it really exists, is to carry enough sheep to make it advisable to keep a shepherd.

Violin music free. Do you play the violin? Every musician will want to take advantage of this great offer by E. T. Root & Sons, 95 Patten Bldg., Chicago, Ill. They will send a 50c music book for five 2c stamps to pay postage. Send for it and large music instrument catalog.

SPECIAL ANNOUNCEMENT TO COW OWNERS

It is with more than ordinary enthusiasm that we beg to call the attention of cow owners and dairy farmers to the new 1908 line of the improved De Laval Cream Separators, consisting of ten machines, ranging in capacity from 135 lbs. to 1350 lbs of milk per hour.

Although for a number of years De Laval machines have seemed as nearly perfect as separators could be, thousands of dollars have been and are being spent annually to improve them. The past two years of experiments and tests have been unusually productive of new ideas and big improvements in separator construction. Even the highest hopes of the De Laval experimental force and mechanical experts themselves have been exceeded.

The principal De Laval improvements are greater simplicity of construction, ease of cleaning and replacement of parts, less cost of repairs when necessary, easier hand operation, more complete separation under hard conditions, greater capacity and a material reduction of prices in proportion to capacity.

The line includes several new styles and capacites of machines never offered heretofore. No matter how small or how large the dairy the new De Laval line has a machine exactly suited for it.

If you intend buying a separator do not fail to examine the new De Laval styles before you make your selection, as otherwise you must surely regret it later on. A handsome new 1908 De Laval Catlog can be had for the asking.

Why Not Accept My Offer and Try a Detroit Tongueless Disc Harrow Free for a Month?

I believe the Detroit Tongueless Disc Harrow has had the largest sale in its first two seasons on the market of any farm implement ever manufactured.
W. W. Collier, Gen. Mgr.

THAT'S my proposition—I mean every word of it.

You can use one of these Discs on your farm—for a full month—without cost.

At the end of that time—if you don't want it—return it to us. We'll allow the freight—thus the test won't cost you one penny. That test is only a part of our liberal selling plan.

It's just our way of assuring every one of our customers that they are going to get what they *want* and what they will be pleased with when they buy a Detroit Tongueless Disc Harrow.

We're anxious to send a Detroit Tongueless Disc Harrow to any responsible farmer—without deposit—and without advance payment—to make the test. It *must* be a good Disc—and one that will *please* you—or we could not go on making this proposition year after year.

We're sending out thousands upon thousands of these Discs all over the country on this plan. Surely we could not afford to do this if the Disc were *not* all we claim it to be.

The principle of the Detroit Tongueless Disc Harrow is right. The Forward Truck does away with all of the annoyance on the team of the old "tongue." It does away with all jamming—end thrust—and whipping of the horses, that frets them and puts them out of commission just at the time you need them most. See the two wheels back of the Disc Blades in the picture?

Those wheels are a part of the Detroit Tongueless TRANSPORT TRUCK, upon which you can raise the Disc Blades off the ground, making them rest on the front and back Trucks—so that you can drive the Harrow over stony ground, rough and sandy roads, bridges, etc., without dulling the blades or cutting up the surface. A good invention—that Transport Truck,—'most worth its weight in gold the way it saves Disc Blades that have to be transported from one field to another or from house to field.

Year before last we had over 1600 orders for this Disc that we couldn't fill—had to send them back. Last year we made twice as many as the previous year—and still we couldn't fill all our orders.

This year we've increased our factory facilities, and hope to be able to fill every single order on the Detroit Tongueless. It has had a wonderful sale—and has given universal satisfaction.

CAUTION:

Beware of *imitations*. They say "imitation is the sincerest flattery"—and our Detroit Tongueless Disc Harrow is being very much flattered. There are several cheap imitations of our Harrow being offered for sale through *dealers*. Don't buy one of them believing that you are getting a genuine Detroit—because you are not. The Detroit Tongueless Disc is not for sale by any dealer—anywhere. We sell it direct from our factory—and *you* keep all the dealers' profits in your own pocket.

WE SELL YOU A DETROIT TONGUELESS DISC HARROW—ON TIME—ON TRIAL—FREIGHT ALLOWED

Anyway, we invite you to drop us a line on a postal card, giving us your name and address, and letting us send you our new 1907-08 Disc catalogue. This Book tells you more about the famous Detroit Tongueless Disc Harrow than we can tell you here—gives you our Selling Plan and quotes prices on a Detroit delivered at your railroad station. You can buy the genuine Detroit Tongueless Disc only through us *direct*. We advise you of this that you may not be imposed upon by some unscrupulous dealer who will represent to you that he has a Detroit Tongueless Disc Harrow for sale—or one as good. He *can't* have a genuine Detroit Tongueless—and he can't have one "just as good."

up to Date ORCHARD AND GARDEN

When are you going to meet to organize your warehouse company and arrange for its building? Remember the 1908 crops.

The naked trees look bare and cold,
As winter winds against them blow;
But southern breeze across the wold
Ere long with bloom will make them glow.
—STELLE.

ONLY A WORD OR TWO

The farmer who is not a profesional orchardist, is very liable to neglect the orchard and allow it to grow up in weeds and sprouts. In such case a sod is apt to form not at all conducive to good or abundant fruit. If such farmers do not care to clean up the orchards and adopt a system of cultivation for them, they may accomplish the next best result by turning into them when the ground is soft, the unringed stock hogs.

If it is proposed next to cultivate the orchards that have been allowed to run wild, there is perhaps no better crop to seed them to than cow or field peas, and pasturing them to hogs early in the season is a good preparatory step. Then the best thing to do with the peas is hog them down; turn in as soon as the pods begin to yellow. If continued cultivation is not desirable, follow the peas the next spring with red clover.

Small trees in danger from rabbits may be saved cheaply by wrapping about two feet of the stems with old newspapers. Remove the papers in the spring lest insects might harbor in their folds.

There is scarcely an orchard in the country, especially of the neglected class, which ought not to be thoroughly trimmed and dressed up this winter. The crop was so meager last year in so large a portion of the central apple area that it is reasonable to look for a crop this year. In that event, the aim should be to raise good fruit. A proper dressing of the trees will undoubtedly contribute thereto.

Regular raisers of asparagus have their beds well mulched before now, but possibly some who raise only for family use may not. It should be done at once. Cover heavily with strawy stable manure.

Potato onions, the most profitable onions grown nowadays, especially for family use, should be planted out in the fall and covered with straw or other like substance. See that the covering does not get blown off so as to leave the ground bare.

THE HOPE OF THE ORCHARD

The hope of the orchard is not so much in varieties, soil or culture as it is in the selling of the fruit. Fruit is known to be a perishable product, a product with a limited time in which to market it. Speculation takes advantage of this fact, and, as a rule, makes prices cruelly low. If consumers got the benefit of such prices and were thus enabled to consume more for the benefit of their own health and to the enlargement of the demand, fruit growers could adapt themselves to the condition and make quantity supply the deficit of low prices. But when they are compelled to accept low prices for only a part of their product while the other is doomed to perish, and the consumers are forced to pay so much that they cannot satisfy their wants, it grates harshly upon the growers.

There must be a different system of marketing, a pooling of issues between consumers and producers, a merging of interests. The two must get closer together. These are obstacles, but greater ones have been overcome. The marketing season must be prolonged. This will require means of storage. Storage methods may be improved, and storage houses simplified. So much of the apparently impossible has been accomplished that the orchardist may plan and devise and invent with every hope of accomplishment. But the first duty is to get in position to co-operate with his fellows.

"BE A STICKIN' IN A TREE"

On almost every farm there is to be found a tract of practically non-tillable land. The thought probably never enters the head of the owner that this land can easily be made almost as profitable as any of the acres that he possesses. However, one of the encouraging signs of the times is the growing disposition of farmers to utilize such land by planting trees for commercial purposes. Many of them are coming to the conclusion this is a profitable business even for land that is not waste land. A couple of instances will show the possibilities of this work.

Twenty years ago T. L. Eastgate, of Wyoming, planted a few acres of his farm to cottonwood trees. They were not given exceptional care. Recently an expert of the Agricultural Department visited the grove and after careful measurements and calculations found the growth to have averaged 4.71 cords per acre for each year that they had occupied the soil. Wood of this kind in the home market is quoted at $7.00 per cord which gives an average increase per acre of more than $33 for each year. Much of the timber was of sufficient size to saw into lumber and for use as building material, which is more valuable than wood for fuel. The owner often declared that it was the most profitable crop he ever raised.

The most extensive work of growing trees on tillable land in the United States has been done near Farlington, Kan. There are four tracts ranging from 135 to 640 acres, aggregating 1,695 acres. The government authorities have made estimates of these forests and some of them have been cut and used. The ages of these forests were 11, 13, 18 and 21 years. The trees were cultivated from two to four years; after that but little attention was paid to the trees. In making estimates posts were counted at 10 cents for first grade and 6 cents for second grade. These tracts produced as follows: The 13-year-old grove $252 an acre, or $19.30 an acre for each year the grove stood; the 21-year-old tract $18.20 an acre for each year; the 11-year-old tract $20 an acre for each year. Summing up this large tract returned an average of close to $20 an acre for each year the timber was on it, and the labor was insignificant in comparison with that expended on other farm crops during the same period.

As a business proposition the planting of trees, especially locusts, will commend itself more and more to the up-to-date farmers.

What would it be worth to you to have a fence you could move about where it was needed? One that can be made for practically what ordinary stationary fence costs. The Up-to-Date Fence is that kind. Adapted for uneven ground. Makes any angle you may want. Will not blow down. Strong as regular old line fence. In fact *the fence* for every reader of UP-TO-DATE FARMING. Mention this paper and write Mad River Fence Co., West Liberty, Ohio, for circulars and particulars.

New Jersey Farms $100

$5 Down $5 Monthly

Big money is being made by truckers, fruit growers and poultrymen in South Jersey. Climate and soil particularly adapted to fruits, berries, early truck, vegetables, poultry and squabs. Produce marketed much earlier than in other localities, thus bringing highest prices. The best markets, Atlantic City, only 17 miles away. Philadelphia and New York are handily reached. Three main line railroads. Good roads. Pure air and water. Two large manufacturing towns near by. Prosperous community. Title insured. Write today for free booklet.

Daniel Frazier Co., 718 Bailey Bldg., Philadelphia, Pa

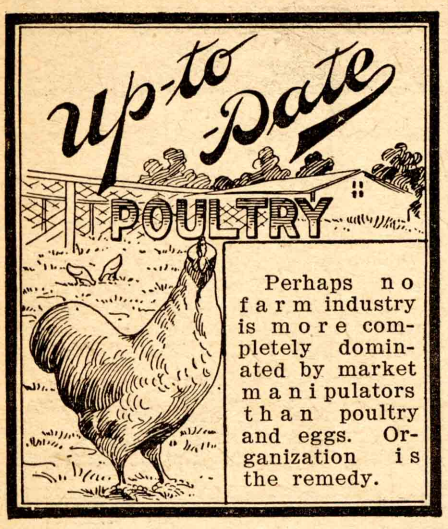
RATEKIN'S SEED HOUSE, SHENANDOAH, IOWA. (LARGEST SEED CORN GROWERS IN THE WORLD.)



EGGS AND EGG FARMING

A hen was cackling loud and long,
Said I to her: "How strange your song."
Said she: "'Tis scarce a song; in fact,
It's just a lay, to be eggs-act."

At the Reading Poultry Conference in England, it was said the secret in egg production is to keep no hen beyond the autumn of the second year. The Reading idea is to sacrifice the chicken after the first year's laying.

Eggs not only spoil by the transpiration of their moisture, and the putrid fermentation of their contents in consequence of air penetrating the pores of the shell, but also by being moved about and jostled when carried a distance by train or otherwise.

Any rough motion ruptures the membranes which keep the white, yolk and germ of the chick in their appropriate places, and upon these becoming mixed putrefaction soon follows.

The future generation of winter layers should come from stock that themselves, as pullets, did good laying in January.

For strong winter laying, pullets that do not drop their first egg before January 1 are to be depended upon.

Pullets hatched between April 1 and May 15, as a rule, lay well during December and January.

Hardiness is a great factor in winter egg production, and it can only be secured by accustoming the fowls to conditions as near outdoors as possible.

Prof. Edward Brown of England says: "One serious danger at the present time is that we regard number of eggs without keeping in view when they are laid. A bird yielding twenty eggs in November and December would return to the owner as much money as if she laid fifty or sixty in March and April. Where hens do not commence laying until February they must produce twice as many in the year to pay the cost of food as would be the case if they came into profit in October.

We appear to have passed the point where general selection of layers has reached its limit, and it is necessary to test the individual performances of each hen in respect of her laying. Only by so doing can further progress be made. Hence the introduction of the trap nest system.

Physical vigor is essential to prevent rapid degeneracy. In some cases it will probably be desirable to use for stock purposes birds whose records are not of the highest, or cocks bred from them, to maintain the stamina.

To breed from the best known layers of the flock, is to build up a strain of prolific fowls. It is the only way to increase values.

FOOD AND FEEDING

Oats contributes to the albumen in the white of an egg.

Peas and oats are a good general purpose food.

Skim milk alone is a highly nitrogenous food; the carbo-hydrates have been removed in the butter, so that it is not a complete diet for any animal. The fat of the cream, however, can be cheaply substituted with corn or cornmeal. The oil in the cream is worth 17 to 20 cents a pound; that in the corn, 1 cent.

Sweet potatoes are not suitable for laying hens, as they contain a large amount of sugar, thus causing the hens to fatten too readily.

According to figures given out by the Connecticut Experiment Station, the weight of one quart of feed is as follows: Cottonseed meal, 1.5 lbs.; linseed meal, old process, 1.1 lbs.; gluten meal, 1.7 lbs.; wheat bran, coarse, 0.5 lbs.; gluten feed, 1.2 lbs.; wheat middlings, coarse, 0.2 lbs.; wheat middlings, fine, 1.1 lbs.; mixed wheat feed, 0.6 lbs.; cornmeal, 1.5 lbs.; oats, 1.2 lbs.; rye bran, 0.6 lbs.

The Reliable Poultry Journal suggests a new method of feeding cottonseed meal to chickens. It says: "Cottonseed meal, if fed to poultry, should, it is said, be fed separately. A ration of equal parts by weight of cornmeal and wheat bran, with sufficient low-grade flour and middlings to roll into a ball and at the same time not be sticky, can be used with the cottonseed meal, the latter constituting about 10 per cent of the whole mash." On the other hand, our best results have been secured from feeding it in a mash with cornmeal. We think the 10 per cent suggested unnecessarily low.

Hulled oats are the best to feed.

Charcoal is a crop purifier.

The poultryman who studies the appetites of his flocks, and feeds accordingly, never fails in putting his feed to the best advantage.

It is always well to have the fowls partially hungry. This will induce them to scratch in the hope of finding some more. Scratching is the best exercise you can give your hens.

POST CARDS FOR ALL OUR READERS

Post Cards are all the rage. They are useful, ornamental and instructive. You will miss the best ones out if you fail to get the original ones offered by A. T. Cook, as advertised in this number. Mr. Cook says all will be fairly dealt with.

It would be mighty hard to beat the catalog of The M. M. Johnson Co., of Clay Center, Neb. Of course every reader has heard of "Old Trusty" Incubators and Brooders. Well, this catalog tells all about them. Furthermore it gives over 100 pages of good solid information about the poultry business. Our advice is "get a copy." Write and mention UP-TO-DATE FARMING. It is free.

RAISING POULTRY AS A SIDE LINE

There is money in raising poultry for the market. As a side line it fills in many hours and pays handsome dividends the year round. The business of raising poultry doesn't require a large amount of money to start. For a few dollars you can buy either the Wooden Hen or the Excelsior Incubator, and either one will more than pay for itself with the first hatch. These incubators are made by George H. Stahl, Quincy, Illinois. Begin by writing for a copy of Stahl's catalog free if you mention UP-TO-DATE FARMING—a most instructive book on poultry raising. It contains many plates of natural colors, including views showing development of the chick from the egg to the bird.

All Leading Varieties of Strictly Pure Bred Chickens, Ducks, Geese, Turkeys. Eggs and Free Trial Incubators at right prices. Dont buy till you see what we offer. A 1 References. Send 2 cents for illustrated catalogue. **Chanticleer Poultry Farm. Dept. 45, Mankato, Minn.**

$HOW Make Hens lay when eggs are high. We do it. You can do it. Simple method explained in our illustrated Poultry Book which also has Record and Expense Acct. showing gains or losses monthly, 10c. Every Poultry Keeper needs this book. Address G. S. VIBBERT, Clintonville, Conn.

INCUBATOR FREE

To the person making the best hatch (largest per cent) with an incubator before May 1, 1908, we will refund the cost of his machine. This offer is made with the following conditions:

1. *Incubator must be bought after December* 1, 1907.
2. *It must have been advertised in Up-to-Date Farming.*
3. *Contestant must mention this paper in writing the advertiser for catalog and price.*
4. *He (or she) must be able to substantiate the report made.*
5. *Report must reach us on or before May* 1, 1908.

This is an opportunity for some up-to-date subscriber to get his machine free. It makes no difference whether it be large or small.

Go after this to win!

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

Mrs. Rudder Tells How Women CAN MAKE FROM $30 TO $50 A MONTH WITH QUEEN INCUBATORS

One of the strong points in Queen Incubators is the fact they have such an army of women users.

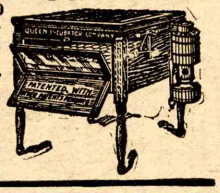
This is accounted for because as Mrs. Rudder says, "they are so easy to operate and regulate."

That's the secret of their great success as money-makers. Being easy to operate means they do not require much watching—means they practically run themselves—means they maintain proper temperature and consequently bring off **more,** stronger and bigger chicks, which grow into profit in the shortest time.

In a letter the other day Mrs. Rudder wrote: "If women (and men, too) only knew the money-making possibilities of Queen Incubators, you couldn't supply the demand. It's easy to make from $30 to $50 a month from a $12.00 Queen Incubator. From five hatches we have 573 chickens. It hatched much better than our hens. No more hen hatching for us. We are delighted with our Queen; it is so easy to operate and regulate. Your personal assistance is certainly valuable."

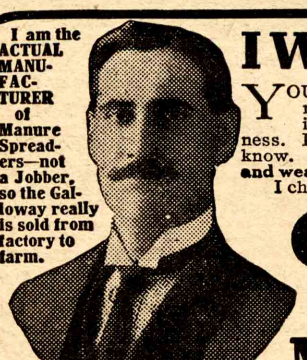
Any woman can do as well as Mrs. Rudder, if she gets a Queen. Our **Big Free 100-page Queen Book** contains many such letters telling how men, women, boys and girls, are making big money with Queens.

Gives our low prices, **freight fully prepaid,** from **$7.50** to **$19.50** for Incubators & Brooders, from 60 egg or chick capacity up to 340. Three months' **trial** with **5 years' guarantee.** Send for free Book.



QUEEN INCUBATOR CO., Box 19, Lincoln, Neb.

I am the ACTUAL MANUFACTURER of Manure Spreaders—not a Jobber, so the Galloway really is sold from factory to farm.



Galloway of Waterloo

Send me a postal and I will send you, absolutely free, my special proposition to you and the **Best and Biggest Manure Spreader Book, Free.**

I Will Give You a Real 30 Day Free Trial With the Money in YOUR Pocket

YOU don't have to pay me **or any one else** a single cent on the price of my spreader before you try it or after you try it, if it doesn't **prove** itself to be the **best** made. I am not beginning in the spreader business. I have built spreaders for years. So I know what beginners don't know. I know how to and do build the Galloway Spreader so **it can't break and wear out** where experimental spreaders are **sure** to break and wear out.

I challenge any other manure spreader seller or manufacturer to put his spreader alongside of the Galloway in the hardest kind of a test. I don't care what other spreader **you** try—it won't cost you a cent to try the Galloway at the same time. So it's certainly to your advantage to try the Galloway at **no cost to you** even if you do put up **your** money to try any other spreader. If the Galloway doesn't beat **any** other that you try, all you have to do is return it **at my expense** and you're not out a penny and you haven't **risked** a penny.

Galloway Wagon Box Manure Spreader

I make the only 70 bu. spreader with wagon running-gear. Patented. It's something new. Worth $15 more than any other, and costs $20 less.

My Price—the Lowest Ever Made on a High-Grade Spreader

The ONLY Spreader with MALLEABLE and STEEL for ALL Parts that break and wear out in other spreaders.

Fits the wagon gears you already have.

THE Galloway has the best improvements—all patented so you can't get them on other spreaders. The Galloway is **Lightest Draft—Feeds as You Wish—and is the Only Spreader that Fits Quickly and Easily to the Different Widths of Wagon Gears.**

The ONLY Endless Apron Force Feed Spreader in the World.

Patented—Worth $25 on any Spreader. Costs you nothing on the Galloway.

The ONLY Spreader Guaranteed for 25 Years with a $25,000 Bond Guarantee TO PROTECT YOU

WILLIAM GALLOWAY, 509 Jefferson St., Waterloo, Ia.

Prompt delivery to you from Waterloo Factory or transfer points at Kansas City; Minneapolis; Madison, Wis., etc.

WOODS IN WINTER

When winter winds are piercing chill,
And through the hawthorne blows the gale,
With solemn feet I tread the hill
That overbrows the lonely vale.

Where, twisted round the barren oak,
The summer vine in beauty clung,
And summer winds the stillness broke,—
The crystal icicle is hung.

Where, from their frozen urns, mute springs,
Pour out the river's gradual tide,
Shrilly the skater's iron rings
And voices fill the woodland side.

Alas! how changed from the fair scene
When the birds sang out their mellow lay,
And winds were soft and words were green,
And the song ceased not with the day.

But still wild music is abroad,
Pale, desert woods! within your crowd;
And gathering winds, in hoarse accord,
Amid the vocal reeds pipe loud.

Chill airs and wintry winds! my ear
Has grown familiar with your song;
I hear it in the opening year,—
I listen and it cheers me long.

H. W. LONGFELLOW.

A GOOD GLOVE CLEANER

There is a glove cleaner which is highly recommended. Shave and melt one-eighth of a five-cent bar of Ivory soap into one jelly-glassful of water. Let this mixture boil five minutes, then pour out and allow to cool. When cold it becomes a bluish white paste. Gloves to be cleaned should be put on the hands and rubbed with a woolen cloth and this solution. It will clean several pairs of gloves, has no odor, and is extremely inexpensive.

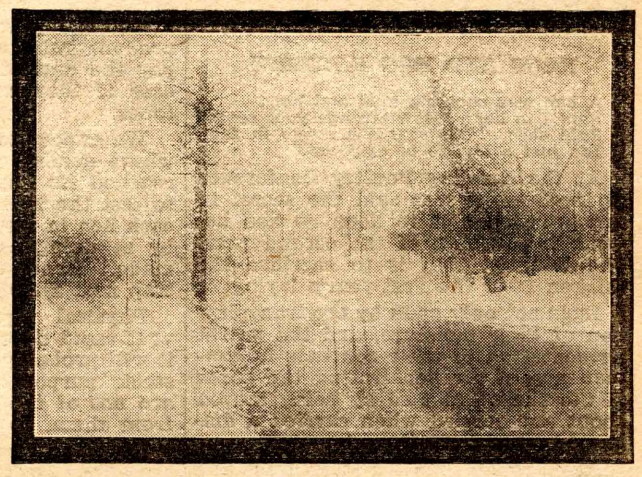
TO DO SPRING SEWING

In these days when one can buy lovely underwear ready made in the stores it seems a waste of time to make it at home, and especially so during this month, when the great underwear sales are going on. But for those who do prefer the home-made, there are wonderful reductions in the prices of muslin, laces and embroideries and now is the time to buy and make.

The first shipment of spring goods has arrived and prices are lower now than they will be again until late in August or September. Why not get all the spring and summer sewing done while the cold weather keeps you indoors? Styles will not change radically. The new pattern books are already on the counters and you can make your gowns as up-to-date now as by waiting until the spring calls you outside to see its loveliness or until the warm summer makes you too uncomfortable to sew.

PRESERVING OUR FORESTS

For years past there has been going on in our land a great waste of the nation's resources. We are gradually beginning to see the effect of this leakage, and in an attempt to check this waste, the President not long since issued a call for an inventory of the natural resources of our country, so that they might be intelligently used for the profit of our people in the future. No part of the natural wealth has been more wasted than our trees.



In some States laws have been passed regarding forestry, but in many instances they were but half-hearted attemps to counteract the terrible waste. Our legislators have not been made to feel by their constituents that this was a matter of importance, demanding immediate and well-directed attention. Or if they have been prodded on this subject, they have remained complacently apathetic.

Other nations have realized the necessity for the preservation of their forests. Norway, a great lumber country, planted in 1905 about seven million trees, over one million of which were planted by school children.

We women feel aghast at the dreadful waste of timber which has been going on in our country since the days of our pioneer forefathers and our orderly instinct is shocked by the lack of method and system displayed by our Government officials in caring for the forests now remaining. Only recently the State of Georgia had to fight two corporations through the Supreme Court of the United States in order to protect her forests from their vandalism.

Every woman knows that the soil she likes best for her favorite house plants is obtained from the woods, where for years and years leaves have decayed and been transformed into the richest black loam.

Every farmer knows that the field which yielded the best crops was the one latest cleared of stumps and trees.

Think of the number of farms being abandoned—of the number of acres of cleared land now standing sterile, when they might have a flourishing forest in the embryo.

Rotation of crops has now become such a well-known idea—why not rotation of forests? As fast as one portion is cleared, why not plant the poorest corner of the farm with young forest trees?

In many States the principal advocates of forestry are women. Let us all join forces and talk the men folks into planting new forests and protecting those few that are now left to us.

"WINTER FANCIES"

The Home Magazine prints a poem by James Whitcomb Riley that ends thus:

Then blow, winds, blow!
And rave and shriek
And snarl and snow,
Till your breath grows weak—
While here in my room
I'm as snugly shut
As a glad little worm
In the heart of a nut!

That is the poet's way of putting it. But aren't we all mighty thankful for our cozy little rooms these winter days? After a hard day's work isn't it good to gather around the fire a while and then the deliciousness of getting into a clean, warm bed to sleep all through the long winter night? Only it would be pleasanter if we knew that all God's people and creatures were so pleasantly housed.

THE GARDEN IN JANUARY

Now is the time for making hotbeds. If the soil can be frozen, and then thawed before planting, it will be better.

The compost should be begun at least two weeks before it is to be used. Fresh horse manure and the leaves of hardwood trees such as oak make the best fermentation. This compost should be turned two or three times in order to heat thoroughly. The heating can be accelerated by pouring two or three pails of boiling water over the manure. Be sure to make enough of the compost as from two to three feet is required in the hot-bed.

With the new seed and plant catalogs arriving, it is high time to make selection for your garden beds next summer. If you wish flowers to cheer you from June to October, plant plenty of annuals, such as sweet peas, nasturtiums, asters, cosmos and candy tuft. The wonderful thing about all annuals being the more they are cut, the more shoots and blossoms come forth.

The perennial blossoms one may treasure on their own stalks, uncut, but one may give generously of all annual blooms and still have heaps of them left. These plants should be well thinned and transplanted. Each year a rotation of flowers is advised, bigger blossoms and healthier plants being the result.

"PATCHES"

A little powdered borax in the starch will make the clothes shine as if they had been laundered.

To keep roaches away from pantry shelves, burn egg shells in the oven and place on the shelves.

So many new handkerchiefs now have colored borders. To set the colors in these, soak them ten minutes in a pail of tepid water in which a dessertspoonful of turpentine has been dissolved.

If the oven is too hot, lower the temperature by placing a basin of cold water inside.

Place one or two large marbles in the tea kettle. The lime will adhere to these, leaving the sides of the kettle free.

Milk that has just begun to change can be sweetened by the addition of a little soda.

GREAT BARGAINS IN POST CARDS

No reader should miss the charming Post Cards offered by A. T. Cook. See advertisement in this number. They are gems of worth and beauty, offered at a special low price to introduce. Send today or you may forget it.

Advantages of Naval Service

Enlisting in the Navy, a young man can begin with good pay, the first clothing outfit free, and lodging, board and medical attendance while training for a higher rating and better pay. There are but few such opportunities in civil life.

If you enlist without having any trade, you will be sent to a training station and fitted to become a seaman or yeoman. As an apprentice seaman your pay to start will be $16 per month, free of living expenses. Your advancement would then depend upon yourself. By continuous, efficient and faithful service you can rise to the position of Chief Petty Officer and later to that of Warrant Officer, with pay of $1800 per year, and allowances.

A thrifty young man can save a great deal of money in the Navy, if he wants to—more, in fact, than can the average man in civil life, because the pay is practically all clear. There are no car fares or lunches to pay for and board, lodging and medical attendance are free.

If you are an electrician, coppersmith, stenographer, drug clerk, baker, or have any other such training, your pay at the start would be higher.

Life in the Navy is interesting, healthful, and by no means all work. Ample time is given for recreation, amusement and instruction.

The term of enlistment is four years. There are special inducements for re-enlistment. Full information can be had by addressing the nearest U. S. Navy Recruiting Station named below:

COILED SPRING FENCE COMPANY,
Box 88 Winchester, Indiana.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS' SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

Is, as the name indicates, a farmers' Society. Its organized forms are local unions and a national union; a county union may be organized where three (3) or more local unions in the county will join to organize one. Also a State union may be organized where five (5) or more county unions will join in organizing it. Full instructions for organizing county and State unions, and their duties, will be sent on application to headquarters.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect anyone of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected

or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. ¶ Local unions of the old A. S. of E. can affiliate with the F. S. of E. by paying annual dues of ($1.20) and reporting name and number of union with present officers and members to *Farmers' Society of Equity, Indianapolis, Ind.* ¶ Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers' Society of Equity is to *obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second,* because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

Send all reports, and address all communications to

THE FARMERS' SOCIETY OF EQUITY,

Headquarters, Indianapolis, Indiana

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

DON'T GIVE UP

Though young birds, in flying fall,
Still their wings grow stronger;
And the next time they can keep
Up a little longer.

PHOEBE CAREY.

Write it Farmers' Society of Equity, or for short, F. S. of E.

There is only one farmers' organization before the people that possesses the true principles for farmers co-operation, and the true and only plan for accomplishing what farmers need most of all—independence in marketing and profitable prices. It is the Farmers' Society of Equity.

RESOLUTIONS—STATE OF MICHIGAN

"Whereas, the members of the American Society of Equity in the State of Michigan have joined and supporting it because of its original principles, be it

Resolved, That we appreciate the great good as set forth in the plan formulated by J. A. Everitt, and in our judgment we can not consistently accept any plan that would in any way endanger it.

Resolved, That we recommend the adoption of "UP-TO-DATE FARMING" as our official paper.

Resolved further, that on account of the condition of the present National organization, we cannot affiliate with it and do justice to the members of this State.

Resolved, That we stand alone until we can work in harmony with the State in a National organization.

Resolved, That for the present we keep the funds within the State other than what goes for the official paper.

Resolved, If found necessary, to incorporate.

Resolved, That the State and county officers remain in office until the expiration of the time for which they were elected.

Resolved, That we recommend State bylaws and fix the fees and dues.

E. N. BALL, Sec., Ann Arbor, Mich.

RESOLUTIONS

The following resolutions were unanimously passed by Rochester, Minn., Local Union, there being 69 members present and voting.

RESOLVED, First, that we withdraw from the so-called American Society of Equity of North America of which Mr. C. M. Barnett, of Kentucky, is president, and Mr. O. D. Pauly, of North Dakota, is secretary.

Second, that we associate ourselves together under the name of Farmers Society of Equity as represented by J. A. Everitt, W. H. Mitchell, Mr. Rous, Mr. Peckham of Kansas, Mr. Webber and Harding of Minnesota, and others.

Third, that we endorse UP-TO-DATE FARMING and will continue it as our Society paper.

Fourth, that we authorize the same persons to act as officers of this Society until election in January, 1908.

Fifth, that we refuse to accept the "Equity Farm Journal," and authorize the secretary to return the copies received to O. D. Pauly at Indianapolis, Indiana.

Sixth, that no person other than farmers shall be eligible to membership in the Society.

S. W. MORRIS, Secretary.

Rochester, Minn.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper two or more times. Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

MACOUPIN COUNTY (ILL.) UNION will meet in Carlinville January 18, 1908, for the purpose of electing officers. A full representation from all locals in the county is desired, as important business will come before this meeting.—O. P. Smith, R. R. 3, Box 35, Carlinville.

R. R. Sherod, Keosauqua, Ia., will hold a meeting at the South Lebanon school house January 15, 1908. All farmers in the community are urged to attend and hear Mr. Sherod explain why prices of farm products have been better than before and how long the good prices will continue.

PURDUE UNIVERSITY, Lafayette, Ind., first annual fruit show, January 13 to 18, 1908. Cash premiums to the amount of $300 are offered for exhibits of fruit, and in addition several special premiums have been secured. Open to every fruit grower in Indiana. For full information mention UP-TO-DATE FARMING and address C. C. Woodbury, Experiment Station, Lafayette, Indiana.

SHERMAN IN KANSAS. Hon. H. B. Sherman is in Kansas now and open for engagements where large audiences will come out to hear him. A man of Mr. Sherman's ability cannot afford to touch the low spots, but get up a rousing mass meeting and send for him. He has frequently held 5,000 people for two hours while he expounded the gospel of Equity to bring salvation to the farmers. Address him H. B. Sherman, care C. W. Peckham, Haven, Kansas.

ARCO (MINN.) LOCAL UNION will meet Jan. 18 at Arco. Officers to be elected, dues paid and other important business will be attended to.—Aug. W. Kruger, Sec., Arco, Minn.

A special meeting of the Kansas State Union of the American Society of Equity will be held at Hutchinson, Kan., Tuesday and Wednesday, February 4 and 5, 1908, at Woodman Hall, to consider matters relative to the present condition of the organization. All officers and members are invited.—L. P. King, Pres.; C. W. Peckham, Sec.

WHO OWNS IT?

A Review of Equity Farm Journal Number 2.

It has been a much mooted question and the subject of much speculation as to who ownes the alleged new official paper. Perhaps the commercial report below will throw light on the dark subject:

Chicago, Ill., Dec. 26th, 1907.

Equity Farm Journal, 84-163 *Randolph St., Chicago, Ill.*

This publication has recently been established by Theo. G. Nelson, Chas. W. Bowne and John Gentner who are prominently connected with the American Society of Equity of North America.

This publication, it is said, is to be the official organ of the organization above mentioned. The gentlemen whose names appear above propose to issue the paper until the organization can take it over.

We are led to observe "every one to his fancy," but we don't see that the late convention, or its representatives, were true to their declarations that *"the Society must own its own official paper."* Also the burden of the literature sent from headquarters since the convention has been *"the Society now owns its official paper."* But here comes information from a reliable source that the "gentlemen whose names appear above propose to issue the paper until the organization can take it over." Well, that's just what the publisher of UP-TO-DATE FARMING said to every convention of the Society. Can *any* farmer be fooled *all* the time?

Number 2 of the paper is before us. It is in a better dress than number 1. But its dress, like its status with the Society and its contents, all are false. Members should stop and think of piling up debts for the future to pay. Several places the statement is made, *"the paper will be yours when you pay what we have put up."* Just so, and where is the money going to come from for organizing the farmers? But that is another matter. Surely the farmers want a newspaper that is false, perfidous, libelous, malicious, acrimonious and vituperous, rather than an organization to secure for them justice and equity. This is the way these people must reason. Are they correct?

We will waste very little space in reviewing it, as *"false in one thing false in all"* is a law axiom, and once a witness is discredited in court he has no standing thereafter. Our readers may be more credulous than judges of courts, but we have proven these people false so many times that it would appear even the truth from them would need bolstering. As an example of the whole paper we reply to their latest attempts to shift the blame, for failures to get papers, on the writer. See on page 3, under the heading, *"Who Owns It?"* We submit the following affidavit:

To Whom It May Concern:

In a copy of a paper called Equity Farm Journal, issued at Chicago, Ill., and dated December, 1907, *Vol. I., No. 2, is the following:*

"Whenever the publisher of the official paper (meaning Up-to-Date Farming) wanted to save a little money, he cut out a few thousand names from the list and saved that much paper and postage. All of you people who did not get your paper for weeks at a time, and you people in lo-

(*Continued on page* 18.)

Department of Elevators and Warehouses

Local unions should concentrate into one good strong union at the sipping or market town rather than meet in school houses. This will be a move toward marketing the crops when sufficient organization and pledging is secured.

We recommend that an Equity hall be built in every town to serve as a meeting place. Also when marketing, according to the Equity plan is undertaken there must be an office for the secretary which will be open constantly every day. If the building is made two stories the lower floor may be rented out until the Society needs it.

No delay should occur now in deciding on the granaries that wil be erected on the farms and elevators and warehouses that will be needed at the shipping point. The question should not be, will we build them? but, are they needed? Farmers have got to have the facilities to control their crops, this means to store them over the time when the genuine demand don't need them.

If anything can be gained by delay we fail to see how to figure it, but everything may be lost by delay or failure to do this important thing. Take the matter up at your next meeting or call a special meeting.

Our Equity people around Shipp Landing will soon have a cleaning plant for peanuts and will then send out a man to sell them for us. I believe we can find a direct market for our crop with the assistance of the cleaner. We would like to hear from other sections where peanuts are grown.—William Everitt Shulz, Cuba Landing, Tenn.

Send reports of elevators, warehouses, cleaning plants or Equity halls built, or in contemplation, to this department.

MINIMUM PRICES

The following minimum prices were agreed upon as fair and equitable for the 1907 crops at the annual convention of the American Society of Equity, October 22-25, 1907:

Wheat—No. 1 Northern and No. 2 red, on basis of Chicago market, per bushel	$1.20
Corn—Until January, 1908	.55
Thereafter to April 1	.60
After April 1	.65
Oats, per bushel	.60
Barley, per bushel	1.00
Rye, per bushel	.60
Buckwheat, per bushel	.85
Flax, per bushel	1.50
Irish Potatoes—Until January 1	.70
After January 1	.80
Sweet Potatoes	.80
Beans, white	1.50
Beans, red	2.00
Hogs, per pound	$0.06½ to .07
Sheep, per pound	.05½ to .05¾
Lambs, per pound	.06½ to .07½
Cattle	.06 to .06½
Hay, No. 1 Timothy, per ton	17.00
Clover Seed, per bushel	$11.00 to 12.00
Timothy Seed, per bushel	3.00
Wool, at country markets, per lb.	.30

ORGANIZERS WANTED

Uuder the new plans of the Farmers' Society of Equity, the work of organization will go forward much faster and be more profitable than ever before.

All old organizers who have been handicapped in the past by a lack of co-operation and assistance from headquarters, will find all the old stumbling blocks removed. They are requested to write us at once for territory and terms in the Farmers' Society of Equity.

This is also for new organizers.

Write us for terms before your choice of territory is taken.

FARMERS' SOCIETY OF EQUITY, Indianapolis, Indiana.

Over 100,000 Prize Dinner Set Winners

—all of the people whose pictures are shown here and over one hundred thousand others have received one of our wonderful 42-Piece Monogram Dinner Set Prizes during the past two years. We will distribute fifty thousand more of these beautiful prize dish sets during the next six months. **Don't you** want one? This 42-Piece Monogram Dinner Set is the most

BEAUTIFUL FREE PRIZE

ever given out. It is given free for a few hours of your time. The set consists of 42 pieces of elegant china—the kind endorsed and used by the most stylish people. Each piece is finished with a beautiful rose and jasmine design in natural colors. Each piece is gold lined and each piece (except the cups and saucers), will be finished with **your initial in pure gold.** This is one of the most aristocratic and finest set of dishes ever given out as a prize.

If you want one of these beautiful sets just send us your name and address and we will tell you by return mail exactly what you must do to get it. If you do not have time to do the small amount of work we require for the set you need not do it; simply drop the matter and no harm done. When you reply we will send you the names and addresses of all the people whose pictures are shown in this advertisement, also over 1200 letters from other lucky winners of Dinner Sets who have written us grateful letters of praise for the prizes. We do not ask for a cent of your money, only a little introductory work in our behalf in your immediate vicinity, which we will tell you about when you write us—then the wonderful Monogram Dinner Set, 42 pieces, will be yours as a gift.

Just send us your name at once. Remember there is no obligation on your part whatsoever to do the little amount of work we require unless you want to do it. We run all the risk. Write us today. Be a lucky prize winner too.

CONSPIRACY AND REBELLION—No. 6

Some Inside History of a Conspiracy Against the A. S. of E. and the Influences that Established It.

By J. A. EVERITT

The signs of the time point to the coming of the reign of righteousness, which is justice and equity and peace, as foretold in the Bible. It was also said that this time would be preceded by great physical earth disturbances, wars and rumors of wars, and sore troubles and trials to the people. These to prepare them for the time (we may say to force them to bring the new conditions about) when the old and iniquitous things will have passed away and the new order is established to bless all future generations. The Lord referred to this time in the following words: "When ye shall see these things come to pass—when ye see men's hearts failing them for fear and for looking after the things that are coming upon the earth—then lift up your hearts and rejoice, knowing that your deliverance draweth nigh."

Let all good people take comfort from this assurance of the Scriptures that beyond the present troubles, which are necessary to strengthen the faith of the people and prepare them TO BRING THE NEW TIMES ABOUT, (Remember Providence don't do these things except through your own work.) When the whole social, industrial and political fabric of our country, own work), the whole social, indus-on equity to all and the sun of Equity will illumine the hearts of all the people.

The Story of the Conspiracy and Rebellion began in November 15th issue. Back numbers can be obtained at 5 cents each as long as supply lasts. Read carefully.

Tubbs to Drayton, January 2, 1907:

We are promised some of the new constitution and by-laws today. If we get them, will send you a supply by express. We have been practically snowed under for the past two or three weeks and it has been practically impossible to give the attention to workers thet we would like to. Regarding the subscription end of our proposition, I am now looking after that to a considerable extent myself and I hope we may avoid the many complaints that were current last year.

Tubbs to Sharp, Feb. 21, 1907:

Have no news to report regarding conditions at headquarters, and will only say that we are working hard and overtime to get things straightened out and shaped up on account of jam caused by my absence explained by circular letter enclosed herewith.

I print two extracts above to show, first, that Tubbs had charge of the office work even to looking after the "subscription end of our proposition to a considerable extent" for the purpose, as he states, that "we may avoid the many complaints that were current last year," and, second, how he attempts to place the blame for bad service elsewhere. Tubbs did have charge of the office work and nobody but himself is responsible for the bad service. His "absence" referred to was for about two weeks and while he was gone I necessarily became familiar with the condition of his department and I telegraphed him to come back at once.

Tubbs to Drayton, March 23, 1907:

I am glad, Mr. Drayton, to report that we are awfully busy and it seems like the entire country has caught the spirit of improved conditions even before they have been apprised thereof. Far-off and snoozing Michigan, which I had become to think was almost past redemption, came forward yesterday with a report of ten new locals; Virginia, that we had practically lost, President Kemper declares that he will make a heroic effort to re-establish the organization; Kentucky has inaugurated a campaign of several weeks, and the wheat States are fully alive to the importance of the work before them. Equity is bound to win and I am confident from a week's experience on our own hook, that wisdom if not Providence guided our deliberations while in session.

Tubbs to Drayton, March 30, 1907:

. . . Glad to report that the national union is progressing nicely and we are as rapidly as possible getting our records in shape that we can touch with a pin point any item of information that we may desire.

I print these extracts to show the deceit practiced by Tubbs (and others at headquarters did the same) when corresponding with directors and others over the country. The motive was to impress them with their own importance and ability and they deliberately and maliciously laid the blame on me. The headquarters were removed from my building about the middle of March and as I was blamed for everything previous to that time, I let them severely alone and was not in the headquarters office half a dozen times up to the July meeting. The person who can make himself believe "the whole country has caught the spirit of improved conditions" when ten locals are reported from one State is not a safe person to tie to. I don't think they can ring Providence in on the conspiracy, although Tubbs makes the attempt. What has Michigan got to say about the "spirit of improved conditions"? How long did the "spirit" work there? Did they not "snooze" the whole year? And who has got the benefit of that wonderful system that "we can touch with a pin point any item of information"?

Drayton to Tubbs, March 13, 1907:

(1) . . . Now, Mr. Tubbs, you are the watch dog of the Equity treasury. (2) We trust you and depend upon you. (3) You know that the board of directors want all money that goes in to be used first of all to equip nicely and respectably a headquarters worthy of the great national society we represent. (4) Then pay right a force of men and women who will give us the most prompt and correct service possible. . . . (5) Just send all those kicks over to Everitt about not getting the paper. Be careful to keep a correct list of members who should receive the paper, so we can prove by careful records that you are right. (6) Be sure to keep the book with the minutes of the board meeting and keep a clear record with dates. (7) Every time Everitt rides over OUR rules we want to know it. (8) If you get a $1,000 in the treasury, hold to it. Everitt will want to blow it right up in a whirlwind campaign, but do not let him do it. (9) Hold him to the rules laid down by the board of directors. (10) No man is to be sent into the field.

(1) And Tubbs told the delegates to the convention that I had charge of the Society funds and my bookkeeper, I. C. Rous, treasurer, was in with me to rob the Society. The fact is not a dollar of the Society's money could be gotten until the secretary drew a warrant. Now the question is, how much money did I get wrongfully on warrants drawn by Secretary Tubbs? (2) Trusted him because he was one of them in their scheme. Yes, they depended on him as one rascal does on another to further their mutual project. (3) (4) There has not been one competent person employed at headquarters between the March meeting of the board down to the present day. (I will except some of the female employees, who would be competent to do their work with intelligent direction.) (5) Did Tubbs show such a list to Drayton? Did he make such a list? I have thousands of cases where the trouble was with the Society, as I will show as this ever a meeting of the National Union, of story is told. Where is Drayton's proof that the publisher was ever responsible for the troubles about not getting the official paper? (6) I don't believe there was ever a meeting of the National Union, of the board of directors or advisory board that Tubbs did not doctor the minutes to suit his ideas before committing them to the permanent records and then he would destroy, or at least not preserve the original. (7) "Our rules" as made by the majority of directors had no more reference to the constitution and by-laws than a gambler's code has to the moral law. (8) (9) (10) Just so. Get all you can, but send no man into the field to organize. This was the policy of your headquarters and yet they say "we don't believe it was Everitt's idea to ever have the Society completed, but to always keep it organizing" or words to this effect. I would like to know what Drayton means except to go on the momentum I got up before he had anything to do with it. It didn't require them a year to dry up completely through this policy. It might have held out a little longer if the "watch dog" had not promoted so many wildcat Equity Exchanges.

Drayton to Tubbs, March 27, 1907:

The national board are looking to you to see that the Equity money shall be used first to properly equip headquarters and hire the very best force. . . . I hear the same old song everywhere I go, "some of our members have never got a paper."

Inefficient service at the Society headquarters has ever been the bane of publishing UP-TO-DATE FARMING. The trouble was never with the publisher and I challenge them to prove to the contrary. They got the complaints, presumably looked them up. What do the records show?

Tubbs to Drayton, April 22, 1907:

As you well know, I spent two or three days of last week in Chicago and Detroit and report excellent progress. The program at Chicago provides that you spend a week or ten days there in addressing meetings . . . and explain to them our Exchange proposition. . . . I see you have meetings arranged up to May 4th. Can you go to Chicago on Monday following? As regards compensation, this should be guaranteed by your State organization. Wisconsin will send two men, Hill and Crawley. I will endeavor to get Winans of Michigan and Whiting of New York. The important thing, however, is to go AND AS ONE OF THE DIRECTORS. . . . I would say go even if the National Union has to guarantee your per diem and expenses. . . . THIS IS MUCH MORE IMPORTANT, MR. DRAYTON, THAN YOUR PROPOSED CAMPAIGN IN THE NORTH and there is no doubt that as soon as you get through in Chicago there will be similar openings in Detroit and after that St. Louis will be ready.

Drayton to Tubbs, April 27, 1907:

(The below was in reply to above. Notice Drayton's greeting to Tubbs after receiving such a treasonous proposition as contained in Tubbs's letter):

Mr. M. Wes Tubbs:

Dear Sir and Brother—Your letter received in regard to work in Chicago. It will be impossible for me to go to Chicago, as my work in Illinois is mapped out and promised to June 8th. . . . I can organize every wheat county in Illinois if I can only have prompt service at Indianapolis. I organized Equality Local Union March 30, sent report that day. I was there again April 24th. They had received charter, but no supplies and no papers. This is very discouraging to an organizer who is working day and night to build up a good cause. For heaven's sake, Tubbs, use the money that goes in there to give us correct and prompt service.

Tubbs to Drayton, March 29, 1907. This in reply to Drayton's letter as above:

My Dear Mr. Drayton:

. . . I certainly regret that you cannot join your forces with the Chicago delegation in helping to float the Equity Exchange stock.

Drayton to Tubbs, May 1, 1907:

Brother Tubbs:

Mr. Phillip Goldeman is secretary of Red Bud Local Union No. 4430. He received charter and books and seal all right, but he received constitution like the enclosed (Equity Exchange constitutions) and I find they are all getting this kind. Why is it that we cannot possibly get correct service at headquarters? ? ? ? ? They are after me right along. I sent you 153 new members in April, $114.75. I am entitled to fair service.

Commenting on the above: The work in Chicago was to organize the consumers so they could not be overcharged by the organized farmers and "self-appointed ministers of distribution," as Tubbs said. There was no money to send any man out to organize the farmers, but note Tubbs says the National Union will pay his per diem and expenses. Also that to organize the consumers is more important than to organize the wheat growers. Also Tubbs had a campaign arranged that would probably consume the summer. No doubt he would have been glad to have pulled all the organizers away from the agricultural sections and put them in the cities, but there were none to pull, as all had been thrown down except those working in my wheat campaign. And yet they say, "We don't think it was ever Mr. Everitt's intention to complete the A. S. of E."

And what did Drayton do? If it had not been that his time was engaged until June 8th, I suppose he would have gone to Chicago. At any rate he sanctioned Mr. Tubbs's proposal and had no words of advice against using the Society money unconstitutionally. However, he did want better service at headquarters. But how can a secretary serve two masters? How could he serve the farmers' society when traipsing around the country on other business and using the Society money for organizing consumers? But Tubbs probably thought the Equity Exchange was the whole thing and even substituted its constitution for the Society's, as is shown in the above letter.

I have referred to the wheat campaign. How the board of directors authorized me to conduct such a campaign and then began immediately to throw it down. I will make brief extracts from letters referring to it here, but it will be referred to again.

Tubbs to Drayton, March 16, 1907:

I presume Mr. Speer has written to you of his resignation, but I hope he will reconsider the matter and remain with us.

When I heard of this I asked Mr. Tubbs if it was true and his reason. The reply was:

Dissatisfied with the action of the board of directors in giving you charge of the wheat campaign. Not willing to concede a point.

Drayton to Tubbs, April 4, 1907:

I have received Mr. Speer's letter and I am not surprised at all of the conditions in the work at headquarters. Mr. Speer is right through and through. The board of directors had no right to authorize Mr. Everitt to take charge of organization work in violation of the constitution.

Speer to Sharp, May 15, 1907:

I have just written Mr. Jones (president Indiana State union) with a view of making arrangements for him to represent Indiana at the Omaha convention (this was called to organize the A. S. of E. Department of Grain Growers.—Ev.), and I was wondering if you had made arrangements for your State to be represented at that meeting. I think, by all means, you should have one representative there and I trust you will decide to go yourself. This is very important, especially as you will have an opportunity to meet the State officers of the grain States which are represented there, and I trust you will decide to go and have a personal talk in regard to conditions. I think this would be a great help at the next national convention, as I feel confident that this special campaign (the wheat campaign) was arranged for a definite purpose. I will also write Mr. Drayton and urge him to go. It might be possible that you and Mr. Drayton could meet Mr. Wilson at the convention and accomplish some good by doing so.

The same letter was written to Mr. Drayton on the same day. Also on May 31 Speer wrote to Drayton as follows:

I arrived home Wednesday morning after having a long talk with Mr. Jones on Tuesday afternoon.

I think it will be a good idea for you and Mr. Jones and any other representatives that may be in attendance at the Omaha convention to get together and talk over conditions in general and be ready to give the State officials of the Northwest some understanding of the conditions at headquarters.

Drayton to Tubbs, May 9, 1907:

I have started out to organize the wheat counties of Illinois and I will do it, and if Mr. E. kicks the nice bucket of milk over I will unite them in the F. E. C. union.

Speer to Pauley (present national secretary) March 14, 1907:

. . . Although the constitution provides for the director of organization to take charge of this department, the board of directors made a compromise with Mr. Everitt and placed seven States in his absolute charge. These including North Dakota. As you have an organized State union, it would be advisable for you to take complete charge of your own work and permit no interference in the same in any way which would not be satisfactory to you. There is no question that some radical changes will be made at the next national convention.

Letters similar to these were constantly being written from headquarters to officers and organizers while I was conducting the wheat campaign, thus hindering it all they could. The motive is clear enough. They were accomplishing nothing and they could not bear to see a successful campaign under my direction reflect against their incompetency. Then, also, the conspiracy against me and the Society had to be furthered. Consequently their lieutenants were posted and sent to the Omaha convention and defamatory, lieing letters and literature were constantly sent all through

$5 A DAY MADE BY VETERINARY DENTISTS

Its weight and bulk are half that of single cylinder engines, with greater durability. Costs Less to Buy—Less to Run. Quickly, easily started. Vibration practically overcome. Cheaply mounted on any wagon. It is a combination portable, stationary or traction engine. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher and 15th Sts., Chicago. THIS IS OUR FIFTY-FIFTH YEAR.

THE E-Z TRUSS Do you want to Cure your rupture? Our new rupture appliance will do it. Sent on 5 days free trial. No C.O.D., at end of 5 days send money or return goods. Write for booklet or send measure. THE EASY TRUSS CO., Kalamazoo, Mich.

the territory. Many people showed me the letters they received. It was very humiliating to me and a great handicap to the campaign. For the benefit of new readers, I will say further, that after the board assigned this campaign to me then Tubbs, Drayton, Sharp and Scott did all they could to kill it. They refused to pay any of the expenses and finally refused to send letters from the seven States to me, which ended the campaign. Mr. Wilson, a director, always stood by me, notwithstanding the extraordinary efforts the gang made to poison his mind.

Can any member doubt my claim of a conspiracy and rebellion after reading these letters? Can they doubt its long existence and is it surprising that the convention resulted as it did? Is is not clear now that conditions were being produced to have just such a convention as was held, months before it convened?

Drayton wrote that to allow me to conduct a wheat campaign was in violation of the constitution. But it was constitutional to organize a consumers' department for the consumers to price farmers' products. No person but Drayton and his gang ever thought of kicking the wheat campaign over, but he went all over southern Illinois spreading the report that I was trying to kill it. At the time I was conducting it at my own expense and it contributed in new members, consequently in money, to the Society more than all the balance of the country combined during the year. Also I want to ask the members in Illinois if Drayton carries them in his pocket so he can deliver them, when, where and to whom or what he pleases?

Sure enough, Speer, that campaign was *arranged for a special* purpose. Yes, two of them. First, to benefit the wheat growers, and they were getting the benefits until the recent actions of the Society's representatives killed all its good results. In this farmers have lost millions and millions of dollars. It will be strictly proper to charge the loss to Speer, Tubbs, Drayton, Sharp, Scott and a dozen of their helpers and abettors. Talk about the speculators and gamblers being a curse to farmers! They sometimes bull prices up also and thus benefit prices, but these people, the ones you trusted and in whose care you placed your Society, hence your farm interests, never bull the market, but have excelled all the bears in bearing it. How much love have you for them? And, second, to show that organization could be accomplished.

Which side of the line did you step on? Or, if you have not taken the step yet, which side will you step to? If you step to the side where is the new A. S. of E., you are in the camp of these people who have betrayed you in the past and by this time you should know that they are powerless to help you, even if so disposed. If you step to the other side, where is the Farmers' Society of Equity, you will find the same influences that gave birth to the Society and built it up to its recent power, but better prepared now than ever before to establish the organization, and make controlled marketing and profitable prices facts instead of wished for consummations.

I plead with all true men in the language of the following verse:

Do thy part
Here in the living day, as did the great
Who made old days immortal! So shall men,
Gazing long back to this far-looming hour,
Say: That's the time when men were truly men:
Serving the State anew by virtuous lives;
Guarding the country's honor as their own,
And their own as their country's and their sons;
Defying leagued fraud with single truth;
Not fearing loss, and daring to be pure.

—*Richard Watson Gilder.*

(To be continued)

THE PEOPLE ARE SPEAKING

1848. Evart L. U. No. 1, membership 51 members in good standing, resolve that this union stand by and support Mr. Everitt and UP-TO-DATE FARMING until such a time as he be proven unworthy of the same.

I heartily endorse your plan for the Farmers' Society of Equity.—Worth B. Smith, Sec., Evart, Mich.

1849. Satterfield L. U. No. 5063 by unanimous vote declares that we are in favor of UP-TO-DATE FARMING as the official organ of our beloved Society.—John R. Satterfield, Pres.; L. L. Morrow, Sec., Satterfield, Ohio.

1850. Local Union No. 370, German, Perry Co., Ind., 43 members, vote yes for UP-TO-DATE FARMING as the official paper. —Wm. Schmahl, German, Ind.

1851. I have taken the vote of Sweet Owens L. U. and they voted unanimously to support UP-TO-DATE FARMING as the official organ.—G. W. McIlroy, Owenton, Ky.

1852. McIlroy Local Union No. 2189, with seventy members present, voted unanimously to recognize UP-TO-DATE as our official paper and we request Mr. Everitt to continue his fight for controlled marketing of farm products. We believe most of the people of Kentucky will stay with him.—Louis Coghill, Sec., Monitor, Ky.

1853. Every member of our local No. 1770 cast his vote in favor of UP-TO-DATE FARMING as the official organ of the A. S. of E. and we further endorse the action of Mr. Everitt and his friends in the late convention. We desire to continue on the same plans for controlled marketing of farm products.—E. F. Cross, Sec. and Treas., Fair Dealing, Ky.

1855. Local Union No. 4734 cast a unanimous vote of all members present in favor of UP-TO-DATE FARMING for the official organ of the A. S. of E. and individually and collectively we expressed ourselves as loyal to Mr. Everitt. We are true to Equity and its principles.—Mae Manning, Sec., Mt. Olivet, Ky.

1856. Mayville L. U. No. 2466 with 12 members in good standing present, resolved to accept no paper except UP-TO-DATE FARMING as the official paper of the Society and that we approve of the action of the friends of the Society in the late convention.—Hans Friis, Sec., Belcourt, N. D.

1857. Local Union No. 3067, Gillo, Ky., 17 members present, all voted in favor of UP-TO-DATE FARMING as the official organ of the A. S. of E.—C. F. Coombs, Sec., Campbellsburg, Ky.

1858. Local Union No. 4475, Worthville, Ky., unanimously voted for UP-TO-DATE FARMING as the official paper of the American Society of Equity. We wish you success and hope you win our fight.—W. F. Barnett, Sec., Worthville, Ky.

1859. All of the members of our union with whom I have talked are in favor of UP-TO-DATE FARMING to continue as the official organ of the American Society of Equity.—Daniel Flanagan, Velva, N. D.

1860. Local Union No. 2436 authorizes me to notify you of the action of its members, which was unanimously in favor of UP-TO-DATE FARMING as our official paper. We send best wishes to J. A. Everitt and UP-TO-DATE FARMING and greetings to all members of the A. S. of E. everywhere.—H. C. Gannaway, Pres.; N. L. Mercer, Sec., Mt. Gilead, Ky.

1861. I am going to answer yes for all of the members of our local union in regard to UP-TO-DATE FARMING being our official paper, notwithstanding I have received notice from O. D. Pauley to transact all business with him. I must say that we are not doing business with that branch of the A. S. of E. I sincerely hope that you will have success in all your plans.—Homer Meyers, Sec., Good Hope Local No. 2295, Hays City, Kan.

1862. We, the members of the A. S. of E. Local Union No. 5060 endorse your action in the late convention. We do not hesitate to call those in charge of that convention traitors to our cause. We want UP-TO-DATE FARMING as the official paper or nothing. We hope for a grand and glorious success in the end.—Ralph L. Rachford, Sec., Oneonta, Ky.

1863. A unanimous vote was cast in favor of UP-TO-DATE FARMING remaining the official paper of the American Society of Equity and we would like Mr. Everitt to direct the Society. Although we have received notice from the other people to send our dues to them, we will not do it.—R. J. Marshall, Brookneal, Va.

1864. Waverly L. U. No. 627 endorsed your action in the last convention to maintain the Society in its purity, and we also endorse UP-TO-DATE FARMING as the official organ of the Society. This union holds that Mr. Everitt is the originator of the Society and that UP-TO-DATE FARMING was the first real advocate of the farmers' cause, and we therefore unqualifiedly stand by them as long as they so faithfully and loyally stand by our great cause.—Alex Fowler, Sec., Waverly, Ky.

1865. The members of Sacramento L. U. No. 1258 resolve to stand by your action in the late convention and will continue to take UP-TO-DATE FARMING. Also, we condemn the action taken by the recent convention and are not in favor of some of the things they have endorsed.—R. E. Stringer, Sec., Sacramento, Ky.

1866. The members of Paradise L. U. No. 2132 adhere to the principles upon which the American Society of Equity is founded and we cannot endorse the action of the recent convention directed against UP-TO-DATE FARMING as our official paper and Mr. Everitt as director of the Society. We uphold the people in the second convention and all reports from this local union shall be sent to I. C. Rous, Sec.-Treas., Indianapolis, Ind.—A. Wellin, Vice-Pres.; J. Beck, Sec., Kingsley, Mich.

1867. Local Union No. 4407, 23 members voting, agreed to stick by UP-TO-DATE FARMING as the official organ of our Society and approve of the action taken by Mr. Everitt and others to save the Society.—H. E. Albright, Sec., Saunders, Kan.

1868. At a meeting of Elkton L. U. No. 4148 it was voted unanimously by the members present to sustain Mr. Everitt and his friends, and UP-TO-DATE FARMING.—H. M. Campbell, Sec.; G. A. Braun, Pres., Elkton, Mich.

1869. Local Union No. 5035 voted unanimously in favor of UP-TO-DATE FARMING as the official paper of the American Society of Equity.—J. L. Drane, Sec., Hardin Springs, Ky.

1870. Calvert City L. U. of the A. S. of E. No. 1422 resolve, first, that we are in accord with the true principles of the A. S. of E. as defined by J. A. Everitt, founder and leader of the Society; second, that we condemn the late convention led by a few unworthy office seekers; third, that all reports be sent to I. C. Rous, Sec.-Treas., and lastly, that we retain UP-TO-DATE FARMING as the official paper of our Society.—W. F. Attebury, Sec., Calvert City, Ky.

1871. Loose Creek L. U. unanimously voted for UP-TO-DATE FARMING as the official paper of the American Society of Equity and we wish it great success.—Ben Boes, Sec., Loose Creek, Ky.

1872. At our local union meeting all present were heartily in favor of UP-TO-DATE FARMING as our official paper and we denounce the late convention at Indianapolis. We are for Equity and a square deal.—J. T. Mardis, Pres., Falmouth, Ky.

930. For God's sake do not stop UP-TO-DATE. The official paper is the only farm paper I read. I have been benefited by its teachings.—J. W. Clark, Webster Co., Neb.

931. Nothing in the place of UP-TO-DATE FARMING will do. We have been more than satisfied with it, and all whom I have spoken to say the same. We don't want any substitute. My husband is vice-president of our union, and I want to say let there be no compromising to other orders by the American Society of Equity.—Mrs. B. Franks, St. Joseph Co., Mich.

941. We must endorse you and UP-TO-DATE FARMING, for no man could work harder or more effectively for the cause. Regarding stock companies I feel sure it will be fatal to the cause. Let the labor organizations look after the work of distribution; let them run their stores on the co-operative plan if they want to. But the only business of the American Society of Equity is organizing the producers and that will be work enough and should satisfy the ambition of any man. I was about ready to do some organizing in our county, but I expect I must wait until the smoke of battle clears away.—T. E. Brown, Clackamas Co., Ore.

942. I want UP-TO-DATE FARMING to continue as the official paper of the A. S. of E. I have taken the paper about five years and I think you are working along the right lines to accomplish Equity and profitable prices on farm products. Make it plain to every member of the A. S. of E. how the other fellows are trying to out-do your work. You see, UP-TO-DATE FARMING has advised members to ship their produce to these Exchanges and it seemed to be with your sanction. I know the gamblers will just delight to see the organization divided, and this million-dollar corporation cannot stand. The raisin growers in California broke up. They were incorporated under the laws of New Jersey.—Samuel Hammond, Churchill Co., Nevada.

[Mr. Hammond, I was forced to lend UP-TO-DATE FARMING to the promoters of the capital stock Equity Exchanges by the Board of Directors.—Ed.]

943. I fear somebody has turned Judas for a few sheckles of silver. Of all the papers I ever read, UP-TO-DATE is the cleanest, purest, most wholesome paper. May God bless the publisher is my prayer and may UP-TO-DATE continue. I am teaching Equity down here to saint and sinner. —W. C. McConnell, Sebastian Co., Ark.

944. We are all in favor of UP-TO-DATE FARMING.—R. D. Meyer, Sedgwick Co., Kan.

945. Yes. I think you did the best thing that could be done at the convention and the quicker you take charge of affairs the better it will be for the welfare of the Society and the farmers in general. Yours for Equity.—Chas. E. Denniston, Lycoming Co., Pa.

946. Since this is a factional fight, not only that but a free fight and a man has to either take sides or lay in the brush, I will say that politically I am with Col. Barnett, but for a leader for the American Society of Equity I am for Everitt, teeth and toenails.—Watt Taylor, Ohio Co., Ky.

947. UP-TO-DATE FARMING is to the farmers' business what the Bible is to Christians, and the true principles of the American Society of Equity are the farmers' only salvation in business. I believe that J. A. Everitt stands to the farmers the same as Washington and Lincoln stood to the people of the United States. If the principles of the A. S. of E. were adhered to by members and non-members, they will carry us over a panic. UP-TO-DATE FARMING has done more for the farmers than any other ten so-called farm papers ever did, and it should be the official paper of our Society.—Ernest Cushing, Washtenaw Co., Mich.

950. At our last meeting I was acting secretary and after a brief discussion the unanimous vote was in favor of UP-TO-DATE FARMING and we are all with you in sticking to the original plan and objects of our Society and no one can sidetrack us. We are not discouraged, for we know that most, if not all, the farmers will sustain you, and we look to you and UP-TO-DATE FARMING to bring us safely through. Never in the history of our country have we needed a man to lead us in a just cause but what that man was furnished and now the backbone of our nation—the farmers—need a man to lead them to victory. My wish is that every member of our grand Society will stand loyal and true to its first principles.—Geo. H. Miner, Benzie Co., Mich.

951. Yes.—Frank Skach, Pine Co., Minn.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost.

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Dollar an hour or sample returnable. Automatic Curry Comb. Sample postpaid, 40c. Particulars free. Clean Comb Co., Dept, B. Racine, Wis.

Agents make money selling household and kitchen specialties. C. V. Thompson & Co., Knottsville, Ky.

Agents Wanted for quickest seller ever sold to farmers. Over thousand sold in one county. Write today before someone else secures agency for your locality. Farm Record Company, Newton, Ia.

Badges & Banners

A. S. of E. Badges, Banners etc. for conventions, Parades, Celebrations and local use. Prices right. Show your colors. Illustrated catalogue free. E G. Staats & Co., La Crosse, Wis.

Dogs and Pet Stock

Collie Pups. Nelson's, Box B, Grove City, Pa.

For Sale Thoroughbred Scotch Collie pups. Best farm dogs on earth. H. R. Miller, Lowelle, Ohio.

Farm Lands

Best location in America for man or woman to raise poultry. Most delightful climate; never cold; markets all up and down Pacific Coast and Columbia River at highest prices; cheapest water transportation. Eggs 25c to 40c. Address Chamber of Commerce, room 1163, Astoria, Oregon.

Cheap Farms—Western Oklahoma. Write, C. A. FISHER, Custer, Okla.

Cheap Farm. Central Minnesota. Write Ed. Landwer, Gardena, N. Dak.

Farms for sale and no speculation. For particulars and what you want, address, A. N. Barks, Fredericktown, Mo.

For Sale Improved 100 acres near Bowling Green, Ky., J. N. Loving, R R 4.

For Sale Sightly, Home-Like, well improved, gently rolling prairie, mortgaged 80 acres in Ills. ¾ miles to good railway town, $50 per acre. Terms. Marshall & Staley, Mt. Vernon, Ill.

Michigan Farms, Stock, Grain, Fruit Farms, Selling Cheap, Good Schools, Ideal Climate, write for list No. 9. C. B. Benham, Hastings, Mich.

Texas Panhandle; black land $8 to $16 per acre. Moody Lands Co., 125 E. Market St., Indianapolis, Indiana.

WE can sell your property; send description and price. If you want to buy, state your wants. Northwestern Business Agency, Minneapolis, Minn.

Farm Products For Sale

Ohio hay under national union label. Graded and weight guaranteed by public weighmaster. J. H. Harpster, Millersburg, O

Tobacco For Sale

For Sale 20,000 pounds best leaf tobacco. Send for samples and price. Anton Wavrin. R. R. 5, Franklin, Ky.

Farm Products Wanted

WANTED Seed Oats and Clover. James H. Saunders, Sec. F. S. of E., Hickman, Ky.

Wanted Car load best grade yellow corn from Equity members. M. Martin & Son, Amity, Pa.

Fencing

If You are looking for something CHEAP and useful in the fencing line, write MAD RIVER FENCE CO., West Liberty Ohio.

Furs and Tanning

Fur robes, coats and mittens, from your cow or horse hide. We tan and manufacture to order. Samples free. Logansport Robe & Tanning Co., Logansport, Ind.

Muskrat Mink and other furs wanted. Best assortment, top prices. Write today. Andrew Mest, Successor to Hoch & Mest, Reading, Pa.

Live Stock and Dairy Supplies

Choice Chester White Pigs, registered and express paid. WILL FISHER, Watervliet, Mich.

Ferrets Raised in small lots; healthy stock; prices the lowest. C. Jewell, Spencer, Ohio.

For Sale Angus cattle of either sex. Wm. Noonan, Hartford City, Ind.

Patent Attorneys

Patents Trade Marks. Book sent on request. Beeler & Robb, Patent Lawyers, 60-62 Baltic Bldg., Washington, D. C.

Patents Advice and book free. Rates reasonable. Highest references. Watson E. Coleman, Patent Lawyer, Washington, D. C.

Poultry and Supplies

700 Head of fancy poultry cheap. Many varieties. Heavy layers. What do you need? Write to Dalbey Bros., Washington, C. H. O.

ROSE Comb Buff Leghorns exclusively; fine winter layers. Stock for sale. Eggs in season. Jacob Pantier, Evansville, Illinois.

Seeds and Nursery Stock

Agents Wanted Wonderful Oregon Evergreen Blackberry, enormously Prolific, grows anywhere, one vine supplies any family, large delicious berries. Write for information, Evergreen Berry Co., 173 South Cottage St., Salem, Oregon.

Photos Send any photo with 25c and get 12 photos on cards, made from it. Your photo returned unharmed. Box 30, R R 1, Stanley, Ky.

Business Exchange

Advertising Pays Producers

¶ Mr. Wm. Henning of Antrim, Mich., advertised apples for sale for his local union. He writes:

"I received more inquiries for apples than I could answer."

¶ All kinds of farm products, such as Thoroughbred Stock, Poultry, Seeds, Potatoes, Tobacco, can be sold by advertising in the Business Exchange. Cost only 5c a word for each insertion. Try it. Send an order for next issue.

UP-TO-DATE FARMING

Indianapolis

WHO OWNS IT?

A Review of Equity Farm Journal Number 2

(*Continued from page* 14.)

cals where no one received a paper for one or two issues, can now tell why you did not. This is no mere assertion. Mr. Gentner, secretary of the Grain Growers' Department, will swear that he saw Mr. Sibley Everitt take the stencils from a box that was to be used for mailing and that the papers for those people were not mailed that week. This was when Mr. Gentner was chief clerk for Mr. Everitt and he was then trying to fathom some of Mr. Everitt's actions."

I am advertising manager of Up-to-Date Farming and have general supervision of the issuance of the paper.. I never removed nor had removed a single subscriber's name, nor any larger number of names temporarily from the mailing list. Also, to the best of my knowledge, no other person ever did such a thing. The claim that in this way people can account for non-receipt of paper is absolutely false, notwithstanding the statement above to the contrary. SIBLEY F. EVERITT.

Personally appeared before me Sibley F. Everitt, who on his oath says that he did not remove or have removed a single subscriber's name or any group of names, temporarily or otherwise, from the mailing list of Up-to-Date Farming.

Subscribed and sworn to before me this 4th day of January, A. D. 1908.

JOSH E. FLOREA,
Notary Public.

My commission expires March 16, 1911.

Readers can see how devoid of the first principles of truth and honesty these people are and to what an extent they will go in their attempts to shield themselves and injure the writer and UP-TO-DATE FARMING. Readers may wonder why their attempts are so clumsy and why they have their lines so vulnerable to attack. But this is not to be wondered at, because the whole conspiracy is a fabrication of falsehoods. The wonder, though, is that any of them continue to hold out after their own president has attempted to do the writer justice and has repudiated the whole campaign of defamation, insults, slander and libel as conducted by his headquarters.

On page four, 5th paragraph, is printed "Mr. Everitt is unable to tell the truth." There is a standing offer made through this paper to give space to evidence to disprove any statement I have made in UP-TO-DATE.

Every paragraph, every word, is the truth and I wonder if I did not support every word with proof?

On page 2, under "Membership Fee," is this:

And when the board paid Mr. Everitt only a part of the fifty cents for the official paper, it was merely to continue his paper until the time some other paper would take its place, or until the end of the year.

Well, such candor is really refreshing. This is just what we claimed all along, i. e. the board of directors disregarded the contract of the Society to furnish the official paper one year out of the membership fee, but they had hatched their conspiracy last March, as I charged. *"Anything to kill Up-to-Date Farming"* was the slogan. See how their own admissions prove the conspiracy, *"to continue his paper until the time some other paper would take its place, or, until the end of the year."* Did anybody but Tubbs, Drayton, Scott and Sharp think of substituting another paper as far back as March, at the meeting of the board of directors? Do the members who joined in 1907 with the understanding that they would get the paper a full year now understand who committed the fraud on them?

First, they tried to starve this paper to death by cutting out the revenue for subscriptions. Failure. Next, they tried to secure entire control of matter published in it so it could no longer be the fearless exponent of truth and Equity, and so it would not expose evil doers and the penalty was to be, if they failed, attempted repudiation as the official paper. Failure. Next, they thought of an injunction to prevent it from issuing. Indiana courts demanded $50,000 bond. Failure. Next, false representations to the postoffice department at Washington. Failure. All the time the basest campaign of falsification, lies and slander ever hurled against a good institution. Failure. And the last move, Secretary Pauley's "official demand."

The contract with the subscribers, whose time is up Dec. 31, 1907, is embodied in the following from the 1906 by-laws:

ARREARAGES. A member twelve months in arrears for dues or other charges shall stand suspended without action of the union.

But we don't intend to continue the paper longer than to give subscribers a reasonable time to renew, and members of the Society to come into the Farmers' Society of Equity.

The balance of this article I will pass as too absurd to be taken seriously, except will again tell my friends that I never made any money out of the Society, or because of my connection with it, and lost a great deal. For evidence of this, I was obliged to mortgage my home last fall to carry the work on. Would I have done this if I had all the money they say I have? But thanks to the true and loyal people, conditions are getting better every day.

Page 4, first paragraph: "and the convention concluded to have no more of the Society money spent in that manner" (for Equity Exchanges). After calling two meetings of the board to act on my recommendation and they refused, the convention orders the thing done. Was it, then, my mismanagement? They say three or four hundred dollars was spent for promoting Equity Exchanges. Ten times this much won't cover it.

Page 6. "Can This Be True?" They express a doubt yet they don't hesitate to publish the criminally libelous stuff. The Egyptian mummy corn story is absolutely false. Ask R. D. Simmons, special agent, care Postoffice Department, Washington, D. C., who came here to investigate on headquarter's charge of a fraud, and found the matter a pure fabrication. I never did business under name United States Seed Company. See also letter from H. M. Stout, about this matter in January 1 number, on page 15. The safe story is from a man with a diseased brain, surely. It was my safe and contents were mine. The receiver was appointed on my petition, as the court records will show. The last paragraph is also false, absolutely so, and I challenge him to produce one farmer or more who did not receive every cent for seed or grain I ever purchased from him.

Page 8. Was it a packed convention? Find somebody else (besides Mr. Everitt) to say it and then write us and we'll go into details."

The same old bluff. No evidence, no proof, no denials. Well, we'll call this bluff also. Here's another one and there's others:

CONVENTION WAS PACKED

To the Members of the American Society of Equity:

I was elected as delegate to the national convention of the American Society of Equity at the annual State meeting at Traverse City, Mich., October 2, 1907. *I have received many letters from members all over Michigan, and some from other States, inquiring what I thought of the convention at Indianapolis,* Oct. 22.

I was prepared for something of an eruption, but the convention was so much worse than I expected that I was disgusted. I learned while at the convention that the Michigan delegation would stand no show, because the members were pledged to stand by Mr. Everitt until he was proven unworthy of the position that he held. No Michigan man that has been clear for Mr. Everitt's principles was recognized when committees were appointed. Somehow they soon found out where every Michigan man stood.. If a delegate talked the way he thought and thought the way that Mr. Everitt had tauught us, he would not get recognized. My opinion of the convention is simply this—it was packed in No. 1 *style. The convention as a whole looked to me like a fake. Now I wish to say that I am not for anybody but the welfare of the Society, and I am ready to be convinced if any one has any convincing argument but where is the proof?. Now I have seen no report of the convention, no new by-laws, nor any hint as to what the new officers intend to do. I claim this is an injustice to all members and doubly so to those members who went lown into their pockets to pay a stenographer ten dollars a day so we could have such a report. The question is, Was that convention packed for the purpose of disolving the Society and putting it out of business? It has been about five weeks since that convention and not a word have we heard from our new officers, no report of the convention, no word as to what we are to expect in the future. It looks to me as though the enemy had accomplished what they undertook—broke up the Society. I have heard many say that they believed somebody got a good boodle for putting the Society out of business.*

I see by Up-to-Date that on October 26 *there was another convention called by some of the delegates that were dissatisfied with the original convention. I think they were justified in calling a second convention and it looks as though that move was all that saved the Society—they left a way open to push ahead to completion.*

The first day of the Indianapolis convention I tried to learn what charges had been made against Mr. Everitt. I failed to find out what a single charge against him was. Mr. Everitt has cleared himself through the columns of Up-to-Date Farming and there appears to be no contradiction to what Mr. Everitt says. If we have new officers that are true to the American Society of Equity, why do they not see to it that other ex-oflcers have a chance to deny Mr. Everitt's sayings? If the men that caused Mr. Everitt to be turned down did not have another publication ready to act as official paper, they are not longheaded enough to conduct so great an organization as the American Society of Equity, and if the officers elected at Indianapolis have found out their mistake in turning down Mr. Everitt, why don't they come out and say so? That would be equity.

We must not think of giving up what we have already accomplished. I have waited patiently for the new officers to act and gave them abundance of time to explain matters. So I think it is now time to act ourselves. We certainly will profit by our past experience and not get caught again. No farmer can say but waht the Society has done him more good than eight times the expense of joining and keeping it up. This is my honest belief. With the best wishes for the American Society of Equity, I am,

Sincerely yours,
M. N. DRAKE, Trufant, Mich.

They say "what he says don't count." How profound their logic and conclusions! Does what Mr. Drake say count? If not, we have many more.

"Miscellaneous" on page 8 G. M. Walrod indulges is truly a miscellaneous assortment of highly edifying Gabfest, but on page 9 they apologize for not publishing the proceedings of the annual convention. We might infer that *more important matter* crowded it out, as there are this page of "Miscellaneous," nearly a page report of the "Farmers' Congress," a page of "What Other Papers Say About Us," a page of "Where We Are At"; of course this should not be omitted, because this is the burning question with every farmer in the country and it is time it is answered; a page of "Peanut Department" and three pages of "What Our People Are Saying," written a month or two ago. What they would say now might be very different. But it was not for lack of space. Oh, no. That great goblin, Mr. Everitt, they say, spoiled their plans and succeeded in holding up their mails, etc. This is the first we heard of it and if it is true, how I could innocently be the cause of it passes my comprehension. But "he who does amiss never lacks an excuse." I will say again they don't want to give the proceedings of the annual convention general publicity. Nothing would condemn them more completely than to send the proceedings complete to all the members. Also I will predict if it ever does see light through print, it will be doctored, like was the constitution and by-laws, so as to not be recognized by its makers.

Pages 14, 15, 16. I just rise to remind these deluded people that their leader, their president, C. W. Barnett, has squared himself before they have. But I may be mistaken, as most of the letters were a month old before they were printed, and some people can "catch on" in a month. I will remind them that "as long as the lamp of Equity burns the greatest sinner may return."

This point is illustrated nicely in the case of U. S. Holdridge, of Michigan, whose column article they publish with editorial comment. Now, Mr. Holdridge starts out on wrong premises and naturally would be wrong throughout. He says:

It has now been four weeks since the convention and I have not seen a report of its doings in print. Mr. J. A. Everitt publishes the official paper and has had his pay up to Jan. 1, *etc., and it seems to me he should have published the proceedings of the convention.*

Note that these publishers put this out without a word of explanation. They let it go before the people in this way, yet it is a fact that the proceedings were not furnished to me and I could not get them. Hence how could I print them? This is a fair sample of their underhand, insidious work for a year. They are constantly stabbing from behind, while I ask, have I not always fought in the open? I will ask further, have I at any time been on the offensive? I have always been on the defensive. Hence, whatever harm has been done, the other side is responsible for. My effort has always been to defend and preserve the true principles and plan of the Society, the paper that has made and preserved the Society, and for equity and justice to all people.

Read Mr. Holdridge's letter very carefully. It is printed on page 16, and remember that it was written in November. It was written when his system was completely saturated with poison injected by the arch conspirators. After you read his letter then read Mr. Drake's letter again as printed in this article. Now these are both Michigan men and both honored and respected wherever known. The only difference with them at the time of the convention was that Mr. Drake had investigated both sides.

But time sometimes works changes and the following, coming from the Michigan State Union under date of December 19, 1907, are a part of the resolutions adopted:

Whereas, The members of the American Society of Equity in the State of Michigan have joined and supported it because of its original principles, be it

Resolved, That we appreciate the great good set forth in the plan formulated by J. A. Everitt, and in our judgment we cannot consistently accept any plan that would in any way endanger it.

Resolved, That we recommend the adoption of Up-to-Date Farming as our official paper.

Resolved further, That on account of the condition of the present national headquarters we cannot affiliate with it and do justice to the members of this State.

Geo. V. Wattles, E. G. Everhart, U. S. HOLDRIDGE, L. E. Dafer, W. N. McDowell, Geo. Soper and Walter E. Goold, committee.

The above report of resolutions was received from E. N. Ball, State secretary, as being adopted by the convention meeting at Grand Rapids, Mich., on the date aforesaid.

Note, "the members joined because of its original principles," and "we cannot consistently accept any plan that would in any way endanger it" (the plan formulated by Mr. Everitt) and "we cannot affiliate with it (present A. S. of E. headquarters) and do justice to members of this State."

Now does this not show that the Michigan people, in State convention, believed the last convention departed from the "original principles" as "formulated by Mr. Everitt" and the conclusion is "we cannot affillate with" the headquarters it established "and do justice to the members," and Mr. Holdridge was a member of the committee.

Further comment on Holdridge's letter should be unnecessary, but I will deny that I ever assumed to have "supreme control" of the organization, unless it may be called such when I stood against a majority of the board of directors when they were determined to commit unconstitutional acts by promoting wildcat schemes at the Society expense. If this is "supreme control" then members should thank God for a man who will not commit treason, who cannot be bought and who has sense enough to foresee failure and ruin if certain trusted officers are allowed to pursue their course. The only thing I regret now is that I did not expose the rebels before the convention.

As to supreme control of its funds, Mr. Holdridge was deceived as were the others. I got none of the Society's funds, had *no* control of them, except to put my name to checks after Secretary Tubbs issued them and signed them, and when I refused to sign checks Directors Drayton, Sharp and Scott, with Tubbs, approved the expenses over my veto and ordered me to sign them. I could not get a dime of the Society's money, except through the same process that it was paid to other people. Tubbs got in the habit of issuing warrants for petit cash to the amount of $50 or $100 at a time, and when I found that he paid Equity Exchange expenses out of this I refused to sign checks for more than $15 at a time and he sent a great howl to the board of directors, but the order stood because I would not sign checks for more. Any person who says I had supreme control of the organization and its funds states an untruth.

I will close the review of the paper with an exposure of the deception committed in the article in last column on page 16.

Read the following in connection with the article referred to:

Okome, Pa., Dec. 23, 1907.

Garrett M. Walrod, Indianapolis, Ind.

Dear Sir—The letter which you ask for, which Mr. Everitt is alleged to have written me concerning membership fee of Mr. Leander Ott is not in my possession, but is, I think, in the hands of Mr. Tubbs, as he seems to know more about the letter and its contents than any one else.

I sent Mr. Ott's membership fee to Mr. Tubbs in July or August, using an old subscription blank of Up-to-Date Farming and calling for the paper one year from date of admittance, though I knew the annual dues are to be paid the first of the year; according to this rule, any one joining udring the year would be entitled to the paper until he paid his dues the first of the year 1908. *I explained this to Mr. Ott at the time.*

A short time after sending the money ot Mr. Tubbs with Mr. Ott's name I received a letter with my money enclosed asking if I had explained to Mr. Ott that he must pay his annual dues the first of the year 1908, *as, according to the blank and the way I wrote, he would not pay until a year from his admittance. This letter had Mr. Everitt's name signed to it.*

I just turned this letter over and wrote on the back of it that I had explained this to Mr. Ott and sent the letter back to Mr. Everitt. A few days later I received a letter from Mr. Tubbs, asking for Mr. Everitt's letter, telling the contents of the letter so I would know to what he referred. He said "there seems to be somewhat of a mystery concerning said letter at headquarters." I wrote on the back of his letter and told him I had done the same with Mr. Everitt's letter.

This whole thing seems very mysterious to me also. . . . As regards the circular you sent, in the first place you want it understood that you knew nothing about the contract with Mr. Everitt for the official paper until after the third day of the convention. You either have not been a member very long or have not paid any attention to the official paper, as it was spoken of in it at the time of the East St. Louis convention (1906). *Also you say you "believe it was never Mr. Everitt's desire to permit the Society to come into the fullness of its hopes, but keep it in a condition of being organized." How do you expect to accomplish anything until the country is organized? And as to Mr. Everitt wishing to get new members to get the admission fee Mr. Speer proposed to advance the fee to* $3.00 *and Mr. Everitt alone opposed it in Up-to-Date, as you must know if you read the paper. Also your convention raised the dues to* $1.50 *a year, while Mr. Everitt and his associates still hold to* $1.20 *and now finally, if you have so many serious charges against Mr. Everitt, why is it necessary to hunt up such trivial matters as Mr. Ott's membership fee?*

Respectfully,
CHAS. E. DENNISTON.

Here is another case where the opposition had a clear explanation which showed that my desire was to have a perfect understanding with Mr. Ott before executing the order. Anything wrong with this? But those human fiends manipulate the transaction to my discredit. I will not impeach any reader's intelligence or good sense to make further comment, assuming that each member has received Equity Farm Journal No. 2.

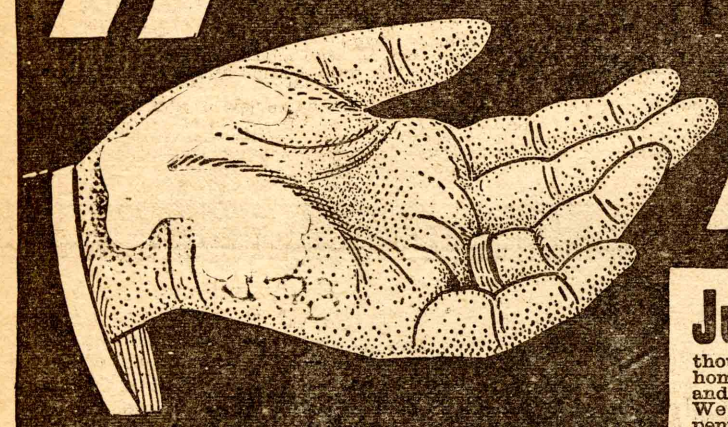
Every person who has done a general seed business made mistakes and the season oftentimes prevented the seeds from giving satisfaction. In nearly every locality dissatisfied customers of other seed houses can also be found, and everybody knows it. Turn loose a few unprincipled, unscrupulous people like Speer, and, considering the disposition of people to rather believe ill report than good, the most conscientious business man in the country would soon find his business discredited and his character besmirched before some people.

This finishes the review of Number 2 Equity Farm Journal. I have said much more than I expected to. In January 1 number I said: "After this number we don't expect to refer to the recent unpleasantness." But how can I help it? I am bound to notice these false accusations and the demand comes to reply to them. However, this campaign must end. I have appealed to the members, to the board of directors and to headquarters, but it still goes on. I have demanded retraction from those who made the false charges when I showed them that they were false, but got in reply additional insults. The courts will end them.

"Children Teething"

MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

HOLD OUT YOUR HAND



Just Let Us Know that you NEED it and we will send it to you. It is yours to try, for the asking, but you must hold out your hand, SO WE WILL KNOW YOU WANT IT. You must give us the signal and we will do the rest. We have it on hand, thousands and thousands of packages, all ready to go out and bring HAPPINESS to thousands of homes, but we cannot know that YOU need it, we cannot know that you want it, unless you write and GIVE US THE WORD, unless you hold out your hand to show that you are ready to receive it. We place it right in your hand, deliver it FREE at your door, and you need not put up one single penny, but you must hold out your hand and ask for it, so we will know you want it.

Stomach and Kidney Trouble

All of His Disorders Now Things of The Past.

KENTON, O.—I have had Stomach Trouble for twenty-five years, and Kidney Trouble for ten years, and suffered with Cramps at night so bad that I would have to rub my legs and walk the floor to get them straightened as many as four and five times. Since using Vitæ-Ore my stomach is all right, my appetite is good and I can eat anything. My Kidney Trouble is cured and the Cramps are a thing of the past. I would say to every sick person, after your doctor and all the patent medicines that friends tell you to try have failed, then take Vitæ-Ore and be cured.

J. M. CARR.

Suffered For Forty Years

Was Permanently Cured Three Years Ago--No Return of The Trouble.

MORGAN CITY, LA.—My conscience tells me that I must fulfill my duty towards humanity and Vitæ-Ore by telling publicly the great good it has done for me. It has certainly proven a God-send to me. I suffered for about forty years with Stomach and Heart troubles. I have had first one physician and then another but they all failed to cure me. One day I saw the advertisement of Vitæ-Ore in a magazine and I sent for a package on thirty days' trial. In less than three days after beginning its use I improved wonderfully. It has been three years now since I was sick. I have taken three packages and must say that I feel as well as I ever did in my life, although I am sixty-seven years of age. I recommend Vitæ-Ore to all my friends.

MRS. F. CHESSON.

Paralysis and Nervousness

Has Now Good Use of His Limbs and Is Free From Pain.

SYRACUSE, IND.—It is with great pleasure that I write concerning my use of Vitæ-Ore. One year ago I became afflicted with Locomotor Ataxia and Paralysis as well as Kidney Trouble. I began using Vitæ-Ore three months ago. I was then suffering intense pain, had no appetite, was very nervous and could just drag my feet across the floor by supporting my weight on the back of a chair. I was also very despondent. Within ten days' time after using Vitæ-Ore, I could eat, sleep well and was free of pain and despondency. Today I have good use of my limbs, can work and life seems worth living again. Words fail me to express my thanks for what Vitæ-Ore has done for me.

JAMES L. MELOY.

If You Need It and do not send for it, you miss a chance to get well, a chance that you have been looking for, a chance you want, a chance to be happy through perfect health. There are no strings tied to our offer. There are no "ifs" and no "buts". There are no questions to answer, no blanks to fill out, no appliances to buy, NOTHING TO SIGN, no references or past history to give. Getting it is as simple as A, B, C. Just a short letter saying you need it, want it and will use it, and it is sent to you, all charges prepaid.

It Must Be Good, it must DO GOOD, or it could not be sent out in this way. It should be no stranger to you. You have seen it advertised over and over again in this paper, have heard it endorsed by your neighbors, have heard it highly spoken of by your friends, have heard that we send it out on trial, EXACTLY AS WE PROMISE. You must know that IT IS GOOD, that it is sent out freely as advertised, that it does what is claimed for it. Your friends who have had trial packages must tell you all this.

Why Don't You Send for it today? With this knowledge before you, with this offer in front of you, with the positive evidence on this page imprinted on your brain, how can you ignore, hesitate, delay or refuse? What is your excuse? You are to be the judge and need not pay a penny unless you are benefited. WE TAKE ALL THE RISK. Read our thirty-day trial offer, read what Vitae-Ore is and HOLD OUT YOUR HAND.

This Is Our 30-Day Trial Offer

If you are sick we want to send you a full sized $1.00 package of Vitæ-Ore, enough for 30 days' continuous treatment, by mail, postpaid, and we want to send it to you on 30 days' trial. We don't want a penny—we just want you to try it, just want a letter from you asking for it, and will be glad to send it to you. We take absolutely all the risk—we take all chances. You don't risk a penny! All we ask is that you use V.-O. for 30 days and pay us $1.00 if it has helped you, if you are satisfied that it has done you more than $1.00 worth of positive, actual, visible good. Otherwise you pay nothing, we ask nothing, we want nothing. Can you not spare 100 minutes during the next 30 days to try it? Can you not give 5 minutes to write for it, 5 minutes to properly prepare it upon its arrival, and 3 minutes each day for 30 days to use it. That is all it takes. Cannot you give 100 minutes time if it means new health, new strength, new blood, new force, new energy, vigor, life and happiness? You are to be the judge. We are satisfied with your decision, are perfectly willing to trust to your honor, to your judgment, as to whether or not V.-O. has benefited you. Read what V.-O. is, and write today for a dollar package on this most liberal trial offer.

Read The Testimony On This Page.

Read it again and again. No stronger words have ever been written about any other medicine; no better expressions are truthfully commanded by any other treatment. Vitæ-Ore is as different from other remedies as is pure milk from chalk and water, or the sunlight from a tallow candle. It does not take faith, does not take confidence, does not take belief, does not take even hope to cure with Vitæ-Ore. It takes only a trial—all we ask. This medicine enters the veins of the sick and suffering person and cures, whether the suffering believes in it or not. Its substances enter the blood, and work, work, work—a work that cures. Read what it is.

What Vitae-Ore Is

Vitæ-Ore is a mineral remedy, a combination of substances from which many world's noted curative springs derive medicinal power and healing virtue. These properties of the springs come from the natural deposits of mineral in the earth through which water forces its way, only a very small proportion of the medicinal substances in these mineral deposits being thus taken up by the liquid. Vitæ-Ore consists of compounds of Iron, Sulphur and Magnesium, elements which are among the chief curative agents in nearly every healing mineral spring, and are necessary for the creation and retention of health. One package of this mineral-substance, mixed with a quart of water, equals in medicinal strength and curative, healing value many gallons of the world's powerful mineral waters drunk fresh at the springs.

DOCTOR SMITH CURED.

Severe Case of Bright's Disease Entirely Relieved By It.

MINNEAPOLIS, KAS.—I have used Vitæ-Ore personally for some time. I was troubled with Bright's Disease, my feet being so swollen at times that I could not wear my shoes, complicated with Gastralgia (pains in the lower part of the abdomen). All of this has left me, I using nothing but Vitæ-Ore. I will say further that I used this remedy in my practice with a degree of success that I have never attained with any other remedy, and shall continue to use it as long as I can procure it.

G. W. SMITH, M. D.

Thousands of People

In all parts of the United States and Canada have testified to the efficacy of Vitæ-Ore in relieving and curing such diseases as Rheumatism, Kidney, Bladder and Liver Diseases, Dropsy, Stomach Disorders, Female Ailments, Functional Heart Trouble, Catarrh of any part, Nervous Prostration, Anæmia, Sores and Ulcers, and worn out, debilitated conditions.

SNATCHED FROM DEATH.

Was So Swollen and Bloated That She Could Not Lie Down.

DELBA, TEX.—I am now twenty-two years old. About five years ago I got in bad health; my father spent everything he could get for medicines. I tried doctors until we lost all hope. Some pronounced my disease one thing and some another, and all failed to do me any good. I had grown worse and worse until I had a complication of diseases—Liver, Kidney, Stomach and Female Disorders. I also had Neuralgia and Muscular Rheumatism. I was so swollen and bloated that I could hardly lie down. It seemed like I would die of suffocation. I thought I had Heart disease in a bad form and had given up to die. I often prayed earnestly to God that death would end my suffering. God sent me Vitæ-Ore through some friends and I decided to try it. The first package made a great change. When I had taken two packages I felt like a new person. I cannot express what it has done for me. It snatched me from death and gave me life and happiness. I took six or seven packages of Vitæ-Ore in all and it has restored me to perfect health.

RHODA WORKMAN.

SAVED THIS BOY'S LIFE.

So Writes Rev. Gregory, who Calls It a God-send to the Afflicted.

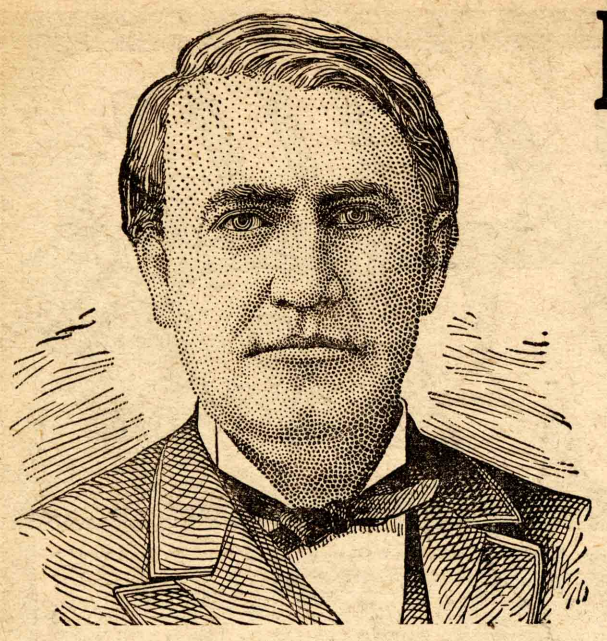
ONEIDA, TENN.—My little boy, seven years old, was afflicted with Liver Complaint for more than two years. Two local physicians treated him, as did also a well-known traveling specialist, who has quite a reputation for treating such diseases, having successfully cured a number in this section. But, strange to say, my boy's case baffled them all, and he continued to grow worse instead of better. I had begun to despair, not thinking he could ever be cured, and feared for his life, when I noticed the Vitæ-Ore advertisement. I sent for a package and after giving it to the boy for ten days I could notice a little change for the better in his condition. By the time the entire package was used he could eat heartily, go to school and run about and play with the other boys, which he had not done for six months previous. I consider Vitæ-Ore a God-send to the afflicted, believing it saved my boy's life, and should like to have the world know what it accomplished for my child, for the benefit of all suffering humanity.

REV. A. M. GREGORY.

Health is so Important

To your happiness, success and enjoyment of life and its duties that if you are in any way sick or ailing you should not delay a day nor an hour but should begin proper treatment immediately, before the trouble has a chance to become settled in any of the vital organs, to spread to other parts, or to become aggravated in its developments. If you don't feel right, if there is something wrong in the workings of your system, something wrong with your sleep, your digestion, your blood, your nerves and your vitality, you cannot afford to suffer another day, when the thing that has set thousands right is offered you without a penny's risk, when it takes but a letter to start you on the treatment which has won international reputation by the work it has done. The cures Vitæ-Ore has made prove the good work it does in checking disease and repairing its ravages, a work that every sick person should turn to for help. Do not continue suffering. Send for a $1.00 package on trial today.

Address, Theo. Noel Co., UP-TO-DATE DEPT. Vitæ-Ore Bldg. Chicago, Ill.



If I Could Talk to You

If I could walk right into your home and **tell** you all about the wonderful latest style Edison Phonograph, I know that I could convince you beyond a doubt that you **must** have this king of entertainers in your home.

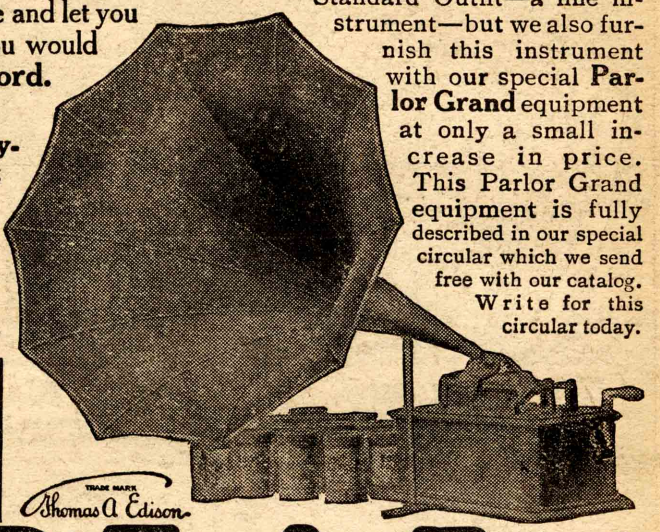
And—If I could **bring** one of these superb new Phonographs with me right into your home and let you actually **hear** the wonderful concerts you would be convinced **without my saying a word.**

But—

As I can't bring the Phonograph **myself,** I **am** going to send it to you at **my risk**—on a free trial.

Read every word of my offer, see if you can **imagine** an offer more generous, more liberal, without my actually **giving** away the Phonograph. Write me today.

F. K. BABSON.



This is the regular Edison Standard Outfit—a fine instrument—but we also furnish this instrument with our special **Parlor Grand** equipment at only a small increase in price. This Parlor Grand equipment is fully described in our special circular which we send free with our catalog. Write for this circular today.

TRADE MARK
Thomas A. Edison
This Trade-Mark appears on each machine.

The phonograph is Mr. Edison's hobby. Although he has sometimes disposed of an interest in other inventions, he retains his interest in the phonograph. Mr. Edison's constant attention and experiments have made the Edison phonograph a perfect musical instrument.

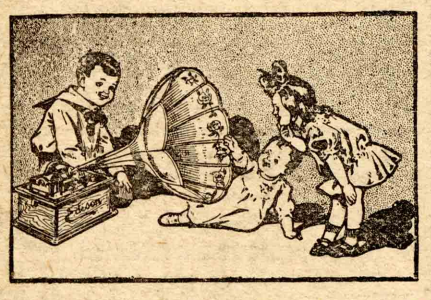
The Editor knows this offer is genuine. Read what Mr. Babson says above.

THE EDITOR.

FREE TRIAL!

I will send the latest style Edison Phonograph on absolutely free trial to any responsible person in the United States. I don't ask any deposit or money in advance. We charge no C. O. D. **You are under no obligations** to buy unless you want to. I will consider it **a favor** if you accept the outfit on free trial. Then why should anybody refuse the free trial? At least send your name and address for the free catalog.

Just send me your name and address on the coupon below. I will mail you the beautiful new Edison Catalog and the very latest list of Edison Gold Moulded Records describing over 1,500 selections. I will also send you a beautifully engraved Free Trial Certificate made out in your own name. This Certificate entitles you to select **any outfit you wish** from the catalog as well as one dozen of the Edison Gold Moulded Records. Then, just as soon as you notify us of your selection, we will pack the whole outfit and ship it to you.



If after the free trial you do not like the Edison or if you think you do not want a phonograph just now, just ship the outfit right back to us **at our expense** and we do not charge you one cent. But if you want to keep the phonograph you may either send the cash in full or, if you prefer, we will make you this offer:

$2.00 a Month

Now Buys a Genuine Edison Phonograph.

We will allow you to keep this Edison Outfit without a mortgage or lease or even a guarantee from a third party, and pay for it in the **very smallest monthly payments.** We don't even charge you interest. On this generous Easy Payment Plan of ours the Edison Phonograph doesn't cost you a cent more than it would if you paid the entire amount in cash. And the payments are so small that you never miss the money at all and the machine is paid for almost before you know it.

For Cash in Full: We are selling these genuine Edison Phonograph outfits on time at the very lowest price for which they can be bought for cash anywhere. Neither do we charge any interest on time payments. Under these circumstances we cannot allow any discount for cash on any Edison Phonograph.

After the Free Trial You can decide whether you would prefer to pay cash in full for your phonograph or take advantage of our easy payment plan. The terms which we are giving on our monthly payment offer are the most generous and liberal that can be made. Anyway get the free trial certificate and Edison catalogs.

Write for Free Trial Certificate and Our New 1908 Edison Catalog NOW

Send us your name and address on the coupon below right away. Get our magnificent new Edison Catalog. It is fully illustrated by large photographs of all the different Edison models. Get this Free Trial Certificate even if you don't intend to use it right away.

Remember all you have to do is to write your name and address plainly with either pen or pencil, tear the coupon off and mail it to us. It won't take you a minute to do it now, while if you put it off you will be sure to forget it. You are under no obligations whatever. The beautiful catalogs and the Free Trial Certificate won't cost you a cent if you send us the coupon now. Don't pass up an offer like this; fill that coupon out right now.

Free Concerts in Your Home

The program below is just a sample of the many thousands of beautiful concerts which you can give with an Edison Phonograph:

Home Vaudeville.

9210	IS EVERYBODY HAPPY? -	Miss Madge Maitland
8847	I MAY BE CRAZY BUT A AIN'T NO FOOL—Comic Song - - - -	Rob Roberts
9385	CHICKEN CHOWDER -	Edison Military Band
8202	ARKANSAS TRAVELER - - -	Len Spencer
9145	EVERYBODY WORKS BUT FATHER—Baritone Solo - - - -	Rob Roberts
9034	NOBODY—Coon Song - - -	Arthur Collins
9065	PEARL OF CALIFORNIA—Bell Solo,	Albert Benzler
8736	TWO RUBES AT THE VAUDEVILLE—Rube Sketch - - -	Harlan and Stanley
2233	STEAMBOAT LEAVING THE WHARF—	Edison Male Quartette
9223	HEBREW SPECIALTY—Introducing Parody on "Then I'd Be Satisfied With Life" -	Julian Rose
9064	MY IRISH MOLLY O—Tenor Solo -	Billy Murray
1515	HOME SWEET HOME - - -	Irving Gillette

There are over **1,500** different titles in the complete list of Edison Gold Moulded Records which we send you, and every one of them is produced by the finest talent obtainable. You can give just as good an entertainment as the great Metropolitan theatres can produce and right in your own home without a cent to pay.

We want you to hear this and other programs on free trial of the Edison in your home. Try this Phonograph in every possible way. Invite your friends to hear a free Edison Concert, a free Minstrel Show, a Church Concert, etc., etc.

See how absolutely lifelike is the Edison's reproduction of the human voice, how perfectly you can hear every word in either a singing or a talking record. Put on a record of brass band selection. Notice the tremendous power and volume of sound that pours forth, and yet how perfectly you can hear every single instrument. Ask your friends' opinion of the Edison.

Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI INDIANAPOLIS, INDIANA, FEBRUARY 1, 1908 Number 3

"Heretofore farmers thought, when organized, they must fight every institution on earth to get their rights. . . . The farmers really have no fight against anybody or anything; all they need is equity and this they can take, regardless of the disposition of other parties."—The Third Power, fourth edition English, page 140; German, page 121. Also see page 4 of this number "Equity Can't Stand for Lawlessness."

In this number read particularly the following:

Page 2. "A Message From the Founder of the A. S. of E."
Page 3. "Farmers and Business Men," and "The Tendency of Things."
Page 4. "Equity Can't Stand for Lawlessness."
Page 5. "The Limit Reached," and "1,000 Men Wanted."
Page 14. F. S. of E. Official Department.
Page 17. "Vindicated."

Also read all the other editorials, departments, etc., and don't forget to read the advertisements and buy from our advertisers what you need in their line.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

A Message from the Founder *of* the A. S. *of* E.

To the Farmers of America:

Five years and a month ago I gave the farmers of America the Equity plan to control marketing of farm crops to secure profitable prices.

Old readers of this paper know what opposition was met with from the outside. I will not attempt to explain it here, suffice it to say that probably no good movement was undertaken under more unfavorable conditions and with more universal doubt, distrust or open opposition.

For years I labored as hard as any man could to break down the barriers that were raised against the establishment of the Society, and succeeded. In four years a nation of farmers has been converted to a new plan of marketing their crops, and the greatest and most important industry of the nation had been revolutionized at its distributing end.

The accomplishments would have been impossible without this paper —UP-TO-DATE FARMING. Every person who has followed the course of events knows this is true.

Perhaps I cannot do better than to quote here from ex-Secretary Tubbs' report before the 1905 national convention of the A. S. of E., as follows:

The Society is to be congratulated in having a man at the helm possessed with a determination that knows no defeat, with a pen many times mightier than the sword, and with an energy bordering almost on the superhuman. Without such a leader success could not have been attained and farmers today, as in the past, would have been powerless to maintain even living prices on their present bounteous crops.

It is to be regretted that the price of victory has fallen so heavily on Mr. Everitt personally. He has uncomplainingly sacrificed much of his personal interests for the liberation of the American farmers from the greed of the class that has occupied the position of vantage between our two greatest classes—the producers and consumers. Whether his effort will be appreciated and his losses made good by the farmers, who reap the rewards of his labors, or whether he will be forgotten and unhonored, remains for the historians to record, but certain it is, he will have the satisfaction of knowing that he has set thoughts, ideas and plans in motion; yes more, has kept them moving, that are responsible for more genuine, enduring good for the agricultural classes, for legitimate business enterprises of all classes, and for humanity in general, than any other man that ever lived in this or any other country.

But the scene shifts. Mr. Tubbs becomes ambitious. To organize the farmers for profitable prices was not enough for him. The consumers must also be organized so they may not be charged too much. Mr. Tubbs conceived the idea. He gave it birth, and through his leadership the American Society of Equity was diverted, in 1907, from organizing farmers to organizing the consumers. His own letters printed in "Conspiracy and Rebellion" in January 15th number leave no doubt. The fact that a list of about 700 organizers commissioned to organize farmers, when Mr. Speer took charge in December, 1906, had shrunk to less than a dozen active ones when the 1907 convention met, proves also, conclusively, that the idea to organize farmers had been abandoned, or the plan killed.

Because the writer and this paper would not join in the program arranged by Tubbs, he conceived a conspiracy to take all honor away from me, defame my name, kill UP-TO-DATE FARMING, and totally ruin my reputation and business. The conspiracy has been proven by this paper. It will go in history as one of the blackest chapters against a good institution ever written.

But Secretary Tubbs said: "The Society is to be congratulated in having a man at the helm possessed with a determination that knows no defeat."

Notwithstanding I have gone through what few men have ever been called upon to endure, my determination is just as strong now as it ever was. Notwithstanding the Society has been shaken from centre to circumference, it has been saved.

When the conspirators discarded the true principles of the original Society, threw down its plan, diverted it to the accomplishment of new objects and elected, as leaders, people devoid of a knowledge of the Society and of good business ability; your humble servant and many true and loyal members rescued the true principles and plan. While it is legally impracticable to rescue the name from those who would wreck the Society to accomplish their personal ambitions and carry out the conspiracy, we recognized that principles were ten thousand times more important than a mere name.

Therefore: the

FARMERS SOCIETY *of* EQUITY

now represents all that the original A. S. of E. did. With all the handicaps removed that had gradually attached to the old Society, with added knowledge, I may say, with the sad and expensive lesson of experience we have just learned, farmers can now embrace their opportunity through the FARMERS SOCIETY OF EQUITY and go forward uninterruptedly to gain their industrial freedom and independence.

I send greetings to all members who remain true to our original principles and assure them I am, as ever,

Devoted to the cause of Equity for farmers,

J. A. EVERITT,

Vice President Farmers Society of Equity and Founder of the A. S. of E.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE $1.00 PER YEAR. A CLUB OF FIVE FOR $3.00

Foreign Subscriptions, including Canada, $1.50 per Year.

Clubs. Two subscriptions for $1.50; five for $3.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY.* Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

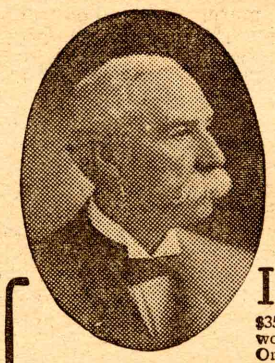
The latest date shown with your address is the date to which your subscription is paid Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.



Let me send you a Genuine BURDETT ORGAN FREE on Trial

—You can buy it on your own terms at my lowest factory price, saving $25 to $50.

Iguarantee it Forever and give you Free Insurance and Free Music Lessons

I AM President of the Hobart M. Cable Company—Capital, $350,000.00. I build the world-famous Burdett Organ that you have heard so much about. I sell the Burdett Organ *right to you* and charge you my *lowest factory price.*

That's my *new* way, and it gives you the Burdett Organ, the organ which for fifty years has been known everywhere as the best, and you *save* at least *half* on the price.

Now I am going to make you an offer that is so liberal you simply *can't afford* to refuse it;—

I will send you the genuine Burdett Organ (any one you select) and you can try it in your own home for ten days.

You don't have to pay me a penny in advance nor make any deposit of *any* kind.

I take *all* the chances, *all* the risk.

Now, if you want to keep the organ after you have tried it, I sell it to you at my *lowest wholesale factory price.*

If you don't like the Burdett Organ—if you don't think it's by far the best organ, or if you don't think the price is less than half you would have to pay for an organ not half so good—then I don't want you to keep it. So you just notify me and I will take it right off your hands.

And you are not out a *penny*, and you are under no obligations to me whatever.

But if you *do* keep the organ, I give you, without any extra charge, a perpetual guarantee.

You see I guarantee the Burdett Organ *forever* —with a legally binding pen and ink guarantee, secured for you by $350,000.00 capital of my company.

If at any time (no matter how many years after buying) you find that the Burdett Organ is not fully as represented, or that it has any defects in material or workmanship, I will either repair or replace your organ with a new one entirely at my expense or refund every penny you have paid.

That's all in the iron-clad guarantee, which legally binds me to live up to every word.

No other organ builder in the world *dares* to make such a guarantee, because no organ except the Burdett Organ will *stand* it.

And now to remove every possibility of objection which you might have to this plan, I even go further—With every Burdett Organ I give you absolutely Free Insurance.

This insurance is a part of my agreement with you, and is *absolutely binding upon me and my company:* (Capital $350,000.00.)

After you have bought a Burdett Organ on the easy payments, if the money-maker of your family should die, and you find it impossible to meet the payments, the organ *immediately becomes your property*, even though you have made only one small payment.

That puts any other way of buying an organ clear out of your consideration.

Because no other organ builder in the world does anything like that.

And in addition to all this I offer you a course of music lessons given by the best instructors in the country. As soon as I hear from you I will send you, absolutely free, a copy of my book which means a big saving of money to you and gives you full particulars, pictures and full descriptions, and factory prices of Burdett Organs to select from, and a copy of my Unlimited Guarantee and Free Insurance offer. Remember, you are dealing with the *largest* manufacturers in our line, who are *fully* responsible and honorable, and you get the genuine *Burdett* Organ, which everybody knows is the best. *10 days' free trial* in your own home and the *lowest wholesale factory price*, payable on *your own terms*, a *Perpetual Guarantee, Free Insurance, Free Music Lessons.* This is a *positive fact*—no other responsible manufacturer has *ever* made such a liberal offer. It is so *very* liberal that *I don't know how long I can keep it up.*

So write me the postal *now*—put your name and address on the back—no promise—no anything. That doesn't put you under any obligations—*there can't be a bit of risk on your part.*

Address the postal like this: Hobart M. Cable, President, 606 Steinway Hall. Chicago, Ill.

A CART LOAD OF FUN

This is the name of our book that should be i every home. More fun to the square inch tha a cage of monkeys. A "cart-load" indeed Space will not permit of our telling much about this book. FARMERS *and* BUSINESS MEN

Every once in a while there crops out in various portions of the country the antagonism between farm organizations and business men that was engendered by the earlier efforts at organization of farmers. This antagonism UP-TO-DATE FARMING has always deprecated. Merchants, particularly local merchants, and the farmers in the country adjacent to them, ought to be the very best of friends. Aside from the friendship that should subsist between them because of acquaintance and association and their common interest in local affairs, matters worldly, selfish and personal ought to make them friends. The merchant cannot afford to oppose anything that would conduce to the welfare of the farmers, because in doing so he is curtailing his own business opportunities and placing obstructions in his pathway to success. His profits come from his customers, and those profits depend not more upon the number of his customers than upon their ability to purchase, and to purchase the better grade of goods. Since in the agricultural community, the merchants' customers are largely farmers, the better farmers those customers are, and the more they produce and sell for profitable prices, the better customers they are of the merchants they patronize.

No merchant, therefore, who consults his own interest, will antagonize the farmers, his best and most liberal customers. If those farmers seek to organize so they may co-operate together to prevent disasterous market gluts in marketing their products, every personal and even selfish interest appeals to the merchant to aid them therein, for if the farmers get no profits, how can the merchant expect profits in his dealings with them?

On the other hand, farmers have a business as distinct in its details as the merchants have. The latter buy goods at a venture, and their success depends upon selling those goods again at a profit. The profit depends upon two things—the cost to them of the goods up to the time of the sale and the price at which they sell them. No one but themselves can tell what price must be to carry a profit with it, hence they are the ones to make the selling price. No farmer should dispute that.

Of course, the customer is not required to purchase blindly at the price asked, for cupidity might exact too great a profit and make too high a price. But the seller of the goods must make the selling price or go out of business.

In almost precisely paralled lines, farmers plant and cultivate and harvest, at much the same risk taken by the merchant in the purchase of his goods. Their profits depend upon the sale of the products and the price at which they are sold. It may be argued that the farmers do not pay money for their products as the merchants do for their goods. True in part, and only in part, for it is scarcely possible to make a crop without some investment of cash. But what is much more, they invest their time, their labor, their only source of income, and, like the merchants, they must have a profit thereon or must fail. And, again, like the merchants, who can so well know the cost of the products as the farmers themselves, and who are better qualified to determine the price at which they should sell? But once more like the merchants, cupidity may interpose, and excessive profits may be demanded in extortionate prices.

Since, however, farmers can make prices on what they have to sell only by co-operation, and since they can co-operate only through organization, and from the very nature of things, in a representative body made up of those who produce some crops and consume others, and where prices become a matter of free discussion, the danger of extortion in price is reduced to the minimum.

This brings to the front the idea of "Equity in all the business relations of life." Farmers should concede to the merchants the right to price, in equity, the goods they sell; and merchants should, in every legitimate way, aid the farmers to get in position to price, in equity, the products they put upon the market, each maintaining the just rights of the other, and each loyally supporting the other. The merchant cannot plow, and plant, and cultivate, and harvest, without first abandoning his place in the store; and the farmer cannot buy and sell goods, a business for which he is naturally not qualified, without first giving up the farm. "Ye cannot serve two masters," nor can you hope to successfully pursue two callings. These two callings, then, should be special friends, and when the merchant ships in products his customers could supply, he breaks a link in the chain of that friendship; and when the farmer sends abroad for goods his merchant could supply, he does the same thing.

There is no room for antagonism between these people, and UP-TO-DATE FARMING regrets every action on either side that tends to create antagonism, or that indicates antagonism.

THE TENDENCY OF THINGS

If no record had been made of the past, if man had no history to read, even philosophical and thinking people could view with complacency the present tendency of things, or, what is most likely, they would take no note of passing events, nor consider the results to which they must inevitably lead unless something intervene which never did in the older ages.

History shows that the nations which rose and fell each traveled one of two paths; they either spent themselves in ambitious wars and their sun set in blood, or they died in the grasp of a cunning and unscrupulous few who absorbed the wealth as fast as it was produced by the many, until the accumulated wealth topped over of its own weight and arrogance, and the nation perished in a struggle with its own overburdened people.

That the latter is the tendency of events in the American Republic the observing student can not fail to see. Accumulative wealth is already here, and shows like mountains but recently thrown up on the level of a prairie—the level of our boasted universal competence and common prosperity. That these mountains of wealth intend to remain and increase in size is manifest on every hand, even though to build them higher must be scooped up all that is valuable on the surrounding plane, bringing the millions that dwell there to a lower level still.

President Roosevelt a few months ago was credited (or charged, depending upon the point of view), with a determination, not so much to tear the mountains down and restore the beautiful level of the plane, as to stop the machinery that is constantly building them higher—to cut off the special privileges that give combined and corporate wealth so great an advantage over the masses of the people. The result was that the masses shouted the President's praises, while the classes, the mountain builders, seemed to look on in stolid indifference.

UP-TO-DATE FARMING at that time forecasted the events as they would unfold themselves: That the dangerous combinations were only biding their time to strike; that the first fusilade would be fired by the monopolistic press; that the target would be entirely different from the real one; that the real aim would be at the popularity of the President and to discredit his policies and administration so as to weaken his power with the people. This is on, and the purpose will be accomplished.. The bulk of the press will be subsidized or deceived, and it in turn will deceive the people, until, before November of this year, whatever Roosevelt shall appear to stand for will be unpopular with the people. And in the midst of it all, if the people are wise they will know that whatever candidate these subtle influences unite upon, will be the trusted candidate of the powers of corporate greed and special privilege, and against the things for which they lauded the administration but a few months before.

We are not talking politics. We care nothing about that. Individual candidates enter not into our calculations. We are discussing the tendencies of the times, and noting the portentous shadows that stretch themselves along the future of our country and fall upon the graves of nations that have preceded us. May we turn those shadows aside, or must we move on to the same burial place?

We possess an element the other nations did not have—we have an educated, sober, thinking, philosophical common people, a host of agriculture—the mighty THIRD POWER. May God help us and the friends of good government, of equity and justice, to arouse this power, illuminate it with the light of truth, cement it together with a common interest, the great good of a common humanity, and induce it to stand in unbroken phalanx for "equity in all the business relations of life." Then will the storms that ruthlessly wrecked other nations pass harmlessly over ours.

THE EQUITY MOVEMENT ALMOST DIVINE, SAYS SENATOR McCUMBER

When United States Senator McCumber of North Dakota, was in this city on the occasion of the meeting of the Indianapolis Grain Dealers Association, he sought a representative of UP-TO-DATE FARMING, in order that he might express his approval and appreciation of the great work that has been accomplished by this paper and its founder in organizing the farmers to secure more equitable prices and better conditions throughout the agricultural regions of the country. "The Equity movement is almost divine in its origin," said the Senator, and in his State, where it has gained great headway, he said in all his speeches in farming localities he had advised the farmers to join heartily in such a wonderfully progressive step toward solving the greatest problems of farm life.

Senator McCumber believes, and so expressed himself, that with complete farm organization and uniform grading of grain, farmers may not only set the price at which their products shall sell, but that they may also fix a scale of wages for farm laborers and a percentage of profit on farm investments that will place the organized farmers on a basis equal with that of organized labor and the combined investors in other industrial enterprises.

Whether or not these conditions are ever to be realized is a question that only the farmers themselves can answer, and it should impel them to renewed effort when such men as Senator McCumber entertain such advance ideas of their needs, and express such emphatic approval of their work.

THE PRESIDENT AND EQUITY

President Roosevelt does not use the term Equity, but he does use the word co-operation, and says the farmer "must learn to work in heartiest co-operation with his fellows, exactly as the business man has learned to work,' and in another place in his message to Congress he repeats what he said last summer in Michigan, that "farmers must co-operate with one another and the Government, and the Government can best give its aid through associations of farmers."

It would seem that farmers could ask no higher endorsement of farm organization and co-operation than is expressed in these words of the nation's chief executive. And when to this is added the crying need for farm organization, we cannot see how farmers themselves can longer hesitate. What a pity it is that petty spite or envy can for a moment be permitted to interfere with so great a work as was being accomplished by the American Society of Equity. The general press had already conceded the practicability of the plans of the Society, some of the most powerful combinations had acknowledged its power and complied with its requirements, and now the highest officials of the country urge its importance.

We can only hope that the greatness of the farmers may see the littleness of individual malcontents, and refuse to be disturbed thereby.

MEN WHO DO THINGS

UP-TO-DATE FARMING is in no sense a candidatic paper, nor do we take sides in party politics, but the great need of today in government, State and National, is men who do things. There is no question but that President Roosevelt owes his great popularity to that quality, and he owes to it also the enmity to himself that has developed in certain quarters.

Congressman James E. Watson of Indiana, is another man of that kind, a man who feels that to hold office is to have work to do. His effort in behalf of his grain inspection bill, designed to secure uniform grading and save to the farmers millions of dollars of which they have been robbed by dishonest inspection and unfair grading, ought to give him a warm place in the agricultural heart.

Multitudes of Mr. Watson's friends are speaking of him for governor of his State, and we can easily see how the people could do worse than to give him that honorable and responsible position.

RESOLVED

In the year nineteen hundred and eight,
Among resolves that I will make:
I'll work for right and shun the wrong,
That men of Equity be made strong
In lifting from the drudge of toil
The valliant men who till the soil.

Not that I hope to stop with might
The wrongs that reason alone can right,
For men in such a glorious land
Are sure at last for right to stand.
Yet only can the land be free
By joining hands in Equity.

JOHN DOLAN, Duquesne, Pa.

Equity Can't Stand for Lawlessness

Conditions in portions of Kentucky are deplorable. The American Society of Equity was organized to secure to farmers the simple right conceded to every other industrial producer, the right to hold his property and refuse to sell until he received a price satisfactory to himself. This is a right denied nobody but farmers. It is the fundamental right of the ownership of property, and we stand by that right. And not only so, we believe farmers may cooperate as others do, and may combine their crops and sell together if they may thereby better secure an equitable price, but we cannot stand for lawlessness. Opposition to lawlessness was early proclaimed as the doctrine of the Society, and when it was first intimated that outrages had been committed in the name of the Society, we declared it could not have been by members of the A. S. of E., and as president of the organization, we offered a cash reward for the apprehension and conviction of any guilty of such outrages.

We still believe the Society we organized cannot be responsible for the deeds reported from Kentucky. What doctrines may have been taught and methods resorted to since the convention last fall we do not know, but previous to that time we do know that every breath of the Society was for peace, not war; for law, not anarchy; for Equity, not disorder and force. When companies were reported riding over the country in the day time with a peaceful message to tobacco buyers and growers, UP-TO-DATE FARMING, conceding the right and probable efficiency of such a course, but gave an earnest warning of its dangers because of the excesses to which it might lead.

The Society is founded on Equity, a word which has a definite meaning, and principles which can not be perverted to justify or tolerate anything unlawful or destructive. And it is a principle which applies to the seller with the same force that it does to the buyer. If the producer, when he has the power, seeks to exact an excessive price, he places himself just as far from Equity as does the buyer, who, having the power, would compel the producer to sell at a price below the equitable.

It is not enough to say that the buyer, the trust if you please, was the first aggressor. That may justify the farmer in striking a blow, just as the man who is truck may strike back, but it does not justify tyranny and force, the defiance of law and the destruction of property. However desperate the case may have been, or may be, in the tobacco growing regions, it is not so desperate but that more can be accomplished by peaceable, lawful methods than by the means that seem to have been adopted in some localitites.

The thing that Justice and Equity would require these people, buyers and sellers, trust and producers, to do, is to get together as men, and agree on equitable methods, and do business. The buyers should not offer less than equity, and the producers should not ask more than equity. This is the fundamental doctrine of the Society, and it has been the consistent teaching of UP-TO-DATE FARMING ever since this paper has been a factor in the business world.

One thing is always sure: Excesses breed excesses; one extreme always leads to another extreme. The State authorities are aroused, as they necessarily were compelled to be, for lawlessness must be supressed or government abandoned. But there is dan ger of going to an extreme on that side. We find in the public press the following dispatch from Frankfort, Ky., referring to the situation we are discussing:

> In the meantime there was a meeting of thirty-five of the legislators from the dark tobacco and burley districts here and a bill was agreed upon providing for a $100 penalty for any grower who would sell pooled tobacco, and exempting any grower from giving bond who desired to bring an injunction against growers who desired to pool tobacco.

That would be going to a disasterous extreme on the part of the law makers. It would be giving the buyers or trust unlimited protection in making whatever price for tobacco they chose, and it would forbid, under penalty, any farmer from taking any step to secure a different price. It would be saying to the trust, "you are the buyer; make your price, and the State of Kentucky will see to it that the growers accept it."

Such a law would be monstrous, and could not for a moment be tolerated. It would be a law running to a worse extreme than lawlessness, short of revolution or anarchy, could possibly reach; tyranny in the statute books matched against anarchy in the fields.

It is time for cool heads to come to the front in Kentucky. Let Equity meet Equity, and buyer and seller stand on the common plane where both belong, that humanity may be served and Justice rule.

IT MAKES A DIFFERENCE WHO HOLDS THE PINCHERS

It is passing strange how readily an 'investigation" is started when an advance on farm products is announced. The attitude of the officials is in sharp contest with their inactivity when repeated advances on manufactured products are scored. The outraged consumer may protest as much as he pleases; may demonstrate conclusively the unjustness of these advances but to no avail. Attempts may be made to justify higher prices by citing the workings of alleged natural conditions, but in reality they are subrfuges and it is practically impossible to interest public officials to the point of determined action.

It is not so, however, with regard to farm products. Hardly a day passes but some official in some part of the country makes public his determination to find out why the producers of milk are charging a few more cents per gallon than they used to. It makes not great difference to them if the dairyman has been compelled to meet an increase of 2 to 50 per cent in the price of his dairy utensils; it is as nothing if his milk wagon stood him 50 per cent more than did his old one. That's not the point; milk ought to remain at the same old figure is their way of reasoning. It is a terrible outrage on the poor public if the dairymen, as a matter of self-protection, adopt the common methods of manufacturers and jobbing distributers and operate under a working or living agreement. In this case, it is a combination and as such is worthy of the best persistent efforts of the public prosecutors.

Then take the case of the tobacco growers. Until the organization began to become effective the agents of the manufacturers laughed inderision at the movement to force an advance on tobacco. But now that the growers are masters of the situation, refusing to part with their holdings until prices look equitable to them, it begins to look different to the trust's agents and they are singing a different song and the accompanying expressions are far from being as pleasing as formerly. Now, they think the tobacco growers organization is a monster trust compelling the poor down trodden buying interests who have not been able to pay over 20 per cent return on their watery capitalization in the past to pay something like a fair prce to the growers of the commodity for which there is such a demand. The wailing of the tobacco purchasing interests are loud and pipiful and doubtless some accommodating official hearing, believing and filled with compassion, will be persuaded that it is his duty to call a halt tnd proceed in his efforts to make the tobacco growers quit such an awful practice as refusing to sell until they get their own price.

On the other hand, manufacturers and jobbing interests promulgate advance after advance and it is taken as a matter of course. An "investigation" is not started until public protest becomes so loud that deafened ears are quickened. The price of printing paper is being steadily shoved upwards but we do not hear much about investigation. Machinery and utensils, building material and other manufactured products are steadily mounting to higher price levels, but it does not seem to arouse much interest on the part of prosecutors.

As a matter of fact the trusts of the country think it is all right to pinch anyone that they want to, but they do not think it fair for the peoducers of any of the raw materials to have pinchers in their possession. In their organization providing for controlled marketng the farmers of the country have pinchers that they can use without compunctions of conscience in a very telling manner.

SIGNIFICANT MONETARY FIGURES

We believe no further danger need be apprehended from the panic of October, 1907, but the heroic measures requred to avert greater disaster ought to warn the public against a recurrence of such things. The spectacle of more than two hundred millions of public money from the United States treasury in banks, and yet the Government issuing bonds and credit certificates, is not a pleasant one.

UP-TO-DATE FARMING has carefully avoided saying anything to aggravate the financial situation, but it is a dull pupil that will not learn from experience, and it is a poor teacher that does not impress the lessons that force themselves upon the attention.

It was all the time argued by press and financiers that farmers and laborers must keep their savings in the banks and thus prevent a monetary stringency. We admitted that, but we contended that depositors must have better security than a mere entry on a bank book. So soon as the money went into a bank, it was poured into the vortex of the financal whirlpool, and the power that was able to hoard eough to start the panic was able to gather in and hoard the balance as fast as it came in. Consequently there was no better way to increase the "corner" and intensify the stringency than to keep pouring the money into the banks. If there is not a monetary lesson in this, it is doubtful if one could be found anywhere.

That money was freely deposited in the banks is shown by a December report of Comptroller Ridgley, who puts the individual deposits at $4,171,-873,717. At the same time the United States treasury had deposited therein $223,117,082, which, added to the above, makes the aggregate deposit of money in the banks $4,394,990,799, more dollars than there are seconds in 120 years!

Against this the total cash resources of the banks were only $660,784,736. Their capital stock at the same time was $901,681,682. So, if the available cash in the banks had been taken and their entire capital stock had been sold out at par, they would not have paid much more than 30 per cent of their deposits. That is not safe banking, and panics will recur so long as such a system prevails. There must be some means devised to make safe to its owners the money deposited in the banks.

But these stupendous figures must inevitably suggest another thought and another question. If the banks now have control of four billions of money not their own, and that immense sum can be 'cornered'" so as to make a scarcity of money in business, how could a few more millions that it is vaguely imagined the people have, relieve the situation? Where is all that money? It is really more money than there ever was in the country at any one time. Yet the comptroller of the currency makes the figures and certifies they are correct! The truth is, much of it is counted over and over again, but that neither improves the system nor relieves the situation.

But, let us again ask where is the money that it can not get into the channels of trade? Mr. Ridgeley tells us in the same report that the loans and discounts of the banks amount to the equally astounding sum of $4,583,-337,094! There it is. The banks have loaned it and used it in buying up paper at a discount. That is what they wanted it for—to speculate on and loan at interest. And that is a legitimate business, provided it is done in a manner "safe and sane." But who borrowed it and took it out of business? Whose paper was discounted that the money paid for it retired from circulation? Answer these questions and we shall have the cause of, and the responsibility for, the panics.

The people are depending upon the honesty and wisdom of their chosen statesmen to solve this problem and make a recurrence of panics impossible. But they can never do it by adding to the powers the banking corporations now have over the money of the country, nor by allowing them to increase the currency, for if four billion dollars can be gathered in and shut out of business any other sum could be.

IS IT A PLOT THE PRICE GAMBLERS ARE WORKING?

In view f the work of the late A. S. of E. convention at Indianapolis the following dispatch to the St. Louis Republic, from Dallas, Texas, concerning the Farmers' Union, is significant:

> From a secret circular issued by President J. J. Neill, of the Texas Farmers' Union, calling a conference of the leaders at Fort Worth Saturday, it appears that a conspiracy to obtain control of the union has been unearthed.
>
> President Neill says he has discovered a plot to get possession of the union that it may be run in the interest of cotton gamblers, and to have bucket shops reopened. He declares that prominent union men have been bought up by the schemers and that others are under suspicion.

It has never been the policy of UP-TO-DATE FARMING to declare a thing until we have the positive proof of it, but the above dispatch goes farther toward explaining the remarkable course taken by the self-asserted leaders in the late convention, than anything that has yet been made public. It was asserted on the floor of the convention that a million dollars could easily be obtained to disrupt the A. S. of E., and, of course, incidently impair the influence of this paper.

We do not know that the million dollars were obtained, but we do know that a few men who dominated the convention, acted as though they were paid for their work, and their action was so opposed to the best interests of the farmers, and so well calculated to destroy the Society, was such a premeditated blow at UP-TO-DATE FARMING, as to justify the belief that it was inspired by the enemies of farm organization. And now, since it has been discovered that there is a plot to do the same thing in the Farmers' Union, it would seem that the fact is well nigh proven—proven by analogy if not by positive testimony.

And this brings to farmers a lesson it is a pity they should ever have to learn—that their most dangerous enemies may be in their own ranks. Indeed that is the only way the outside enemy can effectively attack them. Farm organizations are invincible, and they are all powerful to accomplish their purposes, until treachery develops within; and it has always been the method of the outside enemy to buy up the purchasable within the ranks, and thus sow the seed of discord.

There is but one way to meet this kind of purchased warfare, and that is for the honest membership, the rank and file, to stand by the original principles, support the true and tried, those whose personal interests if they have any, lie in the original lines. Honest men may be sold by corporationists in spite of themselves, but they can refuse to be delivered.

This is our advise not only to our own people, but to our brothers of the Southern Union.

Education in the lines of controlled marketing and organization must go on. Since the old officers could not, or would not, do anything to increase the membership, we must continue to spread the doctrine through UP-TO-DATE and the organization through the F. S. of E.

THE LIMIT REACHED

We do not know whether to take Wallace's Farmer seriously, or whether to think the erudite Doctor-Editor is only trying to be funny. Below we quote at length from a leading editorial, first page, of a recent issue of that high toned publication, so high in fact that it looks entirely over the farms to see what is best and most advantageous for all other callings. We quote this brilliant editorial at length, not for the purpose of ridiculing our learned contemporary, but to enable our readers to obey the Scripture injunction, and "Answer a fool according to his folly," but with no reference, of course, to Dr. Wallace:

Every now and then we read in the daily press of the formation of a farmers' trust. The thought is held out that if the farmers of the west could simply form a combination, limit production, and fix prices, the farmer's millennium would be seen purpling the distant east. There are some people who really believe that such a combination is possible. They have the idea that as many other classes have formed combinations and fixed prices, and the farmer must take what they offer at these prices or do without, the farmer can do the same thing and give the bread and meat eating world a taste of its own medicine.

There are three things at least which render such a scheme utterly impracticable. In order that a combination may be successful it must control its raw material; it must control the labor, and it must be able to meet competition on a square basis or else drive it out by hook or crook.

The farmer, unlike most lines of business, is utterly unable to control his raw material. This raw material is not the land, but the sunshine, the heat, the rainfall, and the electric currents. All the raw material he has in the land is simply the available fertility for that year. The land is his factory, but not raw material. Now the farmers' raw material comes to him as God wills it. He may undertake to grow an eighty-bushel crop of corn or a forty-bushel crop of wheat. Let him do the best he can, he may grow thirty of one and fifteen of the other, not because his factory was not in good running order and well managed, not because his land was not rich; not because he failed in his work, but simply because he did not have the climatic conditions necessary in the way of temperature and moisture. The measure of these is largely the measure of his crops. Another year he may start in to raise the usual crop and raise twenty per cent more than he expected, simply because the raw material was furnished him in greater quantity and he was prepared to make use of it.

The farmers of Iowa were reported to have grown 380 million bushels of corn last year. Suppose they had formed a trust and concluded they would limit the acreage and grow only 300 million bushels this season. Had they done so, with the present season they would have had only about 200 million bushels. This thing alone has absolutely prevented the formation of trusts and kept farmers from committing the unutterable folly into which other lines of business have fallen.

Neither can the farmer control labor, for the reason that farm labor is skilled labor, the skill can be acquired only on the farm and hence the labor must necessarily be limited to the ordinary requirements of the farm. It cannot be greatly increased in any year. It may be diminished by the apparently greater opportunities furnished by other callings, but it cannot be increased and hence cannot be controlled.

Again, a farmers' trust in order to be effective would have to be not merely state or national but international; for in our great products—bread, meat, and cotton—we have the world for a competitor. A trust in wheat must be in India, Russia, and the Argentine. A trust in corn must take in the Danube region, Egypt, and Argentine. As farmers do not hang together except under very great stress in a single county, or even a township, how can it be expected that they would hang together throughout the wide world?

We are glad to transfer that article to our pages as it gives our readers an actual taste of marvelous erudition, and shows them how hopeless is their condition. It tells them that "many other classes have formed combinations and fixed prices, and the farmer must take what they offer at these prices or do without," but that it is utterly impossible for farmers to do so, and, therefore, our great patriotic and toil worn farm population must go on laboring in absolute darkness as to their remuneration or reward, while others fix their own reward and that of the farmers also. We can't conceive of a more hopeless situation.

But let us see if this painter of black clouds has not left a rift here and there through which a litle sunshine may glint now and then. If not we might just as well draw the curtain.

Passing over the other wise sayings for the present, we are informed that "the farmer's raw material comes to him as God wills it," that of the other productive industries comes as men provide it. In this the farmer has an advantage. At least a distinguished man of old thought so, for when offered the choice of being defeated by an arm or of suffering the pestilence among his people, he chose the latter, because it was better to be dependent upon God than upon man.

But the worst thing in the way of the farmer, according to this wise man, is that he cannot control his raw material. We may stop here to say that no user of raw material controls that raw material unless he is also a producer of it. If he uses raw material produced by anyone else he can get it only by purchase, and it is purchaseable only as the producer produces it and is willing to sell it. The manufacturer of steel must depend upon the ore in the mines and the men who dig it. The furniture maker must depend upon the trees in the forest and the men who cut them. The manufacturer of cloths and prints must depend upon the flocks on the ranges and in the pastures, and the men who attend and shear them, or upon the fields of cotton and the men who plant and cultivate them. The flouring mills depend on the wheat and the men who produce it.

What is the matter with Wallace's Farmer? Every trust controlled industry is dependent upon some one else for its raw material.

The farmer alone is not so dependent, for he himself is a producer of raw material—the raw material that keeps the packing houses at work, that keeps the flouring mills busy, and without which the woolen and cotton mills would become junk piles almost in a fortnight. If the article we quote is logical the farmers' is the only calling that can successfully form a trust for it is the only one that does not have to depend upon some one else for raw material to work upon.

To say that the elements of the farmer's products are his raw material is to laugh in the face of science, and to presume upon the ignorance of the pepole. Everything handled or used in any way may be solved into its elements, and "returned to God who gave it." The farmer markets his stuff directly from Nature—from the hand of God, if you will; and, therefore he CAN control HIS business; he can absolutely control the business of all who depend upon him for raw material. We hope Wallace's Farmer will pause long enough to let that soak in.

But here is a clincher: The whole world must act as a unit to control farm production or marketing. If the world is a producer of farm products, the world is also a consumer of them. Were a very small percentage of the food and clothing products held off the market for even a very short space of time, the world would be both ragged and hungry. There is never a great surplus produced, and the world must have its daily supply or suffer.

No class can easier control its business than the farming class, and we cannot understand why farm papers would doom their patrons to the eternal drudgery of having the value of their crops determined and their remuneration fixed by those who fatten off their toil—their sweat made a game of chance played by gamblers to gratify greed.

Pardon us for one more brief paragraph touching the exigencies of crops referred to in the article above quoted, and for which the farmers are not at all responsible. Under the proposed system of equitable price-making, when crops are lean, prices are made proportionately higher and the losses are shared by both producers and consumers—equity. When crops are flush prices are made proportionately lower, and the blessings are shared with the consumers—equity again. A farm trust is not proposed; it is simply organized co-operation, to take the control of the greatest business the country has out of the hands of selfishness and greed, and lodge it where it belongs, and where all other price-making rests, with those who produce and own the property.

Let that soak in.

1000 Men Wanted

THE FARMERS SOCIETY OF EQUITY wants 1000 capable men at once. ¶ To organize the farmers of the country this year, so as to guarantee profitable and equitable prices for the 1908 crops, and to keep them organized so that all the future crops will bring profitable prices, will require permanent representatives in every county, or group of two counties or more.

In the development of this farmers Society, which is different from the Grange or Alliance or any former farmers' society, it will require representatives like great insurance companies have. But the inducements to represent such a great and good movement are greater than can be offered by any other institution.

We call for representatives; we want them from every county in the country. If you are a man of ability, intelligence and integrity, and command the confidence of the people in your community, and want to engage, temporarily or permanently, in a pleasant, profitable and beneficial business, at home or away from home, send your application on the below blank at once.

To applicants will be sent full particulars. You can give all or part of your time, the former preferred. Promotions for deserving people will be certain and rapid until the great society is completed. It has been successful for some, now we want it to apply to ALL crops.

If you live in the grain growing sections of the west, northwest, or central states; the potato growing sections of the northern or eastern states; the cotton growing states of the south; in sections that grow fruit, or vegetables to ship; or that are engaged in dairy persuits, or any agricultural interest that produces a surplus for shipping, and if you want the producers to price their own crops AND GET THE PRICES, then write to us for particulars how you can help.

Use below blank.

.....

To the FARMERS SOCIETY OF EQUITY,
Indianapolis, Ind.

Gentlemen:—I want to help establish the Farmers Society of Equity for profitable prices for ALL products of the farm, therefore, please send me full particulars how I can assist as per your call in UP-TO-DATE FARMING. I am now engaged at....

.....

In the past I have also been engaged in.....

..... If I am satisfied with what you have to offer, I will give.....
(Write "all" or "part") of my time.

Name .....

R. R.....P. O.....

Co..... State.....

TWO PICTURES

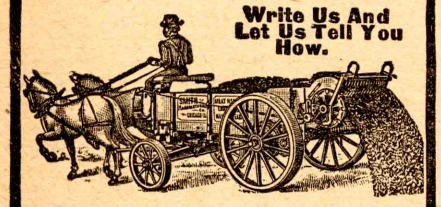
On the first page is a picture that suggests peace, equity, co-operation. What greater blessings could be sought by any community, State, or people? Peace with your neighbors; with those with whom you must do business; with the Government; with the world. Willing to give equity, and as firmly demanding equity, in all business transactions. A cooperation that strengthens every brother farmer who produces the same kinds of crops that you do and that makes you as strong as the combined power of the hundreds of thousands of farmers who you know stand shoulder to shoulder with you.

On the first page of the Equity Farm Journal No. 2, dated January, 1908, is another picture. It is a picture that will make every person who loves peace and equity sad, if indeed it does not repel them with feelings of disgust. Our comments will be brief, because they are unnecessary. The picture speaks louder than words. It is such pictures that arouse animosity, stir up strife and end in night riding, with resultant outrages against law-abiding citizens and crimes against our Government. It is to be deplored that such pictures are ever printed and particularly is it deplorable that they should appear on a sheet named "Equity" and which pretends to represent principles as noble and holy as those of the original Society of Equity. Very shame should protect members of our society from such imposition when laws do not prohibit.

$4.00 to $8.00 Per Acre

That's What a Good Spreader Will Do if Used as it Should Be

Write Us And Let Us Tell You How.



There Are Several Kinds of Spreaders

All The Best ?

No Spreader is best, or even good, unless it has:—

- **An Oak** Pole—not pine
- **Oak Sills** and frame—not pine or maple
- **Wrought Iron** Truss and Stay-rods to keep the frame square
- **Hickory** Double-trees—not rock elm
- **Malleable** F'fth Wheel—not cast iron
- **Double Oak** Bolsters
- **Wide Front** Axle so wheels will track
- **Front Axle** set under the front end of the body so the load is equally balanced on front and rear axles
- **Gear Wheels** and Sprockets keyed on—not pinned on or fastened with set-screw only
- **Heavy Wheels** with big spokes—not light wheels with 1¾ or 2-in. spokes
- **An Endless Apron**—not a half apron
- **A Hood and End Gate** to keep the manure away from the beater while loading

The Great Western Endless Apron Spreader has all of the above good features.

It is Made for the Man Who Wants the Best.

There is no other "just as good" or nearly as good Ask your dealer about the

Great Western

Don't let him sell you a substitute, that he says "*is just as good.*"

The Great Western will cost you just a little more than any other, but for every dollar extra that it costs, you will get $5.00 more in value. The difference in cost will be more than made up in repairs alone in a short time. Besides this, you will always have a machine that will be ready to do business. It won't be laid up for repairs just at the time that you want to use it

We issue a book that will tell you when, how and where to spread manure; how to make from $4.00 to $8.00 more per acre from your farm than ever before. Write just these words on a postal card or in a letter. "Send me your book, Practical Experience with Barnyard Manures, and catalog No. 5A2."

They will be mailed to you **Free.** Do it now before you haul your manure or prepare for another crop.

"One plows.
Another sows,
Who will reap.
No one knows."

Such are the uncertainties attending farming, but there need be no uncertainty about the price.

IN WINTER

Let the tired acres sleep,
For they deserve to rest,
While man his restless vigil keeps,
And Nature frozen tear drops weeps—
All working for the best.

—STELLE.

ONLY A THOUGHT NOW AND THEN

Watch for the little jobs that can be done now as well as next spring. Uncle Threadbare says it is time enough to do them when they have to be done; but Neighbor Thrifty thinks it is bettter to do them now while other work is not pressing. These people are friendly, but they never could agree.

How many little patches are there on the farm that are neither paying rent nor taxes—nooks and corners that you can't well get to to cultivate them? If you can't connect them with a pasture lot, give them a permanent seeding of some sort that you can turn to account. Land is too valuable to allow it to be idle.

And this is a good time to have an eye to the farm animals that are not paying for their keep. Every animal kept should pay its board in growth, in the production of young, or in present or prospective service. It is a losing game to keep boarders that never pay.

In the midst of freezing and thawing and heavy rains ditches are apt to form, and in a single winter and spring may make such headway as to do permanent damage. Uulucky furrows left open, or mole runs may start them. Old straw, grass, waste hay, or small brush or chunks thrown into them may check the wash and save valuable land.

It is bad policy to cultivate poor land when the means are at hand to make it richer. A friend of ours puts in almost every workable day in the winter cleaning up barns, stables and lots in a thriving village, and hauling the manure to his farm nearby. He does not cultivate so many acres as his neighbors, but he makes more stuff. Many farmers do not clean up their own lots, though they may have land that greatly needs fertilizing.

Much valuable pasturage is lost for lack of suitable fencing. Farm fencing is a serions problem. The woven wire fence with iron posts solves the problem, but it is as yet, beyond the farmers' reach. The next is the woven wire fence and good wood posts, but this is beyond the majority of farmers. About the best fence at moderate cost is of good, solid posts, well set 16 feet apart, with four or five wires tightly strung upon them, nine inches from the ground, and nine, twelve and fifteen inches apart, and with a good stake driven midway between the posts, and the wires firmly nailed thereto. Or the posts may be twenty feet apart, and two stakes driven between the posts. This makes a reliable horse or cattle fence. If four wires, it is nearly four feet high, and if five wires it is just five feet high. Two furrows thrown together just before setting the posts may gain three or four inches, and make a better fence. Such a fence may at any time be converted into a hog or sheep fence by making the ridge under the fence four or five inches higher, and drawing an extra wire midway between the first and second, and the second and third .

Walking abroad along the road, his teacher Samuel met, and this advice got in a trice: "Read Everitt's UP-TO-DATE!"

OPPORTUNITIES IN THE WEST IN AGRICULTURAL, STOCK-RAISING, MERCHANTILE AND PROFESSIONAL LINES ARE EXCELLENT

Lewis and Clark raced Simon Fraser for the Empire of the Nortwest through the mountains a century ago. The Forty-niners went through, some of them, and starved or froze before they reached the "Chiook" country. Ranchmen swore that the country was "good for nothin' but grazin'—you couldn't raise a peck of onions between the Mississippi River and the Puget Sound," and to prove it imported supplies with elaborate ostentation, selecting condensed milk and canned meats and dried eggs and vegetables as if they were living in the Arctic Circle.

Then the big railroads began to head westward toward California and the Coast, and each new line swung farther north. The locating engineers came back from the "Great American Desert" and told "The Old Man" in confidence that they believed farmers could raise wheat and potatoes and apples in the valleys of these long-tabooed lands.

So it happened that in the summer of 1907 John Doe—it would never do to be to personal in the matter of names with a man as important as John Doe—went out to see for himself. He did not travel in a private car and acknowledge reception committee ovations. He dropped casually into the offices of business men—bankers, real estate dealers, grocers, blacksmiths—and many of them were calling him "Johnny" before he left. He swapped stories with the farmers in the fields; he got out of his buggy and poked into promising soils and outcropping coal-veins and five-foot wheat-shocks; he slept at farms and ranches and hotels called "The Palace"; he drove many hundred miles in all sorts of weather, and he gained a clearer knowledge of the country as a whole than anyone else had ever secured before.

The account of his trip follows. It is the plain business narrative of a plain business man who went into the Northwest with the questions in mind: "Is this country able to support agriculture? Will it raise wheat and potatoes and apples instead of sagebrush and mountains? Is it "God's country?"

It is not necessary to answer these questions here. As he says, "no one can controvert the visible fact of growing crops, and his account of what he saw in actual bushels and acres is the most convincing reply.

Opportunity Land

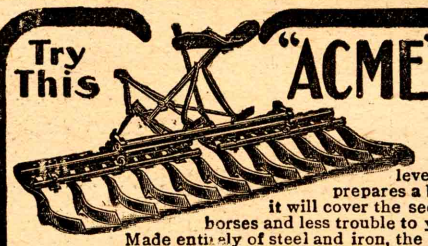
There is, in our northern tier of States, between Minnesota and Puget Sound, a wealth of resource in field and forest and mine of which the majority of people in the United States know little or nothing. Even the most open-minded can gain from word of mouth or printed page only a slight realization of a thing so great. I am no broader than the generality of my fellow men, and the tales I heard of the development of that country, of the tremendous crops and the quick return for labor invested, had made but little impression. But when I got there myself—when I rode from early morning till the dark fell, past splendid farm land and splendid crops—when I saw the enterprising, bustling, booming towns, large and small—when I talked with the level-headed, energetic, prosperous people—then it was a different mater. Then I wondered at the misleading moderation of the accounts that I had heard.

It was no hurried, casual glance I gave to any part of that broad, splendid land. I **neighbored** there. I watched its crops grow. I investigated its mines. I compared its fruits. I examined its cattle. I drove behind its horses and broke down in its automobiles. I ate facts about everything, and I enjoyed them. For they were mighty good facts, well-rooted and palatable. I stayed until I was convinced that the time is very near when this last and perhaps richest portion of our country will take its fair proportions of the people and its proper place in the world's economy.

Railroads Necessary

And now that I am returned from my long journey, the question comes: What is needed that this great empire may come into its own? The answer is as old as the hills. Pioneer railroad lines everywhere have demonstrated beyond doubt the richness and resourcefulness of the silent places with, and their utter worthlessness without, transportation. The wilds and wastes conquered, the business enterprises brought into being, the deserts drenched, the wilderness penetrated, and the mountains pierced—in short, the millions of homes made ready for the habitation of man by what may be called pioneer lines, make up an overwhelming refutation of the new contention that the railroad is a non-

Try This **"ACME" HARROW FREE**



Test its perfect work in preparing fine, smooth seed beds for your wheat and other crops.

See it cut, crush, pulverize, smooth and level, all in one operation. The Acme not only prepares a better seed bed than any other harrow, but it will cover the seed better, quicker, and with less strain on horses and less trouble to you.

Made entirely of steel and iron, the lightest Riding Harrow built, sizes 3 feet to 17 feet in width, it is the harrow for the man with 1,000 acres or the man with 5 acres.

Valuable Book Sent Free. "How to Prepare Seed Beds" containing instructive articles of high authorities on this important subject. It also tells about the "Acme" and its special shaped knives, that cut and turn the soil but leave buried trash *below* the surface where it belongs.

DUANE H. NASH, Inc., Box 41, MILLINGTON, N. J.

The Celebrated DeLoach Mill

The World's Standard for 20 Years

Saw Your Own Lumber For lumber is lumber nowadays, and you can do it better than the other fellow, with our help.

We Set the Pace —Others do the Best They Can

A 15-year-old boy can operate successfully. Two hands cut 5,000 feet per day. 15,000 mills in use the world over. Variable Feed, Friction Set Works, Automatic Steel Triplex Dogs and Diamond Track produce results impossible with other mills. Send for catalog of Saw Mills up to 200 H. P., Steam Engines and Boilers. Gasoline Engines, Portable Corn and Feed Mills, Planers, Shingle Mills, Wood Saws and Water Wheels. Prompt shipment and we pay the freight.

DeLOACH MILL MFG. CO. Box 850, BRIDGEPORT, ALA

producer. In the matter of opening up new territories, it is the first, the pioneer producer, which can claim credit, wholly or in part, for everything from the first cleared field and the saw mill spur, to the fine farm and the city—for the finished products, which are civilization.

As for the northwest States, the rich land is there. The people are going there. What is needed is more of them. When the new straight-tracked, strong-built railroad makes its swift, short passage from the grain fields to the great grain markets; when its builders complete what is already begun—then will there be a new empire where millions shall find homes and whence wealth shall flow out to the whole world.

In the Dakotas

It was on the evening of July 12th that I left St. Paul and I arrived the next night at Dickinson, North Dakota, having spent the day in studying pamphlets and getting what information I could from the western men I met on the train. There was no doubt in any of their minds about the West being "the best country on earth." The following morning I started on a four days' drive through Hettinger, Adams and Bowman counties, Nort Dakota, and Butte county, South Dakota. It had been raining energetically, but we didn't stop for that: We made an early start and did some sixty-five miles the first day.

Hettinger I found to be typical of a certain class of western towns; ahead of the railway, the residences mostly tents, the population about one hundred. It had about three general stores, two banks, a lumber yard, a cigar and candy store, a two-story hotel, a livery barn, two barber shops, one newspaper, one doctor, several lawyers and real estate agents—a good town—and when the Chicago, Milwaukee & St. Paul Railway goes through there, it will be a big town.

Good Soil—Good Crops

I met a locator who had just returned from thirty-six miles south of Lemmon and asked him about the agricultural possibilities of the land.

"It will raise as good crops as any on earth," he said. "All the land for ten or fifteen miles each side of the Milwaukee has been taken up; homesteaders on every section. It's mighty good soil." His verdict was the general one.

One conversation I had with a rancher at Haley, south of the line, was characteristic. "Look here," he said, in response to my invariable query, and led me out behind the barn where he had a thrifty field of oats and squaw corn: "Just look at that; that's my best answer to the question. I've raised as good as that, or better, for the last twenty-three years, ever since I've been in this territory, and if I can do it others can. Others will, too. That's the trouble. They've crowded us ranchers out of the middle west, and out of Wyoming, and out of a lot of Texas, and they'll crowd us off into the Pacific Ocean pretty soon to feed our beef creatures on seaweed."

Adams and Hettinger Counties, North Dakota

From Lemmon I drove north to Mott, N. D., traversing about forty miles of country in Adams and Hettinger counties. The country I found similar to that over which I had driven for four days except that it lies, if anything, still better for farming. Throughout the entire country the houses of homesteaders dotted the prairies. I saw fine fields of wheat and barley just south of Mott, N. D., proving, as other fields in other parts of the country had done, the productiveness of the soil. One man north of Mott last year raised 5,000 bushels of wheat. A number had each over 400 acres in crop this year. This grain will naturally tend south to the Milwaukee, as the wagon roads are better to the south.

Diversified Farming Country

I returned to Dickinson on July 18th, driving from Mott, a distance of fifty miles, and traversing a country containing more farms than any I had previously seen. I talked with farmers in this section and they scoffed at any doubt that the region was good farming country. There had been plenty of rain. Indeed, personally, I could have dispensed with a little of the precipitation, for it rained more than half the time that I was on the road.

I felt that I now had the Dakota situation well in hand. I had driven two hundred and fifty miles in five days, covered about two hundred townships and talked to heaven only knows how many different kinds of people.

The country, all in all, is of the same general aspect, valleys several miles broad and well suited to farming lyng all along the water courses. Between the streams the land for miles is a succession of hills, rolling prairie, and buttes, the larger per cent being plough land. The natural grass that covers this is so nutritious that cattle fatten on it without being fed any grain or given protection against the weather.

Coal Free for Digging

That whole section seems underlaid with linite coal, a great deal of it outcropping. The fuel question is often a serious one on the prairie and I asked the wife of a farmer what they burned.

"Why, there's a coal hole about three miles from here," she exclaimed. "John goes over and gets a few loads when he isn't busy. We don't have to worry about keeping warm."

I examined this coal at several places. It seems to be about half way between wood and bituminous coal. When first taken from the ground it shows the veins and knots of the wood of which it was formed. It slacks on exposure to the air. Two tons of it are said to equal one ton of bituminous coal. The veins vary from three to twenty feet below the surface.

In the Judith Basin, Montana

I spent several days in and about Lewiston, as the Judith Basin, in which the town is situated is considered the greatest cuntry in Montana for dry-farming.

It was wonderful! Simply wonderful! The first day I drove with Mr. G. W. Cook for fifteen miles through the farming country and I never before saw such wheat fields.

Mr. Cook pointed with his whip to right and left and left and right with the succinct remark:

"Forty bushels. . . Forty bushels. . . Forty bushels."

I did not doubt it in the least. The grain was as thick as it could grow and the heads were extraordinarily big and heavy. Ffty bushels to the acre is not uncommon. The grade was No. 1 Hard, a fine milling wheat that sold last year at $1.25 per cwt. That land sold for from ten to twenty-five dollars an acre, averaging about fifteen dollars. I was told that there weer still raw prairie or "bench land," as they call it.

The Judith Basin is a tract of about 2,000 square miles. I drove for hundreds of miles over it. The basin is well watered by numerous streams and springs which never fail in summer nor freeze in winter. It raises magnificent crops. Hay (timothy, alfalfa, broom grass and blue joint) and oats are invariably great producers. On the "bench lands," or prairies, between the creeks, the wheat crops are raised, thirty, forty, and fifty bushels being harvested to the acre without irrigation. The basin seems a natural wheat country. The climate, long days and cool nights, the altitude and the soil are perfectly adapted to this grain. Turkey Red and Scotch Fife are the varieties commonly known. The prices have been largely governed by local conditions. The yield in the basin is estimated at 350,000 bushels. About 80 per cent of the land can be plowed. About 10 per cent is under cultivation. South and east of the railroad the country has been settled up for several years, north and west most of the land has been homesteaded for one or two years and is developing rapidly. Last year 74,000 acres in Fergus County were homesteaded. But there is still good land open. Fergus County has a population of 12,000 and could easily support 500,000. It is a great opportunity for the eastern farmer. The ranchmen who have held the country so long have bought condensed milk, canned meat, stale eggs, and desiccated vegetables without ever thinking to raise such things for themselves. And yet nearly all vegetables and small fruits do well; apples can be raised, and potatoes make a big crop of excellent quality.

The sheep industry is another profitable one, bringing last summer a million and a quarter dollers into Fergus County in sales of wool and sheep.

In Idaho and Washington

St. Joe, Idaho, is a good lumbering and manufatcuring point. I saw flats containing from ten to one hundred acres of fine meadow, growing magnicent crops of timothy hay. Those lands are all settled and are valuable. Hay sells from $16.00 to $20.00 per ton, and the land is held at from $100.00 to $150.00 per acre. Besides these flats, which are nearly level with the river, there are small valleys which raise all kinds of fruit to perfection. The soil and climate are ideal for peaches, plums, apricots, apples and all kinds of small fruits. When the railroad furnishes transportation it will be a great fruit growing section.

Tekoa, Washington, is a thriving town of about a thousand people, with paved streets, electric lights, water, etc. Toward Rock Lake the country is as fine as any in the State. It is a succession of hills on which enormous crops of small grain are grown. The land is nearly all under cultivation, but is held in large tracts, thousand-acre farms being frequent. The soil is a dark loam of wonderful fertility, and the rainfall is sufficient. Wheat, oats and barley are the main crops. Potatoes often make 600 bushels to the acre.

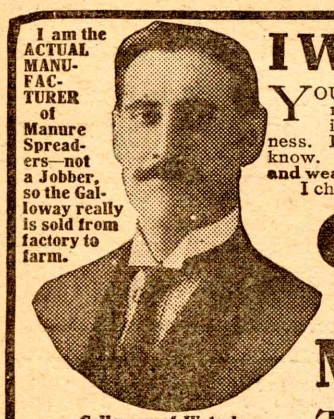
"The crying need of this country," a business man told me, "is that the big holdings on which we old-timers made our money be cut up into little farms of forty or fifty acres. An excellent living can be made off a forty-acre farm. We need more people in the country to raise vegetables and fruit and poultry and dairy produce.

A Great Fruit Country.

Around Ellensburg, which I made on August 21st, the whole country is irrigated land in a high state of cultivation. There are 50,000 acres of irrigated and sub irrigated land that will be tributary to the Chicago, Milwaukee & St. Paul Railway, as well as 80,000 acres more that can easily be irrigated. Over 1,000 acres of apple trees were planted this year at Ellensburg, anad twice this number of trees have been ordered for next year. Pears, plums, cherries and apricots do well and all small fruits.

My journey ended at Seattle. With the first glimpse of the blue water of the Inlet and the scent of the Pacific beaches and the warm sunshine of the Coast warming my shoulders, it was completed. From the Mississippi to the lazy Pacific, I had seen the Northwest, the empire of Lewis and Clark's discovery a hundred years ago. It is indeed an empire, only half developed as yet, but merely waiting for the men to run the irrigating ditch and the plow through its coil and for transportation to carry its products to the eastern markets. The men are coming: the steel rails are constantly heading westward across the prairies, and the long awaited future of the Empire of the Northwest is—today.

All this country described will be developed and settled by the building of the Chicago, Milwaukee & St. Paul Railway now under construction from the Missouri River west of Aberdeen, crossing the river at Mobridge due west of St. Paul and Minneapolis about four hundred miles, through South Dakota, the southwest corner of North Dakota, through Montana for nearly 500 miles, through Idaho and Washington to Seattle and Tacoma.



I am the ACTUAL MANUFACTURER of Manure Spreaders—not a Jobber, so the Galloway really is sold from factory to farm.

I Will Give You a Real 30 Day Free Trial With the Money in YOUR Pocket

YOU don't have to pay me **or any one else** a single cent on the price of my spreader before you try it or after you try it, if it doesn't **prove** itself to be the **best** made. I am not beginning in the spreader business. I have built spreaders for years. So I know what beginners don't know. I know how to and do build the Galloway Spreader so **it can't break and wear out** where experimental spreaders are **sure** to break and wear out. I challenge any other manure spreader seller or manufacturer to put his spreader alongside of the Galloway in the hardest kind of a test. I don't care what other spreader **you** try—it won't cost you a cent to try the Galloway at the same time. So it's certainly to your advantage to try the Galloway at **no cost to you** even if you **do** put up **your** money to try any other spreader. If the Galloway doesn't beat **any** other that you try, all you have to do is return it **at my expense** and you're not out a penny and you haven't **risked** a penny.

Galloway

Wagon Box

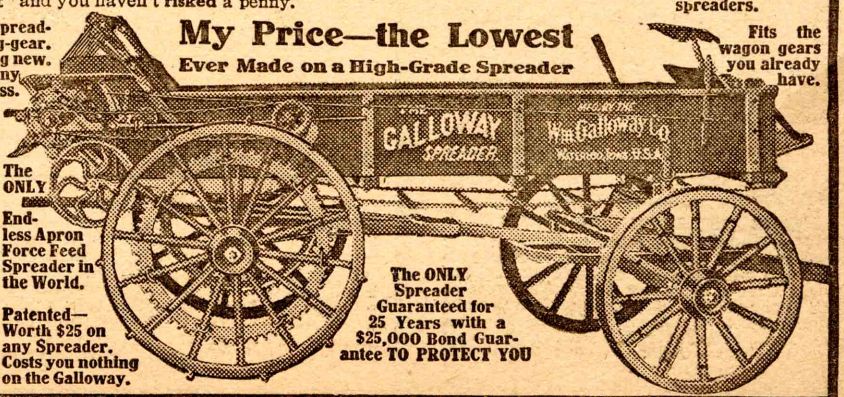
Manure Spreader

I make the only 70 bu. spreader with wagon running-gear. Patented. It's something new. Worth $15 more than any other, and costs $20 less.

The ONLY Endless Apron Force Feed Spreader in the World.

Patented—Worth $25 on any Spreader. Costs you nothing on the Galloway.

My Price—the Lowest Ever Made on a High-Grade Spreader



The ONLY Spreader with MALLEABLE and STEEL for ALL Parts that break and wear out in other spreaders.

Fits the wagon gears you already have.

The ONLY Spreader Guaranteed for 25 Years with a $25,000 Bond Guarantee TO PROTECT YOU

Galloway of Waterloo

Send me a postal and I will send you, absolutely free, my special proposition to you and the **Best and Biggest Manure Spreader Book, Free.**

THE Galloway has the best improvements—all patented so you can't get them on other spreaders. The Galloway is

Lightest Draft—Feeds as You Wish—and is the Only Spreader that Fits Quickly and Easily to the Different Widths of Wagon Gears.

WILLIAM GALLOWAY, 509 Jefferson St., Waterloo, Ia.

Prompt delivery to you from Waterloo Factory or transfer points at Kansas City; Minneapolis; Madison, Wis., etc.

MILK CANS ROB YOU

Look through a microscope at milk set to cream in pans or cans and you'll see how they rob you. You'll see the caseine—the cheese part—forming a spidery web all through the milk. You'll see this web growing thicker and thicker until it forms solid curd. How can you expect all the cream to rise through that? It can't. This

caseine web catches a third to half the cream. You stand that loss just as long as you use pans or cans for they haven't enough skimming force to take out all the cream. But, just the minute you commence using Sharples Dairy Tubular Cream Separator, you stop that loss.

Sharples Dairy Tubular Cream Separators have 10,000 times more skimming force than pans or cans, and twice as much as any other separator. They get all the cream—get it quick—get it free from dirt and in the best condition for making Gilt Edge Butter. Caseine don't bother the Tubular. The Tubular is positively certain to greatly increase your dairy profits, so write at once for catalog I-136 and our valuable free book, "Business Dairying."

The Sharples Separator Co.

Toronto, Can. Chicago, Ill.

SHOE BOILS

Are Hard to Cure, yet

ABSORBINE

will remove them and leave no blemish. Does not blister or remove the hair. Cures any puff or swelling. Horse can be worked. $2.00 per bottle, delivered. Book 6-C Free.
ABSORBINE, JR. for mankind, $1.00 per bottle. Cures Boils, Bruises, Old Sores, Swellings, Varicose Veins. Varicocele, Hydrocele. Allays Pain
W.F. YOUNG, P.D.F. 102 Monmouth St. Springfield, Mass

We All Like to Work For Good Money

You take a man on a farm, or a man with a dairy, either of them in a neighborhood where other people also have a few cows, and he can easily make good daily or weekly extra cash profits with a good cream separator. So much that it will surprise you by looking into the matter. Write a postal for this new "Cream Science" Free Book and investigate. Here's the difference between two men whom we know, both of them equally fixed to start with:

THIS MAN

Got a Great Western Cream Separator—ran it easily by hand, getting one-third more cream from his milkings night and morning—got through almost as fast as he could pour the milk from the pails into the 8-gallon can—fed the fresh milk to his calves and hogs which saved scours and fattened faster. Had no delays and his wife had no pans to skim and wash—and what's more, he had all the neighbors bringing their milk and paying him to separate it. He makes 200 lbs. of butter a week and always gets $56 a week cash for it the year round and sometimes more.

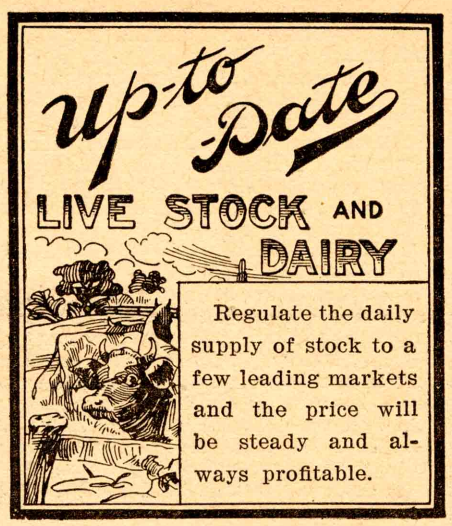
Free Book on "Cream Science"

THIS MAN

Here's an ordinary case and an actual experience. This man is satisfied to do what his father did and don't realize his wife works hardest the old way. He has not yet seen the fact that a world standard Great Western Separator pays for itself very quickly and would get him better prices for his cream or butter and more of both. He hasn't considered his family and himself the way he should. He wastes his time—the extra profits he could make—and don't yet stand for the progressive, up-to-date type of farmer or dairyman.

THIS FREE BOOK TELLS HOW

We have made an agreement that every reader of this paper who writes his or her name and address to the manufacturers of the Famous Great Western Cream Separator below shall receive FREE a copy of this new book about how to make more profits from your cream and butter. Be sure to say you read this paper and write plainly that you want their Free Book No. 5E2 Write today to Smith Manufacturing Company, 156-164 East Harrison Street, Chicago, Illinois. It will pay you wel..



Regulate the daily supply of stock to a few leading markets and the price will be steady and always profitable.

BE MERCIFUL

The cattle on a thousand hills,
The Lord claims as His own;
His tenants we to wisely see
Due mercy to them shown.

AS WE SEE IT

Henceforth the world's supply of meat must come from the farms. The western ranges, with their herds of thousands, are losing their importance—passing rapidly into history.

Something new in livestock economy is what is called "bunching" in the fall to sell out again in the spring. It applies more particularly to cows, generally dry cows that are to become fresh in the spring, though growing cattle are sometimes "bunched" in the same way. Small farmers, and we had almost said shiftless, who make no preparations for wintering stock, and do not fancy the work attendant upon the care of them, sell in the fall at low prices to those who save up all the cheap feed their farms will produce. It is needless to say that this stock is bought back in the spring at such advance in price as to pay well for the wintering, and carry a handsome profit besides. It is a case of Neighbor Thrifty surrounded by Uncle Threadbares who let go to waste the cheap feed that Neighbor Thrifty saves, and which they buy from him in the spring in the higher price they pay for the stock. Besides, they pay him for feeding it, and give him all the fertilizer there is in it to boot.

We passed Uncle Threadbare's the other day. He is feeding a small bunch of hogs, some for his own use and some for market. They were in a small pen and literally wallowing in mud. When he fed them they had scarcely bitten an ear of corn before it was under the mud. That pork cost the old man nearly twice as much, pound for pound, as did that of Neighbor Thrifty across the way, who kept his hogs on solid ground. Besides the nastiness of it.

It is poor economy to allow the work team to get thin and weak. It may save a few cents worth of feed, but the loss will come heavy when the spring work is on.

What preparation is made to welcome the lambs that are soon due to arrive in a very helpless condition? These visitors are really not very troublesome, but sometimes a little courteous attention at the time of arrival, may save a life and several dollars. If the lamb has anything like reasonable quarters and is given one good meal, it will generally take care of itself after that. If it need a little more attention, however, it will pay the bill.

And there is another set of youngsters that should not be neglected—the winter or early spring pigs. These are to be the cash bringing porkers of next fall, and how well they are to fill their mission depends no little upon the welcome they receive when they get here. And, like other healthy boarders, they are not going to be backward in demanding square meals all the way through. But they will be honest with you, the better meals they get the better they will pay.

There is probably a young gentleman or young lady staying on the farm this winter, that needs a little more attention than the old folks—it is last year's colt. This is its first winter, and it does not know much about roughing it. Besides it is now building a foundation for future usefulness, and it ought to have good material and plenty of it. And it should be in the best possible shape for use. Be sociable with the youngster, and make it feel at home. This is another animal that will pay well for all the care and attention it receives.

We do not know whether horses will regain what they have recently lost in price, but the demand is not fully supplied, nor will it be. Plan to raise all the colts you can, and of the very best stock.

BREAD AND MEAT

Bread and meat are still the "staff of life," but meat is getting ahead of it in the United States in point of cost. According to the Census Bureau, the entire value of the "flour and grist mill products" of the country for 1905 was $713,033,395, while that of the "slaughtering and meat packing products" was for the same year, $913,914,624.

We doubt if this represents the real comparative value, or whether it indicates the amount of the two great food commodities consumed, nor yet whether it points to which of them could best be done without. The bread material is priced by the mills. The price of the raw material in the hands of the farmers is held as low as possible and the mills are not yet so combined as to enable them to put so exorbitant a price on the finished product, and it goes to consumers at perhaps an equitable price.

On the other hand, the meat trust, the combined packing houses, have such a monopoly of the meat supply, that they can put upon the meat and its allied products, whatever price they choose, and without any reference to the price paid for the raw material, the live stock. Hence, while consumers are compelled to pay more money for their meat than they do for their bread, there is no proof that the latter is not of greater value to them than the former.

PILLING CATTLE INSTRUMENTS

Very respectfully,
CHAS. S. HAFER, Chief Fire Dept.

A PRIZE STEER OF LONG AGO

"I have often heard my father tell," said a friend the other day, "of a prize steer he saw when a boy in Philadelphia, about 1819. The animal weighed 4.400 pounds, was almost completely dressed in ribbons, and led in a parade through the principal streets of the city. It was then butchered, and the choice of cuts were sold out readily at a dollar a pound.

"Joseph Bonaparte, brother of Napoleon and ex-King of Spain, lived at Camden then, just across the river from Philadelphia, and he sent his steward over for the costliest piece, of which he made a dinner for some of the French nobles who had fled to this country after the fall of Napoleon.

"I do not know of what breed it was, but such steers were uncommon, else such a show would not have been made of it. Still it was possible to raise large stock even in that early day."

GRUBS IN SHEEP

A report comes from Wyoming that during the past year 20,000 sheep in that State perished from grubs in the head, and the State veterinarian says no means have yet been discovered for stopping the plague.

This is a serious matter, and if the ravages of the grub becomes equally bad in other western States, the supply of mutton and wool must be affected. We urge increased sheep breeding in the older States.

NOT SO MUCH IN THE BREED

The editor of the Farmers Voice, at the Illinois State Fair last fall, tried to line up the breed of cattle he liked best, and here is how he tells about it:

"When I saw those magnificent udders of the Holsteins and thought of their vitality, I was a Holsteiner, and when I passed on to the golden Guernseys, I said here are cows for me. The long rows of red and white Ayrshires said, "If you want hardiness and uniformity, here's your material," and if they were polled I think I might live very happily with a bunch of them. The Brown Swiss always appeal to me. I like their placidity. They herd together so comfortably, they give lots of rich milk, and when you think of their elegant dual-purpose porter-house steaks—why they are well nigh irresistable. Then I finished up with the Jerseys. To me there's nothing on four legs more beautiful than a perfect Jersey cow. Their liquid, deer-like eyes, their dainty curves, their lovely fawn-colored coats finish out a picture the central theme of which is high efficiency in performance. They don't waste. They give the solid goods which count, and I believe in time a Jersey could be evolved which would give milk containing fifty per cent solids. I see the good points in all the breeds. Each is fit and worthy and it is altogether a matter of taste or personal preference which to keep. There's one thing ceratin—if ever I raise live stock again, every member will belong to the Royal family. Every animal will have a registered name and number, for these will sell for fancy figures where even good performers unregistered go for purely utiliterian prices."

THE MILK TRUST

One of the meanest trusts yet developed is the milk trust, and it is beginning to be seriously discussed in the cities, as well as in the dairy cen- the buyers and consumers of milk, the ters. Whatever may be thought of it by the buyers and consumers of milk the milk producers are not responsible for it. As in the case of all the other trusts, it is the work of those who buy of the producers to sell to the consumers; and also like the other trusts, these buyers and sellers combine to force down the price they pay for the milk, and then force up the price they charge for it when they sell to consumers. And what is still worse, while the milk is in the hands of the trust the price is not only exorbitantly raised, but the quality of the milk is greatly reduced in order to increase the quantity and multiply the profits. A Chicago authority says the farmer gets three and a half cents per quart for four per cent milk, and, after it is reduced to three per cent milk, the consumer is charged eight cents per quart for it.

It must be confessed that such a condition of extortion is almost unbearable. But the producer is to blame; he is the man that must find and apply the remedy. If buyers can combine, so can producers. The buyers cannot monopolize the trade without the permission of the producers. The producers have the milk first, and can, therefore, get the consumers first if they will. Why do they not devise a way to sell direct to the consumers, have a distribution and delivery of their own, and thus knock out the trust entirely? They can do it. It only requires a little vim and "grit" on the equity plan.

Readers are urged to notice the advertisements in the Business Exchange when in the market for improved poultry and live stock. Our advertisers believe in Equity as well as you do. Patronize them. They will treat you right.

AS WE THINK ABOUT IT

What are your plans for the New Year anyway? These winter days afford a good opportunity to think about them. The best plans are those laid in advance, and then stuck to or amended as developments indicate.

Don't forget that last season's corn crop was not an average one, and prices ought to advance with the season. Producers rather than the speculators should have the benefit of the rise.

Comfortable quarters for stock is not feed, but it is a great saver of feed, besides, you know "a righteous man regardeth the life of his beast."

The financial stringency and present tumble in prices, we believe, is but the culmination of a purpose, and that it is still safe to raise market stock. People must eat.

It must be admitted that there is a general depression of prices effected, as we believe, by those who control the monetary circulation, but even in times like these the farmers have the whip hand, if they were organized and had the courage to exercise it—to not ruinously glut the markets.

When the winds began to blow, and the ground got white with snow, and the birds sat shivering in the cold; the thought came, we declare, "Have Our People everywhere got their stock all safely sheltered in the fold?"

Dairy people who supply the cities have been learning in the school of experience. They realize that the milk they sell is priced by somebody, and they are beginning to believe they are the ones that ought to price it.

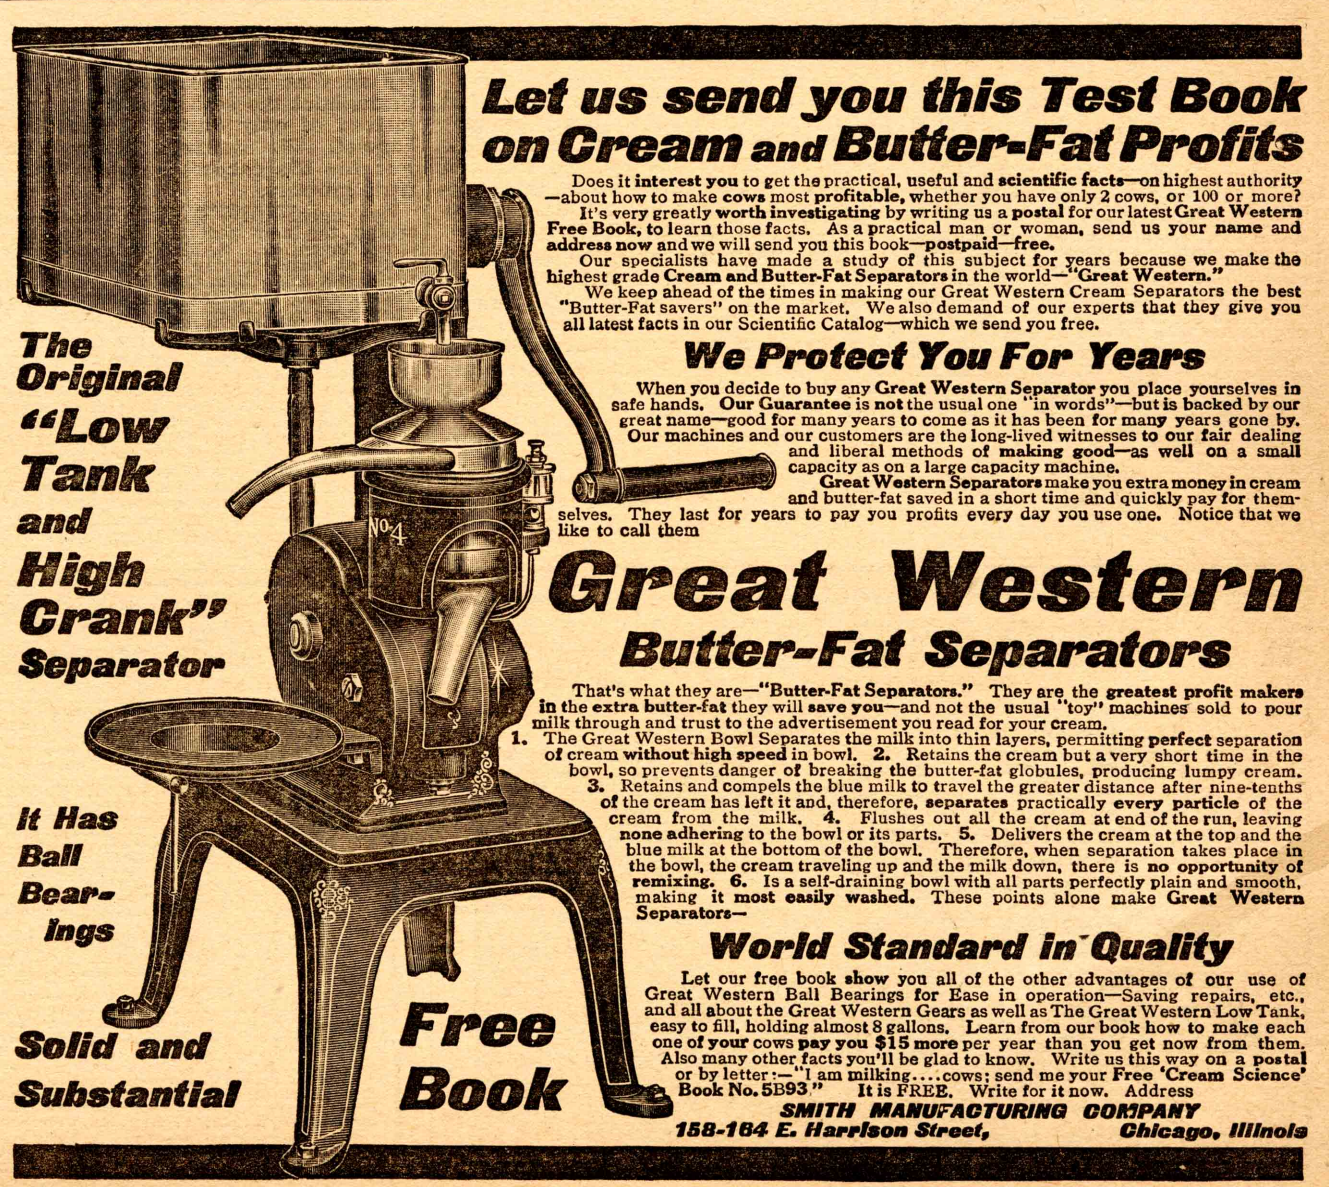
MENTION UP-TO-DATE FARMING WHEN YOU WRITE ADVERTISERS



Let us send you this Test Book on Cream and Butter-Fat Profits

Does it interest you to get the practical, useful and scientific facts—on highest authority—about how to make cows most profitable, whether you have only 2 cows, or 100 or more? It's very greatly worth investigating by writing us a postal for our latest Great Western Free Book, to learn those facts. As a practical man or woman, send us your name and address now and we will send you this book—postpaid—free.

Our specialists have made a study of this subject for years because we make the highest grade Cream and Butter-Fat Separators in the world—"Great Western."

We keep ahead of the times in making our Great Western Cream Separators the best "Butter-Fat savers" on the market. We also demand of our experts that they give you all latest facts in our Scientific Catalog—which we send you free.

The Original "Low Tank and High Crank" Separator

We Protect You For Years

When you decide to buy any Great Western Separator you place yourselves in safe hands. Our Guarantee is not the usual one "in words"—but is backed by our great name—good for many years to come as it has been for many years gone by. Our machines and our customers are the long-lived witnesses to our fair dealing and liberal methods of making good—as well on a small capacity as on a large capacity machine.

Great Western Separators make you extra money in cream and butter-fat saved in a short time and quickly pay for themselves. They last for years to pay you profits every day you use one. Notice that we like to call them

Great Western
Butter-Fat Separators

That's what they are—"Butter-Fat Separators." They are the greatest profit makers in the extra butter-fat they will save you—and not the usual "toy" machines sold to pour milk through and trust to the advertisement you read for your cream.

1. The Great Western Bowl Separates the milk into thin layers, permitting perfect separation of cream without high speed in bowl. 2. Retains the cream but a very short time in the bowl, so prevents danger of breaking the butter-fat globules, producing lumpy cream. 3. Retains and compels the blue milk to travel the greater distance after nine-tenths of the cream has left it and, therefore, separates practically every particle of the cream from the milk. 4. Flushes out all the cream at end of the run, leaving none adhering to the bowl or its parts. 5. Delivers the cream at the top and the blue milk at the bottom of the bowl. Therefore, when separation takes place in the bowl, the cream traveling up and the milk down, there is no opportunity of remixing. 6. Is a self-draining bowl with all parts perfectly plain and smooth, making it most easily washed. These points alone make Great Western Separators—

It Has Ball Bearings

Solid and Substantial

World Standard in Quality

Let our free book show you all of the other advantages of our use of Great Western Ball Bearings for Ease in operation—Saving repairs, etc., and all about the Great Western Gears as well as The Great Western Low Tank, easy to fill, holding almost 8 gallons. Learn from our book how to make each one of your cows pay you $15 more per year than you get now from them. Also many other facts you'll be glad to know. Write us this way on a postal or by letter:—"I am milking....cows; send me your Free 'Cream Science' Book No. 5B93." It is FREE. Write for it now. Address

John A. Salzer Seed Co.
La Crosse, Wis.

Try the New Red Majestic Tomato

The greatest vegetable novelty of the season. The largest, most productive and finest flavored. When we introduced the pink Majestic three years ago, it proved to be just what we claimed, and hundreds of customers reported fruits weighing 3 to 7 lbs. each, and crops of 100 to 147 lbs. grown on one plant. This new variety is fully equal to it in every respect but will be preferred by many on account of its bright red color. The seed is scarce this year and sells at 40 cents per packet of 100 seeds. We desire, however, to place our catalogue in the hands of everyone who **FREE** has a garden and will send a trial packet of 25 seeds FREE if you will mention this paper. Also a copy of our large, beautifully illustrated catalogue. A postal card request is sufficient.

Iowa Seed Co., Des Moines, Ia.

We do not ask you to do any work or pay us one cent. We want you to try our seeds, this year, at our expense. Next year we know you will send us your order without any urging.

OUR GREAT OFFER

Send us your address today and we will send you by return mail an assortment of Garden Seeds such as Radish, Lettuce, Cabbage, Onions, Beets, Cucumber, Etc., also our big 1908 Garden Guide, Absolutely Free. Write today, a postal will do.

ST. LOUIS SEED COMPANY
728-730 N. Fourth St., St. Louis, Mo.

SEEDS THAT GROW

Best quality Garden, Flower and Farm Seeds, Alfalfa, Clover, Grass Seeds, Seed Potatoes. We send free with catalog a pkt. of "New Globe" Tomato, biggest yielder, finest flavored of all, if you ask for it. Write us to-day. Also have full line of Nursery Stock, Roses, Plants and Bulbs.

GERMAN NURSERIES & SEED HOUSE
CARL SONDEREGGER, Prop.

GERMAN NURSERIES, BEATRICE, Nebraska.
Box 62,

Will you dump your potatoes and apples this year ad let others store and control them, or will you arrange for that warehouse?

WHAT SHALL IT BE?

In place of bloom upon the trees,
Sheer glittering snow and ice I see;
But hope and memory smile at these,
And whisper, Bloom and fruit shall be.

LOOKING BACK AND BEFORE

We know improvements have been made in the fruits, yet it is hard to prove to the old folks that there are any better apples than those which grew on "Old Sprongly," and were eaten by us youngsters from the time they were half grown until they were mellow enough to melt in the mouth. No matter about the variety. We ate apples then, not varieties.

We wondered why the trees mulched with the sorghum bagasse bore so much better fruit than those that had no mulching. It pays to mulch now as well as it did then. There is not so much sorghum grown for molasses as there used to be, but old straw, refused hay, strawy barnyard manure, or even forest leaves will do for mulching. And it pays.

The orchard should never be allowed to become a "rabbit rough." It is a good place for rabbits, but it is a poor place for fruit.

The best wash we have ever seen applied to apple trees is a wash of strong soap suds, or soapy water of the consistency of paint.

We have known peach trees that had about refused to bear, brought to new life and vigor, and fruitfulness by scraping off the surface soil and treating to hard wood ashes, then raking the soil back again. Such treatment is good for any fruit tree.

The wild goose plum, once popular for its prolificacy, is not a very desirable tree; it sprouts up so persistently from its roots as to make it a source of almost constant labor, or the plum orchard will soon be a plum thicket. And there is now fruit of much better quality.

In the Mississippi valley pear growing cannot be made very profitable. The blight is gaining headway, it seems, over all treatment. The not very desirable Keifer, so long claimed to be blight proof, is now about as much a victim as other varieties, and apple orchards are becoming more and more affected, whether spreading to the apple from the pear trees is not very well known.

Many refined minds in farmers' families, sadly miss their summer pets, the flowers. Few farm homes have the profusion of flowers they might enjoy. Anticipate the pleasures of next summer in planning this winter to have more flowers next spring and summer than ever before. There is something exhilarating and inspiring in the thought that God is to paint our decorations.

When summer comes to farmers' homes, let beauties rare appear; then UP-TO-DATE, read early and late, will make a happy year.

AN UNPLEASANT TRUTH

The man who always has something to bewail, is neither happy himself, nor does he contribute to the happiness of others; but there is an unpleasant fact that the fruit grower cannot ignore; and it is that those who control transportation and the markets may not only work the destruction of fruits by refusing to take them from the orchards, but they may determine how much consumers may have as well as the prices they must pay.

This is an unfortunate condition that we can see but one remedy for and that is in concerted action in providing storage facilities in the country where the fruits are produced. This is entirely practical. Indeed storage plants, for reasons that readily suggest themselves, may be erected more cheaply in the country than in the cities where land, labor and material are all high; and the fact that storage of all farm products that require it, has been given over to the cities, is simply because it was begun there, because it has become a custom, and the producers permitted it. It has become the great source of speculation and has grown into such power as to determine the price that shall be paid producers, the quantity producers may be permitted to sell, and, consequently the amount of the supply for consumption and the price consumers must pay.

This is a dangerous power that can be checked only by storing in the country so that shipments may be made throughout the season of consumption instead of only during the season of harvest. We commend this as a subject for the earnest consideration of fruit growers.

One agent made $1,200 in one month selling the new portable bath apparatus. Great invention. A bath room for everybody at scarcely any cost. Great seller. Write the Allen Mfg. Co., 1250 Allen Bldg., Toledo, Ohio, for particulars and terms, etc. They have a wonderful proposition.

In winter and summer the Phonograph is king of entertainers for the farm home. It reigns supreme and delights all. You can have in your own home in a single evening selections from the latest operas and comic pieces as well. If you have not heard the new 1908 Edison Phonograph, you do not know how truly marvelous it is. Mr. Edison will live forever in the hearts of Americans because of his inventions and the Phonograph is the greatest of all. Send for the *free trial* proposition of F. K. Babson, Distributor, Edison Bldg., Suite 3651, Chicago, Ill.

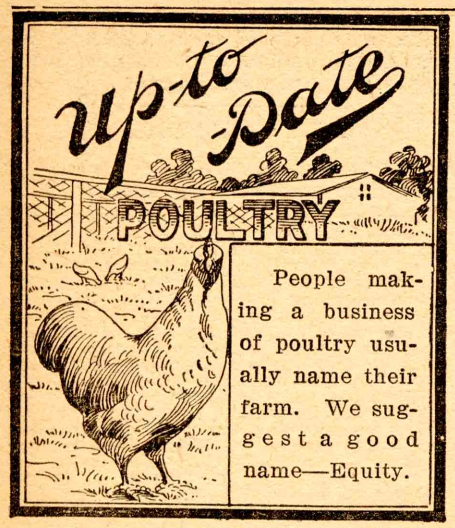
IOWA NURSERY CO., Dept. 507, Des Moines, Iowa
Reference—Iowa Trust and Savings Bank, Capital State Bank, this city.

Our Guarantee:
If any trees reach you in poor condition and fail to grow after planting, providing it is not due to neglect or weather conditions, we replace them free of charge and without quibbling or argument.



People making a business of poultry usually name their farm. We suggest a good name—Equity.

POULTRY GENERALLY

Rudd says experience on his farm had shown better egg production from fowls kept confined than from those allowed to roam at will.

It is advisable for the poulterer to get as close to the consumer in marketing fowl or eggs as is it possible to do.

Pure bred birds being fixed in type give better results than cross breeds, are usually hardy, better layers, and better table fowls than the average mongrel, and in breeding we get conformity in size, which is quite impossible to get with mongrels.

A purebred cockerel can stamp its likeness on its progeny, but a mongrel cockerel may be as big and as good a table fowl, but still quite unfit for breeding purposes, as it has no power whatever of stamping its likeness on its progeny, and therefore cannot give fixity of type, and for this reason should be destined to the pot.

An unknown writer says there is not a great deal of difference in the price of meats, and poultry, which is easily digested, ought to be more on farmers' tables than it is.

The staple meat product used on the farm table is pork. That is always hard to digest, and if more of the vital energy expended in digesting pork were used in pushing farm work and planning better methods, farming would pay better than it does.

The poultry yard should not be regarded as only a means to make more money. If it helps to make farm life more attractive it will be no less profitable than if it added directly to the bank account.

The average beginner aims to "supply a hotel." After he has actually established his farm, he don't want to sppply a hotel, for the reason that hotels do not give as good prices as do other channels of trade.

Henry Van Dresser says his wife makes the best canned chicken he ever ate. She takes nicely dressed chickens, cuts them up and puts them into the kettle and stews them down, and seasons them to taste, just as if she were going to have them for dinner that day, only she doesn't. After they are well cooked, she gets two-quart glass fruit jars, takes the tops off, and places the chickens into the cans, pressing them down firmly. Then she boils the stock down to almost pure oil and pours it, boiling hot, over the chickens in the jars, screws the covers on tightly, and puts the jars in the cellar till they are wanted.

By making application to the Secretary of Agriculture, Washington, D. C., any of the following bulletins can be had free of cost: No. 41, "Fowls, Care and Breeding." No. 51, "Standard Varieties of Chickens." No. 62, "Marketing Farm Produce." No. 64, "Ducks and Geese." No. 128, "Eggs and Their Uses as Food." No. 141, "Poultry Raising on the Farm." No. 182, "Poultry as Food." No. 270, "Turkeys." No. 234, "The Guinea Fowl and its Use as Food." No. 236, "Incubation and Incubators."

DUCKS

The Aylesbury duck derives its name from the Vale of Aylesbury.

The Aylesbury best suits the English market.

The Aylesbury is long in body, deep in keel, and the legs are placed a little behind the center of the body.

The Pekin duck is of Chinese origin.

The Pekin, like the Aylesbury, is a white-plumaged duck, and the legs are set far back, giving them an upright carriage.

The Pekin is a very hardy breed, easily reared, and the ducks are prolific layers.

The Pekin is to America what the Aylesbury is to England.

Rouens resemble the ordinary wild duck in plumage. They are good layers and the flesh is of excellent flavor.

Rouens are slower in maturing than either the Pekin or Aylesbury.

The Cayuga is an American duck, of large size, carring a great quantity of meat of a delicious flavor. They are easily reared, and fatten quickly. The plumage is black.

The eggs of some Cayugas are of a very dark color, almost black, or very dark green, especially at the commencement of the laying season.

In build, the Cayuga is of the Aylesbury type.

The Indian Runner is an all-year-round layer, beginning to lay at about five months of age. They are small, slim, and racy-looking, with long necks and very upright carriage.

The weight of the India Runner averages from 4 to 4½ pounds. The color is fawn and white, neck pure white with fawn markings on the head breast fawn, evenly cut away between the point of the breast bone and the legs, under parts white, back fawn, with white wing flights.

Though small, the Indian Runner is a nice table duck for home use, being very plump and of excellent flavor. The ducklings are very active and easy to raise.

There are several new "made" varieties of ducks in England suitable for general purposes, mostly manufactured by the infusion of Indian Runner blood with Aylesbury, Rouens and Pekins. Among these are the Campbell and Khaki ducks, originated by Mrs. Campbell, of Gloucestershire, and the Orpington ducks of the Messrs. Cooke, of Kent.

GEESE

The goose is the most popular of poultry in Germany.

The Russian geese are nearly all raised in the vicinity of the Black Sea.

A flock of geese can be profitably raised each year on every farm.

The heavy variety of geese do not require access to a swimming pool, though like all water fowl, they enjoy it.

Geese are very thirsty creatures, and should be constantly supplied with drinking water.

When geese begin to lay, the eggs must be gathered before they become chilled, placed in a cool place, a good cellar is all right, and turned daily.

It requires from 28 to 30 days to hatch geese eggs, owing to the condition of the heat supplied them.

It is necessary to have geese mated some time before laying season. In this respect they differ from other inmates of the poultry yard.

Though geese in their wild state are monogamous, the gander will mate with as many as four geese, but half that number is safer.

Every farm ought to be equipped with the R. F. D. Gate. Opens from buggy or horseback. Recommended by Frst Assistant P. M. General for rural routes. Farm right free. Find agents and get 25 per cent on all sales. Thorpe Gate Co., Wapella, Ill.

No need of going to a miller to have your feed ground. It should be ground of course. Makes you more money that way. But do it at home with your own mill. Send for book explaining about Star Feed Grinders. The Star Mfg. Co., 68 Depot St., New Lexington, O.

Anybody Can Make Money

$50.00 a Month made by Some

There's good money in raising chickens if you get started right, if you get the right advice and help, and above all, if you get the right incubators and brooders.

We've been in the chicken-raising business a good many years. That's what got us into the incubator business.

We couldn't get machines that would give us the results we wanted, so we made our own after our own practical ideas. Since then we've sold over 80,000 successful machines.

Queen Incubators are successful because they are practical—run themselves—hatch vigorous chicks and lots of 'em—pay for themselves with one hatch.

That's why their users are making from $30 to $50 from each machine they operate. Just send for our big, 100-page Free Queen Book—tells all about our 3 months' trial plan with 5 Years' guarantee. You can't fail with the Queen.

We help you get started right and help you as long as you want help. Write for book today.

The Doylemarx Piano

I Want to See a Piano in Every Home

I am going to make such a liberal offer, one that takes so little money to accept, that anyone can now have a beautiful, high-grade Piano in their own home.

How can I do this?

By giving you the middleman's profits (No dealer handles this Piano); by selling you the Doylemarx Piano right from the factory with only the very smallest manufacturing profit added to the factory cost! In this way

I Can Save You $100 to $150

on your piano, and give you almost your own time to pay for it. All I ask is a small payment when the Piano is shipped, and after that a few dollars a month to suit your convenience.

I absolutely guarantee the Doylemarx Piano to be *the best piano value in the world.* It is the result of 48 years of study and work by practical piano experts. Its tone is rich and resonant, its action responsive and durable, its case artistic and beautiful.

A Year's Free Trial

To show you my faith in the Doylemarx Piano, I guarantee absolutely that it will please and satisfy you, or I will take it back within a year if you wish, and give you another piano. Can anything be fairer?

Stool and Scarf Free I want *you* to have my illustrated book on pianos. I want *you* to see why Doylemarx Pianos are superior, and to understand how, by selling direct, I save you a large share of the usual price of a piano. Write for this book and learn how to get a stool, scarf and piano music *free.* Remember we sell on easy terms, we prepay freight and guarantee satisfaction. Write me personally,

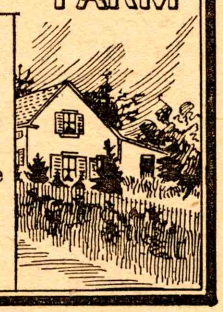
Up-to-Date HOME ON THE FARM

"Keep Smiling! Good fortune will at last favor the unluckiest."



A DOUBTING HEART

Where are the swallows fled?
Frozen and dead
Perchance upon some bleak and stormy shore,
O doubting heart!
Far over purple seas,
They wait, in sunny ease,
The balmy southern breeze
To bring them to their northern homes once more.

Why must the flowers die?
Prisoned they lie
In the cold tomb, heedless of tears or rain,
O doubting heart!
They only sleep below
The soft, white, ermine snow
While winter winds shall blow,
To breathe and smile upon you soon again.

The sun has hid its rays
These many days;
Will dreary hours never leave the earth?
O doubting heart!
The stormy clouds on high
Veil the same sunny sky
That soon, for Spring is nigh,
Shall wake the sumer into golden mirth.

Fair hope is dead, and light
Is quenched in night;
What sound can break the silence of despair?
O doubting heart!
The sky is overcast,
Yet stars shall rise at last,
Brighter for darkness past,
And angels' silver voices stir the air.

—ADELAIDE ANNE PROCTER.

MY BULBS WHICH HAVE BLOOMED

I sit here scenting the delicious perfume of a cluster of Chinese Lily blooms. I am wondering how many of my readers planted bulbs in the fall, and what results they have had with them.

From before Thanksgiving, I have been enjoying a succession of sweet scented Narcissi and Chinese Lilies. One great handsome calla also bloomed and queened it over all the rest for more than a week at Christmas time. My, but I was proud of that flower.

Now the hyacinths and crocuses are peeping up, and by Valentine's Day or before, I expect some more blossoms.

Won't you tell us about your bulbs that have bloomed?

CARE OF PLANTS IN THE WINDOW GARDEN

It is a very difficult matter to keep plants in good condition in the window of the ordinary living room during the winter months. But it is by no means impossible, the secret of success being constant and regular attention and careful watering. For if there is a strong fire always burning, the plants will suffer unless freely watered.

If there is much moving about in the room, the foliage will become covered with dust. This dust chokes the pores of the leaves and should be removed by sponging the leaves with tepid water and soap. Plants with smooth foliage are, on this account, much easier to take care of. While the room is being swept, the plants should either be removed or covered so the dust cannot settle upon them.

Whenever the window is opened, it should be at the top, for opening the bottom would create a through-draft which is very injurious to plants.

It is a good plan to place a paper over the window on frosty nights and when the weather is very severe, the plants should be pulled back into the room. Do not place them on the floor, because there is generally a draft there and the frost is apt to strike there first.

Give plants that are in full bloom, a little manurial stimulant occasionally, but not for some time after being repotted.

"Children Teething"

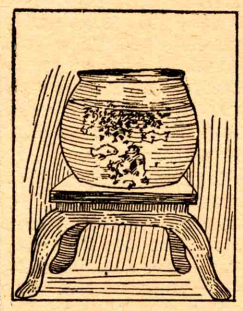
MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

"PATCHES"

When boiling fine clothes in a wash-boiler, put them first into a bag to avoid all possibility of rust-stains. The best material for this bag is unbleached muslin.

Do not open a wet umbrella in order to dry it, as this stretches the silk and makes it baggy: The umbrella should be shaken and then stood on its handle to drain, as standing top downward, couses the water to run down the wires, making them rust.

A cure for croup is sorghum molasses and baking soda. Stir the soda in the sorghum until the molasses turns white. Then give in doses of a teaspoonful at a time.



Feed your goldfish a trifle every morning, but never as much as they could eat. If they are in a large globe, the water need be changed only once a week. They seem to thrive better with as little attention as possible.

Boil a little vinegar at the same time you are cooking cabbage or onions. Their odor will be very greatly subdued.

When your pies are ready to be placed in the oven, spread some sweet milk over the top surface. The pies, when done, will have that brown, flaky appearance so much desired.

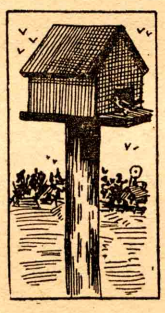
DUST COLLECTORS

In the Farmers Voice appeared the following common-sense article:

We read a great deal about pictures and cushioned chairs for the kitchen, and I often wonder if women who advocate such things have ever done their own kitchen work in the modern, up-to-date home, where there are other living rooms in the house outside of the kitchen. If they have, they would realize that the less there is to be kept clean, the better. Another thing they seem to forget is that the kitchen is a work-shop, and not the rest-room of the house.

When a woman is cooking, or baking, or cleaning in the kitchen, she is too busy, too intent upon getting her work done quickly and well, to care to look at pictures or rock in a cushioned chair. And when her work is done, does she care to sit in the kitchen to enjoy these things? Ask her. Or better still, run into her home when the morning's work is done. Where do you find her? In the kitchen? Oh, no! You will find her in her cozy living-room, where change of scene as well as a cooler atmosphere bring rest more quickly and render it more enjoyable.

PREPARING FOR THE BIRDS



With the return of February also warns the thoughts of our home-coming feathered neighbors, who, even in this early month, are beginning preparations for their northward journey again. Many of our common birds winter as far away as South America, while others stay in our southern States. But wherever they have sojourned, during the northern cold, we must be ready to welcome them back to us again.

There is no better way of showing our joy at their coming, than by building houses for them, putting out food for them in case of late snows, and protecting them from the soucy English sparrows. To do this properly and effectively, one should know just how high from the ground to build the bird houses. This information can be gained from many sources. One should know what kind of location is favored by the different kinds of birds,

A WOMAN CAN EARN $5000.00 A YEAR

Learn Dressmaking at Home

Many women nowadays are earning $100 a week—$5000 a year by dressmaking. One woman, the head designer of Chicago's largest retail dry goods house, earns $10,000 a year. Salaries of $25.00 to $50.00 a week are common. We teach you by mail and put you in a position to command the largest salary of any woman in your locality, or you can Start in business for yourself. Become a Graduate Dressmaker. The regular Diploma of this College is issued to all who complete this course of lessons. The American System requires no charts or patterns. These lessons will teach you how to draft your own patterns and make your own clothes and enable you to dress far better at one-half the usual cost. They teach you how to DESIGN, CUT, FIT, MAKE, DRAPE and TRIM any garment, including children's clothing. This College is endorsed by all high grade Fashion Magazines—Delineator, Designer, McCalls, Pictorial Review, New Idea Woman's Magazine, Modern Priscilla, Housekeeper, Good Housekeeping, etc.

This book will be sent to you free. At an expense of hundreds of dollars this college has published 10,000 of these copyrighted books to advertise the AMERICAN SYSTEM OF DRESSMAKING, and—while they last—will send you a copy FREE. Write for it today. One copy only to each woman.

FREE

AMERICAN COLLEGE OF DRESSMAKING
278 College Building. KANSAS CITY, MO.

(as each kind varies in its likes) and these locations should be carefully protected from enemies such as the English sparrows and cats.

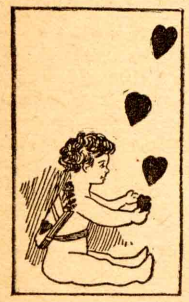
These are small favors to the birds in comparison to those rendered mankind by them. It is true they do confiscate a cherry now and then, and eat the sides of the choice apple. But only think how much more of the fruit would be eaten by the caterpillars and slugs and other pestiferous insects were it not for these feathered scavengers.

And another important thing, if you cannot reach your boys from the humane standpoint, do so from the commercial. Make them realize the value of our birds, and have them throw away the sling-shots and air-guns by which so many songsters have been destroyed.

In many districts Audubon societies, for the preservation of our birds, have organized and have done a great deal of good in the past, with heaps of future good before them.

Have you such a society?

ST. VALENTINE



This is the time of year when St. Valentine is called to mind. Valentine was a Roman monk. He miraculously, so the legend goes, healed the blind daughter of a rich Roman named Asterius. After this exhibition of power, Asterius, with all his household, became converted and was baptized. Poor St. Valentine was beheaded by the Romans on the Flaminian Way, on February the fourteenth, 306, A. D.

The custom of choosing valentines on this day accidentally became associated with his name. It was the custom in England, many years ago, for the youths and young women to meet on Valentine's eve and from a "lot-bowl" each draw out a name.

Each youth got a maid for his valentine, while he become her valentine and acted as her escort for all the ensuing year.

While we do not celebrate the day in this manner any more, we do still continue the practice of sending anonymous valentines to our friends.

A pretty one that will be appreciated by your sick friend is a basket of fruit, some of your choice apples and the pears you have been able to keep fresh all winter.

Another dainty remembrance is a bouquet of flowers or a blossoming plant. These are always in good taste.

HOW DO YOU EARN YOUR PIN-MONEY?

Many many wears ago when pins were a novelty, they were expensive and, fortunate indeed, the woman who could afford to buy many pins at a time. So wonderful and necessary a part of every woman's toilet did they at length become, that laws were made regarding the manufacture and sale of pins. In addition to his wife's regular allowance for dress, a man must needs add some extra with which she might buy pins. Hence the term "pin-money."

Nowadays, however, most of us earn our so-called pin-money, though the part really spent for pins is a small trifle.

Knowing that there are many ways for our farm sisters to earn their pin-money, we want to hear from each one, how they go about it, and what results they have obtained so far.

FOR HEALTH AND BEAUTY

If you wish your neck and head to be graceful, don't sleep on a high pillow.

Have plenty of ventilation in your sleeping room and rinse your stomach with a cup of water, both on retiring at night and getting up in the morning, if you wish a clear complexion.

Here are two good stretching exercises for the short girl who wishes to be tall. Lie on the floor with your feet under some heavy piece of furniture. Now rise up without the aid of your hands or arms. Hang from a cross pole or the top of the door by your hands with some heavy article across the feet. Try to lift the object with your feet without drawing up the rest of the body.

Another exercise which will strengthen the back muscles is to lie on the floor, touching only with the palms and toes. Raise and lower the body as many times as possible, trying to make the chest touch the floor and not allowing the knees to do so.

If the children bite their nails, put some bitter medicine on the tips of their fingers.

No matter if you cannot keep your hair dressed in the latest style, you can keep it clean, well-combed and shining. It is these qualities that count for good looks.

Above all forget disagreeable things learn how to say pleasant words and be considerate of others. Then you will live long and the wrinkles will be slow in coming.

Girls, did you notice the offer on second cover page of January 15th issue of how you can get a big Teddy Bear, a Talking Doll and a China Tea Set free? Did you write to Mr. Bowen? If not, do so at once. This is a big offer and should appeal to every one of our little girl readers. You can get these three presents free. Write to A. H. Bowen, Mgr. Dept. 2279, 46 West Monroe St., Chicago. If you do not have the January 15 paper, write anyway to the above address.

SAMPLE CREAM EXTRACTOR FREE

To introduce their Peoples Automatic Cream Extractor where they have no agent, the People's Supply Co., Dept. F., Kansas City, Mo., is offering to give away absolutely free, without price, note or deposit, one complete machine. The Peoples Cream Extractor is meeting with great success wherever introduced. Over 100,000 are in use. It is operated by an automatic process that requires no ice, chemicals or extra labor and machinery. The manufacturers are unusually liberal in their offer, and are willing to send one Extractor in each community to the first person who writes for their generous advertising offer.

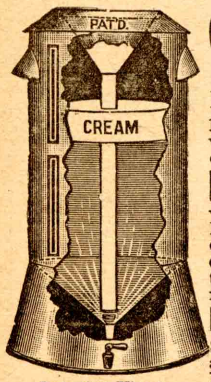
A big line of premiums is given free to those who care to do a little pleasant canvassing for the Globe Novelty Co., Box 416, Greenville, Pa. They trust you with merchandise and when sold will send a handsome premium of your choice. This is a liberal firm. Write for their plan.

Ladies, do you want a free dinner set? One containing forty-two large pieces and with your monogram on? Need we ask the question? What lady *does not* want more beautiful dishes? The Currier Co., Dept. 1011, 48 W. Monroe St., Chicago, offers to give a set to every lady reader of UP-TO-DATE FARMING. Look up their advertisement on page 15 of January 15th issue, or, better still, address them as above for their liberal offer.

Christmas is over for a year. But the boys and girls of our UP-TO-DATE families can still get three big presents free. These are the presents: A Teddy Bear that grunts like a live bear; a big Talking Doll and a China Tea Set. All of these free, girls. Look up the page advertisement of Mr. A. H. Bownen in this issue. Write him. Address Dept. 2279, 46-48 West Monroe street, Chicago. Any girl can get these presents.

It doesn't seem possible to get up a more convincing catalog than that of the Old Trusty Incubator. It talks to *you* right from the heart of Johnson, the famous incubator man—frank, open and man to purchaser. If Johnson's incubators are half as good as his catalog you need have no fear to buy. But from the best evidence they beat the catalog even. And that's going some! Send for a copy of this 180 page book as it contains information on the Poultry business for the expert as well as the novice. Address M. M. Johnson, Clay Center, Neb., and tell him you read UP-TO-DATE

SAMPLE CREAM SEPARATORS FREE



Interior View

Owners of Cows

We offer you a Sample Cream Separator that actually separates the cream from the milk by an automatic process that requires no ice, no chemicals, and no extra labor or machinery. All thrifty housewives realize the waste of butter fat unavoidably lost in the skimmed milk under a pan or crock method. Besides this money loss there is the back-breaking drudgery of washing pans and milk vessels, and the loss of valuable time that can be profitably devoted to other important duties. Now a

PEOPLES AUTOMATIC CREAM SEPARATOR

will stop this extravagant waste of money, cream and valuable time. It will increase your present yield of cream from 15 per cent to 20 per cent. It will give you the cream cool, sweet and fresh, directly after it comes from the cow, unaffected by chemical action. It will improve the quantity and quality of your butter all through the year. **It means more cream, more butter, less time. Result: More profit.**

REMEMBER It won't cost you a cent to take advantage of our free advertising offer as we will send one Sample Cream Separator into each community where we have no agent. **Write today as only one person in each locality where we have no agent may have the benefit of this free offer.** Send us your name, and the name of your nearest freight office. Address—

PEOPLES SUPPLY CO., Dept. F, Kansas City, Mo.

J. J. BELL SEED CO., Deposit, N. Y.

The Whole Truth In A Nut Shell

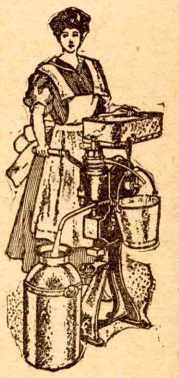
Middleburgh, N.Y. Sept. 4, 1907. I am using your U. S. Separator and am well pleased with it. My U.S. is not out of order every week or two as my neighbors who are using other makes, ARE. DAVID L. VAN WORM.

It's "Reliable"

And RELIABILITY is "THE quality of qualities." A reputation for RELIABILITY is not won in a day, a month or a year. Consistent performance during the slow testing of time, *alone* is sufficient to prove that most satisfactory of qualities—RELIABILITY. Each year for past sixteen years, the

U.S. CREAM SEPARATOR

has been adding to its reputation for RELIABILITY which is UNEQUALLED today. Dairymen today choose the U. S. because they KNOW it can be depended upon to do the Best work ALL the time and the Longest time, too. Time has PROVED it.



Mr. Van Worm's few words sum up completely the many reasons why dairymen everywhere are fast exchanging their old style, unsatisfactory or "cheap" separators for the RELIABLE, clean skimming, up-to-date U. S. If YOU have one of "the other kind," WE'VE a proposition to make you. Just ask us about it, please.

The thirty illustrations in our new catalog enable you to easily SEE why the construction of the U. S. makes it the most RELIABLE and profitable. Won't you send today for free copy? Just ask for "No. 187."

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

Is, as the name indicates, a farmers' Society. Its organized forms are local unions and a national union; a county union may be organized where three (3) or more local unions in the county will join to organize one. Also a State union may be organized where five (5) or more county unions will join in organizing it. Full instructions for organizing county and State unions, and their duties, will be sent on application to headquarters.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers' Society of Equity is to *obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

UNION LABEL TRADES AND LABOR COUNCIL INDIANAPOLIS 33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

Tho' the sturdy oak has known
Many a blast that bowed her,
She has risen again and grown
Loftier and prouder.

If UP-TO-DATE FARMING has proven itself the farmers' friend, stand by it. That is the rule by which to judge everything, and UP-TO-DATE is entirely willing to stand or fall by that rule.

Members cannot be blamed for refusing to pay dues to officers who declare in advance that they will not apply the money as the constitution requires it to be applied.

Read very carefully the first column on F. S. of E. Official Page.

"A house divided against itself will fall." It is just as true that, the farmers divided against themselves will fail to accomplish their desirable objects. This is what some of the old line farm papers are again trying to bring about. But beware. The original plan was the correct plan. Now that they see it discarded by the old Society they are ready to call out "we will help you." They will help you down the hill but never up so you can finally cross to the promised land. Be independent in thought and act.

"UP-TO-DATE FARMING made the A. S. of E. a power for good and gave to the world the first and only Equity movement of the Christian era. Then why turn aside into other paths and attempt to combine the forces of farmers, who are the producers, and the laborers, who are the consumers of what farmers produce? Verily, I say unto you, dreams do not always come true."—Burr Nicola, Fort Plain, N. Y.

We are hearing from many old organizers who want to engage in the work under the improved conditions produced by the F. S. of E. We want to hear from all.

When a bit of sunshine hits ye,
After passing of a cloud,
When a fit of laughter gits ye
An' ye'r spine is feelin' proud,
Don't fergit to up and fling it
At a soul that's feelin' blue,
For the minit that ye sling it
It's a boomerang to you.

CAPT. JACK CRAWFORD.

Never think that farmers can't organize and farmers wont stick together. They will, if the people with selfish ends to promote, will let them alone long enough. Farmers have always been largely led. There's no use to try to deny this. But that they were not led right is equally manifest. If they will put their eternal stamp of disapproval on everyting that departs from the original plan of our Equity Society until they are strong enough to try the plan, they will come out victorious and the "I told you so's" will take to the dense brush.

"We prefer the tail with the hide," is the way the Charlotte, Mich., local union voted on separating their dues, on official paper and support to headquarters.

Let the mistakes of 1907 go with the old year.

Never before were the calls to organize more numerous and more persistent than at present. Our call for 1,000 organizers is not premature. The field is ready for them. Our hope is that the number will soon volunteer.

We want to make 1908 a continuous campaign of organization whereever we can get organizers. With intelligent direction, and prompt and accurate service from headquarters it will not require a brilliant man to be successful. If you have the will, the way will be found. Come, join the army and help us to have a great revival all over the country.

State unions and county unions will be recognized just as rapidly as they affirm their allegiance to the true principles of the society and the original plan as represented by the Farmers Society of Equity. Until then local unions and members must report to Farmers Society of Equity, Indianapolis, direct.

Anent President Barnett's resignation we are led to observe, "A wise man changes his mind, a fool never."

Are you going to give your local papers your dates for meetings and report of your meetings? If not, you miss the very best opportunity to make your meetings popular and to build up the organization. This is your secretary's DUTY.

Don't thoughtlessly address your letters "J. A. Everitt, PRES. A. S. of E." He never gets such letters. If you address them "J. A. Everitt, Vice Pres.," he will get them.

The undersigned, never having knowingly done anything in business that he is ashamed of, and being proud of his connection with the American Society of Equity, and all his acts to originate, promote maintain and save it, makes this offer:

For each charge made against the writer in the Equity Farm Journal, that would be a discredit to him, if true, I will pay the sum of $100 on proof that it is true.

J. A. EVERITT.

IMPORTANT NOTICE TO LOCAL UNIONS, MEMBERS AND ORGANIZERS OF THE F. S. OF E.

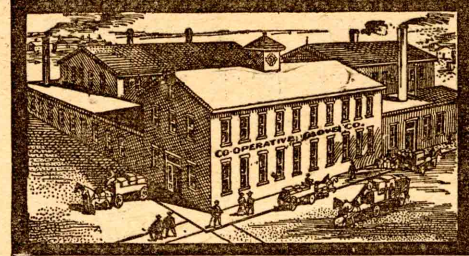
Michigan members, local unions and organizers should send all reports to E. N. Ball, Ann Arbor, Mich. Kansas members, local unions and organizers should send all reports to C. W. Peckham, Haven, Kan. If in any other State, send all your reports to the FARMERS SOCIETY OF EQUITY, Indianapolis, Ind., until the State union gets in line.

The membership fee is $2.00; the annual dues are $1.20. Michigan and Kansas make their own apportionments, but in all other States 25 cents out of each fee and 35 cents out of each dues may be retained in the local union and the balance sent to headquarters. Organizers are paid by headquarters.

Supplies, including members' cards, fee and due stamps, receipt and order forms, report blanks, etc., for the FARMERS SOCIETY OF EQUITY have been sent to all secretaries of local unions with instructions for using. If the union has not as a body agreed to support the F. S. of E., members who want to should see to it that the supplies are available for their use. If the secretary will not produce them, please report direct or send for necessary supplies.

In the present state of affairs it is for each member, himself or herself, to decide his or her course.

You Can Own A Factory Like This



WE START YOU In A Business Of YOUR OWN Right In Your Home Town

We will start you in the canvas glove business, show you how to develop it into a hale, hearty business, make its product, sell its goods and bring its profit to you, and last, but not least, make one dollar grow rapidly into two.

Never before in history of business has help like this been offered to ambitious men.

Here is brought to your home and placed in your very hands the accumulated wisdom, the priceless experience and proven plans of the glove business. Here is spread before you the vivid drawings and information, the actual working details needed in the glove business.

We are making you this offer, we want you to start a factory, to become prosperous. We want to show you how this can be done on little capital (from $30 to $145), with the possibility of making thousands of dollars within a short time.

We do all this for you, start your factory, simply with the understanding that you buy supplies and goods from us so long as our prices are as low or lower than you can get elsewhere.

This is not a speculation in any sense of the word. It is a sound, permanent and highly profitable business. The money to be invested is spent entirely for the necessities of the business; there is no waste material, no dead stock—every yard of cloth can be turned back into cash at a moment's notice.

This valuable book contains a great deal of information about the secrets of the glove business and how any one with a capital of from $30 to $145 can easily make money fast, right from the start. Send for it right now, today.

WE WILL SEND FULL INFORMATION

about the business and how we will assist you to successfully start a factory. If you would like this information it will cost you only one cent (a postal card) to get it.

There is no class of goods for which there has been such an unsatisfying demand as there has been for cloth gloves and mittens. Everybody uses them—the farmer, the mechanic, doctor, lawyer and the merchant in all sections of the country.

We want to prove to you that everybody in the Glove Business is successful and builds up a large business without exception. Everybody who has had the nerve to start gets along well and all have factories in two or three years.

H. E. Clingman is worth $5,000 in 3 years and started with $325 borrowed money, and remember, he has had a good living for his family of five children besides.

Y. T. Amory built a new factory worth $5,000 and has a large stock; been in business 2 years 9 months, started with $1,000.

Mrs. C. H. Brenniff started in 3 years ago, was originally a dressmaker, and by working her two girls has saved $1,800 above expenses of keeping up a family.

We Expect to Start Only a Limited Number of These Factories

One can be started in any spare room at home or small store room and be enlarged as the business requires.

This is not a get-rich-quick or catch-penny scheme, but is simply an opportunity to go into the manufacturing business, which, with a reasonable amount of work and attention to business, will make a man or woman a prosperous factory owner in a short time.

We Can Give You a Start where you can make ten, fifteen or twenty thousand dollars a year and not blister your hands with a pickax either.

We expect to start only a limited number of these factories, protect their interests, and give them our valuable assistance. We hope to make our profit from the cloth we sell; and if our prices are not as low or lower than others, we do not even ask you to buy from us. By this arrangement we'll get a small profit and a few people will get a start in a manufacturing business that in time should be a huge manufacturing plant employing many people.

The two brothers of The McCreery Mannfacturing Company started only a few years ago absolutely broke, actually borrowed $100.00 to start with. At first only had two girls working and have risen to be worth thousands of dollars, do an enormous business, own their own large factory and have extensive interests in others, all in a remarkably short time. If a factory will do this for us, it will do the same for you. Don't miss this offer. First come, first served. Write today for free book and full information.

THE McCREERY MANUFACTURING CO., 724 Dorr St., Toledo, O.

BIG BEND LANDS

Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

SHERMAN IN KANSAS. Hon. H. B. Sherman is in Kansas now and open for engagements where large audiences will come out to hear him. A man of Mr. Sherman's ability cannot afford to touch the low spots, but get up a rousing mass meeting and send for him. He has frequently held 5,000 people for two hours while he expounded the gospel of Equity to bring salvation to the farmers. Address him H. B. Sherman, care C. W. Peckham, Haven, Kansas.

A special meeting of the Kansas State Union of the American Society of Equity will be held at Hutchinson, Kan., Tuesday and Wednesday, February 4 and 5, 1908, at Woodman Hall, to consider matters relative to the present condition of the organization. All officers and members are invited.—L. P. King, Pres.; C. W. Peckham, Sec.

R. SHEROD, Keosauqua Ia., will hold a meeting on the 29th of January in the SEXTON SCHOOL HOUSE. All the farmers and their families living in that community are invited to come. Mr. Sherod will go to other places and address meetings. Write for terms.

FRANKLIN COUNTY, (Va.) County Union, will meet on the third Saturday in February at Wm. Dudley's School House, 11 a. m.—R. C. Shaon, Sec., Taylor's Store, Va.

South Dakota Meetings conducted by J. R. Lighton, Sisseton, S. D.:
In Marshall County:—Veblin, Jan. 27; Marlow, Jan. 28; Newark, Jan. 29; Kidder, Jan. 30; Spain, Jan. 31; Britton, Feb. 1; Amherst, Feb. 3; Langford, Feb. 4.
Day County:—Pierport, Feb. 5; Andover, Feb. 6; Bristol, Feb. 7; Webster, Feb. 8; Wanbay, Feb. 10; Sand Cut, Feb. 11; Summit, Feb. 12; Marion, Feb. 13; Twin Brooks, Feb. 14; Big Stone, Feb. 15.
All meetings called at 2 p. m.

NOTICE TO MICHIGAN MEMBERS

Geo. G. Wynans, Hamburg, Mich., State organizer for Michigan, desires to correspond with any people who want his services in any part of the State. Remember he is your State organizer, and it is his duty to go to you at your call, or send some person. If each local union will write him for terms and instructions and hold a mass meeting before spring work begins, the membership will be doubled or quadrupled. Also, if communities where there are no local unions will hold meetings under his direction the State can be organized before the next crops are ready to market. This means more than any person can conceive of for Michigan farmers.

THRIFT TALKS

By a Farmer

We want every reader of UP-TO-DATE FARMING to secure a copy of two of the most valuable little books that have come to our attention in a long time. One is called "Thrift Talks" and, as the title indicates, tells all about saving the wastes, increasing the soil fertility, and so the prosperity of the farmer; it also tells all about the way crops take their nourishment and the changes that take place in growth. It is just brimming over with good common sense information.

The other is entitled "Practical Experience with Barnyard Manures." This book tells how, when and where to spread manure. We find by referring to page 5 of this report of an experiment that was made on ten acres of land where the manure was spread with a Great Western manure spreader, and 620 bushels of corn were harvested. In the same field adjoining there were ten acres where the same amount of manure was spread by hand, and 500 bushels were harvested.

There are many other similar experiences which have been made that are fully explained, and the names of the farmers who made these experiments are given.

It is a well-known fact that the way to spread manure to get the most out of it is to place a small particle of manure with each particle of the soil. This book goes into the subject of handling manure in a plain, clear way. It contains articles from such eminent authorities as Prof. F. W. Wolf of the University of Wisconsin, Prof. C. E. Thorne, Ohio Agricultural Experiment Station; E. H. Jenkins, Connecticut Experiment Station; Prof. C. G. Hopkins, College of Agriculture, Urbana, Ill.; Prof. Harry Snyder, College of Agriculture, University of Minnesota, and, in fact, many others.

Be sure to get both of these books, because they will give you the complete story and if you will follow the instructions it will put you in position to make from $4 to $8 more on every acre of land that you cultivate in 1908.

Every reader of UP-TO-DATE FARMING can get these valuable books free by addressing the Smith Mfg. Co., 158 E. Harrison St., Chicago. Mention this paper and ask for books No. 5A2. Don't wait, but send today.

MANSON CAMPBELL,
President,
The Manson Campbell Company, Ltd.

I'll Give You Plenty of Time to Prove that the CHATHAM Fanning Mill Will Pay for Itself in a Year

You can prove this by simply taking my proposition and **cleaning your grain**—before you **sell** it—or before you **sow** it. **$1,000,000** lost by Farmers in Ohio and Michigan alone each season by selling and sowing **dirty grain** is a low estimate. You **won't** haul it to **be cleaned** before you sell your grain, so you are "docked" on the price because of **dirt** in every bushel. Just take me up on my offer—get a **CHATHAM Fanning Mill** and save its price easily by using it on your place. Take 30 Days' Free Trial first.

HERE'S WHAT IT DOES

Cleans all kinds of grain—Separates Oats from Wheat better than any mill you can buy—Cleans Red Clover—Takes out Buckhorn Plantain. Cleans Alsike Clover and Alfalfa—Cleans Beans, Oats, Barley—Grades Corn—Cleans Timothy Seed—Takes all chess and cockle out of wheat.

Chatham Free Book Tells You My Plan On 30 Days Free Trial

This valuable book tells many other ways than those above that a Chatham Fanning Mill will make and save for you. As a practical man you know that all I've said above is true and you also know that in selling direct from our factory—prepaying freight to you—giving you **30 DAYS' FREE TRIAL**—and our wholesale price—we have simply **got** to give you a **CHATHAM Fanning Mill** that does all we claim for it. Our business life depends on our mill's making good. Remember that

I Prepay the Freight

I'll send you a **CHATHAM Fanning Mill** on 30 Days' Trial to prove it will do all we say it will. 250,000 sold already in U. S. and Canada. Experiment Stations indorse them, and Agricultural Papers recommend them to subscribers. So why take **low prices** for dirty, mixed grain, or sow seed that **grows weeds** and **mixed crops?** Write for full particulars prices and New Catalog Free—Address me at nearest city to you—**MANSON CAMPBELL, President**

REQUEST TO READERS! Advertisers Want to Know in what paper their advertisements are seen. Therefore please mention **UP-TO-DATE** every time you write to our advertisers

Put Your Money In a New Country

Millions of acres of fine farm lands in the Dakotas and Montana, Idaho and Washington, can be had now for small payments on easy terms.

This land, formerly a great ranching section, is especially promising in opportunities for farmers and investors, having recently been put into close communication with the great central markets by the new Pacific Coast Extension of the

Chicago MILWAUKEE & ST. PAUL Railway

The land is rich agricultural land. Crops grow well—the climate is excellent—long growing periods—mild winters.
By getting in touch quickly, splendid tracts can be had which will pay for themselves with the first year's crops. Investigate these opportunities NOW.

SHIFTING RESPONSIBILITY

Headquarters of the A. S. of E. sends out the report that this paper was paid for each member joining the society or paying dues before October, "and if asked for payment the member should simply refuse to receive the paper." Headquarters officers know they state a falsehood in above. Thousands of members paid their fees and dues and WERE NOT REPORTED TO THE PUBLISHER.

For instance Secretary Robertson of Kentucky stated to the Kentucky State convention that there were 18,601 members in good standing at the end of 1907. Now the subscription list of UP-TO-DATE FARMING showed 17,360, or a difference of 1,241. We'll wager there were not 1,241 new members secured between October 25, when the officers arbitrarily discontinued sending names to the official paper without the consent of the members and not even by order of the convention, nor 241 of them. Now here's the question: If every member was reported to the official paper, how does it come that Robertson has over a thousand members more than the official paper has? The question also naturally arises, if Robertson is right, where is the money representing about 1,200 dues or fees at 50 cents each, about $600? Also Kentucky is not the only State where members have cause for complaint.

The publisher's books are open for inspection at any and all times.

DON'T BE ALARMED

In a circular sent out by the secretary and president of the Minnesota State union is an implied threat against members who refuse to pay their dues to the present A. S. of E. Members need not be alarmed at this, but may have a good case of blackmail. Farmers can pay their money for what they please, and if they please to pay it to the Farmers Society of Equity, no person can prevent them from doing so. If it comes to this kind of a pass, it is time for the thousands who paid their money to the officers of the American Society of Equity to be paid to the publisher of this paper, to invoke the law for their protection. Don't be alarmed, but do what your interests suggest.

GUARDS OF EQUITY

These are a body of people who have strong faith in the ultimate triumph of the principles of Equity as UP-TO-DATE FARMING has taught and defended.

The GUARDS OF EQUITY will be consulted on all important questions. Their opinions will be sought before taking any important step. There is great need for such a body now and they may be the most important body in the country.

If you want to know more about the GUARDS OF EQUITY, send for particulars to UP-TO-DATE FARMING, Indianapolis, Ind.

FUGITIVE FROM JUSTICE

Garrett M. Walrod, a former district manager at A. S. of E. headquarters, and at one time an organizer in the peanut districts of Tennessee, has left Indianapolis to escape a warrant for his arrest for writing and circulating criminal libels. Readers of UP-TO-DATE FARMING are requested to watch for him, and report him, if found, to Sheriff Clay of Indianapolis.

New Subscribers

Let this be your motto: "Every one get one and then keep pushing."

GERMAN "THIRD POWER" BOOK

All orders for the German edition of the "Third Power" book to date have been filled. Other orders are solicited. The price is $1.00 postpaid, but SPECIAL PRICE is 50 cents postpaid and in quantities of 25 or more at 25 cents each, not postpaid. Until the German edition of UP-TO-DATE is resumed organizers should get this book into the hands of all German members and also non-members. Send to publisher of this paper.

English "Third Power" Book

(The Fourth Edition)

Greatest book for farmers ever printed. Should be read by the millions. Mr. A. F. Cook, Wooster, O., wrote January 11, 1908:

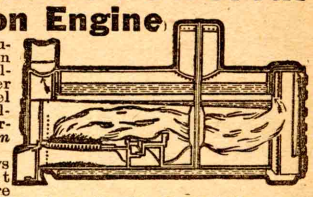
I received the "Third Power" book and have read a large part already with great pleasure. You meet the great obstacles bravely, honestly, lucidly and practically. You propose to overcome them by honest methods, equitably applied, which is certainly a sound business principle. I made a speech at our farmers' club yesterday using ideas largely from the book. I think many of the attendants are less positive now in their convictions that "it can't be done."

Price of English edition, $1.00 postpaid, but SPECIAL PRICE is 25 cents postpaid or 15 cents each in lots of 25 or more, not prepaid. Send orders to publisher of this paper.

"The night is long that never finds the day."

For heaven's sake don't stop sending UP-TO-DATE FARMING. We will send remittance soon as dues are collected. Don't let us miss a single copy. For myself, must say I can't eat or sleep good when it is a day or two late on arriving, and when it comes must read it without a moment's delay.—J. B. BLAKE, Corresponding Secy., L. U. 4388, Myers, Ky.

The Most Powerful Traction Engine



The "New Huber" Traction Engine develops *most* power with *least* fuel because its boiler is the perfected "*return flue*" type.

The cut shows you how heat from the fire passes *forward* in a large fire flue through the water and then comes through tubes to the smokestack in the rear. Thus, the heat goes through the water *twice*, giving *double* heating capacity. There are many other exclusive features about the "New Huber." We tell you about all of them in our new "School for Threshermen", which we send FREE on request.

No matter who you are—nor where you are—nor how you wish to use a Traction Engine—before making up your mind which one to get, you should send for this new book which we mail to you FREE and *postpaid*. Write for it today.

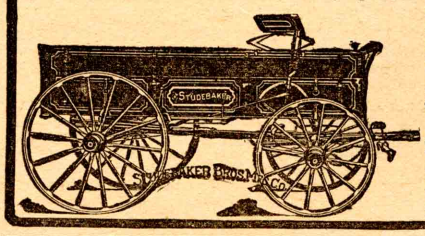
It's Service You Really Pay For in a Studebaker

There is more real economy in buying a Studebaker farm wagon than in paying a lower price for some cheaper make. A Studebaker has quality and gives real service. It is built to last and does last as thousands of farmers will testify. Every vehicle is dependable—honest in material—honest in make. That is why the farmers of the country have made the Studebaker the largest vehicle factory in the world.



See the Studebaker Agent

and ask him to show you the Studebaker line of farm wagons, farm trucks, buggies and harness. If you don't know one, write to us. If you mention this paper and send us two cents in postage, we will mail you "Studebaker" 1908 Farmer's Almanac—**FREE.**

Studebaker Bros. Mfg. Co., South Bend, Indiana

LET Us Save You ⅓ Cost On Your New Buggy

We Will Do It—We GUARANTEE To Do It

Write for our **FREE** 1908 Catalog, and let us tell you all about our direct-to-you plan of selling **Split Hickory Vehicles.** We guarantee to give you a better buggy at ⅓ saving in cost than you could buy from any merchant, retail dealer or jobber. This is a plain, straight-forward business proposition. We take all the risk and guarantee to save you ⅓ in the cost.

We Will Make You a Split Hickory Buggy

Runabout, Surrey, Carriage or any style of light pleasure vehicle that you want, to your order, just as you want it and send it to you on **THIRTY DAYS' FREE TRIAL,** and guarantee it **TWO YEARS.** You try one of our vehicles 30 days. If you are not satisfied, we take it back and refund all your money. We have been selling our vehicles that way for seven years—we know that they will do just what we claim for them; this is why we send them out on such liberal terms. Our **FREE** 192-page catalog shows all of our up-to-date Automobile Seat Runabouts, Top Buggies made in two-in-one combinations, Surreys, Carriages, Spring Wagons and Harness, and tells all about our liberal selling plan and our strong guarantee. We operate two big plants, making nothing but carriages and harness—one at Cincinnati, and the other at Columbus, Ohio. The demand for our goods in 1907 made it necessary to double our manufacturing capacity. Write for our big, **FREE** catalog today. Send all mail to the Home office, Columbus, Ohio.

Address— **THE OHIO CARRIAGE MFG CO., H. C. Phelps, Pres., Station 99, Columbus, Ohio**

Guaranteed Two Years

Vindicated

The Verdict by a Great and Just Jury —the People—is, "VINDICATED"

The story of "Conspiracy and Rebellion" began in November 15th issue of this paper. In the beginning I charged that there was a conspiracy entered into to have the American Society of Equity depart from its true principles and divert it from the original plan to accomplish its objects; that the plans followed before the last convention by some of the officers, and which were confirmed by what I charged was a packed convention, were unconstitutional and if persisted in, would completely kill the Society as far as its usefulness to farmers was concerned, I charged the conspiracy also included removing the writer as a factor in the society, because I would not join with them in the scheme, also the control of the official paper of the society, which was clearly necessary if the objects sought were to be accomplished. In event the paper could not be controlled, it was to be killed. I charged that there was a rebellion against the president of the society, that he was prevented from exercising his constitutional power, that certain of the board of directors viz: Tubbs, Drayton, Sharp and Scott, being a majority of the board, cast aside the constitution and by-laws in numerous parts and made arbitrary rules, which they called "OUR RULES," to govern the society; that through enforcing their rules they used a large part of the income of the society to promote schemes entirely foreign to the legitimate work of the society, and neglected the legitimate duty of the society and hindered the development of " among the farmers, whose society it was supposed to be. By the enforcement of their rules they paid money for illegitimate expenses after I had refused to sanction the payment. Finally, to protect themselves from exposure, they secured a convention of delegates largely prejudiced in advance in their favor and what was not accomplished in advance was done after the delegattes arrived by the basest kind of deception. They managed the convention so it refused to receive a report of a committee that I had called in advance of the convention to examine into the conduct of headquarters for a year, and they succeeded in preventing me from delivering my annual address before the convention.

I charged that the officers elected at the last convention were committed to carry out the conspiracy began by the old officers.

I have been told many times that the conspiracy and rebellion have been proven, that the evidence of illegal use of money is conclusive, that the convention was packed and that the delegates were deceived, unless they were as base as the arch conspirators, which is inconceivable. I have received hundreds of letters saying in substance, "enough has been shown, you have proved every claim, you have refuted every charge made by your enemies against you personally. Your past relations to the society were eminently creditable and your present course is highly commendable. You stand completely exhonerated and vindicated, and it is unnecessary to print more evidence."

In view of such voluntary testimony, I declare that the story of "Conspiracy and Rebellion" is ended, unless necessity arrives in the future to continue it. I feel, however, in justice to myself, as a duty I owe to several good friends, and to more completely disabuse all fair-minded people who may yet entertain a lingering doubt, that the incident should not close without printing a few recent letters. They follow:

ONCE more I appeal to every member of the Society to do all he can in support of the Farmers Society of Equity, which represents truth, honesty, equity, ability, the true principles of the old Society and the original plan. Also to help restore the Society to its former power and then complete it. With such support from the members I pledge Up-to-Date Farming to always stand for full and equal representation so the Society will be in fact a society of the farmers, by the farmers, for the farmers.

J. A. EVERITT.

A Deep-Laid Conspiracy

From a former employe of the A. S. of E. headquarters who desres his name withheld:

I have been a close observer of the American Society of Equity, and of the conduct of its headquarters for quite a long time. Particularly did I take an interest in its recent convention and events since that time. I have closely followed Mr. Everitt's exposure of his enemies and his defense of himself, and to the members I want to say that enough evidence has been produced to convince any reasonable person that a deep-laid conspiracy did exist. That it was laid to ruin Mr. Everitt first, as a step toward the use of our beloved society for the purpose of organizing and promoting gigantic corporations from which each of the conspirators hope to line their pockets with gold. Of my personal knowledge such evidence as Mr. Everitt has printed might be continued indefinitely, as half the facts have not been given to the public.

Any lawyer will tell you that the hardest and most tedious case he has to prove is that of conspiracy. Conspiracies are usually concocted in the dark, and in pri-

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Sell Tobacco and Cigars locally or traveling. Salary or commission. Full time or sideline. Good pay; promotion; experience unnecessary. Address Morotock Tobacco Works, Box B 53, Danville, Virginia.

vacy, and the evidence locked up in the breasts of the principles. The usual course to prove a conspiracy is by a series of long drawn out circumstances, unless, perchance, the neck of one of the conspirators is stretched until he squeals.

I want to say that these men meant no good to the A. S. of E. when they first whispered their slimy lies about Mr. Everitt into the confiding ears of their friends, and then thundered them publicly. They ought to have known that they might ruin Mr. Everitt and blast his name forever. Probably they did know this, but they should have known that they could not kill the great Cause which he had advanced to the world. They should also have known that if what they said about Mr. Everitt were true, and if they really had the interest of the society at heart, it would have been better untold.

In our society there is no room for the men who scheme as trained politicians, to turn its concern to his own selfish interests. They will not succeed. Even now the creation of the conspirators—the Equity Exchange Combination—is begging its people for pittances that its hungry employees may be fed, and for stock subscriptions that its so-called official organ may not die.

Says St. Paul: "The love of money is the root of all evil, which, while some coveted after they have erred from the faith and pierced themselves through with many sorrows."

Would Disrupt and Kill the Society

Special to UP-TO-DATE FARMING: Watertown, S. D.—Wednesday afternoon Judge Fiske spoke to the farmers at the City Hall. Some were present who had known the Judge over forty years. He talked on the panic and money questions. When asked about the troubles in the national meeting of the A. S.of E., he said:

"I am going to tell you something that I never told before.

"At Clyde, Kansas, where I was billed and a big crowd of farmers were in town for the meeting, a stranger, a shrewd looking and well dressed man, approached me and said he had important business with me, and he wanted to see me privately. He said he had tried to meet me at other towns but was too late.

I thought he was from Kansas City, and that he represented the Grain Trust. Now this man had the identical charges all in type-written form that were insinuated against Mr. Everitt at the national meeting, and which have been openly made public since the convention. The plan proposed was for me, as national lecturer, to sign a statement appended to those charges, that on account of the same I had quit the society and that I denounced Everitt as a fake, his society as a fraud, and the movement, or plan of the A. S. of E., a delusion and a dream. He represented that if I would do this, the whole matter would be given the Associated Press and the great dailies, and most of the farm papers would publish it. He said, 'with Everitt exposed, it would disrupt and kill the society and that I would be well rewarded.'

"I cursed the fellow, and there the matter ended for the time. I did not find out his name, nor where he was from. He did not register at the hotel.

"After this incident, I became so weak and sick I could not hold my meeting. I can hardly describe my feelings. I thought then that I could not go out and tell what had happened. It would sound strange among strangers, but there was a sale in the country, and I took that as an excuse and passed the word out that we would hold the meeting a week later. There was much grumbling as few people cared about the sale, they had come for the meeting. Now I could tell two hundred or more farmers around Clyde, why I put off that meeting.

"My friends, that conspiracy did not end or die at Clyde, Kansas. The conspirators did not rest until they did find someone to carry out their plot. The plot was carried into the national meeting at Indianapolis, last October. It was done so smoothly and cunningly that hundreds of honest delegates were deceived. There is no mistake about it. I understand it well. I can see every step to wreck and ruin our society just as plainly as I can see the life size painting of my dead father and mother hanging upon the wall in my home. I see it was the work of criminal schemers to wreck, ruin and burst up the best organization the country ever knew, and then our enemies, traitor-like, would say, "There, didn't I tell you that farmers would not stick together if you did organize them.'

The resignation of President Barnett and his affidavit carried out the theory that the delegates at the national convention were mislead and deceived. If the president of the organization could allow himself to be deceived by the conspirators, why was it not possible for the delegates to be also deceived?

THERON FISK."

Made the Most Hurtful Mistakes

Benton, Marshall Co., Ky., Jan. 4, '08.
MR. J. A. EVERITT, Indianapolis, Ind.

Dear Sir: Believing something from this county would be of interest to you, therefore I write.

I am one of the delegates that attended the late convention. I voted with instructed delegates, but will not affirm that my acts and everything done were correct, but the work is done and I for one am getting my blessing.

I believe that we made some of the most hurtful mistakes. I am confident we can organize this county with J. A. Everitt in the lead if we can get back there any way to save the society.

We held a county union meeting today, found all against Barnett, and for Everitt and UP-TO-DATE. The organization has not gained anything here for quite a little while and will not under the present management.

W. G. MILLER.

"An Honest Man"

The writer has spent several days in Indianapolis where he has been able to observe, at leisure, the effect of the actions of the two recent conventions.

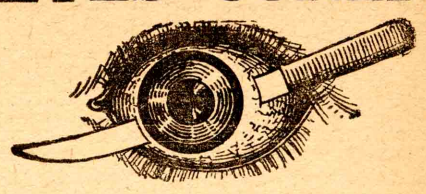
I want to say to all who attended the national meeting—especially to those who listened to the numerous insinuations that permeated the atmosphere of the convention, that if you could take the time, as I have done, to attempt to trace the source or foundation of these insinuations, or so-called charges against the founder of the society, you would be convinced that the whole trouble is simply the result of a conspiracy to remove an honest man from the head of a great organization which might then be used to further the interests of those who care nothing about the success of the farmer. These charges against Mr. Everitt—what are they?

For the most part, a lot of irrelevant and immaterial insinuations—any that might assume the least degree of seriousness, have been *proven* to be absolutely false. I hope every member who receives this has read Mr. Everitt's replies to these charges, and let me say that during the time I have been here he has frankly submitted to me much additional evidence which, for lack of space, he has been unable to include in these replies. Mr. Everitt is an honest man! He has a positive character, like all great men who have been able "to *do* things." Like all natural leaders of men, he is aggressive, energetic, ambitious and persistent. Because of these qualities he is the very man to lead a movement like "Equity."

Because of these qualities, his enemies have been unable to corrupt him, and because he *is* such a man the farmers of this country *will support him.*

Yes, I am satisfied that practically every meeting—State, county and local—that has been called to be held during the next few months will declare loyalty to the founder of the society; will denounce the illegal and unfair action of the first convention and officers elected by it in attempting to force

EYES CURED



Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases—Send Your Name and Address with Two-Cent Stamp for free Trial Bottle

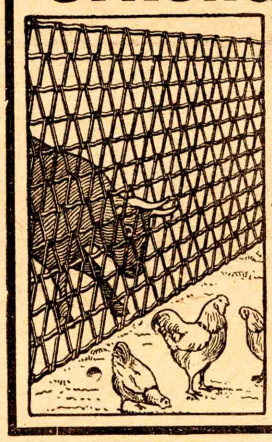
The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me to-day. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 2248 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

Wanted Lubricating oil agents, good reliable men to sell our high grade lubricating oils, greases, etc. Also Barn, Roof, and House paints on commission, either side line or full time. Goods sold direct to consumer. Address The Reliable Oil & Paint Co., Cleveland, O.

STRONGEST FENCE MADE



When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, has taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Our Fence is so closely woven that small pigs cannot "wiggle" through it. So strong the vicious bull cannot "faze" it. We have no agents. We do not sell to dealers but sell direct to the user

AT WHOLESALE PRICES FREIGHT PREPAID

Coiled Wire provides for contraction and expansion and prevents sagging between posts. Every pound of wire in our fence is made in our own wire mill from the best high carbon steel. We give

30 DAYS FREE TRIAL

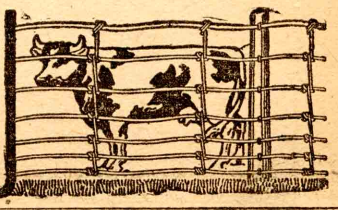
That our customers may be sure they are satisfied. We make a full line of **FARM AND POULTRY FENCE.** Our Wholesale Prices will save you money. Write today for our 40 page free Catalog.

COILED SPRING FENCE COMPANY,
Box 88 Winchester, Indiana.

Page Cattle Fence

The cross bars are continuous and are wrapped securely around the horizontal bars three times and form a staunch knot. The stretch of the coiled spring wire in Page Fence enables you to adapt it to rough or hilly ground and to change feeding places as often as you like. Page Fence is heavily galvanized—durable—strong—economical—elastic—long lived. Write for catalog.

PAGE WOVEN WIRE FENCE CO., Box 7912, Adrian, Mich.



SEED CORN We have originated some of the leading varieties of corn. Our corn all grown under strict conditions for seed. Following varieties are recommended to corn growers as big and sure yielders.

Pride of Indiana Vigorous, medium-sized stock. Ears are large with 16 to 20 rows. The corn is dent and beautiful white color. Great yielder and sure to please. PRICE: one-fourth bushel, 60c; bushel, $2.00; bag, (2½ bu.), $4.50; five bushels or more, $1.75 per bushel.

Central States Dispatch Yellow dent and greatest yielder of any yellow corn we have found. Withstands drought and storms to a great degree. Ears 8 to 12 inches long, very shapely and extremely deep grain. A splendid feeding corn. About 20 rows to ear. Plant a field or more of this great yielder.

Yard Long This is the longest eared corn in the country. Remarkable for its long ears. Frequently 18 inches long with 12 to 14 rows each. Large yellow dent grains. Good to feed and for market. Quite a novelty and interesting at Fairs. Get some of this.

Price On Central States Dispatch and Yard Long Corn: One peck, 50c; bushel, $2.00; 1 bag (2½ bushels), $4.50; 5 bushels or more at $1.50 per bushel. All sorted and cleaned for seed. Order from this advertisement. Catalog free. Write for it.

O. K. SEED STORE, INDIANAPOLIS, INDIANA

KHERSON SEED OATS

THE NEW KHERSON OATS were originally imported from Russia, by the Nebraska State Experimental Station, and have proven one of the surest croppers and largest yielders as well as best sorts ever introduced into this country. THEY DO NOT RUST OR LODGE as many other sorts do, and are fully two weeks earlier than others. In addition to these we have the New Sensation, Early Champion, Lincoln, Texas Red-Rust-proof and other extra early sorts. Prices 50c to 75c per bushel, bags included. Write for our Big Illustrated FREE CATALOG. A postal will bring it. Address

RATEKIN'S SEED HOUSE, Shenadoah, Iowa.

Secure your varieties now, pay in spring. Our Catalog will tell all about it. Send to day. Free to everybody.

SHEERIN'S WHOLESALE NURSERIES, Dansville, N. Y.

upon the membership, without any consideration of the desires and feelings of the members, another paper which they don't want and should refuse to receive.

Don't wait to see what others are going to do. You *know* what they'll *all* do—they will follow their own honest convictions and make it possible for us to continue the organization along original lines. I am about to return to Minnesota to report the results of my investigations to those farmers who have arranged meetings to hear my report. I wish I could meet with, and so report, to every member and local union in the country.

W. C. WEBBER.

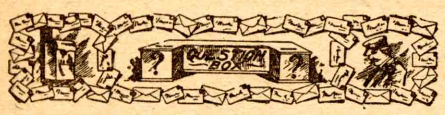
At Indianapolis, Ind.

CHARTERS, SEALS

The Farmers Society of Equity is ready to issue beautiful charters to all new locals reported and to all old ones that affiliate with it. The charter is a beautiful and artistic production suitable to be framed. Any local union will be proud of it.

At the head is a reproduction of the great picture by Trumbull, the original of which hangs in the Capitol at Washington, of the signing of the Declaration of Independence of the United States, and in a manner exemplifies the second declaration that is now being signed by the farmers. Below this is the acknowledgement and recognition of the local, county or State union, followed by the names of the charter members. In the lower left hand appears the emblem of the society, carrying the words "Justice and Equity to All" in the five points of a star, and the monogram, F. S. of E., surrounded by the legend "Profitable Prices for All Farm Crops," being the first object of the society. All of these are surrounded by a beautiful and appropriate border, size 11 by 17 inches.

No charge is made for charter and seal for new locals reported, but a charge of 50 cents will be made to old locals affiliating, which can easily be met out o the 35 cents per member dues they are allowed to retain.



This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

Q. *Mr. Everitt. At our last meeting it came up about the Equity Press and it was reported that there was nothing on the books to show what the members of the Society contributed to the press. Also that you didn't appear before the committee "when they wanted to know about your books. * * * As many of us sent to help pay for the press, you should have shown what was paid on same, etc."—F. R. Harris, Kenmore, N. D.*

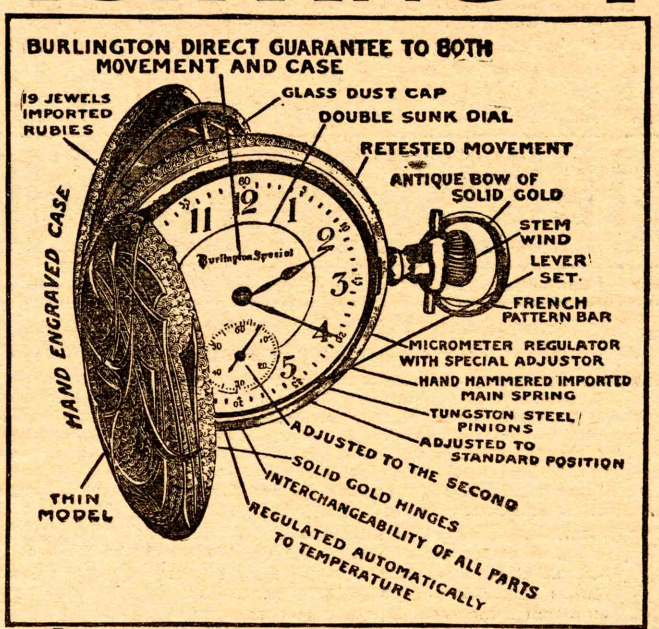
A. During all the time of the convention I was not asked such a question, neither did I know any information was wanted. I did not keep any books for the Society, I had no Society books to show. Your secretary was supposed to keep the books, and if there was no account there he is to blame, not I. But of course HE put the blame on me, like in hundreds of other cases, and I did not know it. I handled no Society money, not a dollar, except my little salary, and I haven't handled all of that yet.

The Equity press shares and donations was not my scheme. I am opposed to begging, but Mr. Tubbs conceived the idea and promoted it. The amount donated was $387.81 as per a written statement rendered me by Tubbs which I have and his signature is to the statement and the American Society of Equity is credited on the ledger of J. A. Everitt, individual, for this amount. The number of shares to "press stock" subscriber for, is eight (8) at $10.00 each, total $80.00. Each of these subscribers have received the interest promised each 3 months. If anybody wants to verify this, I'll send them the addresses of the eight or print them in this column.

Q. *Every member of our local union paid their dues the last Saturday in March, 1907, and the money was sent to the State secretary. How does it come that subscription to our papers were not credited?—S. W. Birdsall, Effington, S. D.*

A. Secretary Ross did not report for the whole year until a few days before the annual convention. He came to headquarters and brought the names of members and the money. He settled with headquarters, but none of the money was turned over to the paper to apply on subscriptions. The few directors who came to the board meeting in January said, speaking of Secretray Pauley: "He is wise, economical and efficient." May the good Lord save us from that brand of wisdom, economy and efficiency and give us more business integrity and common honesty to go with an Equity Society.

FIGHTING THE TRUST



$2.50 a Month

Buys the Burlington Special — (acknowledged the finest and best made watch in the world)—and at the Rock-Bottom—NO-TRUST—direct price.

No Money Down: We ship the watch on approval, prepaid (your choice of lady's or gentleman's open face or hunting case). You risk absolutely nothing — you pay nothing — not one cent — unless you want the great offer after seeing and thoroughly inspecting the watch.

Sign the coupon and get the free Burlington catalog.

Get the Benefit

Of the most remarkable offer ever made on a high-grade watch.

Do Not Miss this opportunity to get the best watch made anywhere in the world—not the biggest seller, but acknowledged among experts as the best — the genuine BURLINGTON watch — sold by our **no-trust** plan — on a **rock-bottom offer**—at **no-trust** price—**one price, direct** to the public (and, if desired, on terms of $2.50 a month).

Get Posted on watches—on the fine points of superior **quality** in watches — (on the secret trust price and the no-trust prices) — get posted before you buy a watch.

Write At Once for Our Free Book on Watches. This free book will tell you not only about the trust but especially about the superior **quality** of the superb Burlington. And to prove that quality to you we have issued our

$1,000.00 Challenge

How the Challenge Started: The Waltham Watch Company published a challenge to all foreign factories to put 50 foreign watches against 50 Waltham watches in a competitive test of **time keeping**, the whole 100 watches to become the property of the winner. For copy of this challenge read our free booklet.

Why Did the Waltham Company carefully confine its challenge to foreign competitors? Of course the Waltham can afford to challenge Swiss watches, for American-made watches are certainly better — but would the Waltham dare to face a test with the Burlington?

We Challenge the Waltham (also Elgin)

We have deposited in the Colonial T.&S. Bank of Chicago $1,000.00 in cash to be forfeited to the winner. We absolutely and positively back any Burlington against any Waltham (or Elgin) of the same size and grade; and we make this challenge irrespective of price, NO MATTER WHAT PRICE the Waltham or Elgin charge. The loser in this contest is to forfeit his $1,000.00. The bank now holds the $1.000.00.—Why do not the Waltham or Elgin accept this challenge?

BE SURE to write for our booklet telling all about this challenge, and pointing out the superior quality of the Burlington (at its one **direct price**) and giving you other **facts of importance** about watches, especially trust watches.

WE CALL THE BIG FACTORIES A TRUST BECAUSE (with the prices on over twenty similar movements EXACTLY IDENTICAL) THEY HAVE A MUTUAL ARRANGEMENT OF NOTICE ON CHANGE OF PRICES.

And the FACTS in this booklet with reports from the **Congressional Records**, speeches in **Congress**, and briefs now before the **Department of Justice in Washington**, will quickly convince you that the American people are paying **two** prices for trust watches.

THIS BOOKLET will quickly convince you too that you **DO** want a no-trust watch — made in a smaller but better factory — the independent factory that is fighting the trust as best it can by giving better quality and superior workmanship throughout; we will quickly convince you that the Burlington watch, on which there is only **one** rock-bottom price (the same rock-bottom price everywhere) is THE watch for the discriminating buyer; that it is THE watch for the man or woman who wants, not the largest selling brand which everybody has, but the best watch, the watch bought by experts, THE watch that is absolutely perfect in its many points of superiority—the Burlington watch.

YOU WILL BE POSTED on inside facts and prices when you send for the Burlington Company's free book on watches.

WHEN YOU READ OUR FREE BOOK you will see also how the dealers and jobbers and trust factories hang together in this watch deal (you will have it all shown clearly by extracts from the **U. S. Congressional Records** and **Briefs before the U. S. Department of Justice.**) This explains why we offer the Burlington **direct** at a price that **astounds** the entire jewelry trade and besides on payments of **$2.50 a month.**

Book on Watches FREE

Just your name and address—that is all

Write at once for the free book. It will tell you what you **ought** to know before you even examine a watch. It will tell you the inside facts about watch prices and will explain the many superior points of the Burlington over the double priced trust products. Just send your name and address right now, today.

ARE YOU UP TO DATE?

Are you up to date? Well—let us see. What time have you?

How many of our readers will have to hesitate! "I have no watch,"—or—"my watch has stopped. Or, perhaps your watch is running fast or slow. Nine chances in ten you can not tell the correct time.

You know, I believe there is nothing that indicates more in any man or any lady an air of being somebody, of being up to date, of enjoying prosperity—than to carry a really first-class, fine-looking watch.

You can afford to save on many ordinary luxuries in order to possess such a timepiece. That is why the editor of this paper is particularly glad to call your attention to the great watch offer on this page—an offer that I personally recommend.

A high-grade watch. For although it costs more than the ordinary "cheap" watches, it is sold on a direct offer at the positive rock-bottom price, and in addition those who prefer to buy on time can get easy payments at $2.50 a month and yet at the rock-bottom price.

If you are posted on watches, you have undoubtedly heard heretofore of the factory producing Burlington watches; and now you have the opportunity to own this absolutely superior time-piece, thanks to the special direct offer.

What a wonderful satisfaction to know that you carry the finest of watches, the most accurate of time-pieces; to see how other people set their watches by your watch; to feel that you carry with you that air of substantial prosperity so valuable to every man and every woman!

What if the watch does cost a little more than the "cheap," inferior watches — you can get it for $2.50 a month at the very rock-bottom price, and with the Burlington direct guarantee. It is the most economical watch in the long run.

The editor advises you to sign the coupon at the bottom of this page and get a free book on watches, posting you on trust prices and no-trust prices. Be sure to write for this free book before you buy a watch.

Department of Elevators and Warehouses

ANNOUNCEMENT

The services of Mr. T. S. Crutcher of Indianapolis, Ind., have been secured to promote the interests of this department, both in the official paper and among members and local unions in the field.

Mr. Crutcher has been a farmer and understands their problems; he has been a long time student of the Society of Equity, hence understands how to apply its principles and plan to the solution of their problems, and he is a lawyer, therefore capable to advise members intending to organize elevator or warehouse companies.

Write to Farmers Society of Equity, Department of Elevators and Warehouses, Indianapolis, Ind.

Lumber! Send Us Your Lumber Bill For Our Estimate Lumber!

The Chicago House Wrecking Company offers the most wonderful opportunity ever heard of to furnish you lumber and building supplies of every kind at prices that will save you big money. Such an opportunity as this seldom occurs. We have lumber for your house, church, barn, meeting house, cribs, stores, factories and in fact buildings of every kind. We can furnish absolutely everything required in construction material. Have your carpenter or builder make up a complete list of everything that you may require, including Lumber, Sash, Doors, Nails, Roofing, Siding, Ceiling and every single article. Send it to us at once, tell us where you have seen this advertisement, and we will make a proposition that will be a saving of from 30 to 60 per cent. This is not an idle statement. Thousands of satisfied customers have bought lumber from us in the past. We guarantee absolute satisfaction. We require your good will. Read our guarantee below.

Lumber From Expositions. We have had vast lumber experience. After the World's Fair at Chicago we sold 80,000,000 feet; at the Omaha Exposition, 51,000,000 feet; at the Pan-American Exposition, 33,000,000 feet, and at the St. Louis Exposition over 100,000,000 feet. You will miss one of the greatest chances you ever saw if you overlook buying your lumber now. Prices on lumber are ever advancing. Do not wait for them to go down. They never will. If you have no need for a carload yourself, get your neighbors to club with you. By buying a carload you can save all kinds of money on freight charges. We have railroad tracks running through our main warehouses and buildings and can load a car to good advantage to you. You can include other items in this same car, such as Pipe, Plumbing Material and Merchandise of every kind. Roofing, Wire, Fencing, Furniture and Hardware.

Fifty Million Feet of Lumber for Sale: We recently bought at Manufacturers' Sale over 50,000,000 feet of all kinds of Lumber and Finishing Material. We are making special concessions to those who will buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. We cheerfully invite inspection of our Lumber Stock and will be glad to have you come direct to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all we say of it; make your own selection and see it loaded. It is not necessary however to come to Chicago; we sell you by mail very easily and will have no trouble to convince you of the desirability of placing an order with us. Just you send us your lumber bill, and we will easily "Show You." On application we will send copies of letters from customers who have bought from us. They saved money, why can't you? Write today.

Pumps of all kinds.

GALV. STEEL TANKS, $2.00

Weigh less and twice as practical as wooden tanks; best manufactured. 32 gal. tank, $2; 47 gal., $2.50; 73 gal., $2.75; 6 bbl., $5.50; larger sizes in proportion. Feed Cookers, $9.20; Steel Wagon Tanks $7.00. Galv. Troughs 60c.

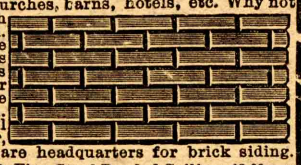
Steel Roofing Per 100 Sq. Ft. $1.50

Most economical and durable roof covering known. Easy to put on; requires no tools but a hatchet or a hammer. With ordinary care will last many years. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering buildings of any kind. Also used for ceiling and siding. Fire-proof and water-proof. Cheaper and more lasting than shingles. Will not taint rain-water. Makes your building cooler in summer and warmer in winter. Absolutely perfect, brand new, straight from the factory. **$1.50** is our price for our No. 15 grade of Flat Semi-Hardened steel roofing and siding, each sheet 24 in. wide and 24 in. long. Our price on the corrugated, like illustration, sheets 22 in. wide and 24 in. long, **$1.75.** At 25 cents per square additional we will furnish sheets 6 and 8 feet long. Our price on Standing Seam or "V" Crimped Roofing is the same as on the corrugated. We have other grades of Steel and Iron Roofing. ***Don't Delay. Write TODAY for Full Particulars.***

We Pay the Freight to all points East of Colorado except Oklahoma, Texas and Indian Territory. Quotations to other points on application. This freight prepaid proposition only refers to the steel roofing offered in this advertisement. Satisfaction guaranteed or money refunded. We will send this roofing to anyone answering this advertisement C. O. D., with privilege of examination if you will send 25 per cent of the amount you order in cash; balance to be paid after material reaches your station. If not found as represented, refuse the shipment and we will cheerfully refund your deposit. All kinds of Roofing supplies, galvanized conductor pipe, eave trough, steel snips, fittings, etc. Send us your order today.

Brick Siding, $2.00

Just the right thing for stores, houses, churches, barns, hotels, etc. Why not fix up your old building by covering it with brick, fresa brick siding. Easily put on. Made of semi-hardened steel. Looks like brick. No special tools required. Prevents decay. Decreases fire liability. Improves appearance of premises. Adaptable for buildings of all kinds. We sell immense quantities. Gives thorough satisfaction. Comes in sheets 24 ins. x 58 ins. Has all good points of steel roofing. Remember, you buy direct from our own mill. We are headquarters for brick siding.



Metal Ceilings, $2.00

Fine Steel Beaded Ceiling, $2.00 per 100 sq. ft. Ideal ceiling for stores, offices, kitchens, restaurants, etc. No falling plaster. Always neat and attractive. Economical and lasting. Sent ready to put up. No special tools required. Comes in sheets 24 in. x 6 in. and 8 ft. long. Also used for siding.

Special Prepaid Freight Offer. We will pay freight on all orders for metal roofing, beaded ceiling and brick siding to points east of Colorado—except in Oklahoma, Texas and Indian Territory. Prices to these points, freight paid, furnished on application. This freight prepaid offer refers only to these items and includes nothing else.

We Purchased Every Exposition

This includes the World's Fairs of Chicago and St. Louis, the expositions of Buffalo and Omaha, built at a cost of $90,000,000.00. We are the foremost dismantlers and purchasers of large institutions in the world. By this means alone millions of dollars' worth of the world's best products have passed into our possession and have been rebuilt and sold at 60 per cent below their original value.

The World's Bargain Center

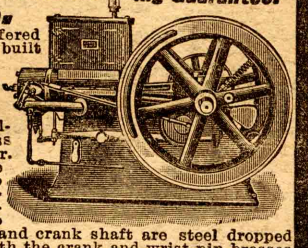
Thousands of satisfied customers everywhere have learned to recognize the virtue of our business. We stand between you and high prices. The greater part of our stock consists of absolutely brand new, first-class merchandise that we have secured in connection with our purchase of stocks at SHERIFFS' and RECEIVERS' SALES. Our enormous warehouses are overflowing with merchandise secured from such sources. Our wonderful growth and expansion is the best evidence of our ability to serve you. Merchandise of the highest quality is sold at sacrifice prices. Each day some new addition to our stock compels us to dispose of what we have on hand. The time to buy is when these bargains, shown you in this advertisement, are calling on you for action. Send us your order today and be convinced.

Our Guarantee We guarantee absolute satisfaction. A satisfied customer means more to us than a large sale. Every article you purchase from us is guaranteed absolutely as represented. If you find it to the contrary, we hold ourselves in readiness to make good our representations. If the goods received are not as represented, we will take them back and refund your purchase price at once. There will be no argument about the return of your money. All you need to say is that "goods are not satisfactory." That's enough for us. Money will be promptly refunded to you. Send us your order today.

We cheerfully invite investigation as to our responsibility. Our capital stock and surplus is over $1,000,000.00. We refer you to any commercial institution in Chicago or anywhere else. Look us up in Dun's or Bradstreet's; ask any Express Company; write to the editor of this or any other paper; if you want more positive proof, write to our depository, the Drovers' Deposit National Bank, Chicago.

$140 Buys America's Finest Built Gasoline Engine.

Sold under Binding Guarantee.

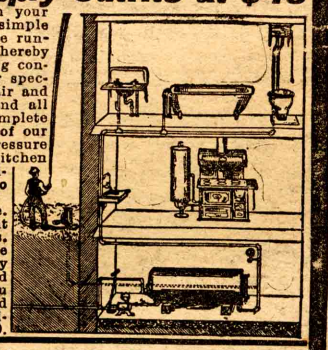


The best farm Engine manufactured is offered you at a price within the reach of all. It is built for service and satisfaction. It is not a toy engine, but made along lines that will be appreciated as time goes by. It is rated conservatively by the manufacturers at 5 H. P. but it will easily develop 6 H. P. It has the most perfect construction possible. The cooling tank is placed on top of cylinder less water being thus required in cold weather. No danger of freezing in winter time. The gasoline supply tank is cast in the base. No necessity for any piping. No danger of leakage. All castings are made of a special mixture of iron, giving great strength and no danger of breakage. The connecting rod and crank shaft are steel dropped forgings, made of finest of mild steel. Both the crank and wrist pin brasses are adjustable. Here you have an Engine, built on the most improved up-to-date design, along lines giving great strength, durbility and simplicity of operation. No need to be a mechanic in order to understand working this Engine. Our complete instructions cover every possible contrivance. This Engine will pay for itself in a year's time. It can be used for any general farm purposes, as well as for regular machine shop uses. Be alive to modern ideas. A few cents per hour will cover all cost of operation. When the Engine is idle, no expense. Can be started and stopped instantly.

Absolutely the Easiest Started Engine Manufactured

We furnish the outfit complete with magneto dynamo and set of four dry batteries. We furnish a set of batteries for starting Engine. When Engine is started, use the magneto. Shipped complete with all necessary oil cups, lubricator and muffler, all ready to run. Send in your order today.

Complete Water Supply Outfits at $48



You can live in city comfort even though your home be on a farm. By our improved and simple pneumatic water supply systems you can have running water in your home and on your farms, thereby enjoying all the comforts of modern plumbing conveniences. At $48 we furnish you one of our special outfits consisting of a 150 gal. Chicago air and water tank, a special air and water pump and all necessary valves, gauges and so forth to complete the outfit. At $125 we will furnish you one of our Complete House Plumbing Outfits with air pressure water system, a bath tub, closet, lavatory, kitchen sink and range boiler for hot water and including all necessary pipes and fittings, similar to illustration shown in this advertisement.

We are in position to save you 30% or more. Our comprehensive book of instructions, sent free on application. Our material is first class. It is easy to install any of our systems. We furnish comprehensive drawings, so that any man handy with tools can properly install and operate. In replying tell us as much as you can regarding construction of your building and any facts that will help us to give you an intelligent reply. We have outfits from $48 to $200.

TUBULAR LANTERNS, 45c.

Steel Shovels, strongly made, 30c; Steel single bit axes, 45c; Double bit axes, 40c; Large size steel hammers, 25c; Manure forks, 45c; Hay forks, 30c; Axe handles, 5c; Hack saws, with frame, 15c; Hand saws, 25c; Compass saws, 12c; Files, 5c; Hatchets, 30c.

100 Lbs. FENCING WIRE $1.25

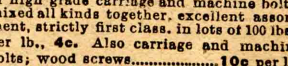
No. 14 Painted Wire shorts.....$1.25
Nos. 9, 10, 11 and 12 Galvanized shorts, $1.80
Nos. 14 and 15.....$1.90
Galvanized Wire continuous lengths, No. 9 per 100 lbs.....$2.00
No. 7.....$1.80
BB Phone wire No. 12 per 100 lbs.....$2.85 No. 14.....$3.10
Telephone equipment, Fence wire all kinds.

DOORS, 60c and up.

10,000 doors and windows, which we will close out at a saving of 40%. At 60 cents we can furnish you an ordinary door, good enough for general purposes.

We have a complete list of these doors and windows, which we will mail on application.

Wrought Iron Bolts, per lb. 4c



Bought at manufacturers sale, 10 car loads of high grade carriage and machine bolts, mixed all kinds together, excellent assortment, strictly first class, in lots of 100 lbs., per lb., 4c. Also carriage and machine bolts; wood screws.....10c per lb.

Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, FEBRUARY 15, 1908 | Number 4

TRYING TO FIGURE IT OUT

This scene represents three farmers considering the market prices of farm produce and they are trying to figure it out" why prices have declined so much since last October.

They find by referring to Up-to-Date Farming (see page 6) and market reports, that on October 21 cash wheat sold at Chicago for $1.00, but a week later, October 26, it sold at $1.00⅜; at the end of the next week at 97¼c and at the end of the next at 92½c. Thus in three weeks and five days it declined 14½c. After this the price went up to 96¾c on November 16 and dropped to 94¼c on the 23d, up again to 98c on December 7 and 14th, with a recession to 96¼c by December 21. From here the bulls put it up to $1.03½ only to be forced down again by the bears to 94c on February 1.

These farmers are stock raisers also and the hog market has been carefully analyzed with this result:

October 20 the price of best heavy hogs on the Indianapolis market was $6.70 per cwt. (see chart on page 6). By the end of the week they sold at $6.20; the end of the next week at $6.40 and then the price started downward with hardly any stop until they reached $4.60½ on December 7. Here the market was supported or farmers marketed less, and the price went to $4.90 only to turn and go lower than before, to $4.40 on January 4, a loss of $1.30 in about twelve weeks.

As the prices of things the farmers must buy, including labor, did not go down, they naturally get to wondering why their business must be subject to laws, or chances, that other business is not and they naturally try to figure it out.

To solve this problem and make the prices of farm crops as steady as the prices on any other commodities has been the mission of Up-to-Date Farming for five years. That it has accomplished very much there can be no doubt. The size of the crops produced in the last five years and the well-maintained prices leave no room for dispute that some power was present in the market that was not in evidence before. And when we seek for that power we are forced to admit that it is CONTROLLED MARKETING. We are then also forced to the conclusion tnat this paper has been the one responsible for teaching farmers how to make controlled marketing a power, and the chief factor in maintaining the power.

But about October 21 it became evident that an attempt would be made to overthrow Up-to-Date Farming, and some thought this was accomplished two days later. Now it is not our intention to ascribe all of the decline in the price of farm produce to the action of the recent convention, or the board of directors, nor any of it. We will leave the reader to judge for himself. But we do want to speak what is on our mind.

For instance, if it will be admitted that controlled marketing was the force that kept prices well above their old level for large crops, and knowing farmers and buyers, also speculators, have generally conceded this for a few years; and if Up-to-Date Farming was the chief exponent of the doctrine of controlled marketing and

(Continued on page 6)

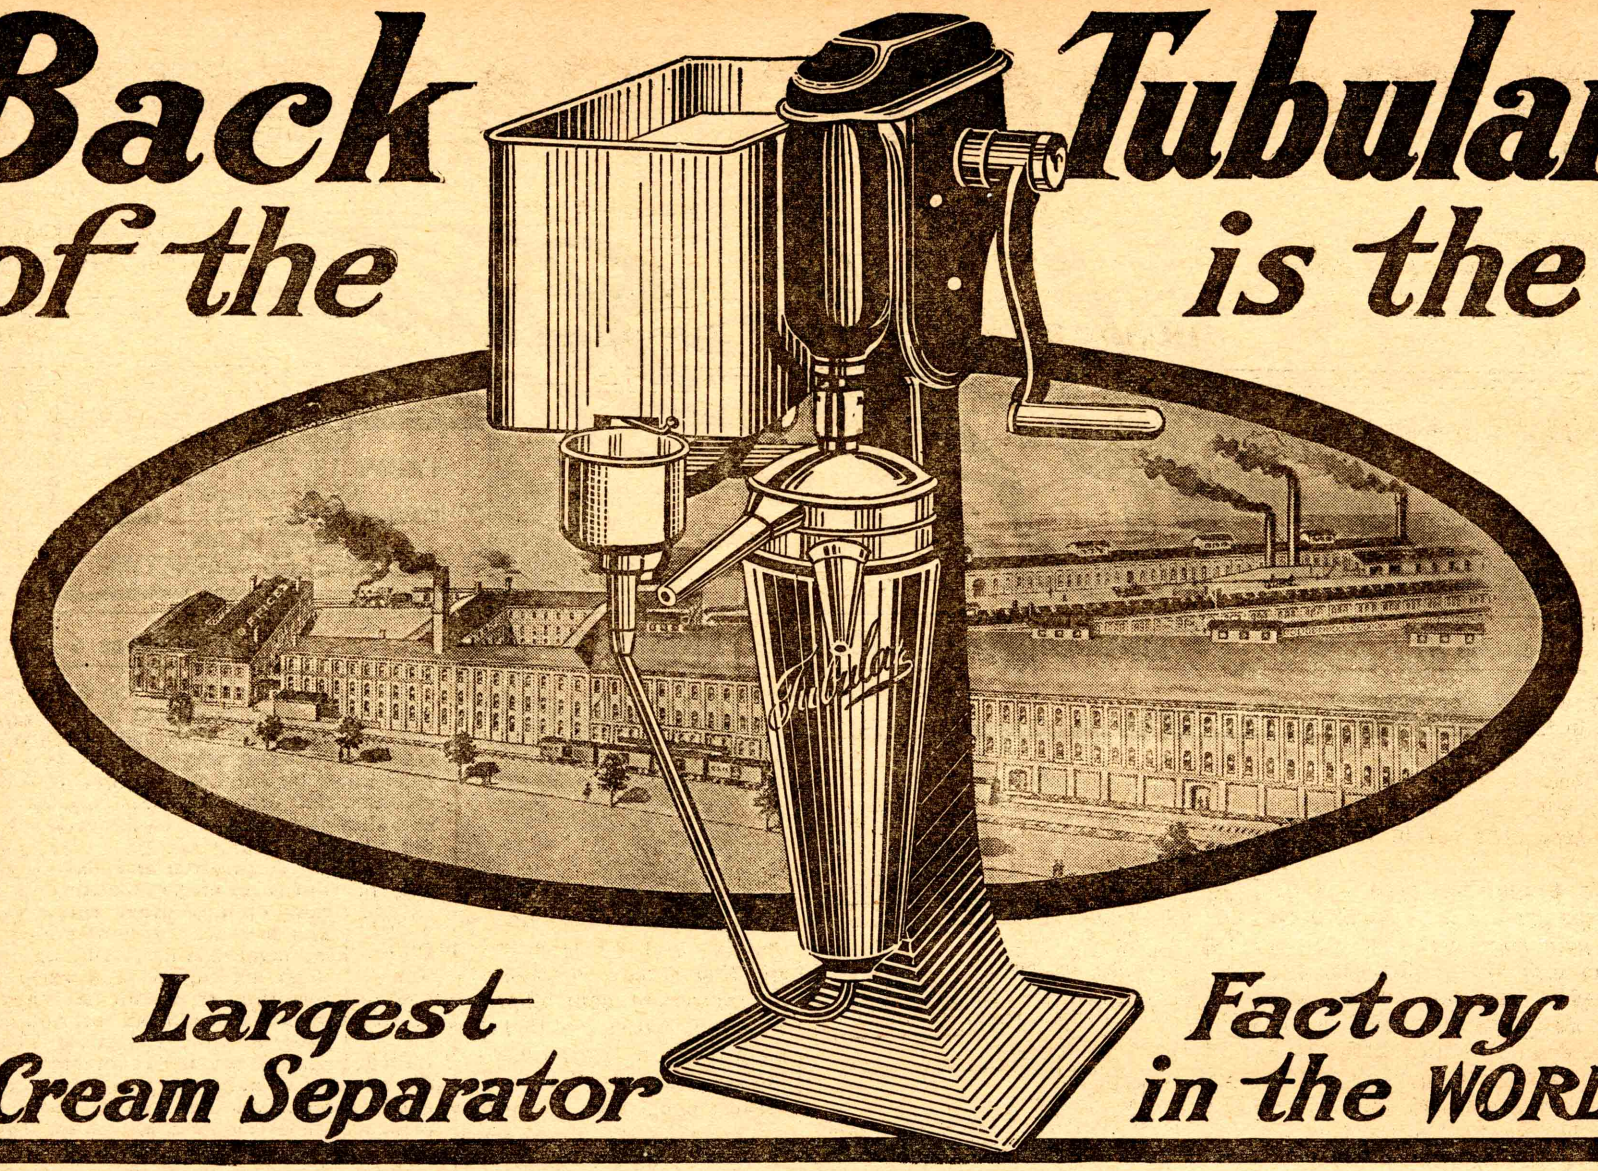
GREATEST NUMBER EVER PRINTED

This number is the greatest one we ever issued. There are a great many very good and important articles in it, so many in fact that we will not attempt to refer to them here as has been our custom in the past. We want each person who receives this paper to read every line and then, if he will, pass it to a neighbor to read. The influence of Up-to-Date must be multiplied. You can help to do this by letting your neighbors read your copy, but better yet get their subscription.

Of course we want you to read the advertisements also and always say, "I saw it in Up-to-Date."

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

Back of the Tubular is the



Largest Cream Separator Factory in the WORLD

WHAT does that mean to you, Mr. Farmer, when you conclude to buy a cream separator?

It means that when you buy a Tubular back of your purchase stands the **safest, surest, strongest** guarantee you can possibly get—something that stands as a positive evidence its product must be the best—something that proves beyond question its product must be superior to all others, or the **largest factory in the World** would not have become necessary to fill the demand.

All the printed claims and guarantees of merit ever written can't compare to this concrete fact—this great monument of proof that Tubulars are the most popular separators on the market today.

"Nothing succeeds like success," and the reason it has been possible to build up the largest separator factory in the world, is simply because Tubulars are an actual, practical success. Because they are the best in the world.

60,000 Tubulars were sold last year; and this year, so far, promises a big increase. Every one sold makes more sales, for their buyers can't help but tell their neighbors of their exceptional superiority.

It is no longer a question whether it pays to buy a Cream Separator. That has become a fact long ago, but it is a difficult question with many as to which Separator to buy, for the reason that so many cheap, impractical and unreliable machines have been flooded upon the unsuspecting buyer. They have been advertised in most glowing terms—offered on what seemed impossible-to-be-deceived grounds, that many purchasers have been caught to their sorrow later on.

For these and many other reasons we say that it means a great deal to the buyer today what is back of the Separator you buy.

When an article has sufficient merit to succeed; to grow to be the most extensively sold; requires the largest factory in the world to supply the demand; wins in every fair competition, is it not **wiser, safer, cheaper** in the end to put your money and trust into that article, knowing what is back of it, than to take chances on something that has none of these buying **safeguards** to protect you?

But that is not all. In buying a Tubular you get the product of the most skillful separator builders in the world; the most practical machine genius can devise; the highest type of perfection money and brains can build—the result of a life-time of concentration and determination to produce the best separator in the world.

And what's the result?

The illustration at the top of this page, the factory back of it, and a record of more satisfied purchasers than all others combined.

When you buy a Tubular you have the positive assurance that you have a separator that will get from 10 to 50 per cent more cream from your milk than any other; that it will turn much easier; that it is the simplest in construction; has fewest parts, consequently easiest to clean and less liable to breakage; has low supply can; is most durably built and is backed by the biggest and most experienced builders in the business.

Then why take chances on your separator purchase? You have everything to gain in buying a Tubular—nothing to risk. In buying a separator here are the vital points to consider:

Which Separator gets the most cream?
Which Separator is easiest to turn?
Which Separator is easiest to clean?
Which Separator has the fewest parts?
Which Separator has no back-breaking supply can?
Which Separator is most durable and costs least for repairs?

In short—get a Tubular and you'll never have cause to regret. Next to your own experience, that of others who have Tubulars, is as good a guide as you can get, especially when they tell by comparison with other makes why they prefer Tubulars. Send for our 1908 Catalog—it gives many letters on these points.

Just get a postcard and write for it today. It tells all sides of this story of separator buying; gives comparative tests of the Tubular and others; letters from dairy authorities, universities, and shows the Gold Medal awards—the highest honors ever awarded to a cream separator.

If you have an unsatisfactory separator now, write to our Exchange Department and see how easy we make it for you to exchange your old machine for the easy running, clean skimming Tubular. You'll find the Exchange the most profitable experience you ever had. Write for Free Catalog No. 136 today.

Don't You Know

that the growth, success, reputation and size of the business that stands back of your purchase is the best, SAFEST guarantee you can get?

It is the ABSOLUTE PROOF that the article you buy is of true merit and worth.

The bigger the business—the safer your purchase and the better the guarantee back of it.

Don't let low prices blind you. The best is the cheapest—that's a TUBULAR.

PRESIDENT BARNETT WOULDN'T STAND FOR IT

The Best of Men May Be Deceived for a Time

President Barnett has proven himself an honorable and conscientious man, and he has taken the only course open to a man of that character. We regret very much that his name had to be coupled with those of the real criminals in the suit for criminal libel that there seemed no alternative but to bring, because his name had been connected with the libelous matter that had been sent out by the other parties.

That Mr. Barnett had been deceived and imposed upon is but another proof that not only good men, but men of more than ordinary intelligence, may be deceived in important matters, and may even do things they could not be induced to do at all if they understood the facts. This will apply to the A. S. of E. convention last fall. It is hard to believe that a hundred or more honest and intelligent men, assembled in a convention, could be so imposed upon throughout an entire meeting of several days, but that they were subsequent developments have proven beyond question.

And, after all, it is not so very remarkable. The most astute men of history have been deceived in various capacities in much the same way. The schemers announced a certain hotel as convention headquarters, to which their known opponents were referred, while an organized force of "ropers" caught and took to another place the most of the delegates, where the falsehoods that have since developed were kept constantly before them, and whence they were virtually guarded from coming in contact with the truth. But enough of this. We only wish to show that the delegates would have been something more than human had they not been deceived.

What we wish to speak of and commend is the course taken by Mr. Barnett. As early as December, Mr. Barnett began to see things as they are, and on the 19th of that month he made the following remarks to Mr. Everitt himself, and practically the same to another person about the same time:

> Mr. Everitt, I begin to see that you have been greatly wronged. I want to say that the defamatory literature sent out from headquarters was sent without my knowledge or approval, also that I am your friend and you can depend on me standing by you.

Getting a further insight into the work being done by those in official capacity under him, he on January 8 repudiated the whole business, and placed his stamp of condemnation thereon, by filing the following unmistakable

AFFIDAVIT

January 8, 1908.

To the Members of the American Society of Equity:

Since the October, 1907, convention of our order, at which I was elected as your president, some matters have developed to which I desire to call your attention.

A circular prepared and printed by some one called "A Circular Letter Report, Issued by Authority and With the Approval of the National Officers of the American Society of Equity of North America," and was addressed to the agricultural press of the United States.

This circular was sent out with what purported to be an official letter of our order calling attention especially to the contents of said circular.

My name appeared—signed to said circular as national president, and the letters accompanying the circulars were also signed with my name as national president.

In this circular attack was made upon the honesty and integrity of our late president, James A. Everitt.

I now desire to state most emphatically under oath that I never signed said circular, nor did I ever authorize anyone to sign my name to any letter accompanying such circular, either as an individual or as an official of your order.

Said circular was not, as far as I have any knowledge, the official act of the officers of this order, and the use of my name to said circular as your president was wholly unauthorized and unknown to me, and I did not approve of the contents of said circular at any time.

(*Signed*) CICERO M. BARNETT.

State of Indiana, } ss:
County of Marion, }

I, Cicero M. Barnett, being duly sworn upon my oath, say that the facts stated above over my signature are true, and I make them freely so that the public may know the facts.

(*Signed*) CICERO M. BARNETT.

Subscribed and sworn to before me, Bernhardt E. Sattler, a notary public in and for said county and State by Cicero M. Barnett this 8th day of January, 1908.

(SEAL) BERNHARDT E. SATTLER.
Notary Public.

My commission expires Sept. 11, 1910.

It is seldom indeed that any set of men ever received so severe a letting down as the above affidavit gives the few who have so persistently and falsely sought to injure a man's character, destroy his business, a business devoted more to the good of others than himself, break up a society designed wholly for the benefit of the people, and divert what had been accomplished to their own selfish ends. But they are meeting the fate such people usually meet. Some of them are under bond to answer in court for their deeds of crime, while others of them are fugitives from justice.

But Mr. Barnett, finding that neither his admonitions nor repudiation would restrain those whom he had been thrown in official association with, resigned the presidency, as appears by the following notice in the Indianapolis Star of January 10:

> Cicero M. Barnett, president of the American Society of Equity, has tendered his resignation to the board of directors of that organization to be acted on at the meeting to be held next month. O. D. Pauley, secretary and treasurer of the American Society of Equity, and the only officer of the organization in the city yesterday, would not discuss President Barnett's action yesterday afternoon.

As to what action was taken on the resignation we are not advised, as the A. S. of E. headquarters in this city seems to be a star chamber affair, and what is done, or is proposed to be done; that is, the inner workings, are held in the hidden recesses of the Claypool Building.

Our purpose in this article is to do simple justice to Mr. Barnett, to let the public know what is being done, and how, and to prove conclusively that good men may be deceived, and were deceived in the convention of last fall.

County unions, local unions, and the members generally, may well do as President Barnett has done, and repudiate the whole push. Having been deceived is not a crime, but sticking to the deceivers after one sees the deception, is quite a different matter.

PROPOSED COTTON BANKS

As was to be expected in view of certain action that has been taken by the financial concerns of the country, apparently backed by government authority, the more intelligent cotton growers are discussing banks of their own to finance the cotton while yet in the hands of the growers. We believe the plan proposed is entirely practical, and that it may be made available by the growers of many other staple crops as well as cotton, and that, through the main crops, it may be made to protect the smaller ones, until every agricultural product may be made secure in the hands of the producers, and guarantee to them a reasonable and equitable profit.

We clip the following from the Cotton Journal, and commend it to the consideration of wheat and corn and hay and tobacco growers:

"Necessity is the mother of invention." This is an old adage which may be applied in modern as well as ancient times when situations are developed which demand solution in some way. The present stringency in finances and the apparent inability or unwillingness of the larger banks to provide currency to the smaller banks in sufficient volume for any purpose except to move the growers of the South to look for relief in their holding movements to some other source for protection in the future financing of crops of American cotton.

If the present banking capacity of the country is only sufficient to handle cotton in transit from the grower to the buyer, and funds cannot be found available in sufficient volume to finance such portions of the crop as the farmers want to hold, then the farmers must either provide the necessary banking facilities or their future efforts to hold cotton will receive no more encouragement from our present banks than is the case at the present. If our present banks need all of the currency to supply only the demands of the buyers and to carry on the regular commercial business of the country, then it is quite clear that we need some separate and specific banking institutions for the sole purpose of advancing loans on cotton in storage before it is sold. The whole crop must be financed before it is finally spun up by somebody, somewhere, whether the staple is in the hands of the growers, the buyers or the spinners. The financial world seems to prefer to finance the crop in the hands of the buyers and the spinners after the farmers have sold, and the general sentiment of the bankers each year is that the growers should market rapidly and not hold back any material part of the crop. We have carefully studied this situation for many years, and do not believe that the present sentiment of banks is likely to be changed for some years to come. The only relief for the growers, it appears to us, will be found in endorsing, encouraging and backing centralized banking capital for the single purpose of financing cotton in storage.

Undoubtedly cotton stored and insured properly constitutes the highest and best type of gilt edged collateral known to the banking business upon which to negotiate loans. The farmers, therefore, owning this type of collateral, occupy a prominent position in inviting capital from every standpoint of safety and security. Where would there be a safer institution to do business than a bank organized for the one purpose of negotiating loans on cotton in storage with a sufficient volume of business in hand to keep its capital actively employed for twelve months every year? The idea of these centralized cotton banks in each cotton growing country is not new, as they have been more or less discussed and endorsed by leading financiers in the South for the past year or two.

THE OLD AND THE NEW

Don't be afraid of an idea simply because it is new. The new is constantly chasing away the old, and what seems impossible or miraculous today becomes a common, every-day affair tomorrow. Of course wild things are proposed, and it will not do to run after every will-o'-the-wisp a restless dreamer may see, but this is an age of such rapid and undreamable development that the opposer never knows when he is safe in his opposition.

When, a few years ago, Mr. Everitt in UP-TO-DATE FARMING declared that farmers could secure equitable prices for their products by controlled marketing, the world was very much astonished, and thought it a thing impossible. The idea was so new, and so different from what had been taught and practiced, that most farmers themselves thought it ridiculous. So the world has thought of every suggestion of a great thing for human advancement. When it was said that carriages could be run on iron roads by steam power, and excel in transportation the vehicles then in use, those at the head of public opinion declared the proposition absurd, and quoted scientific principles to prove the scheme impossible. After some roads had been built and moving engines placed upon them, thus establishing the fact to that extent at least, the question of speed upset the scientific schools, and the wise ones were sure it could not be done. So late as 1819, the Quarterly Review, published in London, and at that time the greatest magazine in the world, had the following to say about the railroads:

> As to those persons who speculate on making railways generally throughout the kingdom, and superseding all the canals, all the wagons, mails and stage coaches, post-chaises and, in short, every other mode of conveyance, by land and by water, we deem them and their visionary schemes unworthy of notice. What, for instance, can be more absurd and ridiculous than the prospect of locomotives traveling twice as fast as stage coaches? We should as soon expect the people of Woolwich (the great arsenal town) to suffer themselves to be fired off from one of Congreve's richochet rockets as trust themselves to the mercy of such a machine going at such a rate.

In less than a hundred years from that time that very doubtful means of transportation and travel has virtually driven out all others except the same power employed on water, and the impossible speed is four or five times exceeded!

It has been so through every step of human progress. Neither opposition nor ridicule can stay the progress of a great truth when it is once awakened and sent forth; and we verily believe, within the lives of people now living, the fact that the greatest class of our industrial population labored only to produce, and left entirely to others to say at what price they should sell the results of their labors, will seem like some far-away story of the olden time. It is not just that one should labor and create, and another should say what the thing created, the result of the labor, is worth, or at what price another shall take it. God's plan toward the human race is founded on justice, and man cannot long defeat it.

¶ When you go into a store to buy an advertised article do not accept something the dealer says is "just as good." An advertiser spends his money to introduce his goods to you. After that it is up to the goods to "make good." Do you think he would expect an inferior article to please YOU? Insist on getting what you ask for. Advertised brands are usually best.

SELF-RELIANCE

During these first months of the year is a good time to consider whence the good things come, and on what we must rely for things desired in the future.

It is very evident that if farmers wish a change in conditions that shall enable them to exercise an influence in pricing their products as all other classes price what they have for sale, there is no source they can look to for that change, but to themselves. Everybody is busy looking out for himself, and nearly everybody other than farmers, fear to lodge a price-making power in the farmers' hands. Of course such fears are groundless as regards the equity plan, but graft and greed have figured so conspicuously in other lines, that changes are dreaded.

Farmers, therefore, must depend upon themselves. They must not only organize to accomplish their just and reasonable purpose, but they must assist in educating public action. No class of people ever had a greater proposition with which to go before the world, nor one so logically reasonable, so entirely just and fair, and so sure to benefit all classes as well as the great class that is presenting it.

But the farmers themselves need to be educated up to it. So long have they accepted the price speculation has awarded them, that they are slow to believe there can be any other way. They are suspicious of their fellows, and lack confidence in themselves. They are doubtful of marketing methods different from those which they have been accustomed, and skeptical of their ability to make any other method successful.

They must be educated to look at all these things differently. They must be led up to business confidence and self-reliance. They see how other people do things, and chafe under the disadvantages forced upon them; They must be taught to overcome these disadvantages by their own efforts—to quit looking to others for relief, and to rely upon themselves.

And farmers, so far as these things are concerned, are not inapt scholars. They learn rapidly. When the truths are brought before them, they readily and eagerly accept them, and need but little persuasion to induce them to act. This is proven conclusively by the wonderful educational work accomplished by UP-TO-DATE FARMING. In just a few years it has compelled the world to acknowledge a doctrine that no one conceded before, and all it needs to win a complete victory is to get before the people. This suggests a line of work in which everybody can assist. Help us to get more readers; and let us all together teach farmers the truth, and induce them to be more self-reliant.

ALMOST BEYOND BELIEF

The readers of UP-TO-DATE FARMING know what a struggle we had for years with some of the old line farm papers, to get the truths of Equity before the people, and to get a hearing for the now quite generally accepted doctrine of controlled marketing. Hundreds of patriotic farmers all over the country, stood by us in this fight, and compelled the opposition papers to quit their warfare or take their names from their subscription lists. One of the bitterest of these was the Ohio Farmer, published by the Lawrence Publishing Co.

It is now almost beyond belief that one C. R. Walrod, paid by the acting officials from the treasury of the American Society of Equity, is sending the names and addresses of members of the Society to its avowed enemies, in order that they may have the greater opportunity to poison their minds and disrupt the organization!

The above mentioned bitterest of these enemies is actually sending circular letters to such members and soliciting their patronage in aid of their nefarious work. The letter sent out shows that the whole animus of the Ohio Farmer was jealousy of UP-TO-DATE FARMING. His principal fight has always been upon the society because it supported this paper, and upon Mr. Everitt because "He published a paper." The burden of the letter sent out to the members is an appeal for subscriptions; and there you have it; people in the pay of the Society playing into the hands of its worst enemies.

Not so very long ago the papers were burdened and a court record blurrred with proceedings in which that same publisher figured in a shameful prosecution, in which a young girl, a niece, we believe, was mentioned as the prosecuting witness. Those who now represent the Society of Equity go tremendous lengths to find endorsers of their own iniquity.

AN INEFFECTIVE REMEDY

It is a pity that our lawmakers will not take a practical view of the money question. Perhaps they do, but the power of the banking concerns is so great that they dare not support any measure which those concerns do not favor. Certain it is that no measure is seriously proposed which does not carry with it increased powers for the banks and an enlargement of the bank circulation, whereas it is just as certain that such measures cannot bring relief only as the banks will it, nor can they contribute in the least toward the prevention of such a crisis as came last October and November. That trouble was not the result of a lack of currency. The monthly statement of the Comptroller for December shows that the total outstanding currency at that time was $690,130,895, which is nearly ninety-four million dollars more than that of a year ago, and an increase of $33,912,699, for December alone. It is folly to say that the panic was the result of a lack of currency when there was ninety-four million dollars more of currency than there had been before, and when the currency was actually increasing at the rate of practically thirty-four millions a month.

The panic was caused by hoarding, not by the people, but by the corporations that had the power to hoard it; and increasing those powers instead of preventing panics will make it easier to precipitate them.

A little bit of true remedial legislation would be a provision compelling banks to secure their deposits. That would give confidence to individual depositors, and keep the general circulation in the banks, and make it harder for those with evil designs to "corner" the money. Practical plans to acccomplish that have been suggested by men of intelligence and influence, but they seem not to have reached the lawmakers.

DEMAND EXCEEDS SUPPLY

In his testimony during the trial of the Government's case against the American Tobacco Company, T. B. Yuille, head of the leaf buying department for the Southern States, admitted that, in face of a substantial increase in acreage during the past ten years, that the demand for tobacco has so greatly increased until the supply is not equal to the demand. He pointed out that during this period from 60,000 to 160,000 acres in eastern North Carolina and South Carolina have been turned over from cotton and truck to tobacco culture because the latter proved more profitable. He declared that the improvement in the demand for tobacco has been due largely to the development of foreign markets.

In the light of this testimony, it is no wonder that so many of the buyers accept the ultimatums of the growers regarding the disposition of pooled stores. It is no wonder, that the tobacco trust is exercised over the action of growers with regard to next year's operations. The words of this official make it pretty plain that, in allowing back crops to remain in the hands of the growers, the tobacco trust believes it can bluff the farmers into believing that it does not need the stock, excepting at its own figures. The growers will have profitable prices as the demand for tobacco goods justify them.

EVERY BUSINESS LETTER DEMANDS A REPLY OR ACKNOWLEDGEMENT

Many farmers have an aversion to correspondence. Even when a sheet of paper is sent to them and an addressed return envelope, they often push them aside without using them. Of course the postage stamp will cost two cents, but it is not the cost they object to, and perhaps they are asked to send a small sum to renew their subscription, say $1.00. We again don't believe many would excuse themselves that they did not have the dollar or were not willing to pay it, for subscription to UP-TO-DATE FARMING. But the fact remains that many letters sent out are not answered.

We believe, oftimes, the stamp is not in the house, and then the trouble of getting a money order, or draft, or of registering the letter accounts for most of the failures to reply to letters. But as regards letters sent out from our office this should not be pleaded as a valid reason because in every case we send an extra strong return envelope in which any sum of ten dollars or less may be put and mailed without registering at our expense. Of course, paper money must be used for all sums of $1.00 or more and silver must be wrapped to prevent it moving about in the envelope. It is always desirable to have a few stamps on hand and your carrier will supply them if you put a dime or more in the mail box with the request.

Thus we remove practically all the trouble. Our readers should remember that we have many trials, that the expense of publishing a paper like UP-TO-DATE FARMING is very heavy and that a leter unanswered usually calls for a double expense on the part of the sender. As farmers are becoming business men now, one of the rules they should adopt, and it is a rule in every well regulated business house, is that every business letter demands an acknowledgement.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE $1.00 PER YEAR. A CLUB OF FIVE FOR $3.00

Foreign Subscriptions, including Canada, $1.50 per Year.

Clubs. Two subscriptions for $1.50; five for $3.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The datest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer. The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

THE MONEY IN HIDING

A graet deal is being said about "the money in hiding," and the unknown person who is hiding it is being soundly berated as the individual responsible for the lengthening out of the recent "panic." Even the President in his message to Congress found occasion to say: "Individuals have hoarded their cash and the working men their earnings; all of which money has been withheld and kept in hiding or in the safe deposit box to the detriment of prosperity."

Seriously, who is hiding the money? The President intimates that it is individuals and wage-earners, which virtually means the masses of the people. We do not believe the monetary stringency is chargeable to the masses. Ordinary people don't care to keep money about them, and if they have the least bit of assurance of safety, they prefer to put it in other hands.

Besides the alleged hoarding by the people is not sufficient to account for the recent stringency. There is a very high per capita of money now, and the amount is constantly increasing. Deposits and loans diminish, but bank note circulation increases. This is the constant showing of the bank statements, or was during the "panic." Every institution that might increase its circulation did so, and about as fast as it went out it disappeared.

There is somewhere a power that can hoard money that is far more potent than the masses of the people, and means to call the people's money into the banks will have little impression on the real hoards. The money is being hoarded for a purpose, and it will not come from hiding until that purpose is accomplished. We do not know what the purpose is. It may be to create a general slump in prices to enable speculators, the real hoarders of money, to buy up the choicest lines of property to sell again at high prices during another "wave of prosperity." It may be by some giant secret combination to freeze out lesser ones and get their holdings at forced sales. It may be to compel the very thing that was determined upon and is being done, an issue of Government bonds to increase the ability of banks to issue their notes as money.

Whatever the cause, the remedies proposed will not reach the disease, for no matter how much money might be issued, it can be controlled by those who issue it. It can be put out on easy terms and create "prosperity," or it can be gathered in and hoarded to make a stringency, whenever the issuers will it, and whenever the one or the other condition will bring them the greatest profits.

What do we conclude, then? That the Government alone should issue and control the money. Don't be startled at this saying. There is nothing either radical or revolutionary in it. The Government coins the gold, the silver, the nickel and the copper; and it issues the gold and silver certificates. And more than that, it stands sponsor for the national bank notes, and guarantees their redemption — redeems them if the banks fail. In reality, the national bank notes are only Government bonds chopped up in small pieces to circulate as money. But the bankers control the output, while the Government pays them interest on the bonds and the people pay them interest on the notes, which they may contract or expand at their pleasure, as may best serve their purposes and add most to their accumulations.

Why not let the Government do its own chopping—chop up its own bonds and put the pieces into circulation whenever business needs the notes to effect exchanges worse than hoarders need the interest that may accrue upon the bonds?

HANDS OR BRAINS

Are you working entirely with your hands and letting some other person do the thinking for you? If you are, wake up. You have brains, probably as good as the other people have. Use them and you will need to use your hands less.

NOT DEAD YET

The greatest organization of the common people of this country, has not been ruined. The only organization which provided for the industrial freedom of the real representative citizens — the American farmer — may have been threatened, but certainly not destroyed.

The trouble emanating from the late national convention was merely the first serious test of loyalty and we may expect other such tests before we have gained our objects.

If members of the Society had "thrown up the sponge," as it were; or if the farmers had simply bowed their heads to disappointment, with ambition lost and all hope for success extinguished entirely; then might the speculators have chuckled with satisfaction. Then the parasites, the hangers-on for a position and influence, for graft and corruption, might commence a celebration of their triumph and the relegation of the farmer, once more to obscurity.

But the members have met the situation squarely. They recognized, with regret, the conditions resulting from the national convention, realizing that some one had blundered—that very serious mistakes had been made—that while they may desire to place the responsibility for these mistakes where it belongs, still they feel obliged to refuse to abide by them because they are mistakes unconstitutional, and contrary to the true principles of Equity.

In their extremity, they quite naturally turn to the one man who is qualified to lead them along right lines—the founder of the organization. That their confidence in J. A. Everitt is not shaken in demonstrated by the hundreds of personal letters, to that effect, which are being received constantly. And how could it be

WITH UP-TO-DATE'S PUBLISHER

WHOSE MONEY HAVE WE?

The following people have recently sent money to this office, but their address is insufficient, hence orders cannot be executed. We expect all of these people think they have been defrauded. We give the amount of money sent and any part of address we have.

The following sent $2.00 each:

July 17, ———, Riverside, Iowa; Dec. 3, ———, Rochelle, Ill.

The following sent $1.50 each:

Dec. 30, J. B. Tripp, Mont.; Dec. 23, R. D. Henson.

The following sent $1.00 each:

Jan. 2, 1907, T. A. Brown, Garcy, Cal.; May 13, Wiley Woodard; April 22, W. O. Swarts, Andover; April 20, T. A. Lilly; March 21, H. R. Wilson, Miss.; Jan. 4, I. Stauffen, Cometa, Okla.; Jan. 31, J. D. Orr; Jan. 31, A. E. Page; March 18, J. C. Franklin, Fremont; Dec. 16, ———, Watertown.

The following sent 50 cents each:

Jan. 12, Harvey R. Witt, Leesville; Jan. 21, W. C. Smither; Jan. 28, Anton Turrill, Dresden; Jan. 3, Geo. L. Hoyt, LaFayette.

The following sent the amount stated:

Sept. 13, ———, Nashville, Mich., 20c; April 25, ———, Bigpiney, Mo., 25c; Jan. 2, ———, Foxholen, N. D.; Jan. 2, S. H. Hess, Clinton, 42 cents; Dec. 30, Geo. Miller, 90 cents; Jan. 10, ———, York, Neb., 70 cents.

We have letters as follows with insufficient addresses:

M. H. Welling, J. H. Fulton, Walker Fulton, Mrs. Bell George, T. S. Woolers, E. I. Edwards, A. J. Horner, H. H. Barnett, Andrew Haye, Chas. Zobeist, B. F. Harrell, Ole Amundson, Joe Lorenz, Minnesota; Charlie Lorenz, Minnesota; Summerfield, Ill.; Hub City, Wis.; Waverly, Ky., R. R. 1; James Ford; Mrs. G. H. Rader, Wigner, Ohio; Coloma Station, Wis.; Willie H. Schiter; M. R. Johnson; Henry Friger; W. M. Tyler; Mr. Ocran; H. Stretch; Pat Roan, Eagleton; L. J. Ulley, Ind.; James Stimson; H. W. Fenimore; Carl G. Pekowsky; Frank Adames; Roland Newton; Bellefounte, Pa.

Request to change address from Lilac, Ky., to Duff, Ky., no name given.

Remittance of $2.00. Received at this office Nov. 21, 1907, for a subscriber owing 90 cents arrears.

Russellville—Claims party is dead; left no estate. No name or State given.

W. V. Tompkins claims Mr. Coulder has been dead two years. No postoffice or State given.

If you recognize your order, repeat it for identification and write to the publisher.

We have some sample copies for the friends who will send for them and pass them around.

One day recently we received 1,791 letters in one mail delivery and nearly all contained subscriptions or renewals. This is the largest single mail we ever received.

Look at your wrapper. If in arrears, renew now. Always, if convenient, send your address clipped from wrapper to help us.

SPECIAL LIMITED OFFER to subscribers. If you received one, don't let the time limit expire. We don't want to lose a single subscriber.

Banks have made some very onerous rules regarding collecting checks and we request our subscribers to please not send them in the future. Even drafts on large cities like Kansas City, Philadelphia, Boston, etc., for which the remitter probably paid a fee, we are charged another fee for collecting. Send the cash in a strong envelope well secured or registered letter, or postoffice or express money order or bank draft on Chicago or New York. When the Farmers' Society of Equity gets strong it will not allow onerous rules made against the public.

There are thousands of names on our subscription list of members who paid 1907 dues, according to their reports, where the report and payment did not reach us. The only way we can get a correct list is to report the fact to the member and he in turn should report back and not take offense. We have always accepted the member's statement and given credit, although it means a loss of many hundreds of dollars to us.

"EVERYBODY RENEW AND GET A NEW ONE" was the burden of a special limited offer sent to 30,000 subscribers, good until February 24, 1908. If you are one who received that offer, and if you have not embraced it, please do so promptly. Every subscriber added to this paper's list increases its power, to double its list will double its power, etc. Each present subscriber should work to multiply its subscription list many times and thus correspondingly multiply its power.

If you approve of what this paper is doing, drop a postal to us for a few sample copies to hand around.

OUR ADVERTISERS

Did you ever see a finer display? The fiercer the attacks of the enemies of UP-TO-DATE FARMING became, the more the business men of the country rallied to its support, after they knew the animus of the opposition. The business men know that this paper is a great power for good to them as it is the greatest power for all that is good for farmers. They know that to divert this paper from its past policies and from the accomplishment of its mission will be a terrible blow to all legitimate business in the country. Patronize our advertisers.

ORDERS WE LIKE

On February 4 we received a wire order for 100 Third Power books from W. H. Seymour, director of Alabama Bureau of Cotton Statistics, Montgomery, Ala., to be distributed on the occasion of the annual convention of the Alabama division of the Southern Cotton Association. We like to receive such orders. If some wealthy man philanthropically inclined would distribute five million of these books to as many farmers, all farmers' problems would soon be solved. This number of books could be printed and mailed for about $750,000. Considering that a good many times this sum has been expended each year for many years by the National Department of Agriculture, State experiemnt stations and farm papers, without the prolems being solved, would it not be a good investment?

REWARD

MY ENEMIES have said, written and printed many false charges against me, hoping in this way they could turn the people against me, ruin UP-TO-DATE FARMING and then there would be no hindrance to the accomplishment of their base conspiracy.

I have always striven to be honest in business; I have never knowingly or willfully wronged a human being; I am proud of all my connection with the Society of Equity as its founder, its chief promoter and in my efforts to save it. Therefore I offer the following

REWARD

For each charge made against the undersigned by officers or employees of the present American Society of Equity, or organizers of the same, and made public through circulars, or the sheet called Equity Farm Journal, and which, if true, would be a discredit to me, I will pay $100.00 on proof that it is true. **JAMES A. EVERITT.**

Indianapolis, Ind., January 24, 1908.

Evidence Wanted

NOTWITHSTANDING that all charges made against the writer by present and past fficers of the American Society of Equity have been refuted and indisputable evidence of their falsity submitted;

And ntwithstanding that the president of the society has attempted to evade responsibility for those published over his name by an affidavit; and the secretary has also in a signed public statement attempted to escape responsibility; and employees of headquarters have left the State to escape arrest and punishment; still there are people going over the country and repeating the false charges in local, county and State union meetings and causing them to be published in papers and otherwise.

Therefore, I appeal to all fair-minded people who believe in justice and equity, to make correct records of any statements of a damaging nature to my character, reputation or business and have same attested to, if the statements were made by word of mouth, by one or more reliable witnesses, or secure newpapers or circulars containing such statements, send to me and I will prosecute the guilty parties. Always also send the envelope or wrapper in which the letter, circular or paper was received.

I am determined to break up the hellish conspiracy and will go the breadth of the country, if necessary, to do it. I particularly seek evidence against Charles U. Pierson, State organizer of North Dakota, but it is not expected that this appeal be limited to any one State or individual.

Indianapolis, Ind., Feb. 3, 1908. **JAMES A. EVERITT.**

NOT DEAD YET

(Continued from page 5)

otherwise? He has proven the efficacy of the plans he conceived; he has proven his ability to lead and direct the successful carrying out of those plans; he has, through these years, proven his integrity and loyalty to those to whom his life work was dedicated; and he has proven the falcity of every charge to the contrary that has been made by those who seek to undo his good work. That he may continue to advise and direct the work of the Society, the members have pledged themselves, in a determination regarding which there can be no question, to continue to support the official paper, UP-TO-DATE FARMING. They realize, as expressed by many local unions in their resolutions, that this paper can keep them together and guide the organization into safe channels as no other could. They appreciate the actions of the delegates to the convention who remained loyal to the farmers, who have provided the opportunity and devised a plan by which the organization may be saved to work out the objects for which it was intended.

With such a display of loyalty on the part of its members, who can say that the organization is destroyed?

As a matter of fact, it will have in their ability to maintain prices can be restored and will be restored. Therefore this paper will continue on to accomplish its mission, as it never for a moment thought of relinquishing it. Give hearty support to UP-TO-DATE FARMING now, seeing that the powers that would have curbed it against the accomplishment of its mission has been broken never more to rise. We verily believe, when the confidence of farmers is established again as it should be at once, they can now go forward without interruption to the full accomplishment of the mission of this paper, which is also the object of the Society of Equity.

KANSAS STATE MEETING

At the annual meeting of the Kansas State Union of the A. S. of E. at Hutchinson, Kan., February 4 and 5 the following resolutions were passed:

RESOLUTIONS

Whereas, All legislative authority emanated from and is vested in the people.

Whereas, UP-TO-DATE FARMING teaches the correct doctrine of price making and controlled marketing of farm products, and as it has stood alone for years in its sphere of usefulness, it has endeared itself in the estimation of all members of the American Society of Equity.

Whereas, A conspiracy was formed during the past year, by employees and others, at national headquarters, the principal object of which was to replace our official paper with one to be created by themselves, ble and profitable prices for farm products, so nobly begun, must be carried on to a successful conclusion. If we falter now, we will soon experience old conditions. Producers cannot tolerate the pricing of their products by those whose only interest is exploiting of the same. To accomplish this object speedily, farmers must work together as a unit.

Resolved, That we consider the practice known as gambling in grain futures as one of the most depressing features of the general market. And we heartily commend Congressmen Scott, McCumber and Culbertson in their efforts to enact a bill in Congress making this a criminal offense, and punishable the same as other henious offenses against public morals and welfare.

Resolved, That we again demand uniform inspection of grain, and we believe that this can be best accomplished by national inspection, and we heartily endorse the petition that is now in the hands of the Governor bearing on this subject.

PLEDGING WOOL

We have received the below very simple form of pledge for wool from Mr. W. T. Riner of Riner P. O., Montgomery county, Virginia, and his letter of transmittal to the growers as follows:

DEAR SIR:

I enclose a form of pledge for the wool growers of our section that I want you to consider and sign and return.

I claim that we producers of wool should have something to say about the price and we can have if we stand together in this matter. I am convinced we were deprived of 2 cents per pound, that we were entitled to on our last year's crop, by the local buyers.

If you agree that this is the proper thing to do, please get all your neighbors, wool growers, to sign the pledge with you. We will have a leading man in each neighborhood to get the pledges. When we are all together, let's see if we cannot sell our wool co-operatively to advantage.

The pledge follows:

We, the undersigned wool growers of the county of Montgomery, in Virginia, and adjoining counties, do hereby pledge our wool to be held together until a satisfactory price is agreed upon between us and some manufacturers or dealers.

Name .....

No. of sheep.....

This matter is referred to other wool growers, and this paper will freely give its service to bring about close pledging, pooling and control of the 1908 wool crop for fair and equitable prices. We will print and mail pledges free on request. Apply on this blank.

....

(*Cut out and fill in and mail*)

Publisher UP-TO-DATE FARMING:

Please send to the undersigned blank pledges for wool. There are about.....producers in my neighborhood.

Explanation—The same as for the wheat chart.

become stronger by reason of having overcome the difficulties.

Its work will go forward as never before—and strictly in the interests of the farmer. It is the Farmers Society of Equity with UP-TO-DATE FARMING as its official paper, which promises to solve the problems of the greatest class of people on earth.

TRYING TO FIGURE IT OUT

(Continued from page 1)

the medium that gave the farmers courage and confidence to control their crops; will it not follow that when this medium is threatened, and widely reported that it had been deprived of its former position (although false) that the courage and confidence of the farmers would largely be destroyed and they would go back to their old way of marketing? The action of that convention and events subsequent to it were terrible shocks to farmers and confidence was largely destroyed. They had good reason to say: "Well, it is so, farmers won't stick, and I'd better market before the prices go still lower."

But UP-TO-DATE FARMING was not destroyed and it is firmer in the confidence of farmers now than ever before. Also the confidence of farmers also to take control and direction of the American Society of Equity and relegate its founder and our official paper to the rear.

Whereas, These employees have, during the past year, given a large part of their time, and spent a large sum of the society's money in propagating what is known as Equity Exchanges, all contrary to the fundamental principles of the American Society of Equity; and

Whereas, The representation at the late national annual convention was unfair, unwarranted and calculated to disrupt our beloved organization, to-wit: the seating of 105 delegates from Indiana and Illinois, and refusing to allow the delegation from Kansas (six) to represent our State's membership; and

Whereas, The above irregularities of said late convention are so gross, flagrant and revolutionary that we refuse to be held by its action.

Therefore, be it resolved, that we appreciate the efforts and sacrifices of our ex-President J. A. Everitt in bringing our organization to its present high standard, and we hereby extend to him our vote of confidence.

Resolved, That we continue UP-TO-DATE FARMING as our official paper.

Resolved, That we severely condemn all who took part in the late conspiracy, and we warn them and all others that radical or important changes must emanate from the people.

Resolved, That we heartily commend the six delegates who represented Kansas at the late national convention and endorse their action in the convention held October 25 and 26, which convention we hold to be the only bona-fide annual convention of the American Society of Equity held in the year 1907.

Resolved, That the campaign for equita-

ARRESTED

Chicago, Ill., Feb. 11, 1908.

Mr. J. A. Everitt:

Bowne, Nelson and Gentner arrested today and are locked up. You must be here tomorrow.

GEO. B. BRIGGS.

The parties are Chas. W. Bowne, Theo. G. Nelson and John Gentner, publishers and editors of the Equity Farm Journal. The reason for the arrests is the publication of many false and libelous articles contained in the December-January number of the above mentioned paper and against Mr. Everitt.

UP-TO-DATE FARMING

Fly abroad, thou glorious paper,
Win and conquer, never cease;
Spread from eastern coast to western,
Multiply and still increase.

J. D. GAINES.

1000 MEN WANTED

THE FARMERS SOCIETY OF EQUITY wants 1,000 capable men at once. To organize the farmers of the country so as to guarantee profitable and equitable prices and to keep them organized will require permanent representatives in every county, or group of two counties or more.

In the development of this farmers' society, which is different from the Grange or Alliance or any former farmers' society, it will require representatives like great life insurance companies have. But the inducements to represent such a great and good movement will be greater than can be offered by any other institution.

We call for representatives; we want them from every county in the country and in each community. If you are a man of ability, intelligence and integrity, and command the confidence of the people in your community, and want to engage, temporarily or permanently, in a pleasant, profitable and beneficial business at home or away from home, send your application on the below blank at once.

To applicants will be sent full particulars. You can give all or part of your time, the former preferred. Promotions for deserving people will be certain and rapid until the great society is completed. It has been successful for some, now we want it to apply to ALL crops.

If you live in the grain-growing sections of the West, Northwest, or Central States; the potato-growing sections of the Northern or Eastern States; the cotton-growing States of the South; in sections that grow fruit or vegetables to ship; or that are engaged in dairy pursuits, or any agricultural interest that produces a surplus for shipping, and if you want the producers to price their own crops AND GET THE PRICES, then write to us for particulars how you can help. Use below blank.

To the Farmers Society of Equity, Indianapolis, Ind.

Gentlemen—I want to help establish the Farmers Society of Equity for profitable prices for *all* products of the farm, therefore please send me full particulars how I can assist as per your call in UP-TO-DATE FARMING. I am now

engaged at .....

....

In the past I have also been engaged in

....

If I am satisfied with what you have to offer I will give.....

(*Write "all" or "part"*) *of my time.*

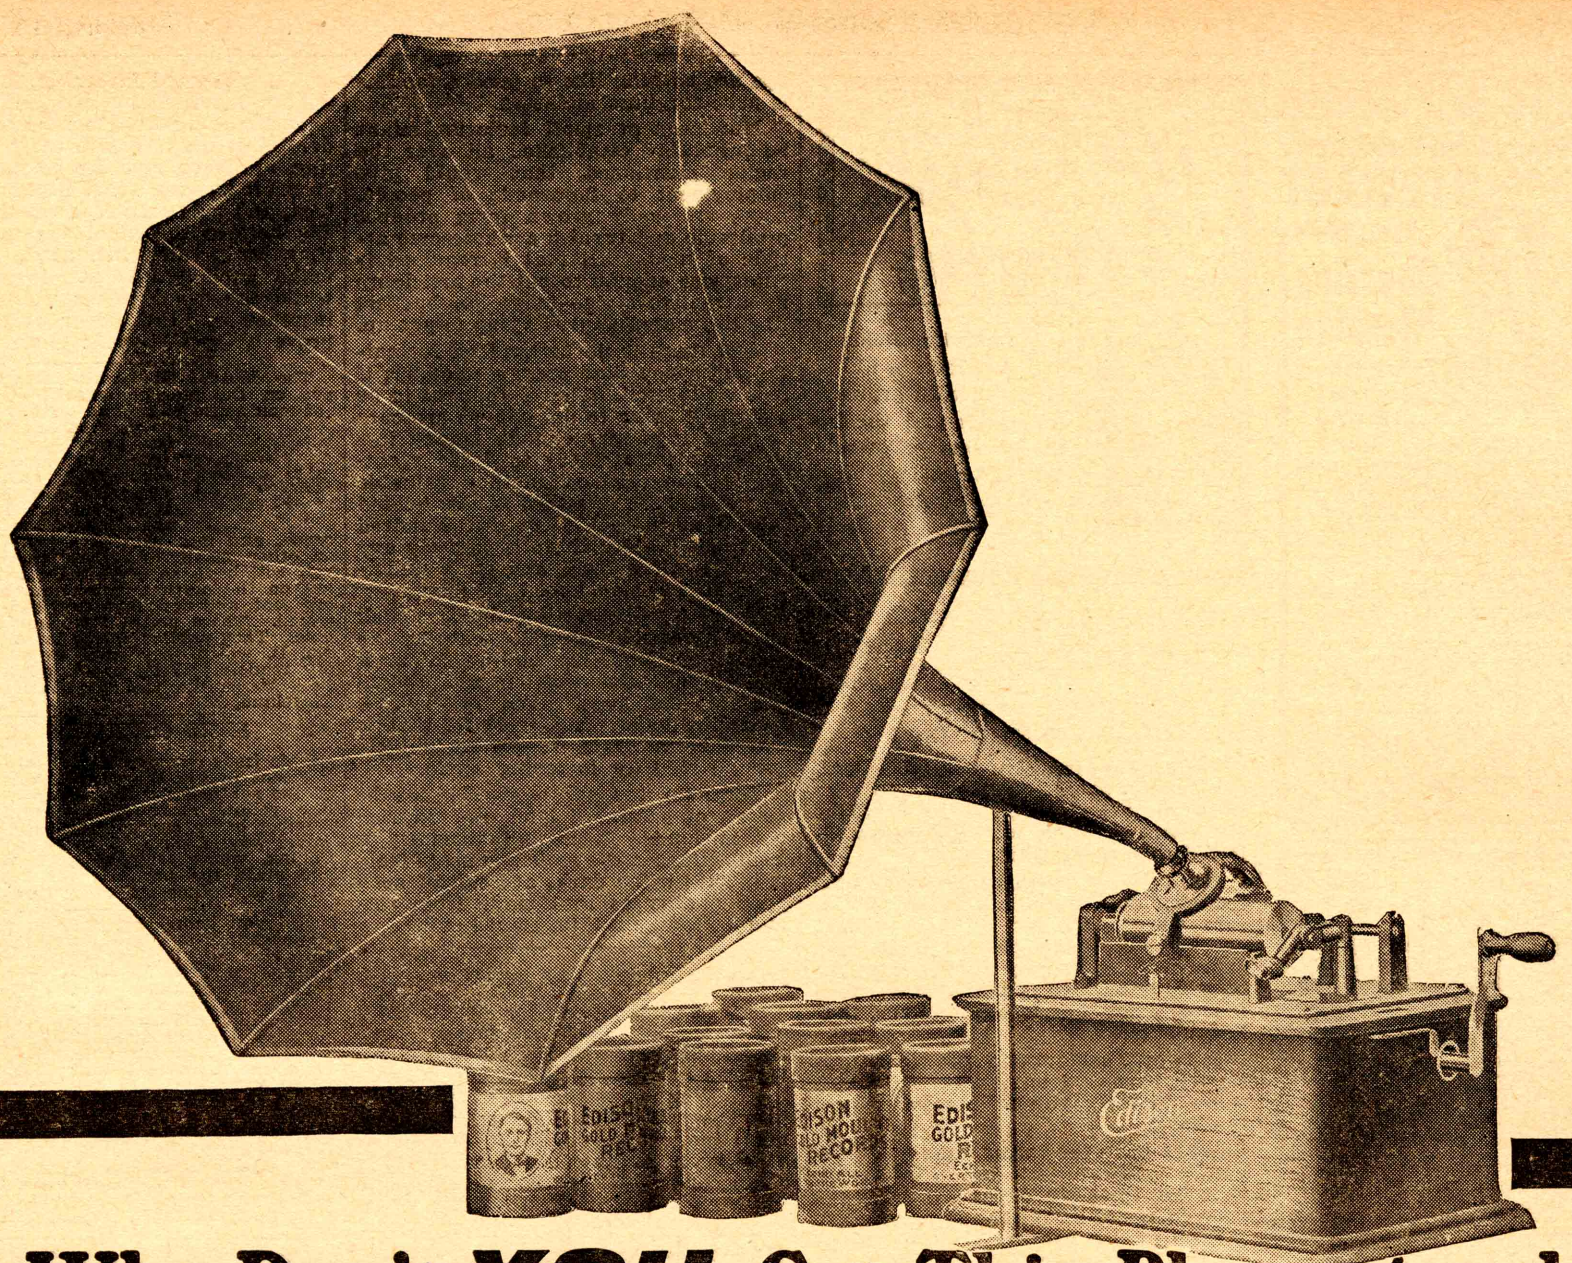
Co. ..... State.....



Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely **nothing** but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them) and our Free Trial Certificate entitling you to this grand offer. Our richest mines are idle now;
Within the soil lies the gold;
But Nature's strike will soon be o'er,
And 'gain we'll gather wealth untold.
J. P. S.

HINTS ABOUT THINGS

Wicked seeds, like wicked habits, are laying plans for future trouble; ill winds are sowing the seeds about the farm. It is a pity they were allowed to mature last fall.

Good fences used to be farm protectors; they were absolutely necessary when stock ran at large almost everywhere. They are great conveniences now, and many a dollar's worth of good pasturage is available on well-fenced farms that is lost on farms that are not fenced.

It is very seldom one sees a manure-strewn barnyard but that he can find some "poverty points" somewhere on the farm.

What have the farms done to create money panics? All unite in saying that the American farms are the country's financial salvation, and Secretary Wilson proves it every year by incomprehensible strings of figures. But when the panics come the farmers are the first and worst sufferers. There's a monetary screw loose somewhere, sure as you live, and our big law makers seem to be doing very little to tighten it.

It is all right to lay plans for the very best and biggest crops next summer, but it is well to mix therewith some plans to get the benefit of the crops after they are grown. Arrange so you won't have to tumble them in a pile on glutted markets.

It must be confessed that the organized tobacco growers are doing best where they have kept strictly within the law and refused to countenance lawlessness of any kind. Equity is for right and justice to the growers, but it is also for law and order. Remember that.

There is a great deal of corn in the cribs yet. Let it stay there only as it is fed to stock. Don't sell until some months later. We like to see farmers get the worth of their stuff.

Green bugs are already reported in the wheat fields of the West, but the only bugs we ever knew to flourish in the winter time are humbugs. Put that in your box.

Uncle Threadbare is wondering why he finds so much water and ice on his wheat fields where he neglected to run a drain furrow last fall. Wonders never cease for him.

Tom and Jim are anxious now to grow enough to hold a plow, and then they'll farm with rapid gait, because they're reading UP-TO-DATE.

SORGHUM

We doubt if enough attention is paid in the Middle Mississippi Valley States to the growing of sorghum. Those who use molasses cannot find a more healthful article than good sorghum molasses, and the demand always exceeds the supply. In any grocery or provision store one may find manufactured syrups nicely put up in gallon buckets, and selling freely at good prices. These manufactured syrups are nothing like so good a food as is pure sorghum molasses.

Hundreds of small factories might be profitably established all over the region mentioned, that would give employment to thousands of people, make an easily grown farm product profitable and furnish a wholesome article of food. All that is required is enterprise enough to put the article up in attractive style—in gallon buckets like the manufactured syrup is put up.

And there is no better feed for cattle and sheep than sorghum fodder, if it is well cured. This is thought to be a difficult thing to do, but we are sure there is ingenuity enough among farmers to devise a way to do so profitably. The seed is another valuable side line. Sorghum seed is now quoted in the market at $1.40 per hundred pounds. Besides there is scarcely any better poultry feed, and it is understood to be a good feed for hogs.

There is another by product well worth mentioning, and that is the skimmings from the boiling juice; it is an excellent and strong fat producing slop for hogs. And we believe, though we have not tried it, that it would be valuable with which to mix ground feed for fattening cattle.

Sorghum for syrup should not be grown on manured land, nor on rich bottom lands. It grows luxuriantly in such soils, but the molasses made from it is sure to be dark, and not of such good quality as that made from sorghum grown on thin, clayed soil.

CLOVER SEED AS A MONEY CROP

For several years the demand for clover seed has been far greater than the supply, and the price has been so high as to greatly curtail clover seeding. What seed has been produced has been grown almost entirely as a side line or by-product. The clover crop has been grown for hay, and then the second crop has been permitted to grow as a volunteer crop, and if everything seemed favorable, it has been cut for seed.

It might be well to reverse this order. Cut the hay crop early as a side line, and then give the second or seed crop all the season it needs to do its best, and make the seed the main crop. We believe the yield per acre could thus be greatly increased, so as to make good profits at lower prices, while the lower prices would lead to increase of the clover acreage, and prove of great benefit to the country.

The Mutual Mercantile Company have put on the market what they say is a common sense stock and poultry food at a common sense price. Theirs is a new idea. As compared with other stock foods, they say, theirs is in reality a condensed food. It is put up in tablets; take one of the boxes and crush, and mix with fifty pounds of bran or other mash, and they guarantee that you will have as good stock food as ever put on the market, and at a cost of only one cent, and not seven to fifteen cents, per pound. These people we know to be reliable. They publish a free premium catalog No. B, which they want to send each of our readers. Write for it, addressing Mutual Mercantile Co., 5915 Euclid avenue, Cleveland, O.

SEED CORN WANTED

This issue our readers will see an advertisement in the Business Exchange of one of our subscribers who wants a carload of best yellow corn. If any local union or member has a car of good corn to sell, we would advise them to write to Mr. Lewis Collins, whose address is Aurora, N. Y., and state the price delivered to Auburn, N. Y., and other necessary particulars.

Did you know that a great part of the responsibility of a grain crop depends upon the size of the kernel planted? A small, wizened grain of wheat will, in spite of all the fertilizers, rain and sunshine, produce a small stalk of wheat. This being true, is it not important that every farmer should sow only the largest grains? The way to get the large grains is to buy a good fanning mill, one that grades the grain. The Manson Campbell Co., 5 Wesson Ave., Detroit, Mich., are offering a good mill, and have just issued a book giving a lot of information every farmer should know. Send for it today.

"Columbus" THE BUGGY OF QUALITY

POTATO CROP REPORTING

Read Mr. Drake's plan of reporting on potatoes as printed in this number under heading "Notice to Secretaries and Members of the F. S. of E." We commend Mr. Drake for his thoughtfulness. His reasoning is logical and his plan carried into execution will result in much good. Now let every local union in potato-growing sections act on Mr. Drake's recommendation, and potato growers will soon know where they are at.

Growers will remember how the price of potatoes rose very high last spring. Why? Because of the small supply. But the trouble with farmers was they were not informed in advance and few of them got the benefit. This paper circulates all through the chief potato-growing sections and it is possible for members to have a knowledge of the supply in time to protect themselves for spring shipment. Just think, this information can be had by members exclusively for a dime per local union. If the supply is not more than it was a year ago, we may expect the market to advance as it did then. But, with this knowledge possessed by the members THEY WILL HOLD THEIR CROPS FOR THE ADVANCE and it will come sooner. Also if the stock is larger recommendations can be made regarding marketing and planting for 1908.

All matters extraneous to the real matter of the distribution of crops and profitable prices should be laid aside at once and attend to this business matter of the most vital importance.

1907 CROP

Yield Per Acre and Quality

The Department of Agriculture has compiled the following table showing the yields and quality of tobacco in the various districts. The yields and quality in the cigar type sections is below last year, but yields and quality of the other types are above last year:

TYPES AND DISTRICTS.	Average Yield Per Acre. Pounds.	Average Quality. Per Cent.
Cigar Types		
New England	1,520	88
New York	1,150	84
Pennsylvania	1,260	89
Ohio—Miami Valley	900	89
Wisconsin	1,100	84
Georgia and Florida	910	89
Chewing, Smoking, Snuff and Export Types		
Burley District	970	95
Dark Districts of Kentucky and Tennessee:		
Paducah	790	90
Stemming or Henderson	870	92
Upper Green River	860	90
Upper Cumberland	820	95
Clarksville and Hopkinsville	800	92
Virginia Sun Cured Dist.	750	83
Virginia Dark District	790	90
Bright Yellow:		
Old Belt—Virginia and North Carolina	640	91
New Belt—Eastern N. and S. Carolina	650	86
Maryland and Eastern Ohio Export	700	87
Periqua—Louisiana	350	85

WHERE IS THE PAY?

Farmers may think seriously of what part of their business brings the pay. Is it the long, fatiguing hours of toil, or is it the fewer and shorter hours of selling? Of course any one knows which act brings the money. Count the difference brought by different prices, and then a just conclusion may be reached as to which is the most important.

THE "THIRD POWER" BOOK

Englsh and German

This is the most valuable book ever written for farmers. Mr. Sam M. Parks, Cole Camp, Mo., writes:

I received my "Third Power" book yesterday. I realize now that I have lost very much by not having this book before. I would not part with it for any consideration. It should be read and its teachings applied by every patriotic American.

Every one of the millions of farmers who have not read it are losing as Mr. Parker did. Why will they continue to lose many dollars that they ought to have when they can get this book so cheaply. We just received the following from J. J. Schneider, Danube, Minn.

I just received the German "Third Power" book, also the English edition. I congratulate you in having the book in German, and the translation is excellent.

320 pages; cloth bound; illustrated.

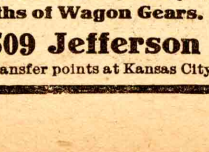
ENGLISH, 25 cents post paid; 25 or more at 15 cents not prepaid.

GERMAN, 50 cents post paid; 25 or more at 25 cents not prepaid.

English and German may be combined to get quantity price.

Address J. A. Everitt, publisher, Indianapolis, Ind.

How often you have wanted an up-to-date manure spreader, but the cost was too much for you. Mr. Galloway, out in Iowa,



got to thinking about this and concluded he could make them better and cheaper. He thought he could make a spreader that would fit on any wagon running gears, and in this way furnish a better spreader, and charge less, by letting the farmer use his own running gears. The result, Mr. Galloway says, is that he has produced a spreader with the lightest draft, with all parts that usually wear or break made of malleable iron and steel, the biggest spreader, one with an endless apron, and—but we haven't space to tell you any more about it. Write to Wm. Galloway, 509 Jefferson St., Waterloo, Iowa, for his big manure spreader book, which will give full particulars. A postal brings it. You oughtn't to put off sending for it.

The Annual Studebaker Almanac, which is always eagerly looked for by farmers, is out and being distributed. If anything, this 1908 book will be found more valuable than any of its predecessors. In addition to the regular calendar and almanac features, it contains weather forecasts, a large list of recipes and a mass of historical and entertaining matter which will make it interesting to every member of the family. Among these latter features we note plans for various seasons' partjes, population of cities, postal rates, weights of grain, maxims of Washington, interest tables, ages of animals, ages of birds, etc. Almost any local Studebaker agent can supply copies of the almanac, or send direct to Studebaker Bros., South Bend, Ind., enclosing 2c stamp to pay postage, and mention UP-TO-DATE FARMING.

Steady Work and Good Pay

For Young Men in the U. S. Navy

The Navy offers good pay, steady employment and a bright future to ambitious American men and boys. Upon enlistment, as an apprentice seaman, you are at once put on the pay roll at $16 a month and given a $60 outfit of clothes free. After four months at the training station, you go on board ship as an ordinary seaman, with pay of $19, including free board, lodging and medical attendance. In a year you may be advanced to seaman at $24 a month. After that your promotion is simply a question of how capable you are and how hard you are willing to work. In time you can be advanced to a position paying $75 or $80 per month, free of living expenses. A man who deserves promotion is probably more certain to get it in the Navy than in any other calling.

The work is healthful and not too severe, and the comfort of the enlisted men in the Navy is carefully looked after. The daily life is varied and interesting, ample time being given for recreation, amusement and instruction. The food is wholesome, and there is plenty of it.

If you are a carpenter, electrician, stenographer, drug clerk, or have any other such training, there are special opportunities in the Navy for you, and higher pay to start. The term of enlistment is four years. There are special inducements for re-enlistment, and after thirty years' service you can retire on three-fourths pay and allowances.

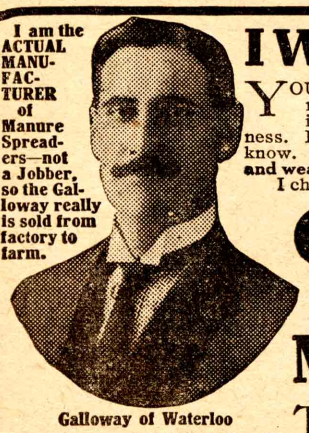
FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.



I am the ACTUAL MANUFACTURER of Manure Spreaders—not a Jobber, so the Galloway really is sold from factory to farm.

Galloway of Waterloo

I Will Give You a Real 30 Day Free Trial With the Money in YOUR Pocket

YOU don't have to pay me **or any one else** a single cent on the price of my spreader before you try it or after you try it, if it doesn't **prove** itself to be the **best** made. I am not beginning in the spreader business. I have built spreaders for years. So I know what beginners don't know. I know how to and do build the Galloway Spreader so **it can't break and wear out** where experimental spreaders are **sure** to break and wear out. I challenge any other manure spreader seller or manufacturer to put his spreader alongside of the Galloway in the hardest kind of a test. I don't care what other spreader **you** try—it won't cost you a cent to try the Galloway at the same time. So it's certainly to your advantage to try the Galloway at **no cost to you** even if you **do** put up **your** money to try any other spreader. If the Galloway doesn't beat **any** other that you try, all you have to do is return it **at my expense** and you're not out a penny and you haven't **risked** a penny.

Galloway Wagon Box Manure Spreader

I make the only 70 bu. spreader with wagon running-gear. Patented. It's something new. Worth $15 more than any other, and costs $20 less.

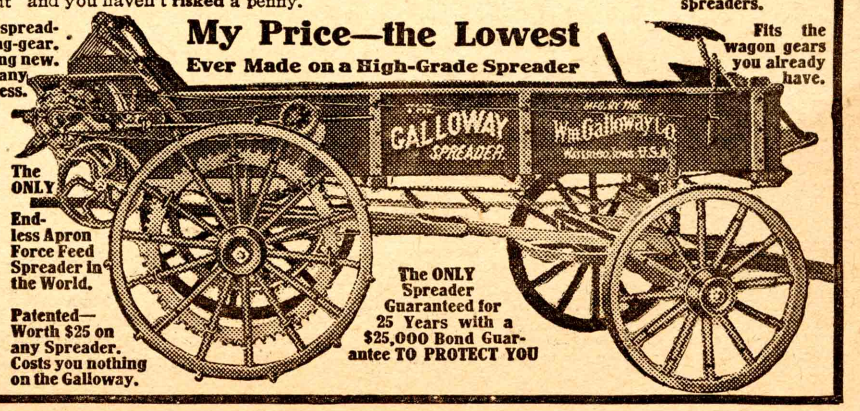
THE Galloway has the best improvements—all patented so you can't get them on other spreaders. The Galloway is

Lightest Draft—Feeds as You Wish—and is the Only Spreader that Fits Quickly and Easily to the Different Widths of Wagon Gears.

The ONLY Endless Apron Force Feed Spreader in the World.

Patented—Worth $25 on any Spreader. Costs you nothing on the Galloway.

My Price—the Lowest Ever Made on a High-Grade Spreader



The ONLY Spreader Guaranteed for 25 Years with a $25,000 Bond Guarantee TO PROTECT YOU

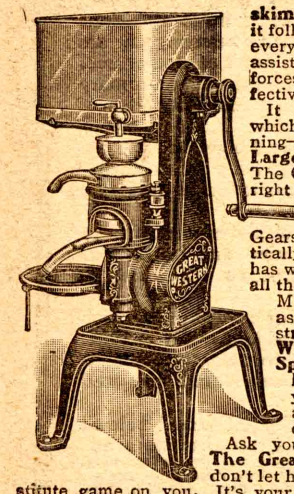
The ONLY Spreader with MALLEABLE and STEEL for ALL Parts that break and wear out in other spreaders.

Fits the wagon gears you already have.

WILLIAM GALLOWAY, 509 Jefferson St., Waterloo, Ia.

Prompt delivery to you from Waterloo Factory or transfer points at Kansas City; Minneapolis; Madison, Wis., etc.

The Great Western



skims closest because it follows most closely every law of nature, assisted by artificial forces in the most effective way.

It is Ball-bearing which means easy running—has low down Large Supply Tank—The Crank is just the right height to make the machine turn easy.

Gears run in oil—practically self-oiling and has wide base to catch all the waste.

Made as accurately as a watch and as strong as our Great Western Manure Spreader.

Increases your yield of cream and butter $15 per cow each year.

Ask your dealer about The Great Western and don't let him work any substitute game on you. It's your money you are going to spend, you should insist on having the best.

The Great Western is the world's best.

Write just these words in a letter:—"Send me 'Thrift Talks,' by a farmer, and your book No. 5B91 which tells all about the breeds, dairying, the care of milk, etc." They are free. Write now

SMITH MFG. CO., 158 Harrison St., Chicago, Ill.

ABSORBINE

will reduce inflamed, swollen Joints· Bruises, Soft Bunches, Cure Boils, Fistula, or any unhealthy sore quickly; pleasant to use; does not blister under bandage or remove the hair, and you can work the horse. $2.00 per bottle, express prepaid. Book 7-C free.

ABSORBINE, JR., for mankind, $1.00 per bottle. Cures Varicose Veins, Varicocele Hydrocele, Strains, Bruises, stops Pain and Inflammation.

THOUGHTS OF THE STOCK

"Heavy receipts of cattle — prices down," say the market reports. Perhaps the very next day: "Light shipments — prices higher and strong." And then maybe the next: "Moderate shipments — prices steady." Here is an eloquent sermon in three texts. If farmers would only control their marketing!

Farmers used to raise calves around old straw stacks. But it won't work now. That breed has run out. Buyers want good stock, and good stock is built out of good material furnished in a good way.

The farmer who don't intend to treat his young stock well and make the very best of them, ought to sell in the fall, and let someone else have the benefit of their growth and development.

Young stock fed on clover or pea hay, and kept in reasonably comfortable quarters, will maintain a steady growth all winter, and put on just about as many pounds during the three winter months as they will during the three spring months.

A little more labor in feeding will get a great deal better results from a given amount of feed than if the feed is given in the usual wasteful way. Suppose you are feeding the cattle corn and fodder, or even corn and straw. Cut the hay or fodder or straw reasonably fine, and dampen it with water; and then, having had the corn chopped, or cob and corn crushed, mix it with the dampened roughness, so that the coarse meal will stick to the cut hay, etc. See how the stock will clean it up, and how much better they will do on it! Yes, it takes work, but it pays, and industrious people will work whenever then can get pay for it.

Writes a friend: "I am having an experience. It is with a beautiful young cow that sucks herself. And she is sucking herself to death. The milk she gets takes more nourishment from her than it returns, with all her feed thrown in; she gets poorer all the time. She is harder to wean than any calf I ever tried. I have tried a calf muzzle on her—she gets it off her nose; a pole fastened to a halter and a girth around her middle—she gets it twisted to one side and sucks. I have not tried a spindle, nor splitting her tongue—these are too cruel. But I am going to try a frame around her neck. I don't care for her milk, but she won't let herself go dry. Did any of your readers ever have just such an experience?"

What were your profits last year on live stock? Hadn't thought of that? This is a good time to balance the books, if not already done. No books to balance? Well, we live in a business age now, a commercial age, the papers call it. No one can know whether he is prospering unless he keeps books and strikes a balance once in a while. At all events, you could have made more if you had had steady prices; and that is something farmers in all conscience are entitled to. Every one ought to do all in his power to secure them. They can be had by co-operation in controlled marketing.

The editor of the National Live Stock Bulletin expresses surprise at the amount of inferior stock he sees wherever he goes. He need not. Small farmers who are constantly on the jump to "produce more," as the farm papers tell them to do, sacrifice quality to quantity, and while they are pushing their acres to make all the bushels and tons possible, they let their over supply of stock hustle for a living on a few bare acres, and the result is the poor stock that surprises our editorial friend. If farmers were taught "less in quantity, better in quality, more remunerative in price and steadier markets," better stock would crowd out the scrubs. But if a farmer must "take his chances" on price, it is just about as well with a scrub as with a thoroughbred. So let us line up to control the marketing and raise thoroughbreds.

It is encouraging to note that the milk inspectors of some of the cities are getting after the buyers and deliveries. Most efforts to secure pure milk have been directed against the dairy people or producers, whereas nine-tenths of the "cussedness" found in the milk gets into it after it leaves the producers. The devil is constantly setting traps for the wrong bird.

A lean and bony, rough-haired horse never looks good to us, but one frequently sees such on small farms, and in harness in the smaller towns. It advertises the owner's cruelty and bad management. If the horse has not paid for better treatment, turn him loose; maybe some other owner will find greater value in him.

Melissa Beam
Saved all the cream,
And churned it into butter;
Then said to Kate,
Read UP-TO-DATE,
We'll sell our butter better.

CONTROLLED MARKETING FOR STOCK MEN

Recounting the gains in price secured by the Society of Equity for the producers of wheat, corn, cotton, fruit, tobacco, etc., the National Live Stock Bulletin, in a lengthy and well-written editorial urges the growers of live stock to take the same action the growers of crops have taken—to organize for controlled marketing.

We can heartily indorse the recommendation, for our experience in the organization of farmers on the Equity plan, and the results we have seen follow it, fully convince us that similar effort on the part of the growers of live stock would add immensely to the profit and attractiveness of the business. And that, too, without increasing the burdens of the consumers of meats. It is a fact beyond dispute that when the making of both buying and selling prices is conferred upon any one party, the power is given to that party to tax without limit both the producers and consumers of the articles so priced. One is taxed by making the price excessively high, and the other by making it ruinously low.

That the prices paid for live stock are determined in the same place and by the same parties who make the price to be paid for meats, is a fact no longer questioned. It is not necessary to argue that there is a beef trust, or that the packers are combined; it is certain that in the markets where live stock is sold there is very little competitive bidding, and prices rise and fall from day to day as the needs of the packers for raw material indicate.

It is not the fault of the packers that this power is exercised, nor that they take advantage of it to squeeze the growers. The fault is with the shippers. Some days there is a tremendous excess of stock on the market; some days there is an annoying scarcity; every day there is an irregularity and uncertainty. It is a false imputation of ignorance to say that live stock growers and live stock shippers cannot know the needs of the market, and then it is an equally false assumption to conclude that shipments cannot be controlled so as to steadily meet the normal requirements of the trade. Our acquaintance with live stock men and their achievements in progress and improvement establish the fact that they are as intelligent as any other class of our people; and we know they could add to their other accomplishments the business ability to thus control shipments.

It only requires organization and co-operation, a matter requiring no greater effort than has been put forth in things of much less importance. And the organization effected, it at once becomes the instrument for the accomplishment of almost all other

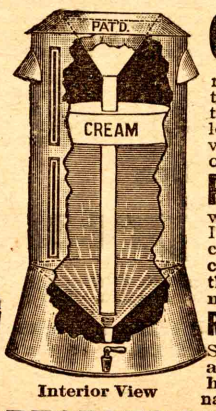
SAMPLE CREAM SEPARATORS FREE



Interior View

Owners of Cows

We offer you a Sample Cream Separator that actually separates the cream from the milk by an automatic process that requires no ice, no chemicals, and no extra labor or machinery. All thrifty housewives realize the waste of butter fat unavoidably lost in the skimmed milk under a pan or crock method. Besides this money loss there is the back-breaking drudgery of washing pans and milk vessels, and the loss of valuable time that can be profitably devoted to other important duties. Now a

PEOPLES AUTOMATIC CREAM SEPARATOR

will stop this extravagant waste of money, cream and valuable time. It will increase your present yield of cream from 15 per cent to 20 per cent. It will give you the cream cool, sweet and fresh, directly after it comes from the cow, unaffected by chemical action. It will improve the quantity and quality of your butter all through the year. It means more cream, more butter, less time. Result: More profit.

REMEMBER It won't cost you a cent to take advantage of our free advertising offer as we will send one Sample Cream Separator into each community where we have no agent. Write today as only one person in each locality where we have no agent may have the benefit of this free offer. Send us your name, and the name of your nearest freight office. Address—

PEOPLES SUPPLY CO., Dept. F, Kansas City, Mo.

things that have had the attention of the stockman.

To prove that buying and selling prices are made arbitrarily and by the same power, take the prices that prevailed in the Chicago market on a day near the last of November, 1906 and 1907. We take that day because we happen to have the prices before us; any other day, and any other two years, would prove the same thing:

PRICE PAID FOR LIVE STOCK NOVEMBER 29, 1906

Steers, choice fancy	$5.90@$6.40
Steers, medium good	4.60@ 5.35
Steers, average	6.34
Hogs, bulk of sales	6.20@ 6.50
Hogs, average	6.34
Lambs, prime native	7.50
Sheep, choice native	4.75

RETAIL PRICES OF MEATS NOVEMBER 29, 1906

	Per lb.
Steak, porterhouse	$0.25
Steak, sirloin	.16
Steak, round	.11
Rib roast	.15
Pork, loin	.12½
Ham	.14
Lamb chops	.20
Mutton chops	.12½

PRICES PAID FOR LIVE STOCK NOV. 29, 1907

Steers, choice fancy	$4.90@$6.30
Steers, medium good	4.15@ 4.85
Steers, average	4.75
Hogs, bulk of sales	3.90@ 4.05
Hogs, average	3.96
Lambs, prime native	6.15
Sheep, choice native	4.00

RETAIL PRICES OF MEATS NOVEMBER 29, 1907

Steak, porterhouse	$0.20	@$0.22
Steak, sirloin	.16	@ .18
Steak, round	.12	@ .12½
Rib roast	.16	@ .18
Pork, loin	.12½	
Ham	.12½	@ .13
Lamb chops	.20	@ .22
Mutton chops	.16	@ .18

The margin between these prices is significant. The highest price paid for beef stock on the day given in 1906 was $6.40 per hundred pounds; the price charged for highest priced beef (porterhouse steak) was 25 cents per pound, or $25 per hundred pounds. The highest price paid for choicest beef stock on the day given in 1907 was $6.30 per hundred pounds, with a very wide margin in the same grade, dropping as low as $4.90. The highest price charged for porterhouse steak on the same day was 22 cents per pound, or $22 per hundred pounds, which shows about the same margin between buying and selling price.

It is contended that the buying price is for live weight, and much is bought that does not make meat. Very true, but nothing is bought which does not sell, and the offal is said to pay for handling the stock and converting it into meat. It may also be said that the prices of meat given are the retail prices, whereas the buyers of live stock sell at wholesale Grant it all, for sake of argument, and yet there is no equitable room for a margin between the prices of from three hundred to four hundred per cent Manufacturing does not enter into the business; it is simply handling, butchering and dressing. In some cases there is curing also, but prices for cured stuff are higher.

A comparison of these prices show another fact in proof that they are arbitrarily made. The prices paid for live stock in November, 1907, are much below those paid for the same grades in November, 1906, yet the prices charged for the finished product in 1907 are almost invariably above those charged for the same goods in 1906, the most marked exception being the aristocratic porterhouse steak. The "poor man's meat" throughout costs more than it did the year before, though the raw material of which it was made cost much less. The financial "panic" of October gave the price-making power an excuse to knock down the price paid the stockmen, but it did not affect the pri e charged the consumer—the "wave of prosperity" rolled higher and higher for the price-makers.

In all this there is not only food for thought for the stockmen, but there is certainly an incontrovertible argument in favor of their organizing and co-operating so as to secure stead prices by controlling the marketing on the Equity plan. The Live Stock Bulletin is right; live stock men should organize and co-operate, not in petty local organizations, but in a national association to cover the entire live stock interest.

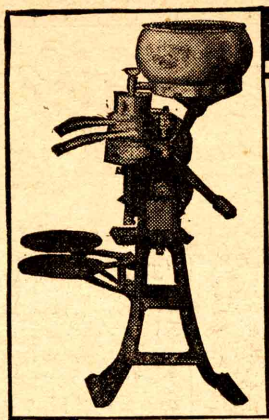
ANGORA GOATS IN THE UNITED STATES

Indications are that the breeding of angora goats is to become an important industry in the United States. The demand for mohair, the wool of the angora goat, is much greater in this country than the supply. We have not before us the figures of the importations for the last two years, but in 1901 there was imported 739,419 pounds; in 1902, 793,649 pounds; in 1903, 1,243,749 pounds; in 1904, 2,231,340 pounds; and in 1905, 2,625,575 pounds. This shows a steady and quite remarkable increase not only in the demand, but in the deficit in the home-grown article, and it may well encourage an increase in the production of angoras.

These animals are quite hardy in almost all portions of the United States, and soon adapt themselves to any climate. They are easily kept and do well where most other animals would starve. They are actually proving useful for what they consume in what is known as the stumpage districts of Michigan and Wisconsin. These are lands that have been closely cut over for lumber or wood pulp, and have grown up into brushy wastes. Pasturing angoras upon them is killing out the brush, and they are growing up in valuable pasture grasses and clovers. They also do well in the Rocky Mountain regions of Montana, Idaho, Wyoming and Colorado, as well as in Texas and the Southwest. The distribution of angoras throughout the country is being rapidly extended, and importations have greatly increased.

The prevalent prices of American mohair is also increasing, and the markets for it are extending. Mohair of six months growth now commands 35 cents per pound in Texas, while in the North full year's growth brings from 36 to 40 cents per pound. Angora mutton is also coming into demand. More than 58,000 angoras were slaughtered for mutton in Kansas City last year, and sold at prices about equal the price of mutton sheep.

Angora Goats are proving very profitable animals to farmers who raise them. Learn more about them. Write for complete catalog from the largest American breeders, Northern Angora Goat and Live Stock Co., Dept. B, Helena, Mont.



Just One Fault With The New

DE LAVAL SEPARATORS

At every conference and convention of the De Laval traveling representatives and local agents during December and January there has been just one criticism made in connection with the new 1908 machines and the policy of the Company in respect to them, and that has been that the Company's advertisements, catalogs and circulars DO NOT BEGIN TO CLAIM NEARLY ENOUGH FOR THE NEW MACHINES, and that if their advantages and many features of superiority could only be brought home to every intending buyer of a cream separator there could scarcely be a single buyer who would not prefer a De Laval machine and find it actually cheaper and wiser in every way to purchase one of them in preference to anything else.

The general concensus of opinion at every meeting has been: "CLAIM MORE FOR THE MACHINES and try harder to make intending buyers really appreciate THEIR SUPREMACY IN EVERY WAY in the face of the claims of all kinds made for would-be competing machines, which, if words and means can only be found to accomplish it, must result in the new De Laval machines SIMPLY SWEEPING THE FIELD IN 1908, provided enough of them can be produced to meet the demand."

A new catalog illustrating the new machines is to be had for the asking.

GEORGE HARVEY, 120 Clinton Street, Desk 110 CHICAGO

MENTION UP-TO-DATE FARMING WHEN YOU WRITE ADVERTISERS

$4.00 to $8.00 GAIN PER ACRE

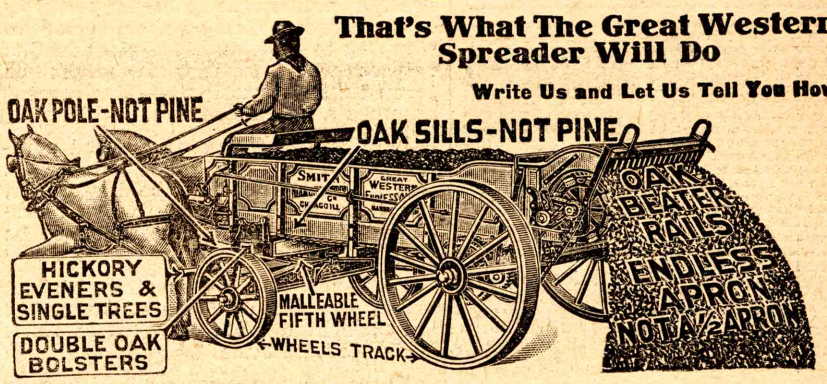
$2,352,700,000.00

Is the value of Manure in the U. S. per year. That's what United States Bulletin No. 192 says; also that a conservative estimate of loss by handling is about ⅓—$784,233,000 —per Annum.

We publish a book telling you how to stop the loss.

That's What The Great Western Spreader Will Do

Write Us and Let Us Tell You How



The Great Western Endless Apron Spreader

Spreads all kinds of manure. Makes the same amount of manure go three times as far and produces better results than hand spreading. Has a graduating lever and can be regulated while in motion to spread thick or thin.

Hood and End Gate keeps the manure away from the beater while loading. Prevents choking and throwing out bunches when starting. Acts as a wind shield when spreading. The rake forms a hopper. Holds all hard chunks in contact with beater until more thoroughly pulverized.

Endless Apron is one continuous apron, (not a half apron,) therefore, always ready to load. It has no reverse gears, springs, catches or contraptions to break or get out of order. Spreads even from start to finish.

Light Draft because the load is nearly equally balanced on front and rear axles. The team is as near the load as it can be worked. Wheels track. Beater shaft runs on ball and socket bearings; therefore, no friction. Beater is twenty-three inches in diameter.

Seat Turns over out of the way when loading. Machine turns in its own length.

Simplicity. There are only two levers on the machine. One raises the hood, locks it, and throws the machine into gear at the same time. The other changes the feed to spread thick or thin. Makes it so simple that a boy who can drive a team can handle it.

Has Oak Pole, Sills, Stakes, Axles, Beater Rails, Hood Rails, Rake Head, Apron Supports, and Double Oak Bolsters.

Don't buy a machine with any of these pieces made of pine.

You know oak is best. Why buy a machine that's made of cheap material?

Don't Let any one make you think that pine is as good as oak.

The GREAT WESTERN will cost you just a little more than any other spreader, but for every dollar extra that it costs you, you will get $5.00 in actual wear and value. The difference between the price of a cheap machine and the **GREAT WESTERN** will be saved in repairs alone, in a short time, besides, the saving and annoyance in break downs.

We Issue a Book that will tell you when, how and where to spread manure; how to make from $4.00 to $8.00 more per acre from your farm than ever before. Write just these words on a postal card or in a letter: "Send me your book, 'Practical Experience with Barnyard Manures' and catalog No. 5A3." They will be mailed to you **FREE.** Do it now —before you haul your manure or prepare for another crop.

SMITH MANUFACTURING CO., 158 Harrison Street, Chicago, Illinois

INCUBATOR FREE

To the person making the best hatch (largest per cent) with an incubator before May 1, 1908, we will refund the cost of his machine. This offer is made with the following conditions:

1. *Incubator must be bought after December 1, 1907.*
2. *It must have been advertised in Up-to-Date Farming.*
3. *Contestant must mention this paper in writing the advertiser for catalog and price.*
4. *He (or she) must be able to substantiate the report made.*
5. *Report must reach us on or before May 1, 1908.*

This is an opportunity for some up-to-date subscriber to get his machine free. It makes no difference whether it be large or small.

Go after this to win!

"Cook-a-doodle-do-o-o." This is what the rooster said, and it meant if my owner co-operates, I will too.

BROILERS AND ROASTERS

Quick growth makes tender meat.

With proper care thirty-five to forty young can be raised from a single pair of guineas in a season.

Guineas should be mated unrelated and in pairs.

J. F. Fetter says that if new blood is to be introduced in guineas, the mating should be made in the fall or early winter, previous to the breeding season, for if mated too late in the season the eggs are not apt to be properly fertilized. They must have their choice about such matters.

Birds intended to be fattened should be caught up in the morning before feeding and placed in the fattening pen, and if they appear restless, fast them for say two to ten hours; this will increase the appetite, and after a good meal they will settle down and do well in their new quarters.

In France the birds are given a few mouthfuls of milk before killing, to whiten the flesh, it is said.

In killing, the French operator punctures the brain and severs an artery in the mouth. This method is similar to the American plan except that a pair of scissors are used instead of a knife. When the blood has ceased to flow, the interior of the hen's mouth is washed out with vinegar.

The French do not approve of the English method of killing poultry which is a veritable decapitation) for the reason that the flesh of the bird is not considered so white nor so delicate in point of flavor as when French ways are resorted to.

Great care must be taken to allow dressed poultry to become perfectly cold before packing them prior to shipping to market. A neglect in this respect will cause what might be termed "fermentation" — the carcass assumes a greenish tinge.

It is safe in wrapping dressed poultry in white paper when shipping a short distance during cold weather, but it is not advisable to use newspapers, as the print is claimed to be unquestionably most dangerous.

Soft roasters bring the highest prices about the middle of June, but they are high from the first of April to the last of June.

There is but one form of chicken on the market that brings a higher price per pound than the soft roaster, and that is the early broiler.

A. C. Smith says that probably more than 90 per cent of all the eggs from which prime roasters are hatched in New England, come from flocks not owned by those who raise the chickens.

DISEASES — THEIR REMEDY AND PREVENTION

Do not forget to provide charcoal.

Charcoal is an excellent corrective for indigestion.

A piece of charcoal in the drinking water will aid in keeping the water pure.

On the first appearance of sore throat, it is recommended to swab out the mouth and throat with a solution of copperas. Follow this with a two-grain quinine pill. Keep the fowl in a warm, dry place, and feed soft, stimulating food.

Bumble-foot can be distinguished from gout by the fact that it always appears in the ball of the foot, and that at first it is a soft swelling which, by degrees, becomes hard and permanent.

English authorities claim that tuberculosis or scrofula (which is the same thing to all intents and purposes) is the predisposing cause of bumble-foot, but the immediate cause is usually some slight injury.

The bird may tread upon a piece of broken glass, or it may catch the ball of its foot against a nail in the perch, and tenderness having been started in the ball of the foot, the disposition to tuberculosis deposit will then reveal itself, and so bumble-foot will be formed.

The English cure for bumble-foot is to first poultice it well, then make an incision, and try to remove the core. This having been done, syringe the place with some warm antiseptic, and annoint it with a little carbolized vaseline or some other suitable ointment; also give tonic medicine, and take care that the bird is not allowed to perch, but that it is made to sleep on straw until the foot is quite well again.

A recommended cure for bowel trouble is to take a teaspoonful of ground cinnamon and pour a pint of boiling water on it in a vessel, and let stand until almost cold; then add three quarts of cold water, and put where the fowls can get it to drink, giving them nothing else to drink. Bad cases should be given fresh every day till they are better; then two or three times a week.

For sorehead in poultry, blue-stone water hac been found excellent. Use a tablespoonful of powdered blue-stone to a quart of water and bathe the parts thoroughly with this once or twice.

Here is another remedy for diarrhoea: Take an old burnt kitchen vessel and place on a hot stove empty. Let it get very hot and pour in sweet milk and let both remain on the stove long enough for the milk to thoroughly scorch. Feed this to the fowels, young or old, in clean vessels. You need not remove all water from the chickens when giving this remedy, but do not allow them much, as they may refuse to drink enough of the scorched milk — if given plenty of water — to cure the bowel disease.

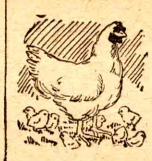
Have you seen the Business Exchange this issue? Some dandy bargains there.

A most interesting seed catalog is that just issued by L. L. May & Co., St. Paul, Minn. It contains a large list of the very best seeds, and in addition is chuck full of valuable information of use to the gardeners. Every reader ought to secure it before sending off his order for the season's supply. It is entirely free if mention is made that the notice of it was seen in UP-TO-DATE FARMING.

Mr. May also writes us that he has originated a new tomato which he says "puts it all over" the others; that it matures ten days sooner than the majority, and that the fruit is large, smooth, bright red, fine flavor, and entirely free from a hard core; moreover, he says it bears continuously throughout the season. We would advise that you look it up. Write Mr. May at the above address, and mention UP-TO-DATE.

IT WILL DO THE SAME FOR YOU

Chas. E. West, Goteba, Okla., writes under date of Nov. 15, 1907: "I purchased your Absorbine from the druggist and applied it according to directions for bog spavin and had grand success. One bottle was enough to do the work. I can give high praise for your Absorbine and shall recommend it above all others." If you have a lame or blemished horse in your stable, get a bottle of Absorbine today. Absorbine removes bunches, kills pain and cures lameness without blistering or removing the hair; horse can be used. Mild and positive in its action and cures to stay cured. Express prepaid upon receipt of $2. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.



The Belle City Incubator Co., Box 79, Racine, Wis., is issuing a most interesting book for poultrymen, and what is unusual, they are distributing it free. It is an unusual offer and you should write for it today.

The Queen Book for 1908 should be in every poultry raiser's house for the good it will do him. It contains 100 large, well-written and illustrated pages. It will be helpful to the expert and novice as well. Brim full of good matter. If you want a copy sent free, postpaid, write to the Queen Incubator Co., Box 19, Lincoln, Neb., and they will send you one.

Who is going to get that incubator free? UP-TO-DATE FARMING has published an offer to pay for the incubator bought from one of our advertisers this year and whose owner makes the best hatch. Get the incubator catalogs and look up our proposition in recent issues.

ELKHART CARRIAGE & HARNESS MFG. CO., ELKHART, INDIANA

TURKEYS

It looks as if the turkey crop is annually increasing.

An English authority says there is a great art in dressing turkeys for market. The feathers down over the breast must be pulled out one at a time, or a piece of the breast may follow, thus spoil the general appearance of the bird.

It is a bad policy to try to pull out a broken feather with the fingers, or even with the aid of the back of a knife; in both instances it leads to sore fingers, which might have been prevented by the use of a pair of flat-nose pliers, which are also very useful in removing the wing feathers.

The English plan of dresing is to leave the feathers halfway down the neck, as well as those in the wings, and those forming a fan in the tail. A tuft is also left on each side of the back, when the white skin will show up to perfection. The legs are never left sprawling, but a piece of string is brought between the claws and the feet bent back into the hollow formed by the thighs. They are then forced inwards against the breast, thus forcing the meat up on to the breast bone.

Further instructions on the above plan is: Turn over, and tie the string tightly behind the back. Turn back, put the wings in position, see that the pressure on the breast is equalized, and hang up in a fairly cool place. Do this by means of a loop passed very tightly round the neck, so as to compress the throat, and by this means shrinkage will be reduced.

Turkeys frequently die because they have been inbred too closely, without careful selection of breeding stock. In such cases death comes from a general constitutional weakness.

To get the digestive organs in order again, Miller Purvis recommends mixing a level teaspoonful of Epsom salts in middlings, wet enough so it can be made up into pills about the size of the end of the thumb. Give this quantity to five of the sick birds, once a day for three days. As a tonic give each bird a one-grain capsule of quinine every other day for a week.

Keep the sick birds in a good house, where they can have sunshine and protection from cold winds.

R. L. Adams says turkeys are not hard to raise if given reasonable care and attention, and by fall one will have a nice flock ready for market. Nothing gives a tone and dignity to the place as a flock of these gaudy birds, in addition to their commercial value.

It is a question if the turkey will remain the emblem of this country in the future, according to an exchange who thinks it should be the good old hen. We doubt, however, if this noble bird will ever be removed from its exalted position. The custom of having goose at Christmas-tide is growing, and in this particular the turkey may lose her laurels, but she will save her neck.

GEESE

W. R. Gilbert says: "The egg is only suitable for hatching. It has a strong flavor and even in pudding is not appreciated. It used to be thought something of a delicacy, but our forefathers were fonder of strong flavors than we are today." We take exception to that. The food flavors the egg. On the farm of the writer, the geese are fed pure grain, both in a ground and in a whole state, with a large percentage of meat scraps. They have good pasture, and cannot find such weeds as will produce a strong flavor. The consequence is that the eggs are of as sweet a flavor as those laid by hens. They are used in various ways in the household of the writer.

The older the gander becomes the more he developes a temper, and unless very kindly treated is apt to become dangerous. Children must never be allowed to tease him.

Geese feathers are prepared by exposing them to the sunshine or in a stove until perfectly dry, and then beating them to remove dust and loose dirt. When carelessly collected and dirty, they may be cleaned with lime water; or, still better, with a weak solution of carbonate of soda, or with water containing a little solution of chloride of lime; after which they are rinsed in clean water, and dried as before. Old feathers are purified and cleansed in the same way.

Goose feathers are prepared by exif they are given access to a good meadow they are almost able to support themselves, which represents a very considerable saving in the food bill, and thus a greater profit.

FOOD AND FEEDING

Regularity in feeding is essential.

An easily prepared chick food: Six pounds cracked wheat; two pounds finely cracked corn; one pound rolled oats, or pin-head oatmeal; one pound millet seed; half-pound broken rice; two pounds fine granulated beef scrap; half-pound granulated bone; six pounds pearl frit.

No more food should be fed during the winter than in summer, but the winter bill of fare must consist of more heating food.

Corn in winter and oats in summer is the standard that some poultrymen fix for the quality of food.

Warren does not believe in having a pen abnormally fat nor pathetically poor.

If you will go to the trouble of examining the crops of the fowls at night, when the birds are on the roost, you can pretty well determine whether you are giving enough or not.

If the crop is distended and hard, you are feeding too much; if nearly empty, you are giving too little. The grain in the crop should fill it comfortably full, yet the skin ought not to be as tight as a drum, but rather loose and yielding.

During the winter the fowls on the farm of the writer are fed at about three o'clock in the afternoon for the last meal of the day. This gives them ample time to scratch among the litter to recover every grain, and the exercise is worth almost as much to them as the grain.

An authority claims that a flock of hens that lay well in winter is sure to have sufficient appetite to eat with a keen relish more than a maintenance ration. This implies not far from four ounces per hen, of a dry grain mixture, or its equivalent, but many hens will be found that will not eat much more than half that amount.

It is claimed that a chicken will add in ten weeks 1,500 per cent to its weight, while the calf weighing fifty to seventy-five pounds at bi th takes three years to reach a matured weight of nine hundred to twelve hundred pounds, and a man may in fifteen to eighteen years multiply his birth rate by twenty. This goes to show what a remarkable work is going on in the body of the growing chick.

The weight of a chick is not all flesh but largely made up of bone- structure that calls for mineral matter for its development. Enough of this mineral matter cannot be secured from the grains, as it is not contained in them in a sufficiently high percentage, so that the use of sand, oyster shell, etc., must be given to supply the deficiency. If sufficient mineral matter is not given, the bones will be large, but soft and weak, resulting in lameness and deformity, or else the growth of the bird will be slow.

EGGS AND EGG FARMING

The male bird exerts no appreciable influence on the number of eggs produced.

It will be noticed that steady laying hens generally lay in the same nest during the entire laying period.

An anonymous poultry writer says that he has noticed that the heaviest and most consistent layers are the early layers; that his heaviest layers produced the strongest and quickest growing youngsters; that heavy laying hens produced eighty per cent more chicks than ordinary layers, their eggs being universally fertile. He also thinks that egg production combined with fancy points, demands terrific culling; that 200-egg daughters of 200-egg hens are but the products of breeding and trap nests; that the highest scoring hen he ever owned never laid an egg until she was eighteen months old.

An exchange says that the tenth egg laid by a hen will be the largest laid by her during the year. It is wonderful what information some of our exchanges can stir up.

Here is another piece of exchange logic: "Eggs laid during the twelve days after Christmas should be carefully preserved, for if placed under a setting hen they will produce beautiful, large, fat chickens."

And here is still another: "If you put eggs under a hen when the wind is in the east, it will take two more days than usual for the eggs to hatch."

"It is unlucky to put eggs under a hen before sundown, for if you do, some of the chicks will be blind." So say the Arabs.

The hen gathers, mixes and puts together in organic form 650 grains of water, 120 grains of fat, 102 grains of lime, 80 grains of albume., 26 grains of sugar, and 10 grains of ash.

In shipping eggs, guarantee freshness, and market at least twice a week.

Never send a dirty egg to market. Carefully wipe off the egg with a moist rag.

Strictly fresh eggs carry with them their own recommendation, and require no argument to prove their superiority.

In gathering eggs, the poultryman should at once remove them to a dry, sweet cellar, where the temperature remains pretty even. There should be no odors near the eggs, as they quickly absorb all impurities. It is remarkable how quickly an egg can become tainted through the shell.

$7.85 FOR OUR 100 EGG HATCHING WONDER
Delivered
A substantial practical incubator, 26 inches long, 21 inches wide, 14 inches high. Triple walls, hot water heat, aluminum coated tank, automatic regulator, nursery. With brooder $11.45. UP-TO-DATE FARMING
Indianapolis, Ind.

See "Department of Elevators and Warehouses" for instructions how to make a good start to control this year's crop.

Cream's a question for the dairy,
But orchard and garden give the fruit;
The home that gets the two together,
For food need not with kings dispute.
J. P. S.

WINTER SUGGESTIONS

While the orchard trees are sleeping is a good time to relieve them of every unnecessary burden. Nature will wake them up and set them to work in a few days. Like humans, they will do better if they can concentrate their efforts. Take from them their superabundance of brush; it is an unnecessary load for them to carry.

Orchards that have been heavily pruned this winter must be watched during the early spring or sprouting season. The first act of the trees, like a depleted army, is to call out the reserve—to awaken the dormant buds and throw out innumerable sprouts to absorb the material the cut-away branches would have taken. These sprouts should be rubbed off as fast as they appear, until the extra flow of sap is diverted to the remaining branches. Then the object of the pruning will have been accomplished.

There are at least two reasons why young trees produce larger and finer fruit than old ones. The trees are in newer soil so far as the production of such trees is concerned, and they are better fed; and they have not so many branches with which to divide the food they draw from the earth. Don't allow the trees to grow too many branches, and keep the soil penetrated by the feeders well supplied with tree food.

A reader who mulched his trees with raw stable manure, found that the following spring the trees made a luxuriant growth of leaves, but he could not see that the fruit was improved. Perhaps not. Raw stable manure contains a great deal of nitrogen, a most invigorating plant food, but it contributes mainly to the growth of leaves; the fruit needs phosphorous and potash. After the first year the result will be more evenly divided between foliage and fruit.

One of the most labor-saving jobs is to keep the weed seeds out of the garden. The practice of waiting until spring to clean up the garden is a bad one, for weed seeds will mature after cultivation ceases, and during the winter these seeds plant themselves to make trouble the next season.

A pippin blushed upon the plate,
While peaches took a bath in cream,
And near them lay good UP-TO-DATE.
Here's food—a mind and body dream.
J. P. S.

THE KINGLY TULIP

It has not been so very long ago that the tulip was a most aristocratic flower, and was grown only by kings and nobles and the very wealthy. During the period of the "tulip craze," single specimens of new and showy varieties are said to have sold for as high as $5,000. Now it is one of our commonest flowers, but it is no less a beauty, and it has lost none of its kingly bearing. It is most prized now, perhaps, especially in the Northern country, for its appearing so early in the spring — it is our first flower to laugh at the retreating winter, and following so close upon the heels of the snow and ice makes it a general favorite.

The tulip is hardy and very easily grown. The usual way, and the best, except where the winter is exceedingly severe, is to plant the bulbs (Dutch bulbs they are generally called) in well-prepared beds in October or November. The beds should be protected by some sort of close mulch, which should be removed as soon as the earliest spring sun begins to warm things with even a remote promise of returning life. Such beds, with the tulips planted in circles, or stars, or other fancy shapes, afford the first and brightest floral attraction. And by the time their beauty is exhausted, they may be removed and the beds are ready for geraniums or other summer flowers.

But tulip bulbs may be planted any time in the winter when the ground may be worked, though so planted they need immediate and better protection than if planted in the fall. They may be planted in rich, moist soil in beds, or boxes, or pots, in the cellar, and transferred very early to the open ground. The bulbs multiply themselves, and once getting a supply, it is easy to keep a supply of your own. But the bulbs are now quite inexpensive, and so many new and striking varieties are coming out every season, it is better, perhaps, to get new bulbs every autumn.

Catalog free.

L. J. Farmer, Box 835, Pulaski, N. Y.

THE OAT WONDER

Emperor William Oats.

Are you aware, Mr. Farmer, that Germany grows more oats than nearly the whole of Europe put together, outside of Scotland, England and Russia? That Germany, a country smaller than Texas, piles up more bushels of oats than Italy, France, Sweden, Norway, Spain, Austria, Holland and Denmark together?

Why is this? It is not because Germany has better land or more careful farmers, but because Germany sows only heavy yielding varieties. When we were in Germany several years ago we obtained this oat in one of the rich valleys of the Rhine. We saw it growing there. It completely captivated us. We brought it to America, distributed it for trial in twenty different states in the union, and everywhere it has proven itself peer of any grown the past season.

Our Emperor William Oat is a wonder, almost as wonderful as the Emperor himself, and no farmer will want to be without it. In good oat years it will weigh from 38 to 48 pounds per measured bushel. Catalog tells. Trial package, 6 cents.

Macaroni Wheat No. 5639.

The purest, best, finest Macaroni Wheat on earth. It is largely used by millers in mixing. It would be ashamed of itself to return less than 40, 50 or 60 bushels per acre on any farm in America.

Silver King Barley.

Out of sixty sorts tested at the Wisconsin Agricultural College, Salzer's Silver King lead all in yields. That's a record we are proud of. Catalog tells.

Big Seed and Plant Book Free.

We publish the most original seed catalog in America. It bristles with seed thoughts. Gladly mailed to intending buyers FREE.

Or, if you will remit 10cts. for postage, we will send you a remarkable lot of farm seed samples, including **Billion Dollar Grass,** the twelve-ton hay wonder; **Esparsette,** the dry soil luxuriator; **Speltz,** the 80-bushel cereal prodigy; **Silver King Barley,** yielding in Manitowoc County, Wisconsin, 173 bushels per acre; **Victoria Rape, Bromus Inermis, Salzer's Northern Grown Alfalfa,** etc., etc., etc.; and if you send 14cts. we will add a package of new farm seeds, never before seen by you; or send 20cts. and we will add a package of Emperor William Oats.

JOHN A. SALZER SEED CO. LA CROSSE WIS.

WHAT ABOUT STRAWBERRIES?

The strawberry is a native of the Middle West and of all the Central Mississippi Valley States, and there is no more delicious berry, nor one more universally enjoyed by humankind. Dr. Talmage once said: "I suppose God could have made a better berry than the strawberry, but I suppose He never did."

And yet the strawberry is more seldom found in the farmer's garden and on the farmer's table than any other of the delicious fruits. One of the principal reasons for this is the persistent growth of weeds in the fertile soil of the regions we have named, and weeds and strawberries do not get along well together. The first care is to keep the strawberry patch as free as possible from weed seeds. This makes thorough and careful cultivation necessary. If it is desired that runners shall grow to set new plants, pull the weeds by hand as fast as they appear above the leaves of the plants. Of course this requires work and vigilance, but it is the price of an abundant yield of this luscious fruit.

Freezing and thawing in winter is a great enemy of the strawberry plant, but it is one that may be easily overcome. Mulching does it. It is best not to mulch too early, but it should be done before there is severe freezing. The material does not matter so much, provided it is positively free from weed seeds. One of the best things to mulch with, perhaps, where it can be obtained, is marsh hay; but straw, forest leaves, or any other material that will lie close and not blow away, and, first of all, is free from seeds, is good. In the spring opening up around the plants so they may grow up through the mulch is better than cleaning the mulch entirely away. The mulch, if thick enough, will smother out the weeds between the rows and plants, and make cultivation unnecessary. The fruit also growing above the mulch, will be cleaner and brighter, and we think berries so grown are larger, as the mulch keeps the ground moist and in better condition for the plants to grow. But the fruit may not ripen quite so early.

FRUIT TREES CHEAP AS $5 per 100 Freight Paid. Catalog Free.
RELIANCE NURSERY, Box D., Geneva, New York

TUBEROSES

Next to tulips (and some prefer them) are tuberoses, but since they come at different times they cannot well be considered rivals. The best time to plant tuberoses almost anywhere in the central part of the temperate zone, is in June, though they may follow the tulips in the tulip beds. They are very hardy and require but little coaxing to induce them to do their best. Give them rich, moist, mellow earth and they will do the rest.

If you haven't much fruit on your farm, you are not getting all out of farm life that is your due. Nothing pays so well on the investment as an orchard. One of our advertisers writes and says that they are now making a special offer in the way of fruit trees, offering sixty of the latest varieties of fruits of all kinds, including apples, cherries, plums, pears, peaches, quinces, neckpar-

ines, grapes, apricots and berries very cheap. Also they make extra special offers if order is sent within 15 and 30 days. We would advise that you look up their ad in February 15 issue and write them at once. Address the Iowa Nursery Co., Dept. 507, Des Moines, Iowa.

We have had many inquiries about the Great Western Manure Spreader. We are glad to print the following letter from a user of this machine. This, we believe, is the best answer we can give of its merits.

Smith Mfg. Co.,
Chicago, Ill.

Gentlemen—I received one of your No. 4 Great Western Endless Apron Manure Spreaders in September, 1907. I brought it home from the freight depot the day before we threshed, and the day we threshed one of our neighbors, who has a ——— 35-bushel spreader, asked what we were going to do with such a big manure spreader; said that he could hardly run his 35-bushel spreader with four horses, and I was almost scared out. He said also that his drive chain had broken some four or five times on his machine, and that his chain was three times heavier than the one on your machine. Remembering what your general agent had explained about the drive chain being made light on account of your having an easy-running machine, I told him if ours broke we would send it back. Well, we hauled over 150 loads of manure of which there were 75 loads of cow manure. We also loaded the machine full to the top and often tramped on it, never using over three horses to put this heavy manure on top of plowed ground and covered over 15 acres all over with it. We hauled sheep manure this fall that had dried in the shed all summer, which came out in flakes as large as two men could put on the spreader, which the spreader handled as nicely and spread as evenly as it did the horse stable manure. We didn't break the chain or anything else this fall. We also hauled out an old straw stack, which we spread over the ground before plowing, intending to burn before I plowed it, but it rained before I got it plowed under, but I am glad it rained, as I think that is far better than burning it. Who could scatter straw thin enough to plow under only by using a Great Western Endless Apron Manure Spreader? We hauled 22 loads in just 4½ hours of heavy cow manure and only 3 horses to the No. 4 spreader. I think the Great Western is the greatest money saver of any machine that one can put on the farm. Yours respectfully, A. N. Delaney, Warnock, O., Nov. 5, 1907.

We suggest that you write the Smith Mfg. Co., 158 E. Harrison St., Chicago, for their book No. 5 D 5, which will be sent free.

We have just been looking through a mighty nice piano book—one that tells all about them in every way, that shows how a piano should be made, and plainly and intelligently explains the difference between the good and the medium. It is a book that every one contemplating purchasing a piano should have before ordering. It is published by M. Doyle Marks, vice-president and manager of D. S. Andrus & Co., 125 Baldwin St., Elmira, N. Y. In addition to selling the piano cheap, Mr. Marks includes free with each order a handsome stool and an excellent scarf, also a fine list of piano music. Write to him today.

Another company is making war on the trusts. This time it is the Burlington Watch Co. They say the Elgin and Waltham people have been making too much money—been holding up the purchaser through combining. They say their watches are better and cheaper than any of the others, and to prove it have posted $1,000, which they agree to forfeit in case their watch fails to keep time more accurately than the Elgin or Waltham. They are backing their claims, and it seems they mean business. Write for their free book telling all about their watches and the contest. Address Burlington Watch Co., Suite 3652 Millard Sta., Chicago.

SEEDS $1.50 Worth to Test Only 10 Cents

We ask you to try our Superior Seeds. One Trial will make a Customer. We will mail one Full Packet each of the following 15 Grand New Sorts for only 10 cts. These would cost at least $1.50 elsewhere.

The Best Potato on Earth

For Home Use and Market

Market gardeners, truckers and all others who grow potatoes for home or market will prize this potato ahead of all others on account of its *extreme earliness, good table qualities, fine size and shape, great productiveness and splendid keeping properties.* Just think of one variety of potatoes combining all of these qualities *in high degrees.* We positively assert and have abundant and undoubted proofs that EARLY SIX WEEKS MARKET POTATOES do make good-size, merchantable tubers *in six weeks from planting.*

We don't refer to a solitary instance. This potato can be *depended* upon for such results every time *if planted when the growing season has arrived, and the weather is favorable.* With unfavorable weather they will, of course, require longer. The potatoes cook fine and dry from the time they are large enough until late spring. Size is medium, skin light flesh color, shape like in illustration. They are perfect beauties, heavy and sure yielders.

One pound Early Six-Weeks Market Potato yielded 147 pounds of fine, sound, smooth tubers. Ripened in 75 days, and produced marketable potatoes in six weeks as you claimed. This is the most valuable variety of potatoes ever introduced. R. TAYLOR, Ashland Co., Wis.

I like the Six-Weeks Potato very much. I divided with my neighbors. One of them says they are the best he ever saw. They are excellent keepers. They are first-class in every respect. E. HARTMAN, Sutton Co., W. Va.

We have had much experience with this potato and are prepared to state that owing to their quick growth, escaping the drought, bugs, blight, etc., and extra yielding propensities, they make larger average yields for the ordinary potato grower than late varieties that often times are left to take their chances against unfavorable influences. This potato, *strange to relate, keeps sound, solid and fresh late into the spring, equal to any late potato that we ever saw.*

Size for use in six weeks. Ripen in ten weeks. 1 year yielded 420 bushels per acre next year, 380 bushels per acre; 2 years later, 600 bushels per acre. Get the genuine seed from us. We introduced and named this potato.

We have the genuine seed. Price very low, considering how fine this potato is *By mail postpaid*: 1 pound, 30c; 4 pounds, 75c. *By freight or express*: 1 pk., 60c; bu. $2; bbl. $4.50.

Catalog free. Order from this advertisement.

O. K. SEED STORE, Indianapolis, Indiana

Procrastination is

We are led to select the old and true saying as above for the heading of this important page because old members of the American Society of Equity are haltin between two opinions. In the meantime preparations are being made for the year's crops and then the harvest and marketing time will soon come and farmers will not be ready to protect themselves in the price. In that case we may also say, procrastination is the thief of money.

Members who do not pay their dues by or before April 1 will not be in good standing. Also subscribers to UP-TO-DATE FARMING who do not renew by or before April 1 will receive no more papers. Therefore it is important that the membership be maintained and that the circulation of ths paper, which represents the power, be not lessened.

The important question, however, is: WHERE SHALL WE SEND OUR DUES? Shall we send them to the old American Society of Equity with the new principles, plans and objects, or to the new Farmers Society of Equity with the old original Equity principles, plans and objects? These are the problems that members are trying to solve and they cause them to halt between two opinions. Let us see if we can help to a decision.

It should not be difficult for any person to decide this question, but with some it is apparently difficult. There are two features to consider: First, the name; and, second, the plan and objects. We believe every person will say that the principles, plans and objects, if they have been proven and are good, are far more important of the two. There cannot be any question about this, while the new name is equally as desirable as the old one and by many preferred.

But the advocates of the old society may say: "We have not departed from the original principles, plans and objects." They may say it now, but all the evidences contradict them. They did depart from them soon after the 1906 convention, and the story of "Conspiracy and Rebellion" is indisputable evidence that the society was diverted from its true plan, which had accomplished so much of good for farmers. The proceedings of the 1907 convention would also leave no doubt, if they were published complete and without alterations. But in absence of these we have the following from Delegate E. C. Parker and which was published in Farm, Stock and Home soon after the convention:

OBJECTS NOW SOUGHT

The leading minds of the A. S. of E. are now aiming to affiliate the society with the American Federation of Labor and the Producers and Consumers Exchange, a corporation capitalized for a million dollars and chartered under New Jersey laws. If the interests of these organizations can be successfully combined, there is no doubt that the interests of consumers and producers will be greatly benefited in many localities which suffer from unreasonable charges by the middleman or distributor of farm products. The plans contemplate the building of warehouses and exchanges at central points with capital secured from the sale of the stock in the Producers and Consumers Exchange, said stock to be sold among union laborers in the cities. Farmers' organizations can then build local shipping stations with the funds derived from the sale of stock in the Producers and Consumers Exchange, and can consign to the city exchange owned by the union men. The use of the union label will be insisted upon by both the farmers in the purchase of factory goods and the city workers in the purchase of farm products.

So the reader may have an idea of "The Producers and Consumers Exchange" referred to, and into which the A. S. of E. was to be largely merged, we quote as follows:

The Producers and Consumers International Equity Union and Co-Operative Exchange (this is the full name) proposes first to give attention to the necessities of life, especially food, and eliminate all opportunities for speculation. . . . But the people's national corporation will not confine itself to simply the food products. When opportunities are favorable it will also enter into the manufacturing business, and will have the power to acquire and undertake the good will, property rights, assets, etc., of any person, firm, association or corporation and pay for the same in cash or otherwise. To enter into, make, perform or carry out contracts for any lawful purpose. To push union label propaganda by co-operating with the Federation of Labor and subordinate unions in the trades and crafts for the purpose of promoting the use and sale of goods bearing the union label; to encourage the purpose and use of such articles and products by the general public.

The reader can now get an idea of where the conspirators designed to carry the A. S. of E. Do they look anything like the original simple plan and objects of the A. S. of E.? Where is the farmer who will have a word of censure for Mr. Everitt and his co-workers in undertaking to save the society from being diverted to such objects, which are foreign to the farmers' real interests? One of the most commendable features of the original plan was that farmers attended to their own business and let others do the same. But the "leading minds" of the A. S. of E. now propose to attend to everybody else's business but farmers', just like the Grange, Alliance and the other old organizations did. We all know what became of them.

Some of the enemies of Mr. Everitt try to further deceive farmers and delay the development of the society, by saying that because he was not re-elected to the presidency he started the Farmers Society of Equity.

Nothing could be further from the truth. The Farmers Society of Equity was started to save the organization already accomplished and to have a society in which more organization can be accomplished. Mr. Everitt IS responsible more than any other person for saving the society when designing people attempted to carry it from farmers, but he is not entirely responsible for the Farmers Society of Equity. In the first place Mr. Everitt told the late convention that he would not accept an office from it, because he knew he could not conscientiously stand on the platform it was building. Other honest men also saw things with the result that another convention was held. But we will reprint from "An Address," issued immediately following the convention, as follows:

Yours for profitable prices,

J. A. EVERITT.

CALL FOR CONVENTION

Whereas, we consider the gathering now assembled in this city alleged to be a meeting of the National Union of the American Society of Equity of North America, is revolutionary in its action and purpose; that it disregards the traditions and teachings of the society; that it is made up of unfair, unjust and illegal representation dominated by influences antagonistic to the principles and corporate purposes of the society, in many cases violating the constitution thereof and acting counter to its original purposes;

Therefore, the undersigned, duly appointed delegates to the annual meeting of the National Union of the American Society of Equity of North America, do hereby call a meeting of such delegates to convene at room 202 in the Denison Hotel, Indianapolis, Indiana, October 25, 1907, to consider the matters above set forth, and take such action as may be deemed wise and for the best interests of the said American Society of Equity of North America.

One of the first acts of the convention was to make the following declaration:

We, regularly elected delegates to the fifth annual convention of the American Society of Equity of North America, now in session at Indianapolis, Ind., met pursuant to the above call, do withdraw from the sessions of said convention, and we do repudiate many of the acts of said convention, and we do hereby assemble and declare ourselves the true representatives of the American Society of Equity of North America, and we proceed to hold a convention pursuant to the call of the Board of Directors in their meeting held July 23-26, 1907. We declare that the alleged convention assembled in the hall of the Denison Hotel is unduly dominated by persons not farmers, and who do not represent the farmers' interests; neither do they stand for the true principles of the American Society of Equity of North America, nor for the carrying out of its plans, nor the accomplishment of its declared objects.

These, understand, were the acts of a number of regular delegates to the convention and not Mr. Everitt individually. And at the convention Mr. Everitt requested that he be not elected to the presidency, but it was thought proper to elect him to the vice-presidency. Whatever of good or bad has resulted or will result from the second convention, Mr. Everitt is not entitled to any more credit or blame than any one of the other individuals who participated.

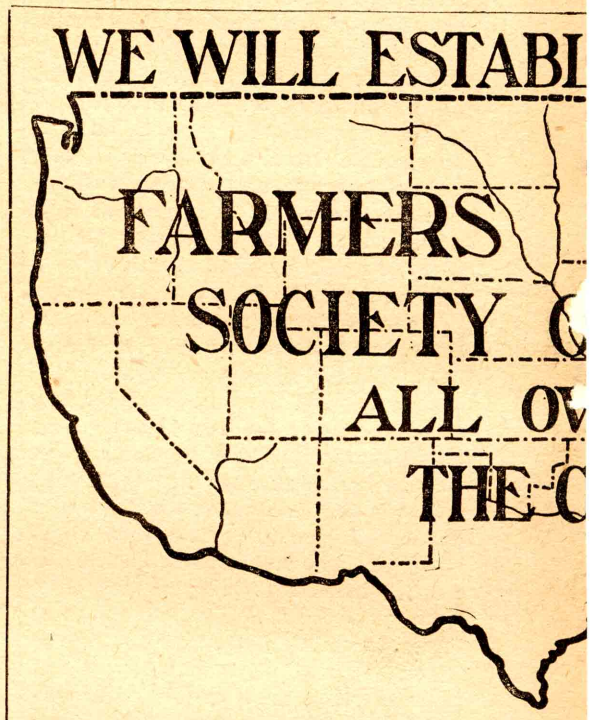
In the way of further explanation we will now reprint the declaration made after the convention by the officers as follows:

The action we have taken is a precautionary one, to save the society from mischievous counsels, wrong purposes and evil influences. Should these continue to dominate the organization, we stand ready to act, and to act promptly.

We appeal to our constituents, and to the membership everywhere, did we do right, and will you sustain us?

With heartfelt devotion to the cause of Equity, and to the society that has taught the world and compelled the recognition of the doctrine of equitable prices for farm produce, and controlled marketing to secure them, we are, devotedly yours, W. H. Mitchell, president; J. A. Everitt, vice-president; I. C. Rous, secretary.

Time passed on. Mischievous counsels, wrong purposes and evil influences did prevail in the society headquarters, but it was evident that the officers elected by the second conventon could not take charge of the headquarters without long-drawn-out and expensive court proceedings. Therefore matters drifted along nearly two months. In this time absolutely nothing was done by the active headquarters that would have a tendency to build up or preserve the society, but everything of a nature to destroy it was done, as was the policy before the convention. It was evident that the members very generally repudiated the acts of the convention and almost unanimously condemned the act of the new board of directors in refusing to longer recognize UP-TO-DATE FARMING as the official paper. A general demand came to the A. S. of E. headquarters as well as the publishing office that UP-TO-DATE FARMING should be continued as the official paper.



MR. J. A. EVERITT:

I have watched the courses of "Old Hutch" the point where breadstuffs had flowed into a big I have seen the dams all swept away and I forme was no more to be raised or lowered than was the in the trade had to travel with the tide and profi currents skillfully.

Your Equity idea, however, to raise the level and in the little rivulets before they can merge in having to use the enormous blocks of credit that manipulations—struck me as so Napoleonic that closely as possible. I confess tht I wondered wh when the car shortage was a smaller feature than holding. And now we have the proofs that the E . . . One of my reasons for my interest in the S lighter links and still holds them loyally and soli

the Thief of Time

WOULD KILL PAPER OR SOCIETY.—Notwithstanding this demand from the members, headquarters made an order that any member who selected Up-to-Date rming would lose his membership. This was a direct attempt to kill the paper, or, if members prized the paper more than the society, then the society would be ed. When this order was promulgated it became evident that some radical measure must be resorted to. It was clear enough, to kill Up-to-Date Farming and ove it as a factor, would leave the principles and true plan of the society without a true champion and it would mean the dissipation of the society or the success the conspirators to divert it to other objects.

When the development reached this stage the matter was presented to the officers of the second convention and many true members of the society, and it was greed to save the society under the name

"FARMERS SOCIETY OF EQUITY."

By this plan members can receive their favorite official paper and belong to the society that represents everything that the original society did. In this way present organization can be preserved, kept true for its objects, and development can be secured that will not be accomplished by the other under its present nagement.

With the above facts fresh in the minds of members we ask again: Which society will you support? We have nothing against the American Society of Equity, and we predict that when all members of the Equity societies join in the next annual convention the power of the people who rebelled against the influences that always held the society unswervingly to the accomplishment of its good and holy objects, and who conspired against the farmers' best and dearest interests, will have been completely broken and from that time forward there will be only one society and the members themselves will decide the name. The present, however, is what should concern us most.

The time has come for decision and action. Every day any member or local union hesitates weakens their cause for profitable prices for the 1908 crops and strengthens the cause of the speculators, gamblers and exploiters. Don't delay any longer.

At the next meeting of your local decide the matter one way or the other. If the local does not decide, to suit all the members, then let each member be a power unto himself. Up-to-Date Farming taught farmers to think independently. Now let them practice it. The time is here when members cannot afford to follow implicitly a national, State or county convention, or possibly the action of a local union. We would far rather trust the individual members to be right than all of the unions. Conventions may be bought or influenced, but there is no practical way to buy, bribe or influence all or even a majority of the members in the society. And this brings us back to the Farmers Society of Equity. As long as Up-to-Date Farming has a voice in directing its policies, that voice will be raised in advocacy of people's rule. All important matters, such as election of officers, official paper, etc., shall be decided by the members as was the original plan of the A. S. of E.

If any doubt remains in the mind of a single member which headquarters he should support, let him read in this issue the department "A. S. of E. Headquarters," "Question Box," and the editorial "President Barnett Would Not Stand for It." And then if there is a lingering doubt read again "Vindicated" in February 1 number. And if still he thinks he is not prepared to decide the matter with justice to all and particularly to himself, send to us for a copy of the new booklet U 18, "You Have Been Deceived and Betrayed by Your Trusted Representatives."

"In union is strength, but divided we fall." To divide the Society of Equity and Up-to-Date Farming from each other means for both to fall. Unite them as they formerly were, and soon they will be the great power we always hoped for, the real third power.

HOPELESSLY IN DEBT

To establish the A. S. of E. Mr. Everitt advanced about $6,000 in 1903, 1904, 1905 and 1906. This was very properly charged to the society, by permission of the officers; sanctioned by the various boards of directors and was accepted as a liability by all the national conventions. Considering the great results accomplished and the light income of the society, particularly in the early years, the only remarkable thing is that the sum is so small. With interest this debt now amounts to about $7,000.

Then there is an unpaid account owing Mr. Everitt for printing, etc., in 1907 and accounts owing various other people or firms. The aggregate of these we do not know.

In 1906 the dues of members were payable annually, quarterly or monthly as the member preferred. The expiration dates were kept on the society's records and they were not reported to the publisher of the official paper with the names and payments. The stencils of members, therefore, did not show the expiration date, but were identified by the letters "L. M.," meaning a member of local union; or "M. L.," meaning a member at large. Some members joined and paid their dues every month in the year 1906 and their expirations would come, some every month in 1907. The publisher could not know when a member's time was up, because none of the stencils contained the expiration date. But it was known that the latest ones would expire December, 1907.

When the board of directors met in July, 1907, the publisher asked them for instructions how he could determine which had expired, or to give dates of expiration, but no dates were given. So the only thing that could be done was to run all until December, 1907.

Also it was the law of the society in 1906 and 1907 that members were in good standing one year after they were delinquent for dues, and it was also the law that all members, in good standing, were to receive Up-to-Date Farming. Therefore this was another reason why the paper must be continued until the end of the year. As far as the publisher was concerned there was no escape.

In 1907, as our readers know, the legitimate society business of organizing farmers and maintaining the organization was largely abandoned to organize the consumers. As a result of such neglect of the real business a great many members' dues were not collected, consequently their subscriptions to the official paper were not paid for 1907. The number of such is in excess of 30,000.

The price the society was to pay the publisher was 50 cents for a year's subscription. Therefore 30,000 subscriptions at 50 cents is $15,000.

We want members to take a business-like view of this matter. In the first place the publisher was obliged, by the laws of the society; by the society's contract with him and by his obligation to the subscribers themselves to continue the paper until December, 1907, because there was no way to distinguish those for whom payment had been made to October, November or December, 1907, from those that were paid to April, May or June, 1907, etc. It is also manifest that no considerable number could have been removed without fraud on those paid ahead. Also when the directors were appealed to they did not furnish the dates. Hence the publisher had no choice but to continue the paper.

They also (the board of directors) ruled in March, 1907, that instead of paying for a year's subscription for each member out of the fees they would pay for only the unexpired fraction of the year. Later developments show clearly that this move was made to distress the publisher, weaken him financially, and thus they hoped to be successful in killing Up-to-Date Farming when their chosen time came.

Also the old board of directors, and some of the new ones, with the officers, employees and agents, have conspired in every conceivable way to injure Up-to-Date Farming in its circulation and advertising.

Because of the things enumerated and very many others not enumerated here, all claims for leniency on the part of Mr. Everitt have been forfeited. He has given value for all he claims and the society cannot reasonably expect any different treatment from him than they would from any other creditor. If the old and new officers would have given their best efforts to promoting the society, instead of to abuse of its best friends, Mr. Everitt and his paper, these debts might have been paid and the largest one avoided. In fact Mr. Everitt told the committee on official paper at the convention that he would give the society a reasonable time to arrange for payment, but all this time has been wasted by its representatives in assaults on him.

Members can now make their own calculations of prospects ahead of them by the A. S. of E. headquarters under its present management, which is directed by the same people who directed in 1907. The outlook is not rosy for the society, neither for the creditors. But we are authorized to say for Mr. Everitt that he will waive every dollar of his claim if it were possible to produce conditions now that will secure proper development and the speedy completion of the society.

CONFESSION OF ANOTHER DELEGATE

Montgomery, Ind., January 31, 1908.

MR. T. S. CRUTCHER, Indianapolis, Ind.

My Dear Old Friend—I was glad to hear from you. . . . I have been thinking of writing to Mr. Everitt as to where I stood in the matter of the national convention, but failed to do so. But I am glad to give Mr. Everitt credit for forming it and its growth in the past. As you know, I have been in farmers' movements for reforms for twenty years and I never knew just what we needed until I got hold of some of Mr. Everitt's literature and that great and powerful educator—Up-to-Date Farming.

Now regarding the sad spectacle of the late convention. It was made up of many brave and honest men, who had nothing but the welfare of the farmers and our country at heart, but they were beguiled and misled and unknowingly became the assassinators of so noble a movement. It is too horrible to think about. I was there as a delegate, as you know, and the enemy got me by the arm and coat-tail and tried to drag me into the deception hall. But I made my escape by letting them know that I had come to the convention to work for the best interests of the society. I told them if Mr. Everitt had done anything wrong, that was the time and place to try him, as we had both judge and jury — the convention — and I believed in justice and equity to all. But they said, "Crucify him!" and they thought that they did. I wanted to go home to get away from such deceived people, for as the Savior said on the cross, they knew not what they did. I approve very much the steps taken by Mr. Everitt and others in the election of other officers and thus getting in a position to save the society.

Well, Mr. Crutcher, tell Mr. Everitt I am with him and will always be as long as he is true to the true plan of our society. If he wants to use any of this letter in print, tell him to do so. N. C. WILSON.

FREE THIS BEAUTIFUL MONOGRAM DINNER SET OF 42 PIECES

Each piece decorated with your initial in gold. Positively the biggest and finest dinner set ever given away as a free present. Any lady can earn this set in a few hours' time.

This beautiful Monogram Dinner Set, full size, for family use, consisting of 42 pieces just as shown, is a present that will bring delight to the heart of any housewife and can be had **absolutely free of charge** for a few hours' easy, pleasant work among your neighbors and the people of your vicinity.

This set is made of **finest Parisian China**, is a pure delicate white and decorated with wild rose design in colors, with the edges traced in gold. It is a set of dishes that you will be proud to own and put on your table and show your friends.

Your own initial in pure gold will be on every piece except the cups and saucers. The set consists of six large plates, six dessert plates, six large cups and saucers, six sauce or fruit dishes, six butter plates, two large vegetable dishes, one large platter, one cake plate, one bread plate, and one gravy bowl, making 42 separate pieces, positively the grandest array of dishes ever offered for this small amount of work.

Send No Money. Just your name and address and I will send you **our big free outfit**, so that you can interest only 24 of your neighbors and people in your vicinity in our special offer, collecting 25 cents from each one and sending us the money collected. It is easy, pleasant work, and our offer is so liberal, so unique, so far above the average offer made that you will have no trouble at all in interesting 24 neighbors or persons in your vicinity, and sending us the money collected. We send the set immediately, securely packed, and safe delivery guaranteed. No delay. No red tape. The set is yours just as soon as you have fulfilled these simple, easy conditions.

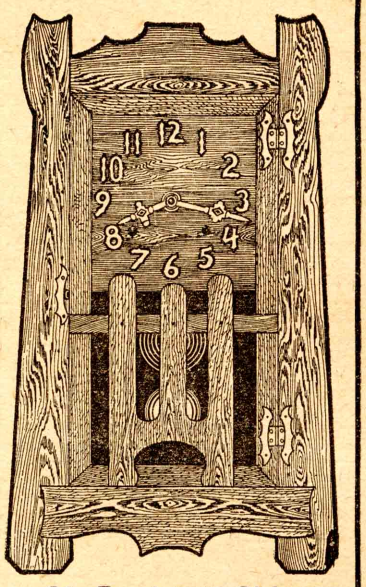
100,000 Satisfied Women is our record for the past year. **Just think of that**, we have sent out over 100,000 sets of these beautiful Monogram Dishes to persons who have helped us introduce our grand special offer, and every one of them is a pleased, satisfied patron. They all say that they never saw a more beautiful set of dishes and never did any work that they found easier and more pleasant. **Why should you not have a set of these dishes?** They will not cost you one cent of your own money and you surely would not object to getting them absolutely **free of charge.** When we send you our big free outfit, we will also send over 1,000 testimonials of those who have earned a set of these dishes, every one of whom will testify to our honest, prompt and liberal treatment.

Write me today and start to work at once. **Let me send you my free outfit anyway** and if you don't think you can succeed, I will take it back and no harm done. Just write your name and address plainly on a postal card and enclose it in an envelope and send it to me and I will arrange everything by return mail so you can earn this grand Monogram Dinner Set with your own initial as mentioned above, in a few hours' time.

J. B. DIGNAM, Manager, 120 S. Clinton St., Dept. 7092 Chicago

MISSION CLOCK FREE

I have received a few thousand magnificent 8-Day Mission Clocks to distribute free. I will give you the opportunity, if you write at once, of securing this prize without one cent of expense on your part—only a little work in my behalf.



This is the genuine Mission Style Clock that you have heard so much about. It is nearly two feet high, solid and substantial throughout. Cathedral chimes toll the hour and half-hour in sonorous tones. The hands and figures on the dial are polished brass and it is a perfect time-keeper, with a timed, tested and regulated EIGHT-DAY MOVEMENT.

This is not a cheap clock, but is **the latest up-to-date, mission style,** the same as you will find in the homes of the wealthy and well-to-do people everywhere. It is a clock you can put in your parlor or sitting room and be proud to show to your friends and neighbors. It is a premium worth getting, for a clock is something you can always use and this clock is not only useful but also a handsome addition to your parlor or sitting room and will last a lifetime.

This Grand Clock is absolutely free to any lady or anybody who will show my special offer among her friends and neighbors and get only 20 to accept it at 25c each and send me the $5 collected. All I ask is that you do this little bit of work for me, which will require but a few moments of your time and immediately upon hearing from you with your remittance, I will not only send you the clock absolutely free, but will also pay the freight charges to your town, so that it will not cost you one cent of your own money, even for charges. I want to get my special offer introduced in every town in the U. S. as quickly as possible and am giving this grand present as inducement for your prompt assistance. **Let me send you my free outfit anyway,** also a great, big illustration of the clock, which will give you a better idea of just what it is. I will send everything prepaid, so that it will not cost you one cent to try and if you do not care to accept my offer, you can return the outfit and no harm done. Be the first person in your town to secure this Grand 8-Day Mission Clock. Write me about it today. Address

GEO. A. FULLER, Sec'y, 46-48 W. Monroe St., Dept. 7092 Chicago

This Grand, Comfortable Morris Chair FREE

YOU CAN SIT IN THIS CHAIR FREE FOR REST OF YOUR LIFE

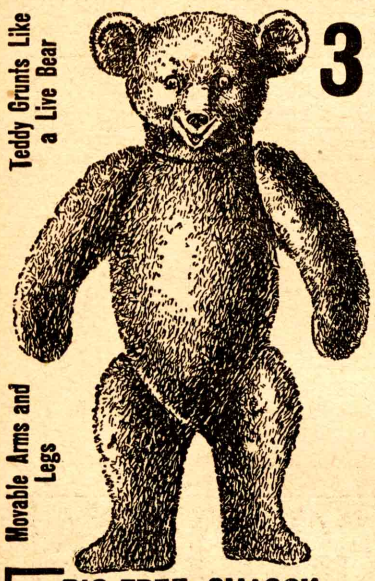
for just a few moments of your time devoted to easy, pleasant work among your neighbors and people of your vicinity. This is certainly **a grand, magnificent present,** for it is full sized (nearly four feet high and two and a half feet wide), beautifully and comfortably upholstered and will lend an air of comfort and luxury to the parlor or sitting room of the most prosperous home. **It is a big, comfortable chair,** with reclining back, which can be adjusted so you can sit up straight or recline or lie down, just as desired. Of course we can give you no real idea in this illustration, of the beauty, comfort and elegance of this artistic piece of furniture. **It is a surprise and delight** wherever we send it, for it is really far greater value than people expect to get, and our friends wonder how we can afford to make such a liberal offer.

SEND NO MONEY. Just name and address and we will send you our **free outfit** and full instructions how to proceed. Get only 26 of your neighbors or people in your vicinity to accept our grand special offer at 25c each and send us the money collected and we will send you this magnificent Morris Chair (your choice of golden or weathered oak) immediately on hearing from you. We **positively guarantee** this chair to give satisfaction and to be exactly as represented. **Send name and address today** and get our free outfit and see what you can do. If you do not succeed, outfit can be returned and no harm done. This chair is certainly worth working for and any enterprising person can fulfill our simple, easy conditions in a few hours' time. Do not miss this opportunity to get this big, comfortable, luxurious Morris Chair, **absolutely free,** without costing you one single cent of your own money. Address

CURRIER CO., Dept. 129 Currier Bldg., Chicago

Teddy Grunts Like a Live Bear

Movable Arms and Legs



3 BIG PRESENTS FREE TO GIRLS

BIG FREE, SHAGGY GRUNTING TEDDY BEAR

real, genuine, big, brown shaggy Teddy Bear, with special movable arms and legs, so that he can sit up, lie down, stand on all fours and be placed in all sorts of comical positions. By just giving him a little squeeze he makes a funny grunt that sets everybody laughing. You can have more fun with Teddy than anything you ever owned. This is the **real Teddy Bear,** girls, of which you have heard so much. Some girls prefer a Teddy Bear to a doll, but **I give both.**

This beautiful bisque doll is nearly half a yard tall, has beautiful curly hair, big blue eyes which open and shut, is **magnificently and fashionably dressed** and a large hat, and has shoes and stockings that can be taken off and put on, so that you can play with this doll just as if it were a real baby.

This is also a **wonderful talking doll** and says papa and mamma plainly and distinctly. The big blue eyes, the pretty hair, the peaches and cream complexion cheeks and the little rose-bud mouth makes this the handsomest and dearest doll you could imagine, and **I want every girl to get one free.**

I also give a 27-piece China Tea Set consisting of 6 cups, 6 saucers, 6 plates, tea pot, sugar bowl, cream pitcher and 6 spoons. It is not every girl who has a set of dishes for her doll, but I am going to include this handsome little set with every doll. The set is beautifully decorated like the real china in the large sets costing many dollars.

And I am not going to stop here, but I am also going to give a

BIG FREE TALKING DOLL

I GIVE ALL 3 PRESENTS FREE!

To any little girl (or big girl either) who will show my fine offer among her neighbors and people in her vicinity and interests only 12 persons in my special offer at 25c each and send me the $3 collected. You can do this slight service for me in two hours' time. **I don't charge you anything for my outfit,** as I send it free, and you can try and see what you can do, and if you can't very easily do the work on my plan there is no harm done. However, I know any bright girl can earn these presents without any trouble whatever. **Just think, you get a big handsome doll, a grunting Teddy Bear and a 27-piece tea set and 6 spoons** all for this little work. It is the most generous offer ever made, and every girl reader of this paper should write to me at once and get my full instructions and outfit, and then just as soon as you do the little service I require, I will send you the **Doll, Teddy Bear and Tea Set and Spoons absolutely free.** I arrange to pay **express charges,** so they will not cost you a penny. Write to me today and be the first in your neighborhood to get these beautiful **free gifts.**

Big Free China Doll's Tea Set

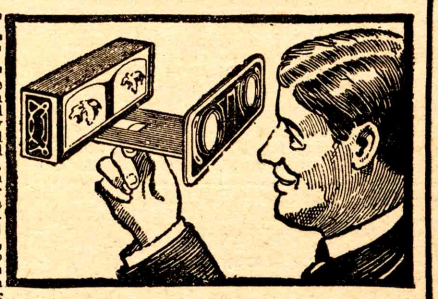
EXTRA GIFT FOR MAMMA

You can also give your mamma a beautiful ring as an extra gift if you will write me at once. This is a nine-stone ring, three large ruby doublets and six frosted pearls; given extra if you'll write at once. This beautiful ring is extra and **in addition** to the other three presents.

The Editor of this paper knows we are reliable.

A. K. BOWEN, Mgr. Dept. 709 246-48 Monroe St., CHICAGO

STEREOSCOPE AND 50 FINE VIEWS FREE



Everybody can have barrels of fun and amusement with this collapsible stereoscope, which folds up in compact form and can be carried in pocket and enjoyed anywhere. Small size but perfect in every detail, extra strong lenses which enlarge and magnify the handsome views as lifelike and real as life. **Send name and address,** no money, and I will send you my free outfit, so that you can interest just four of your neighbors and people in your vicinity in my special offer at 25 cents each. Send me the $1 collected and immediately on receipt of remittance I will send you this handsome premium **and also an extra present** of 50 fine **Double Views,** all charges prepaid. It will only take you an hour to do the easy work. If you do not want to do it you don't have to; costs you nothing, however, to try. Am sure, though, you will be glad to help me for an hour and get this premium delivered free for your trouble. Just send me your name today and I will send you my outfit by return mail.

W. L. WILSON, Supt., Dept. 129, 122-124 Clinton St., Chicago

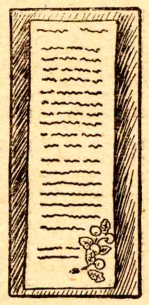
COONER & FORTUNE CO.
Indianapolis, Ind.

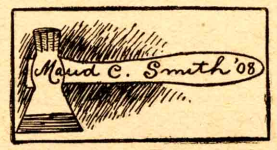
A "WASHINGTON" PARTY

If you are planning for a little company for Washington's Birthday, here are some ideas which may prove helpful. Ask your guests to wear fischus over their waists (any large handkerchief will answer this purpose) and little lace caps over their hair. If they like to enter more into the spirit, they may powder their hair and wear a coquettish black patch on their chin or cheek.

The questions for a contest may be written on a long, narrow strips of white paper, preferably water-color, with a sprig of cherries painted at the top. If you wish to give a prize for this contest, a small portrait of Washington will be very appropriate.



For refreshments serve ice cream, each dish of which is to be topped by preserved or candied cherries. Or preserved cherries and cake will be just as suitable. Your favors and name-cards can be easily cut from cardboard. They should have each guest's name written across them.



From Fisher's Drug News we get a game which may help you:

Fruits and Flowers

1. What flowers are found in a good menagerie?
   Ans. Dandelions.
2. What flower is seen in the east when the sun rises?
   Ans. Morning Glory.
3. What fruit caused a great disaster?
   Ans. Apple.
4. What fruit enrages a south-country Irishman?
   Ans. Orange.
5. What fruit does a brick mason use?
   Ans. Lime.
6. What flowers turn the thoughts to kisses?
   Ans. Tulips.
7. What fruit causes many pupils to stumble?
   Ans. Dates.
8. What fruit tells tales?
   Ans. Peach.
9. What flower does a bird want when it rides a horse?
   Ans. Larkspur.
10. What flower is often seen on a cold winter's day?
    Ans. Snowball.
11. What flower is often seen in the sunset?
    Ans. Golden Glow.
12. What flower is a nice boy?
    Ans. Sweet William.
13. What flowers grow in swamps but are seen waving in the air?
    Ans. Flags.
14. What flowers always belong to your father?
    Ans. Poppies.
15. What flower would a geologist scorn?
    Ans. Shamrock.

"PATCHES"

Try greasing the griddle with a white turnip cut in halves. There will be no smoke, smell, taste or adhesion.

Mix a small quantity of baking soda with the brick dust that is to be used for scouring purposes.

When your boots or shoes have become hardened from water, rub them with kerosene to make them pliable.

Vinegar diluted gives a beautiful polish to windows. It should be rubbed on with a soft cloth, dried with another and the window then polished with a soft chamois skin.

If you place salt under the bakins tins in the oven, there will be less danger of their contents scorching.

Those who suffer from sleeplessness should drink a cup of hot water or milk before retiring. It warms up the system and prepares it for a good night's sleep.

THE "CATE" GAME

Here is the game of "Cate," which may perhaps help to entertain your friends for an evening. Give each guest a sheet of paper on which the following sentences are written and allow them a certain time in which to write their answers, which must be words ending in "cate."

1. Cate never tells the truth—Prevaricate.
2. Cate is frail and gentle.—Delicate.
3. Cate kindly points out the way.—Indicate.
4. Cate has a turn.—Duplicate.
5. Cate seizes the property of others.—Confiscate.
6. Cate leads a country life.—Pusticate.
6. Cate leads a country life.—Rus—Implicate.
8. Cate adds to the difficulty of many a case.—Complicate.
9. Cate takes leave.—Vacate.
10. Cate makes things run smoothly.—Lubricate.
11. Cate is an eloquent pleader.—Advocate.
12. Cate offers a perplexing problem.—Intricate.
13. Cate has an influence for evil.—Intoxicate.
14. Cate believes in home life.—Domesticate.

BE DAINTY AND NEAT

The girl who is dainty and neat need not perforce be the extravagant or the wealthy girl. If she be careful her clothes will not become soiled or shabby from neglect, and by saving in these items she is enabled to buy many extra things which she could not get otherwise.

Every girl should learn to sew and darn neatly, for it is by these two accomplishments that she may look as well or better than her wealthier sister, for home-made, hand-made garments are very much in demand.

She should be careful in putting away her clothes. Veils and ribbons should be put over a roller to keep creases out. A waist folded and put away carefully will remain unsoiled much longer than if carelessly thrown into the cupboard and allowed to collect numerous wrinkles.

Remember that fresh, clean, neat, though cheap garments look better than expensive soiled ones.

In this issue our subscribers are offered a handsome full size dinner set free. It consists of 54 handsome pieces. The firm that offers this gift is known to us as one that will do absolutely as they say. They have advertised with us for years and we have yet to receive the first complaint. Look up the advertisement. Or, better still, every lady should send direct to The Pure Food Co., 672 W. Pearl St., Cincinnati, O., and ask for their free Dinner Set proposition. Do it today, ladies.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Did you ever hear of the Burdett Organs? If you ever heard one of them play, you will not soon forget it. For sweetness and purity of melody they are seldom equalled and never excelled. They are made by the Cable Organ Co., of which Hobart M. Cable, 606 Steinway Hall, Chicago, is president. He says they are making an attractive proposition now to would-be purchasers, and wants all of our readers to write for it. We can say that they will treat you square, and if you are interested you should by all means write Mr. Cable for his catalog.

Banking by mail grows in favor year by year as people become more familiar with its workings and understand how easy and safe it is. Often it is more convenient than depositing money in your home bank, and certainly it is much more private. There is not the slightest chance of neighbors, relatives or anyone else finding out how much money you have deposited or knowing that you have an account unless you tell them yourself. Banking by mail has been in successful operation for seven years. In this time not a dollar has been lost by depositors in the mails. It is the way to bank for 1908. Begin today. $1.00 will open an account. Write for book K to Cleveland Trust Co., Cleveland, O.

Boys, do you want a big Magic Lantern, nearly one foot high? It is free and won't cost you a cent. Write to George Harvey, Dept. 2279, 26-48 West Monroe street, Chicago. He will tell you how to get this fine big Magic Lantern free. Better write a letter or send a postal card right away.

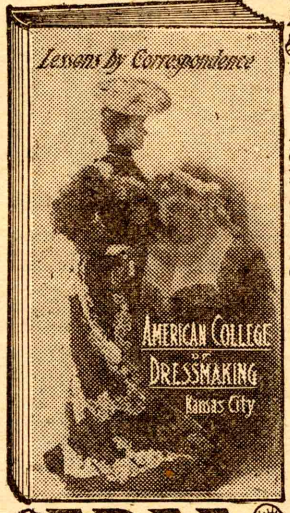
I WANT AGENTS ALSO.

NOTE.—The Above is the Largest Mail Order Spectacle House in the World and perfectly reliable.

A WOMAN CAN EARN $5000.00 A YEAR



Learn Dressmaking at Home

Many women nowadays are earning $100 a week—$5000 a year by dressmaking. One woman, the head designer of Chicago's largest retail dry goods house, earns $10,000 a year. Salaries of $25.00 to $50.00 a week are common. **We teach you by mail and put you in a position** to command the largest salary of any woman in your locality, or you can **Start in business for yourself. Become a Graduate Dressmaker.** The regular Diploma of this College is issued to all who complete this course of lessons. The **American System** requires no charts or patterns. These lessons will teach you how to draft your own patterns and make your own clothes and enable you to dress far better at one-half the usual cost. They teach you how to DESIGN, CUT, FIT, MAKE, DRAPE and TRIM any garment, including children's clothing. This College is endorsed by all high grade Fashion Magazines—Delineator, Designer, McCalls, Pictorial Review, New Idea Woman's Magazine, Modern Priscilla, Housekeeper, Good Housekeeping, etc.

This book will be sent to you free. At an expense of hundreds of dollars this college has published **10,000** of these **copyrighted** books to advertise the **AMERICAN SYSTEM OF DRESSMAKING,** and—while they last—will send you a copy **FREE.** Write for it today. One copy only to each woman.

A SMILE OF FORTUNE

A STORY OF WELLESLEY COLLEGE

Ada Helmick was a girl to whom the accidents of life had become its rule. There were those who believed that at one time or another every bone in her body had been broken or sprained. At college she spent half the time in the hospital or making the rounds from lecture to lecture in a wheeled chair. She had a fine athletic spirit that was never downed. Recovering from a sprain, she would return to crew practice, or, if it were winter, to the joys of skating, until some unlucky chance brought her again to the care of a certain famous nurse, and to a temporary stay in the North Hospital.

Bad luck pursued her. Returning to college one fall, she found that her boxes had disappeared. Search was in vain. For two months she lived in a bare, unornamented room and cultivated a stoical temper. She regularly forgot to register when leaving college, until her registration privileges were forfeited and she had to get permission just as any freshman would. She lost every article dear to her heart during her life at Wellesley, broke her glasses fifteen times, and came to look upon life as a huge certainty. Whatever its general characteristics, she said it was sure to be "mighty unpleasant" in its details.

Her latest misfortune was the loss of her purse. It contained twenty dollars and a ten-trip ticket to Boston. The end of the term was approaching; bills were coming in; her glasses were at the optician's; and she hadn't a cent to her name. After a day or two of fruitless search she had written home for money. She lived at some distance from college, however, and it was more than likely that her letter would miscarry. She was prepared for such an event.

One afternoon she donned her gym. suit, and, wrapped in a mackintosh, pursued her way to the gymnasium. It was the hour when the class crew tried its muscles in a business-like way, and, in the intervals of work, lay on a huge woolly rug, engaged in conversation. On this particular day, as they lay there contemplating the rafters, they litsened to the voice of the Captain, who gave each a detailed account of her recent "cuts," and threatened specific results unless they toed the mark in a more whole-hearted fashion.

Ada took advantage of a pause to yawn and resume a sitting posture.

"I'm in trouble," she announced.

"Yes?" said the girls politely.

"Yes," said the Captain, looking grim.

"That purse has not turned up," she went on, "and I must have my glasses, to say nothing of other things. I'm afraid I shall have to give up the long gloves for my new gown. I can't afford them now. But there are some things I must get immediately. In short, I must go shopping in Boston tomorrow, and I haven't the ghost of a quarter."

"You must borrow then," announced Edith Marten, whose mind was nothing if not practical.

"Now I call that a brilliant suggestion," said Kate Williams, flippantly. "Like the solution of other problems, it looks very obvious when once found."

"I don't know. I rather think I could go without," said Ada with inspiration.

"Go to Boston without a ticket and shop without money!" gasped Edith. "I envy you your gentle self-confidence."

"Well, I think it's possible."

"I'll wager you can't."

"A real live bet! I haven't heard of one since Frank's chum visited us summer before last. What will you bet?"

"The gloves," said Edith.

"Don't, girls," said the Captain. "It's so—so commonplace. You don't need amusement so badly as that."

"Hunt up something clever if you want a diversion," assented Kate Williams from the rib-walls which she was climbing vigorously. "The Captain's right. I'll lend you a ten and—pay for your gloves if necessary," she added with animation.

The rest-interval was over, and the girls began to throw off their jackets.

"Quit preaching," said Ada. "Unless Edith withdraws, I shall stick to the wager. It is a diversion, and I need to win something to balance my usual ill-luck."

"Get to work," interrupted the Captain, and the conversation ended.

As they left the gymnasium half an hour later Edith said, briefly:

"You aren't to borrow a ticket nor ask any one for money. Just go to Boston, get your things, and bring them back with you."

"Exactly," said Ada. "I shall remember."

. . . . . .

At dinner the next evening Edith Marten and several other girls sat in the parlor at Stone Hall. There wasn't much possibility of guests, for it had poured steadily since four. An animated wood-fire burned in the fireplace. Some one was trying over new songs softly on the piano.

"I saw Ada Helmick go to her room half an hour ago," said a new-comer, "the most forlorn-looking object in Wellesley. She was wet, cross, and apparently tired."

"Ah," said Edith. "She didn't enjoy her trip, then."

"At any rate she got something to eat. I saw her ten minutes ago in No. 1. Nellie, the maid, was serving her royally."

"Yes, I fared rather well, thank you," said a voice from the door. "I have quite recovered since dinner, and if you don't mind I will constitute the lot of you my confessor immediately."

"Come on," said Edith. "I yearn to know who owns those gloves."

"I will begin at the beginning. It was rather good. I started for the 7:45 train to avoid meeting people. Of course, I missed it; so I sat down in the station to await the event. At about ten minutes after eight, Professor Locke came in and asked affably whether I were going to Boston. I said that I was, and sought some excuse to get rid of her. No inspiration came to me, however, and in ten minutes the train arrived. Then I saw a freshman, whom I hardly know, coming across the platform. I excused myself and rushed cordially in her direction. I don't remember what I said. I saw Professor Locke mounting the steps of the first car. The freshman looked a little dazed as I gallantly helped her into the middle car and retired to the one at the rear.

"We passed the 'Hills,' and then I saw the conductor coming. He took

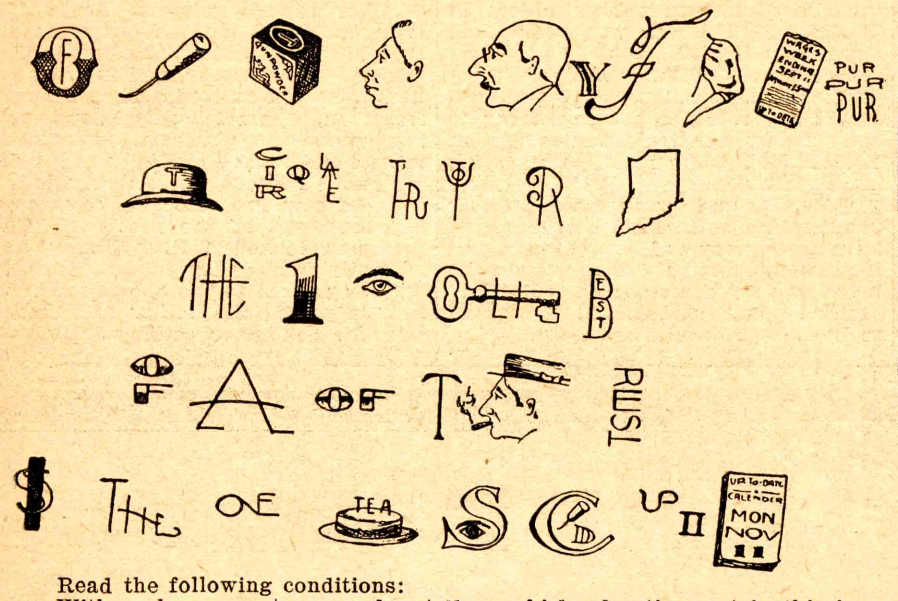
Solve the Rebus and Win a Prize

We want to try the skill of our readers and have prepared a rebus for them to work for us. We have not made it very hard—just hard enough to keep you guessing a little. We want every one to try. It may be we will get no correct answer, so send the best one you can.



Read the following conditions:

With each answer to our rebus tell us which advertisement in this issue of **Up-to-Date Farming** appeals to you the most and why. Don't write more than fifty words.

For the best solution and article we receive on or before March 1, we will give a prize of $1.50 in cash. The next best will receive $1.00 and the two next best 50 cents each.

No money required to compete for, or to get a prize if you are entitled to it. This is a bona fide offer made by the publisher of **Up-to-Date Farming** and there is no "catch" in it.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of March 15, and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMING, (Rebus Dept.) INDIANAPOLIS, INDIANA

the tickets deliberately, one after another. I felt myself blush, but steeled my heart for the encounter.

" 'Tickets!' he demanded at last of the person in front, and then turned to me. I looked at him firmly and said:

"I've lost my purse, and I must go to Boston. It is very embarrassing, but——

" 'Live at the college?'

" 'Yes.'

" 'Um.'

" 'If you would be so kind,' I continued, 'I might go on to Boston and leave a ticket tomorrow at the Wellesley station. You could get it there.'

" 'Well, that will do,' he said.

"Every one was interested by this time, and I felt the eyes of the entire car.

" 'Thank you,' I gasped. 'My name is Ada Helmick.'

"He turned to go, but paused again and asked:

" 'How shall you get back?'

" 'Oh, I shall meet some one in Boston,' I said. 'I shall get back somehow.'

"He moved away, and I began to breathe normally. Suddenly I saw him before me again. This time he dropped half a dollar in my lap. I blushed and started to speak.

" 'You might not meet your friends,' he interrupted. 'It's all right. Just leave fifty cents and a ticket in an envelope with the agent at Wellesley.'

"And he retreated.

" 'It's too bad,' said an old lady, addressing the back of my head. 'Now, could I lend ye something? I live in Wellesley.'

"I thanked her, but declined the offer. Fifty cents, I said, would get me back, and was all I needed.

"The shopping went smoothly enough. I called at the optician's and got my glasses, asking him to send the bill next term. He has fixed those glasses fifteen times, so he can afford to trust me. Then I went to a shell place and bought a comb for Mary. By the way, how do you like it?" And she tossed a box to the girls. "They agreed to send the bill. The little woman who served me was much struck with the pathos of my story. Then I thought I might as well make sure of those gloves and christen them tomorrow at Fan Reed's party. I had taken a sample of my new gown, so I went to Miss Blank's and matched it, sending the bill to you. She said six was not your number, but I told her they were a present. Behold them. Aren't they iligent? You will pay four dollars for them in time. Don't interrupt. You may wail later.

"I went over to the New Library and looked at the pictures, and then I invested in a cup of coffee and a roll. That left me forty cents. I considered. Edith told me yesterday morning that the B. and A. fare to Boston had been reduced to twenty-five cents. Forty cents minus a quarter is fifteen cents. I determined to buy chocolates to that extent and walk from the station to the college.

"When I presented my quarter to the agent and demanded a ticket to Wellesley, he looked a little queer. 'Thirty cents,' he announced.

" 'I thought it was reduced to twenty-five.'

" 'No, thirty,' he said shortly.

" 'Well,' I said desperately, 'give me a ticket to the "Farms."'

"He struggled to suppress a smile. I suppose it did look queer. I didn't seem particular about the place, so long as it was cheap.

"Fortunately, the Wellesley passengers were mostly freshmen. Moreover, I didn't meet the conductor of my morning experience. I put the chocolates in my pocket to avoid temptation, and stared into vacancy with a dignified chill.

"It was very cloudy, and before I reached the 'Farms' it began to rain. I got off there, and faced the pleasant but damp prospect of a walk.

" 'What on earth,'—said a voice behind me.

"Before I turned I knew it was Mary Evans.

" 'I'm economizing. Saving seven cents a trip for the Missions,' I said.

"I should think you were doing penance as well — killing two birds with one stone,' said she cynically. 'Come home with me for tonight. It may clear before morning.'

"I thanked her, but stuck to my purpose. I did take her umbrella, however, and with this slight protection against the rain, I proceeded toward Wellesley.

"Until today, I never realized the length of three miles. The rain came more and more heavily, and the way seemed to stretch ahead indefinitely. I ruined a remarkably good looking pair of boots. My new skirt is twisted out of all recognition, and ornamented after the impressionistic fashion with Norfolk County clay. Still I have had my experience, and I have won a wager. Moreover, the wager is paid."

"Not yet," groaned Edith.

"As far as I am concerned it is paid. I have seized my opportunity."

"I venture to say you have cured Edith of one pernicious pastime," said the girl at the piano. "Her wagers for the future will be indefinite."

"Oh, the luck of it!" said Polly Eliot. "I might smile my prettiest without melting the hard heart of a railroad official."

"A joke on Ada Helmick," said some one, coming into the dusky room. "She lost her purse this morning, and had to go to Boston without a ticket. The conductor lent her fifty cents. The whole situation was most ludicrous."

"No," said Polly, breathlessly. "How did you hear?"

"Mrs. Allen came out on the 3:20 from Boston. The conductor, who is one of her numerous acquaintances, asked her if she knew a Miss Helmick at the college. He described Ada in a vivid and telling manner; said she was a little incoherent. Wasn't it just like her?"

"Remarkably," responded that young lady, as she rose to poke the fire.

After the mirth aroused by this epilogue had subsided, she resumed:

"At any rate, the gloves remain to me. That is a piece of good fortune that my usual luck has not prepared me for."

She flourished them as she spoke, and walked backward toward the door.

Some one was lighting the lamps.

"Save the table," said Polly Eliot, and Ada turned aside in time to avoid a collision.

She paused.

"Behold," she said, as a parting shot at Edith, "and sigh for your lost four dollars."

"Oh!" said every one at once, as one of the long pale-green things slipped and fell into a pitcher of ice-water.

There was a short rhetorical pause, broken at last by shouts of amusement.

"Well, Ada Helmick, you have worse luck than any one I know," gasped Polly at last.

But Ada did not answer. She meditated.

MONEY MAKING AT HOME

No work is more remunerative, when intelligently handled, than the raising of poultry. The demand is constant. The market is seldom oversupplied. Prices are always remunerative and often very profitable. The capital required is small. One can start with one of the George Ertel Co.'s 100-egg Hatching Wonder Incubators. This is a thoroughly practical small machine. The price is only $7.85 delivered at your railroad station if east of the Rocky Mountains. The Ertel catalog "Incubator Whys" will be found helpful in selecting an outfit. Its hints and helps will save the beginner money and trouble. A copy will be sent free to any readers of UP-TO-DATE FARMING on request to George Ertel Co., Quincy, Ill.

At the Jamestown Exposition the Atlantic Coast Line Railroad was awarded 13 Gold Medals, 11 Silver Medals and 7 Bronz Medals. It was certainly a most worthy display to receive these numerous awards. If you are interested in the excellent country tributary to the Atlantic Coast Line write Wilbur McCoy, Agricultural and Immigration Agent, Jacksonville, Fla.

We have received a copy of Ratekins big Seed Book for 1908. It is brim full of matter about "Reliable" seeds. As this is Ratekins' twenty-fourth year it proves that "merit wins." Send for a copy of this catalog, which lists and describes all garden and field seeds. Seed corn is a specialty of this house. Send to Ratekins Seed House, Shenandoah, Iowa.

CUT GLASS MOST BEAUTIFUL

American Women All Desire One or More Pieces of This Magnificent Ware—How You Can Get a Thirty-Two Piece Set of Mould-Cut Glass Absolutely FREE.

There was a time when a woman couldn't have a set of cut glass on her dining-room table or her sideboard unless she were worth several thousand dollars and had a big income. NOW there is a way of getting a fine mould-cut glass set absolutely free, as explained below.

Only a few years ago all the cut glass in the world was made by a very expensive process. Since a new process has been introduced into the manufacture of cut glass the prices have been reduced somewhat, but they are still quite high. The prices are, in fact, considerably higher than most women can afford to pay, but I am going to tell you here how you may get a mould-cut glass service of 32 pieces, four complete sets, entirely free.

ALL WOMEN WANT CUT-GLASS.

American women, the country over, are fonder of cut glass than of anything else that can be brought into the home. Haven't you ever wished for just a FEW pieces of cut glass? If you haven't you are an unusual woman, indeed. Every woman I know longs for just a few cut-glass dishes, enough so that she may say, "I have cut glass in my house."

Now, in order to get the magnificent pieces of mould-cut glass, of which I spoke before, absolutely free, all you have to do is to spend a little time in a most pleasant manner. I am very glad to tell you that this free mould-cut glass offer is made on this page today. It is an offer which I believe to be so unusual that I desire to bring it to your attention. I think it is my duty to tell all of my readers about it.

The mould-cut glass service which I told you about consists of thirty-two distinct pieces which altogether comprise four complete sets. And you can really get this entire service free. And in addition to this mould-cut glass service of thirty-two pieces and four entire sets there is also a Swastika Cross Souvenir Spoon which is given away. I will tell you of the spoon a little farther down.

BETTER SIGN THE COUPON.

Mr. C. A. Cummins, President, of Chicago, is the man who is making these liberal offers and I would advise you to sign the coupon at the bottom of this page and send it to him just as soon as you read this.

The entire design of the mould-cut glass service is extra deep and each piece is extra bright and glittering. When placed in the morning sun as, perhaps, it filters into your dining-room, this service throws off all of the diamond glitters of the rainbow, and sitting there on your dining-room table it is a sight that you will never forget.

And to think that Mr. Cummins offers all of this free—all of this and the weird Swastika Cross Souvenir Spoon also free. Just read where he says: "The Offer," and there you may learn all about this liberal chance—why he will give this thirty-two piece mould-cut glass service and the Swastika Cross spoon away free.

CROSSES THOUSANDS OF YEARS OLD

These Swastika Crosses may be 5,000 years old or they may be more. They are all the rage in every part of the United States and all over the world, because those who possess them believe that they bring good luck and that they ward off disease and even death in many forms.

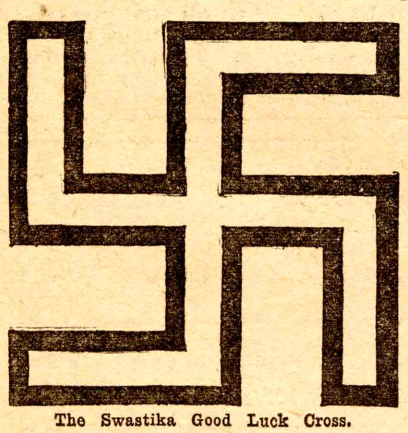
For centuries and centuries this weird and wonderful cross has been accepted as the emblem of good luck. Nobody knows where this strange cross originated. It was known long before the coming of Christ and it was accepted by all people then as the sign of good fortune.

By many it is said that the Swastika Cross proves the truth of the Scripture story that all peoples of the earth once lived together, and when they scattered to different parts of the globe they took this mysterious emblem with them and planted it in the new empires which they founded.

In every corner of the earth vestiges of the cross are found. It is found on the solid rock of India, it is emblazoned on ancient Buddhist and Brahmin gods and idols, it is dug up in the ruins of Pompeii and Herculaneum, it is found in the caves of the cliff dwellers and in the mounds of the mound builders. Men have found the cross on pottery which they have unearthed from the burning sands of Sahara and they have dug it from the frozen ground in the mountain fastnesses of Alaska and farthest Siberia.

In the large cities men and women of fashion have it inscribed on gold and silver ornaments and upon the silverware they use on their table. Everyone has at least one Swastika Cross in the household, and everyone who does not possess a Swastika Cross wants one.

You know that you can't get a souvenir spoon for less than 50 cents anywhere, and if you want a good



The Swastika Good Luck Cross.

souvenir spoon you must pay from $1.00 to $2.00 for it. More than likely you have priced them when you were away from home, so you know. Well, all Mr. Cummins wants you to do is to distribute sixteen of these wonderful and mysterious Swastika Cross Spoons, at 25 cents each, and when you have collected 25 cents for each spoon and forwarded him the money he will send you the magnificent mould-cut glass service which I have told you about here.

And if you are prompt in distributing the first four spoons he will give you a Swastika Cross Spoon free.

Each spoon is placed on a pretty Souvenir Card which tells of the Swastika Cross, and the people who see these spoons just go into raptures over them and will not rest until they have them.

And all you need to do is to hand out sixteen of these spoons at 25 cents each to receive the beautiful mould-cut glass service of thirty-two pieces and four complete sets free. You can't imagine the beauty of this mould-cut glass service. You will not be able to understand its magnificence until after it is your very own. And it will be your very own in such a short time if you send for these spoons at once. In a day or two they will be gone and then you will have the thirty-two pieces of mould-cut glass and the Swastika Cross souvenir spoon—both free.

I advise you to send for the spoons today.

32 Pieces BUTTERFLY PATTERN GENUINE MOULD CUT GLASS Free!

HERE is a picture of a beautiful and elegant genuine mould-cut glass service, butterfly pattern, consisting of thirty-two distinct and separate pieces, and made up of four complete entire sets. You can get all the thirty-two pieces absolutely free by giving me just a few minutes of your spare time and no canvassing is necessary. *Every piece guaranteed, full size, pitcher, 8½ in. high holding half gallon. Other dishes in proportion.* This is a magnificent and elaborate service which will grace any dinner table and any dining room. It is the very same pattern of cut glass that you would find in the dining rooms of millionaires. It is the genuine mould-cut glass which is strong, durable, extra deep pattern, bright and glittering. Remember there are thirty-two pieces and four complete sets—all absolutely free. You can't imagine the beauty, the diamond-like glitter and the perfect rainbow sheen of these marvelous sets until you have seen one.

4 COMPLETE SETS OF MOULD-CUT GLASS

1 WATER SET—7 pieces, 1 beautiful pitcher holding one-half gallon, stands 8½ inches high and 6 dazzling glasses.

1 BERRY SET—13 pieces, large berry dish and 12 individual dishes.

1 TEA SET—7 pieces, 1 beautiful spoon jar, 1 magnificent butter dish (with cover), 1 elegantly cut creamer and 1 fine sugar bowl (with cover).

1 BUFFET SET—5 pieces, 1 magnificently patterned oiler, 1 delicately traced salt cellar, 1 pretty pepper shaker, 1 elegant celery dish, and 1 elaborate cheese and cake plate. — ALL FREE.

Here is My Great Offer

How to get this set: Within a few days this elegant set will be yours just for spending a little time on my behalf in the most pleasant work imaginable. All I want you to do is to distribute, at 25c each, 16 of the Wonderful Souvenir Swastika Cross Good Luck Spoons, which you see pictured on this page. I will send you these spoons prepaid, without one penny from you. When you have distributed the 16 spoons at 25c, send me the money you collected and I will send you at once the beautiful 4 sets (32 pieces) of mould-cut glass as illustrated above.

That is *all! So easy* to earn the splendid mould-cut glass sets! And don't you think you ought to take advantage of this offer *at once?*

Here is the Swastika Spoon

It is a regular souvenir spoon with the strange and mysterious Swastika Cross on the handle. This is called the cross of "Good Luck." The cross is embossed on the handle of the spoon and is in beautiful Blue Enamel, baked under a terrific heat so that it will never wear off. And you know that all silverware with enamel on it is very expensive. This spoon is so strange and pretty and it is, indeed, a spoon of such rare value that it attracts instant attention. Everywhere you go you may see the strange emblem of the Swastika Cross, and when discovered on the handle of a spoon it has a most striking effect. We have gone to a great deal of trouble and expense to secure the cross and incorporate it on the handle of this spoon. Read the entire story of the Swastika Cross which you will find on this page. No matter where you are every one wants one of these Swastika Spoons. They are the rage all over. Read how the people for centuries have looked upon the Swastika Cross as an emblem of good luck. Read what the Editor says of the Swastika Cross and the Swastika Spoon in the first column of this page. Just think how very easy it will be to dispose of 16 of these spoons at 25 cents each and win the grand mold-cut glass service consisting of four sets. Send no money. Just sign the free coupon below, and the spoons will reach you by return mail prepaid. Then you will hear a gasp of astonishment from every person who calls at your home and sees the spoons, for we know that these Swastika Spoons are absolutely new. And we are sure that no one in your neighborhood ever saw anything like them before.

A SPOON FREE TO YOU

I you act promptly, right away, at once, I'll give you a spoon absolutely free—one for yourself just as soon as you have sold the first four spoons. But you must answer this advertisement immediately. Don't wait. Send the coupon now. This extra spoon is just like the others. It has the wonderful Swastika Cross on the handle. This beautiful spoon for you is given absolutely free only for promptness. Our agents must act quickly. Better get the spoons to distribute at once. If you wait it may be to late. Better sign the coupon now. Then you will receive the spoons before anybody else ever heard of them.

As to our responsibility, we refer by permission to the Colonial Trust & Savings Bank of Chicago, Capital and Surplus, $1,100,000

C. A. CUMMINS, Pres.
60 WABASH AVE., Dept. 1102, CHICAGO, ILL.

SIGN THE COUPON

Sign it right now. Write your name and address plainly with pen and ink or pencil on this coupon, cut or tear out along the line indicated and mail to me at once. **SEND NO MONEY** and do not bother with a letter—just put the coupon in an envelope and mail it. As soon as I receive the signed coupon I will send you the Swastika Spoons to distribute. Just as soon as you have distributed four of the spoons you get a **Free Swastika Good Luck Spoon** for yourself (provided you act promptly) and when you have distributed all 16 of the spoons at 25 cents each and have sent me the $4.00 I will send you the perfectly magnificent 32-piece mould-cut glass set you see above. Don't miss this wonderful opportunity.

REMEMBER—No Canvassing Necessary.

After you get the spoons put them on your dining table and when a friend calls show her one of the strange, weird "good luck" spoons and let her have one at 25 cents. Everybody is just wild for Swastika pottery and Swastika silver ware. So your friends will appreciate the favor you show them and they will be glad to call on you in order to get the "good luck" spoons at 25 cents each. Thus no canvassing is necessary, for these remarkable spoons at 25 cents each will certainly be readily taken by anybody who understands the historic interest in the Swastika Cross. Write at once. *If for any reason anybody should fail to distribute all the spoons at 25 cents we will take back any unsold.*

SIGN YOUR NAME

and address now on this coupon. Don't wait a minute or some one else may get ahead of you. Begin while the field is new.

Begin while everybody is "just crazy" to get a Swastika Spoon and be the first to distribute the spoons in your locality. Did you ever hear of a better offer? Sign the coupon at once and win this beautiful set right away. Don't delay. Sign the coupon plainly and mail it to us.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

Is, as the name indicates, a farmers' Society. Its organized forms are local unions and a national union; a county union may be organized where three (3) or more local unions in the county will join to organize one. Also a State union may be organized where five (5) or more county unions will join in organizing it. Full instructions for organizing county and State unions, and their duties, will be sent on application to headquarters.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers' Society of Equity is to *obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

UNION LABEL TRADES UNION LABEL COUNCIL INDIANAPOLIS 33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

If by easy work you beat,
Who the more will prize you?
Gaining victory from defeat,
That's the test that tries you.
PHOEBE CARY.

Which side of the line are you on?

UP-TO-DATE FARMING taught farmers to think independently instead of letting other people think for them. The necessity of indepent thought is greater now than ever before. All the powers that would keep farmers mere "hewers of wood and drawers of water" are embracing the present opportunity to weaken the only farmers movement that has the elements to give industrial independence to the greatest class of our people and to strengthen their own would-be position as masters.

Report to Farmers Society of Equity because it is the only society that represents the true principles of the original Equity Society, has the original plan, and has the ability to carry the plan out.

Two meetings a month should be held by each local union. Don't neglect such an important part of your work. Read the 1908 plan of organizing and note how it is proposed to maintain a district organizer or auditor permanently. How do you like the plan?

We wish each union would consider this plan of campaigning in their next meeting. How will it fit in your district? You will want to consider the condition of organization in your county and in adjoining counties. What three other counties should join with yours to make a district, or should there be more or less than four in the district?

The district auditor can be of great advantage. First, in completing the organization; second, in maintaining it; and third, in superintending the marketing and doing a hundred other things that some body must do.

Manufacturers have their agents all over the country. You cannot go into any considerable town but there is a representative of the International Harvester Company, and representatives of other manufacturers. These people look after their principal's interests and they get paid for doing so. If the companies would forget to pay their representatives, or refuse to do so, they would quit, the business of the concerns would be crippled and, well, the houses that would do this would soon get out of business.

While farmers have always done business without agents to look after their general welfare, they have not been forced out of business, but they have not reaped the rewards they are entitled to. Fact is, the poorer they got the more necessity there was for continuing in business.

The district man can do many things for all the farmers because it will be his business to do them and his business alone. You know that "what is everybody's business is nobody's business," so we must specialize. This reminds us of an elderly man in the writer's town many years ago speaking about work by boys, he said: "a boy is a boy, two boys are half a boy, and three boys are no boy at all." Let us get one man's work.

So when you meet next time, decide on the counties that should go in your district and also recommend a person for district organizer or auditor. Don't delay about this now if you want to get profitable prices on the 1908 crops.

Analyze them all and see if the final analysis does not result in just what we state.

Address all correspondence and reports to Farmers Society of Equity, Indianapolis, Ind.

Independence in thought is the farmer's safeguard against being duped by designing people. This paper has taught farmers to think independently.

"We can best redeem the past by forgetting it."

Elsewhere in this issue are feature articles; one headed "Reward" and the other "Evidence Wanted." The attention of our friends, and the friends of justice and equity everywhere, is asked to them.

The F. S. of E. motto for February and March: "Every One Get One and Every One Push."

UP-TO-DATE FARMING makes one earnest request of its friends, and that is that they lose no opportunity to spread the doctrine of controlled marketing to secure profitable prices for farm products and provide the facilities to control them. That is of greater importance than who shall be "big" or who shall be "little."

It will pay you in dollars and cents to read the Business Exchange. There is where our readers tell what they have to sell.

Grand are the sports of winter time;
The skaters glide, the sleigh-bells chime;
There's health and ozone in the air,
And happiness is everywhere.
E. P. DICKERMAN.

EXPLANATION

A great many local and county unions have passed resolutions in favor of the Farmers Society of Equity and UP-TO-DATE FARMING and they wonder why they have not been printed.

Our apology is, lack of space. Nothing would please us more than to print all of them, or even to continue giving the name and location of the unions, as we have done for many, but even the latter encroaches on space that it appears necessary to use for other matter, while to print the resolutions would largely be repititions of the same sentiment, of which the following, just received, is a sample:

Franklin County (Va.) county union met at Cross Roads on the 11th of January, 1908. The committee on credentials reported twenty-seven delegates present, representing eight local unions and 177 members. . . . A committee on resolutions reported as follows after a free discussion by the body:

That we recognize the Farmers Society of Equity as our headquarters and UP-TO-DATE FARMING as our official paper. That we send 85 cents to headquarters and retain 35 cents of the dues in our local treasury. That we ask headquarters regarding maintaining one county union.

R. C. SHAON, Sec.,
Taylor's Store, Va.

County unions that recognize the F. S. of E. should be maintained and such assessments made on the local unions as is necessary to meet their expenses until the next step, that of marketing crops, is undertaken, when they will be maintained from the small sum provided in the sale of crops.

RECOMMEND AN ORGANIZER

Do you want your section organized? If you do, select an organizer and report him to the F. S. of E. and we will do the rest. Simple, isn't it?

GOOD READERS NOW

Mr. W. O. Reiter, vice-president Minnesota State Union, writes:

FRIEND EVERITT:

A good many of our members who formerly never took the wrapper off of UP-TO-DATE are getting to be good readers now. I think we will come out all right—just keep cool.

We'll try to keep as cool as possible and glad to know that your members are reading. We always said UP-TO-DATE ought to be read by every farmer, and we hope they will get the habit now never to quit it.

BLANKS FOR REPORTS, FORMS FOR LOCAL UNIONS, MEMBERS' CARDS, BUTTONS, ETC.

Many compliments have been passed on the new forms, blanks, members' cards, etc., and the concensus of opinion is that if such facilities had been provided by the old secretary the multitude of errors would have been avoided. A supply was mailed to each local union secretary with the request to use if any or all the members desired to affiliate with the Farmers Society of Equity. Members should ask for them if the secretary displays an unwillingness to present them.

E13 MEMBER'S CARD

The Farmers Society of Equity

Headquarters, Indianapolis, Indiana

This is to certify that.....

a member at large
a member of.....Local Union, No.....

has paid his dues until.....190.., as indicated by the stamp affixed.

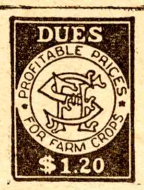
Organizer.

33 .....Secretary.

MEMBERSHIP FEE $2.00

To Local Union	$ .25
To Organization Fund	1.00
To General Expense	.25
To Official Paper	.50

Secretaries or Organizers shall leave 25 cents in the L. U. treasury and remit balance to headquarters.



ANNUAL DUES $1.20

To Local Union	$ .35
To General Expense	.35
To Official Paper	.50

The Secretary shall send 85 cents to the National Union and retain 35 cents in L. U. treasury.

TAKE NO SUBSTITUTE

Above is a print of the membership card in the Farmers Society of Equity. It represents the true principles of Equity for farmers as taught by the original society and stands for the original simple plan that has been proven sufficient. Accept no other.

The important feature to observe is the stamp, which should be put on each card issued to members when paying their dues. Across the face of the stamp must be written, by the secretary or organizer, the month and year the dues are paid to. Example: "Dec., 1908."

When a person is taken into the society a FEE stamp is placed on the card and it is marked as explained above.

Each member has a double check on the person who receives his money, first, the date on the stamp, and, second, the expiration of his official paper, UP-TO-DATE FARMING. The dates should correspond. Watch the date on your paper wrapper and first report to the person to whom you paid the money if an unusual delay in receiving paper *or changing the date.*

$5.00 PRIZES

A member wrote: "A new star has arisen." He referred to the star of justice and equity, representing the Farmers Society of Equity. See first column, "Official Page." A sermon might be preached on this new emblem or a long araicle written. We will not write it now, however, but we offer $5.00 in prizes to our readers for the best letters describing and commenting on the emblem. The letters must not contain more than 250 words.

First prize, $2.50; second prize, $1; third, fourth and fifth prizes, each 50 cents. The prize articles will be printed in this paper.

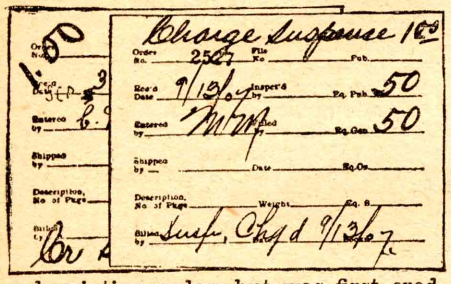
ANOTHER OF THE WAYS

We have said that some of the old A. S. of E. officers were determined to ruin the publisher of UP-TO-DATE FARMING and kill the paper. Numerous of their schemes have been exposed. Another was to toll subscriptions that came into their hands. Below is an example. This order was sent to the society headquarters.

Dear Sir: . . . Enclosed find one dollar for a new subscription to UP-TO-DATE FARMING. Be sure to send English. This man is a progressive farmer living ten miles from here. . . .

GREGORY LUEKEN,
Aug. 31, 1907. Stanton, Mo.

This order was received September 3, as shown by the facsimile of order ticket shown here. It was a straight



subscription order, but was first credited to "Suspense." Later, on September 13, the order was taken up again and the ticket shows that 50 cents was given to the publisher and 50 cents was kept by the headquarters.

The subscription price was $1.00, and the remitter said plainly what the money was for. Therefore to keep any part of it was plain—well, everybody knows what it was.

NOTICE TO SECRETARIES AND MEMBERS OF THE F. S. OF E.

Dear Friends and Brothers:

For the benefit of our noble society I am going to make a few suggestions and I am going to try and put one into effect, and I hope others may try and see if they can think of something for the betterment of our society. We should not depend altogether on our editor or our other national officers to do all the thinking for so great an organization, but each and every one should put his shoulder to the wheel and see if he could do something for the betterment of so noble a cause (Equity).

Now in my opinion we should do something to better the condition of our members and members alone. Heretofore the members have had NO advantage over non-members, and I believe it is time for us to do something whereby our members can have some advantage over those that are not members, and when that time arrives you will see our membership increase at a rapid rate.

If our crop report and the report of all products that remains in the farmers hands could be handed out to our members and members only, that would give an advantage to members that would mean many dollars, and I think it can be done without much trouble, and when it is accomplished every farmer will want to be a member.

Now I am going to make a test and see how many are in favor of my plan. I mean just what I say and will carry out my part to a letter and hope that every member will see the benefit that would arise from it. I am in a potato belt and potatoes is what we are interested in. So this test will be on potatoes. I realize that it should have been done at least sixty days ago, but I believe it will benefit many members even more now.

What I want is this: Every local union in America that is interested in the price of potatoes, and especially those in Michigan, Wisconsin and Minnesota, at the first meeting after receiving this paper to invoice the neighborhood of their local and get as near as possible the correct number of bushels of potatoes that is in the farmers' hands at the date of that meeting. Get all that you know of either members or non-members, also as near as possible the number of bushels a year before that date. Make your report short but plain, like the following:

.....Local No.....

In members' hands February 15, 1907:

.....

In members' hands February 15, 1908:

.....

In non-members' hands Feb. 15, 1907:

.....

In non-members' hands Feb. 15, 1908:

.....

Total in members' hands.....

.....

Total in non-members' hands.....

.....

Acreage planted 1907.....

Signed .....Sec.

P. O. .....

County .....State.....

(SEAL)

Make this report as correct as possible. Put on the seal of your local and with one dime enclosed send to me. I will in return send you a true copy containing the results (or number of bushels) on hand of every union that I hear from, stating number of bushels on hand and what was on hand a year ago. I will mail such report to every secretary that complies with the above request, and he can read it at the next meeting.

Now I do not wish to make a cent out of this, but I realize that I will have to make two reports to most of the secretareis, for I will mail reports so they will be received by secretaries by March 1. Some locals will not get their reports to me so I can mail by that time on account of meetings not convening soon enough. So will mail the second report not later than March 15, 1908. So I think 10 cents is about the expense for a union, and I think such a report would be worth much to any one that had potatoes to sell.

Now I hope that all members in potato districts will take an interest in this plan of reporting, and I believe this will lead to similar reporting of all crops. A crop report through the paper gives all the same benefit and I think those that pay their dues to meet expenses should have some advantage over those that paid no dues. Now send in your report to me and I will do just as I have agreed, and will answer every letter with a report enclosed, to any member; but must have the seal. Address all reports to

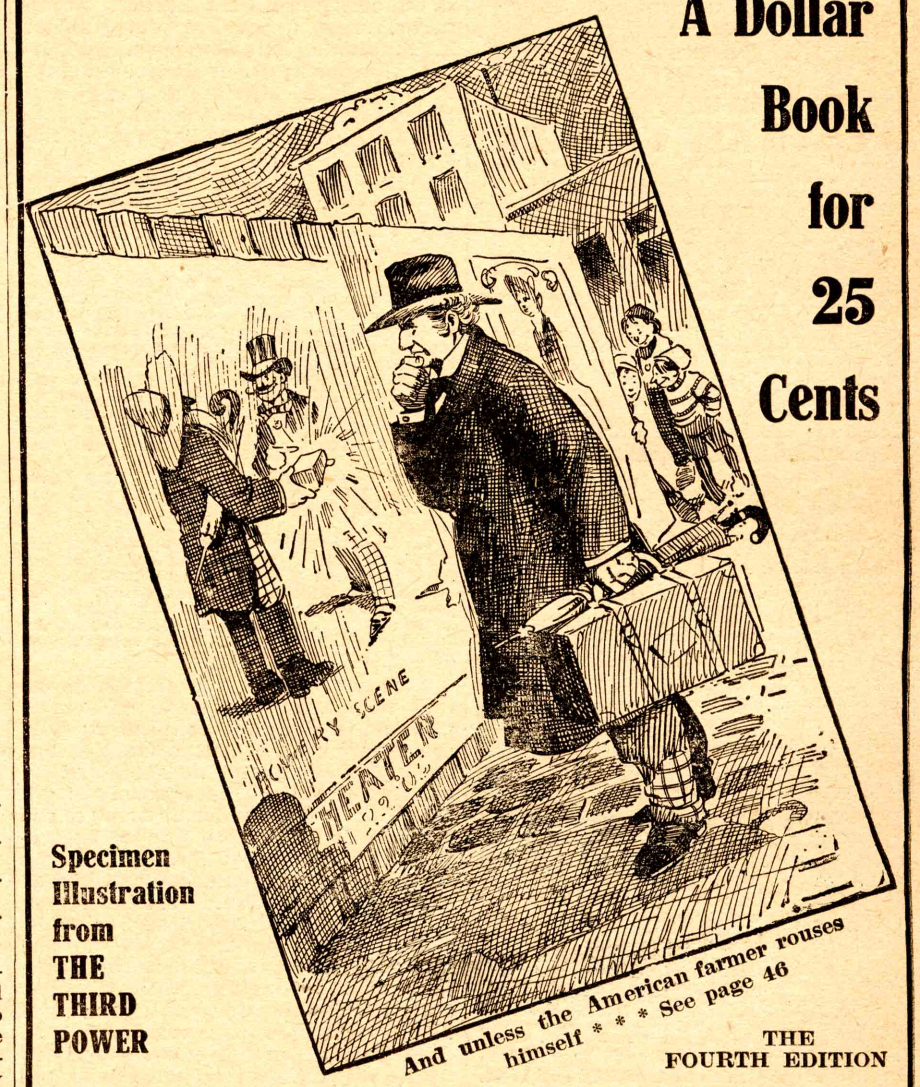
M. N. DRAKE, Trufant, Mich.

GUARDS OF EQUITY

We desire to build this body to one thousand members who are earnest friends of this paper, and who are truly interested in bringing about the reforms it is working for through an organization of the people. An invitation to become a Guard of Equity was recently sent to 2500 people. If YOU were favored with an invitation and have not responded, we hope you will do so soon. Or if you did not receive an invitation and are interested, send for particulars to the publisher.

THE THIRD POWER

A Dollar Book for 25 Cents



Specimen Illustration from THE THIRD POWER

And unless the American farmer rouses himself * * * See page 46

THE FOURTH EDITION

PERSONAL TO EVERY READER:

Doubtless you have heard of "the third power," and you have heard of THE THIRD POWER book, too. Undoubtedly every one of you has thought: "I'm going to get one of those books some day." Well, that "some day" should be *now*. Your best interests demand that you do not delay longer.

THE THIRD POWER is a revelation to everyone who reads it. No matter if you have a dozen or a thousand books in your library, this one will be more valuable to you than any other if you are a farmer, or are interested in the farmers.

HELP TO EDUCATE THE PEOPLE

The more people who read THE THIRD POWER book, the more money the farmers will make. This is a strong claim. It is a fact, nevertheless. Send 25 cents for one, or $1.00 for four, or get a dozen for $3.00, postpaid. If you will pay express or freight, I will sell them at $3.75 for 25, or $15.00 a hundred. Sell or give them to your friends to help bring farmers to the front.

This fourth edition is much better than any former edition. It contains a full account of the farmers' movement down to date.

320 Pages, Cloth Bound.

160 Acre FARMS IN Western Canada FREE

Illustration Showing Mixed Farming Scene in

WESTERN CANADA

Some of the choicest lands for grain growing, stock raising and mixed farming in the new districts of Saskatchewan and Alberta have recently been Opened for Settlement under the

REVISED HOMESTEAD REGULATIONS

Entry may now be made by proxy (on certain conditions), by the father, mother, son, daughter, brother or sister of an intending homesteader. Thousands of homesteads of 160 acres each are thus now easily available in these grain-growing, stock-raising and mixed farming sections.

There you will find healthful climate, good neighbors, churches for family worship, schools for your children, good laws, splendid crops and railroads convenient to market.

Entry fee in each case is $10.00. For pamphlet "Last Best West," particulars as to rates, routes, best time to go and where to locate, apply to

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

A. S. OF E. HEADQUARTERS

Notes of the Society

The A. S. of E. board of directors met January 7, 8 and 9. Out of the sixteen directors eight were present as follows: President Barnett, Secretary Pauley, C. O. Drayton, Illinois; L. N. Staats, Illinois; Thos. Emmerton, Wisconsin; James Jones, Indiana; T. S. Morrell, Minnesota, and James Holes, North Dakota. The official, public report of the meeting was as follows:

1. The great American Society of Equity is safe in the hands of your national officers and board of directors.
2. Secretary-Treasurer O. D. Pauley is wise, economical and efficient in all his work in our national office.
3. In the past we have found that the most successful campaigns of organization have been instituted and conducted within the bounderies of the various States as a unit, and directly under the supervision of a director of organization.
4. We find that if 20,000 members will pay their 1908 dues before the first of April the A. S. of E. can own and publish its own official paper, which would be worth about $20,000 to the members of the society.
5. We will make this (the Equity Farm Journal) the best farmers' paper in America—a paper by the farmers and for the farmers.
6. This board of directors pledges the members that every dollar received by the national union will be used to give efficient service, to publish the best official paper possible and to carry on an aggressive campaign of organization. Not one dollar will be used for million-dollar corporations or any illegitimate purpose.

Surprise has been expressed to us that no report was made of accomplishments since the convention; why the report of the convention had not been published; and no report of an attempt to clear headquarters from the cloud it rests under or bring about harmony? Also there was no expression of regrets that Mr. Everitt was grossly insulted, slandered and libeled since the convention. But the report says: "The great American Society of Equity is safe in the hands of your national officers and board of directors"; that "Secretary Pauley is wise, economical and efficient"; that "if 20,000 members will pay their 1908 dues before April 1 the society can own and publish its own official paper"; and, best of all, it says: "Not one dollar will be used for million-dollar corporations."

How safe the society is in the hands of a headquarters whose head officers are under arrest and the employees fleeing to escape from the officers of the law, let the members judge. Secretary Pauley must be very wise indeed to allow libelous matter to be sent from his office for a period of two months, to thousands of newspapers, and then read the reprint of it in the papers; and to thousands of individuals, and receive replies from them acknowledging it; issue vouchers for postage to mail it, and pay the printer's bills for printing it, and then publicly declare as follows:

The undersigned, officers of the society, desire to inform the members that they had no participation, directly or indirectly, in the writing or publication of such circular (referring to the circular sent to "the Agricultural Press of the United States") and had no knowledge of its preparation and distribution." (Signed by the president and secretary.)

Again we say Secretary Pauley must be very wise. Members may judge if the society is safe in his hands.

Regarding the official paper, the day the society undertakes the publication of it, that day it forfeits its charter of incorporation. The society was not incorporated to publish newspapers. Read the articles of incorporation and objects in the constitution and by-laws. The State of Indiana does not charter a society to do certain things that are clearly set out in the contract and then allow that corporation to engage in any wildcat, or even legitimate, undertaking beyond its provinces that its officers may take a fancy to. Here we can note the profound wisdom (?) of the leaders, and we might again ask members if they are willing to follow them to the destruction of the society?

But a craze to publish papers appears to have taken possession of the leaders. In view of the attention given this subject we might conclude that the first and chief object of the A. S. of E. now is to publish official papers. The desire to have an official State paper has been in evidence in several States, while Wisconsin has actually taken steps to have one. We quote from the proceedings of their last State convention as follows:

As to the State paper, it was voted to capitalize at $10,000 and establish headquarters at Madison. A stock subscription list has already been sent out. It will be presented to all local unions.

Last year it was Equity Exchanges that took the attention of the society's officers from the main issue, while this year it is official papers, and all the time farmers are being plundered by their old exploiters. Oh, when will farmers get in the game instead of being dupes to carry sand with which they are blinded?

In its report to the Postoffice Department the Equity Publishing Company, publishers of the Equity Farm Journal, is reported to be composed of the following individuals: Thos. Emmerton and S. D. Kump of Wisconsin, Theo. G. Nelson of North Dakota, John Gentner of Indianapolis, and Chas. W. Bowne, formerly of Washington. This report is probably authentic. These individuals are all heavily interested in the million-dollar Equity Exchange corporaton.

"One View of the Situation" was the title of an article in the try-monthly Equity Farm Journal — December-January issue — by Garret M. Walrod. It is hoped that Walrod will have another view and report it to Sheriff Clay, care of Marion County Jail, Indianapolis, Ind.

Has anybody seen John Mulholland lately? If so, please report his whereabouts to the publisher of this paper, who has some important matters waiting on him. Mr. Mulholland was formerly an employee of A. S. of E. headquarters and vice-president elect, at the late convention, of the A. S. of E. Department of Fruit and Produce.

Charles U. Pierson, State organizer of North Dakota, and his lieutenants are going over North Dakota repeating the libelous statements for which the head officers are under arrest and headquarters employees have left the State rather than attempt to prove them. North Dakota members are requested to read notice in this paper "Evidence Wanted."

C. O. Drayton is visiting local unions in Illinois and many reports come of his slanderous exhortations to members to continue supporting the present acting headquarters of the society. Any money contributed for such purpose is a contribution to put the exploiters on the backs of farmers again. We are not an advocate of harsh measures, but if, after the exposures of the hypocracy and betrayal of the society by this man, that have been given, he does not retire, he may naturally expect some unpleasant experiences.

We did not expect to refer to the conspiracy again and the recent convention, but we just came in possession of important information that is so appropriate in this connection that we will give it and will ask our readers to bear with us this time. It follows:

Believing that a statement of the following facts will only be just to Mr. J. A. Everitt, I desire to state: On or about April 23, 1907, I received a note (in answer to an advertisement which I placed in the Indianapolis News) from Mr. G. Walrod, an employee of the American Society of Equity, asking me to call at the offices of the American Society of Equity in the Claypool Building, as he wished to dictate a letter that he did not wish to give to the stenographers employed in that office. I called as he requested, and he dictated a very long letter and told me to write four copies of that letter, as he wanted to send one to each of four directors. One of the four, as I remember, was a Mr. Drayton. I have mislaid or destroyed the note book containing the shorthand notes of this letter, unfortunately, but will say that Mr. Walrod made great complaint of nearly every person employed in the office, with possibly the stenographers and bookkeeper excepted. He declared that Mr. Tubbs was incompetent and not a strong enough man for the position which he held; also that he did not manage and guard the funds of the society as he should, allowing bills which should not have been allowed. He also spoke of another officer or employee of the society not being at his desk much of the time and as neglecting his work.

He also devoted much space to a very emphatic denunciation of the lack of system in the office, stating that the system which they did have was exceedingly poor, that records were not accurately kept, and that many orders coming in from organizers throughout the different States did not receive proper attention.

I give the above facts, as I understand that since that time Mr. Walrod has praised Mr. Tubbs and the other officers of the society very highly, and joined with them in an attack on Mr. Everitt. The above is to the best of my knowledge and recollection.

M. K. SLEIGHT, Stenographer.

State of Indiana, }
County of Marion, } ss:

Before me, Irvin C. Rous, a notary public in and for said county and State, personally appeared M. K. Sleight and acknowledged the foregoing is a true statement.

Given under my hand and seal this 6th day of February, 1908.

(*Seal*) IRVIN C. ROUS,
Notary Public.

My commission expires Sept. 6, 1910.

The reader will observe that this was about a month after the first meeting of the board of directors and the removal of the society offices from Mr. Everitt's building. It was about six weeks after Mr. Everitt had called the board of directors to consider precisely the same things, viz.: incompetency, resulting in the lack of results, etc. Those who have read "Conspiracy and Rebellion" know how the board of directors refused to act on Mr. Everitt's recommendations and they did not act when G. M. Walrod laid the matter before them, and they did not act when Mr. Everitt called the second meeting in July for the same purpose.

Garrett M. Walrod was one of their trusted advisers, therefore they cannot plead lack of knowledge of conditions at headquarters since April 23, 1907. How can they excuse themselves for allowing it to continue until the convention in October, six months? Will their friends speak for them now and justify their course? Can any member still censure Mr. Everitt for being out of accord with the directors who would so grossly neglect the society's interests?

And Garrett M. Walrod was one of the leaders in the convention. He lauded Tubbs, Speer and Mulholland and directed all censure, and threw all reproach, on Mr. Everitt. We ask each delegate if this is not true. And yet some of the delegates say: "Oh, we were not deceived!" And some members may still say: "The majority must be right!" We wonder whether they will?

If a single member still entertains a doubt, perhaps the following will help to dismiss it. This letter was written by Garrett M. Walrod (same as above) to W. C. Stephenson, Berlin, Va., February 15, 1907. Notice the dates are not very far apart:

. . . Mr. Everitt is the publisher and editor of the paper called UP-TO-DATE FARMING. What, therefore, could be more natural when it was found advisable for the society to have an official paper than to make arrangements with Mr. Everitt to furnish the paper, when we knew that his whole soul was so entirely wrapped up in the society work. We therefore laid the question before him and he generously agreed alst year to furnish the paper for 30 cents a member, he losing several thousand dollars by so doing. . . . This year Mr. Everitt agreed to print the paper four times a month and furnish it to every member on the list for 50 cents during the year, and you would be surprised to see the thousands of names that came in here in which the members themselves or through their secretaries claim the right of going on the list for the same old dues of 40 cents. There are fifty thousand of these names on the list now and Mr. Everitt is losing over $200 a week clean cash by carrying them, yet he is doing it and says he will continue to carry them because he says he believes they will eventually get in line and pay up.

Notwithstanding the above was written February 15, 1907, in October, 1907, and since that time, this man Walrod has been one of the leaders in spreading the idea that Mr. Everitt's motives were all selfish; that he did not want the society completed; that he was getting immensely rich out of publishing the official paper; that UP-TO-DATE FARMING was an usurper as the official paper, etc. Will the delegates still contend that they were not deceived? Will they still put absolute confidence in Drayton, Walrod, Tubbs, Mulholland, Speer, Sharp and others when they have been completely dis-

credited by their own most trusted accomplices? If what Walrod said to the delegates was true, why did he not stay in Indianapolis and prove it?

We want members to ask their delegates to the late convention NOW if they were deceived? Here is what an honest delegate wrote on February 3, 1908: "All of my people looked to me to tell them about the convention, as I was a delegate. Well, I was ashamed to tell anyone that I had been to the convention. I went knowing nothing and came back the same way. I was there from Tuesday to Friday morning. I left the hall just after Barnett was nominated and did not go back any more. I did not like the way things were running, but could not help it. Not one of our members want to give up UP-TO-DATE FARMING."
—A. B. Walker, Pleasant Home, Ky.

RESOLUTIONS

Whereas, Senator McCumber, of North Dakota, has announced he will introduce his bill for national inspection of grain, and

Whereas, President Roosevelt has recommended to congress the passage of a bill providing for uniform Federal inspection of grain; and

Whereas, reports from abroad call our attention to complaints made by foreign purchasers against the grades of American wheat, consular reports show upon investigation, that the wheat upon arrival in Europe does not grade up to the commercial standard because of dishonest methods practiced by our grain dealers of mixing a lower grade with a higher grade (Macaroni with our hard wheat of the west;)

Resolved, that it is the sense of this board that all grain should be inspected and graded by the Federal Government and when exported should carry with it the seal and proper authority so that it should have with it absolute confidence in every grain market of the world.

Resolved further, that we heartily endorse Federal inspection and call upon our representatives in national congress now assembled, to do everything possible in their power to assist in passing such bill.

Be it requested that our State Association, the Farmers Co-operating Grain and Live Stock State Association, call upon grain growers of the State to assist by way of providing the necessary funds by contributing to send a delegation to Washington to assist in securing such legislation, as we believe it will do more to break the back bone of the grain trust than any one thing could be done.

THE FARMERS CO-OPERATIVE GRAIN CO.
Minden, Nebraska.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper one or more times. Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

SHERMAN IN KANSAS. Hon. H. B. Sherman is in Kansas now and open for engagements where large audiences will come out to hear him. A man of Mr. Sherman's ability cannot afford to touch the low spots, but get up a rousing mass meeting and send for him. He has frequently held 5,000 people for two hours while he expounded the gospel of Equity to bring salvation to the farmers. Address him H. B. Sherman, care C. W. Peckham, Haven, Kansas.

FRANKLIN COUNTY, (Va.) County Union, will meet on the third Saturday in February at Wm. Dudley's School House, 11 a. m.—R. C. Shaon, Sec., Taylor's Store, Va.

NOTICE TO MICHIGAN MEMBERS

Geo. G. Wynans, Hamburg, Mich., State organizer for Michigan, desires to correspond with any people who want his services in any part of the State. Remember he is your State organizer, and it is his duty to go to you at your call, or send some person. If each local union will write him for terms and instructions and hold a mass meeting before spring work begins, the membership will be doubled or quadrupled. Also, if communities where there are no local unions will hold meetings under his direction the State can be organized before the next crops are ready to market. This means more than any person can conceive of for Michigan farmers.

EQUITY GRAIN BIN

Storage question has been solved. I have thoroughly examined it. It is absolutely water proof, fire proof, rot proof, wevil proof, and is dryer of damp grain. Will last a lifetime, and costs much less than a timber granary. For particulars write to Geo. M. Boll, Mt. Hope, Kan. In my judgment this bin will solve the grain storage problem on the farm.

H. B. SHERMAN.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

Q. *I have noticed in the question column that any question that was asked would be answered by you. In our meetings we have had some arguments over the questions I am going to ask. My questions are as follows:* (1) *At the last regular convention held in October, 1907, did you tell the delegates to that convention that you was no candidate and would not be for any national office of the A. S. of E.?* (2) *Mr. C. M. Barnett, of Kentucky, was elected president of the American Society of Equity by a large majority, and all the other officers were duly elected at this convention, this convention being in regular session and at the proper time.* (3) *Did you, Mr. Everitt, make a speech to those newly elected officers that you was well pleased with those selections and they were your friends and you would assist and aid them along with the American Society of Equity?* (4) *Is it a fact that this convention went on with its regular work until all the business was completed, everything seemed to be satisfactory and no more business to attend to, and then adjourned until its next regular term?* (5) *Mr. Everitt, is it a fact that after the delegates to this convention were scattered and gone home, except a few of your special friends; is it a fact that you and this few number got off and held a sideshow convention and elected Mr. Mitchell president of the American Society of Equity and yourself, Mr. Everitt, vice-president? Will you please show where there is any by-law of the American Society of Equity that would give any legal right that you and your few friends could have a sideshow convention just after the regular convention had closed?* (6) *If these questions be true, that you will pray for forgiveness for the last few months' disturbance in the American Society of Equity.* (7) *Why don't you, Mr. Everitt, stop sending your paper, Up-to-Date Farming, to locals when the members order it stopped?* (8) *I ask this to be published just as it is and your answers with it, as I think these questions will cover the ground of all our late trouble. Hoping you will answer these questions fair and square.—J. B. York, R. R. 1, Olaton, Ky., February 3, 1908.*

A. (1) No. I did not tell them I was not a candidate for a national office. I did say that I was not a candidate for any office THAT THAT CONVENTION had to give. Notice the difference and the words emphasized.

(2) They were elected by the made-to-order convention which was dominated by traitors to the true American Society of Equity. Read "Conspiracy and Rebellion" in January 15 number of this paper, pages 16 and 17, and if there is not enough evidence there I can furnish fifty times as much.

(3) I did speak to the convention and I said: "The best interests of the our society are always paramount with me to personal ambitions, and I affirm, if this convention stands true to the true principles of the American Society of Equity, and entrusts these principles to honest, efficient, loyal officers, no person in all the membership, officers or privates, shall excel me in endeavor to promote the society so equity may prevail throughout our land. On the contrary, however, should they do otherwise, no person shall excel me in denouncing them." I did not say I was well pleased with the selection, as I saw then who were in control of the convention and could forecast the results. My address, as quoted above, was a warning.

(4) The second convention was called Friday afternoon, was in session then and Friday night, and completed its work Saturday. It was held by regular delegates AND CONVENED BEFORE THE MAIN CONVENTION ADJOURNED, which adjourned, I believe, after midnight of Friday night.

(5) No, sir. It was a convention by regular delegates, who protested against the assassination of the original plan of the society. I will print its declaration and call as follows:

"Whereas, we consider the gathering now assembled in this city alleged to be a meeting of the National Union of the American Society of Equity of North America, is revolutionary in its action and purpose; that it disregards the traditions and teachings of the society; that it is made up of an unfair, unjust and illegal representation dominated by influences antagonistic to the principles and corporate purposes of the society, in many cases violating the constitution thereof and acting counter to its original purposes;

"Therefore, the undersigned, duly appointed delegates to the annual meeting of the National Union of the American Society of Equity of North America, do hereby call a meeting of such delegates to convene at room 202 in the Denison Hotel, Indianapolis, Indiana, October 25, 1907, to consider the matters above set forth, and take such action as may be deemed wise and for the best interests of the said American Society of Equity of North America."

(6) But your surmises are not true and may God have mercy on the people who have poisoned the minds of honest people, disrupted the society and committed crimes against the laws of our nation and State.

(7) I have, in every case. Sometimes a secretary will order papers stopped for all

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Dollar an hour or sample returnable. Automatic Curry Comb. Sample postpaid, 40c. Particulars free. Clean Comb Co., Dept, B. Racine, Wis.

Agents Wanted for quickest seller ever sold to farmers. Over thousand sold in one county. Write today before someone else secures agency for your locality. Farm Record Company, Newton, Ia.

Badges & Banners

A. S. of E. Badges, Banners etc. for conventions, Parades, Celebrations and local use. Prices right. Show your colors. Illustrated catalogue free. E G. Staats & Co., La Crosse, Wis.

Dogs and Pet Stock

Collie Pups. Nelson's, Box B, Grove City, Pa.

Ferrets Raised in small lots; healthy stock; prices the lowest. C. Jewell, Spencer, Ohio.

Farm Lands

Cheap Farm. Central Minnesota. Write Ed. Landwer, Gardena, N. Dak.

For Sale At Reasonable Prices. FARMS from $10.00 to $32.00 per acre. STONE building in good repair, ren's $40 00 per month. BUY FROM ADVERTISERS IN UP-TO-DATE FARMING

You will save money. The advertiser will do more business and increase his advertisement. This gives us more money to make a larger, better paper—to carry more advertisements—to save you more money—to increase the business of advertisers and enable them to enlarge their advertisements. Again we will increase number of pages, etc.

Your purchases will help—no matter how small. Send for catalogs; ask for particulars

ONE OF THE BEST AGENT'S ARTICLES ON EARTH!

Best because they please your customers and are needed on every set of work harness. Big demand—quick sale. Do away with strap hame fasteners. They are out of date, troublesome in summer and an abomination in winter, when you wear gloves. No bother if you use our patent fasteners. "Fastened in a twinkle." One pair will outwear the harness and can be removed to new ones. Adjustable to different sizes. If you once use FERRY'S HANDY HAME FASTENERS, you will never try to get along without them. Mr. H. A. Carter, Franklin, Ky., writes: *"I bought a Handy Hame Fastener four years ago and have used it ever since. It is the thing."* Sample pair for one collar mailed for 25c. Two pairs required for a team. Dozen pairs, $2.25 by express not prepaid. Money refunded promptly if not entirely satisfactory. Write for agents' prices. One agent sells 24 dozen a week easily. You can do better. Order a sample.

Cooner & Fortune Co., Indianapolis.

25c FERRY'S HANDY HAME FASTENERS 25c

members of a local union and not give the names and addresses. We cannot remove them until we get the list and we always write for it.

(8) Your request was complied with. After reading this if you still adhere to and support the present headquarters, you deserve to always have your old exploiters on your back.

Q. *Did the convention, or the new board of directors, discard Up-to-Date Farming?—Several Inquiries.*

A. The board of directors. The convention, when it adjourned, expected UP-TO-DATE FARMING to be continued. But the enemies of the paper and the promoters of the Equity Exchanges to the number of a dozen or more were in constant attendance at the board meeting following the convention and dominated them. I was called before the board only once and was there not more than ten minutes when N. C. Crawley, if he had not been restrained, would have fought me. On the advice of some of the directors to retire until Crawley was quieted, I did so and was not recalled. This was the extent of the board's effort to continue this paper.

Q. (1) *Has a new Society of Equity been started?* (2) *If we go with it, will we lose our charter and be to the expense of a new one? We want to hold our union together and we believe you have been the main factor in this movement.—J. M. Risley, Breckenridge.*

A. (1) Yes, in name only, not in principles and plan, the Farmers Society of Equity. (2) Yes, and the F. S. of E. will issue you a new one with all necessary supplies and seal for 50 cents (no charge at all for new unions organized). The F. S. of E. allows local unions to retain 35 cents of each member's dues, so it will be easy to pay the small charge. The change of name was to facilitate business. The principles and plan are the original ones, hence is really not a new society. For instance, the Farmers Society of Equity headquarters co-operates with Michigan, which adheres to the name American Society of Equity, but refused to endorse the plans of the new A. S. of E.-Equity Exchange-A. F. of L. society as launched by the October convention. All Michigan unions should get terms from E. N. Ball, secretary, Ann Arbor, Mich. All Kansas unions from C. W. Peckham, secretary, Haven, Kan., and all others the terms are as above and should report to Farmers Society of Equity, Indianapolis, Ind.

Q. *Under what condition will the Farmers Society of Equity send new charter and seal?—Many Inquirers.*

A. To new local unions organized they will be sent without charge on receipt of report. To any old local union or body of farmers already organized they will be sent on report of ten members or more having paid the annual dues of $1.20 each and on receipt of 85 cents for each member (the balance stays in the treasury) and 50 cents extra.

The German "Third Power" book is ready to send. Price is 50 cents post paid or 25 cents in quantities not prepaid.—Reply to several inquiries.

Q. *In January Equity Farm Journal was an article headed "Can This Be True?" Mr. Everitt, is it true?—H. C. H., Maysville, Ky.*

A. Absolutely not true. Not a vestige of a foundation in fact for a single statement. I'll pay $100 to the person who produces evidence that it is true. "All liars shall have their portion in the lake that burns with fire and brimstone."—Bible. Speer, Mulholland, Editor Bowne and all others who have given publicity to the infamous lies these fellows have invented will get the hottest portion of that lake, no doubt.

Q. *Do special members (males) have to pay a fee to join the F. S. of E. when reaching their majority?—Robt. Duddles, Spurlington, Ky.*

A. Yes. The regular fee.

Q. *The dues of 134 members in Augusta County, Va., have all been paid, yet some of them received a statement for 1907 subscription to Up-to-Date Farming. If you have not got your money it is no fault of mine as I paid it where the regulations required, to the State treasury. Get it again if you can.—A. Henry Towberman, Staunton, Va.*

A. Mr. Towberman's sarcastic letter is hardly called for. We cannot credit subscriptions unless we receive the report, and we are bound to strike these troubles unless we would continue the subscription list with all its errors due to the former bad system of reporting. We must get on a sound basis now and by the new and simple system of reporting, the trouble can be eliminated.

Q. *Can we send the amount for subscription to your office and the balance of dues to our State union or A. S. of E. headquarters?—Several inquirers.*

A. Certainly you can. But the result will be this: You will get UP-TO-DATE FARMING one year but Secretary Pauley has said that any dues received that do not include the full amount, including their official paper, will not put the member in good standing. Consequently you will forfeit your membership. The best way is to remit to the Farmers' Society of Equity, Indianapolis, Ind.

Q. *Our union voted to hold back a while before paying dues to see what to do. Is this advisable?—J. H. Beatly, Sec., Livermore, Ky.*

A. I think your members should be able to decide by this time which side of the line they will step on. It is important that we know as soon as possible who will support the true principles and the original plan of the Society in the Farmers' Society of Equity, and who want to depart from it. Particularly Kentucky farmers should not be in doubt. Let every loyal member stand up and be counted as soon as possible and the same way the others.

Q. (1) *Was it not a mistake to offer a life subscription to Up-to-Date Farming for $5.00, as it looks like a graft. Something might happen that you cannot print the paper during my life. I might live 25 years yet.* (2) *Can you afford to send the paper that long for $5.00? I don't think you can.—Chas. Huckstep, Lewis, Kan.*

A. (1) True, something might occur to prevent publishing UP-TO-DATE FARMING. But if there does, then I believe it will be because farmers rejected the Equity plan to secure their industrial freedom. I cannot bear to think of such a possibility. I think the Equity plan is as permanent as agriculture, and agriculture will be the most honorable employment of man as long as time continues. Therefore the chief, and until now the only exponent of the plan ought to have a long life. (2) Suppose the *average* term of life subscriptions is 25 years, then we will receive 20 cents a year on the payment of $5.00. The interest on $5.00 at 6 per cent is 30 cents. Add 20c and 30 cents. We have 50 cents. Yes, I can afford the paper at 50 cents a year.

Q. (1) *How can I become a GUARD OF EQUITY?* (2) *Are the Guards of Equity to guard and direct the Farmers' Society of Equity?—W. B. Gilchrist, Schoharie Co., N. Y.*

A. (1) By becoming a life subscriber to UP-TO-DATE FARMING. The cost is $5.00. (2) Not exactly. But they will be consulted on matters related to publishing UP-TO-DATE FARMING.

Q. (1) Has there ever been any move made toward establishing packing plants run by farmers? I think the time has come when farmers have got to own their own meat-packing houses.—Geo. Fizi, Woodford, Wis.

A. (1) The American Society of Equity should not undertake the packing business. Neither do we recommend the farmers to undertake this business. It will be sufficient if they will control and market their hogs, cattle and other live stock according able prices for the same.

QUESTION: (1) *I want to know if the blanks in the book of blanks are to be sent in to headquarters with a stamp on?* (2) *I don't understand how much to send to headquarters.—Thom Aplin, Kelly, Ia.*

ANSWER: Mr. Alpin refers to members cards and due or fee stamps. (1) No. Don't put a stamp on a member's card and send it to headquarters. But do put the stamp on, write month and year when his dues are paid to, on the stamp and give the card with the dated stamp on TO THE MEMBER. Now report the name and date paid to to Farmers Society of Equity, Indianapolis, Ind. (2) Place 25 cents of each fee and 35 cents of each dues in the local union treasury and remit balance as above. If in Michigan or Kansas, get terms from the State secretary.

Q. (1) *Some of our members have received duns for Up-to-Date Farming in 1907, but all our members paid their dues. How about this?* (2) *Our union voted to hold back for a time until we could learn more.* (3) *Write terms to members for Up-to-Date if some of our members stand by the old headquarters.—J. H. Beatley, Sec., Glencoe, Ky.*

A. (1) We never aimed to send a statement of subscription to a member until that member showed 12 months in arrears, and, as far as our list disclosed, was no longer a member. Then we considered it entirely fair to solicit him to continue his subscription to the paper. Read elsewhere in this number, "Shifting Responsibility." This article explains why your members received "duns." If the subscription list is not correct, we must make it correct, and there is no other way. (2) You did right, but I don't think it is necessary to hold any longer. It is time you decide, besides why is it necessary to halt between two opinions in view of all that has been published? (3) We did make terms to local unions of the A. S. of E., 50 cents a year. But Secretary Pauley says he will not consider any member in good standing who pays part of the fee or dues to UP-TO-DATE FARMING. Therefore, come with the Farmers Society of Equity and its official paper, or go with the new A. S. of E. and its bastard official paper. In other words choose, and then take the tail with the hide.

Q. *Some members of our local union have received statements of subscription. These members paid their dues; they were sent to our State secretary, and by him, to my knowledge, sent to the national secretary.. I wish you would explain so I can put the blame where it belongs.—H. E. Rindfleish, Homestead, Okla.*

A. See same question answered above. These troubles clearly show the necessity of a simple system of reporting, and one that does not require the reports to go through several hands. Such is the system of the F. S. of E.

POST CARDS. (To introduce) 20 Gems of Worth and Beauty, 25c; 40 for 15c. Absolutely unlike all others. Get the best. Premium Coupon and Seed Catalog Free with every order. A. T. Cook, Hyde Park, N. Y.

BUY A MANURE SPREADER

A manure spreader is one of the greatest modern helps on the up-to-date farm. It is a proven fact that by far the greatest percentage of fertilizer is *wasted* by old methods. A manure spreader saves this. Increased crops will pay for the outfit in a short time. And then consider the convenience and time saved when you use a spreader.

One of the leading spreader manufacturers in the country made the following offer in an advertisement in UP-TO-DATE FARMING a few weeks ago. Hundreds of readers of our paper should take advantage of this liberal proposition. That is why we repeat from the advertisement:

"Just write me so that I can write you personally—Send you my *free "Knodig" Manure Spreader Book* and tell you all the reasons why I'll send you one of my *"Knodig" Manure Spreaders* so that you can make a *field test* of it and use it to do your fertilizing work with, on your place for 30 *Days Free.*

My *"Knodig" Manure Spreader* is the *only spreader good* enough to *stand* this kind of a test—*no* advance payments—*no notes* to sign—*no* "sale" and *no* money paid by you to me until you've *proved* satisfaction by using my "Knodig" for a month's *actual work.*

My "Knodig" is the only Manure Spreader sold under an iron clad Money-Back Guarantee that means every word it says.

Don't figure that this is an ordinary free trial offer. You'll see that it isn't when you just write me and hear from me.

I'll write you personally and send you my *Free Book* about my *"Knodig" Manure Spreader.*

Then you yourself can dicide whether you want to try one of my "Knodigs."

We suggest that you write to Mr. H. C. Gumbel, Gen. Mgr., National Pitless Scale Co., 2066 Wyandotte St., Kansas City Mo. He will send full particulars and finely illustrated catalog printed in colors. Send for it today.

AGENTS WANTED
Good firms want reliable representatives. Are you interested? Read the advertisements in the Business Exchange under AGENTS WANTED

Big money is being made by truckers, fruit growers and poultrymen in South Jersey. Climate and soil particularly adapted to fruits, berries, early truck, vegetables, poultry and squabs. Produce marketed much earlier than in other localities, thus bringing highest prices. The best markets, Atlantic City, only 17 miles away. Philadelphia and New York are handily reached. Three main line railroads. Good roads. Pure air and water. Two large manufacturing towns nearby. The community is a prosperous one. Land sells very cheap. Send for booklet explaining. Address Daniel Frazier Co., 718 Bailey Bldg., Philadelphia, Pa

There is a good bit of satisfaction to every man in having a good reliable razor. You can get a first-grade razor on 30 days trial and if it proves satisfactory keep it and pay for it. Ask Royal S. Palmer & Co., 54 River St., Chicago, Ill., to send you one on these conditions.

Every year a large number of the readers of UP-TO-DATE FARMING buy a new buggy or carriage. How's yours for use in these up-to-date days? It is a great pleasure to have an up-to-date rig. You want yours to be just as good as the other fellow's or a little better. If you invest in a Split Hickory Vehicle you have an outfit that will give good service for years to come. Send for big free catalog and special prices. Address Mr. H. C. Phelps, Pres. The Ohio Carriage Mfg. Co., Station 99, Columbus, Ohio.

The United States Navy needs men. Men who will serve our country well. Men who want to learn a trade. The Navy offers excellent opportunities to young men. There are many advantages in a Naval training and they are told in a book nicely printed in colors, which will be sent free if you write to the Bureau of Navigation, Desk 7, Navy Department, Washington, D. C.

The Gulf Coast country of Texas offers opportunities for all kinds of farming, fruit growing, etc. The climate is delightful—never cold and severe. Think it over. Perhaps it is the place for *you,* especially if Northern winters are hard or your health not good. For full information write the Theo. F. Koch Land Co., 801 Globe Bldg., St. Paul, Minn.

If you have any use for a Stump Puller, and nearly every up-to-date farmer has, by all means investigate the Smith. Send for their book "The Evidence" as well as large catalog. These are about the most convincing pieces of literature we have seen in a long time. Address W. Smith Grubber Co., Dept. D8, La Crosse, Wis.

Ore & Neubert, proprietors of Chanticleer Poultry Farm, Dept. 45, Mankato, Minn., old experienced poultrymen, have started their advertisement with us this issue. If you are going to buy any eggs, incubators or choice poultry this season, it will pay you to get their large catalogue.

By the way, did you write to the American Harrow Co., 539 Hastings St., Detroit, Mich., about one of those new Detroit Tongueless Disc Harrows? They have advertised in recent issues. Better write them early for special price and catalog. Sold on time and 30 days free trial.

Osgood Standard Scales have satisfied thousands of farmers and saved them money. If you have no satisfactory scales, investigate. Sold on trial. Catalog free. Make *all kinds.* Osgood Scale Co., 100 Central St., Binghamton, N. Y.

If you want Lumber, Roofing, Plumbing, Furniture, Engines or any Building Material, send for big free catalog No. 204 of the Chicago House Wrecking Co., 35th and Iron Sts., Chicago. It is free and full of bargains.

If you want a gas engine, mention UP-TO-DATE FARMING and write to The Caldwell & Hallowell Mrg. Co., Waterloo, Iowa, for free catalog and free trial proposition. Do it now.

Department of TOBACCO GROWERS

A HURT BRINGS A HOWL

A recent issue of the U. S. Tobacco Journal contained a most vitrolic arraignment of the movement among the tobacco growers of the country to secure profitable prices for their product, under the title of "The New Tobacco Trust." The language used is bitter and the natural inference following a reading is that somebody's plans and possibly their profits are being influenced by workings of the newly discovered "trust." It is gratifying to know that the tobacco monopolists are beginning to realize that the farmers can have something to say regarding the price at which they are to sell their commodity when they are effectively organized. This is the way the tobacco trust regards the farmers' movement:

The New Tobacco Trust is not satisfied with the monopolistic control of the dark tobacco alone. It has invaded also the cigar leaf fields and gathered into its fold the Wisconsin cigar leaf growers. The latter's resolution the other day, as duly recorded in our columns, not to sell their 1907 crop at less than an upset price of 15 cents, was the direct inspiration of the New Tobacco Trust. And the flattering result of success which the New Tobacco Trust has achieved in the dark tobacco belt cannot remain without telling effect on the Pennsylvania and New England tobacco growers, whose 1907 crops are still waiting to be moved. Suppose the cigar leaf growers of these States join also the New Tobacco Trust, what remedy would the leaf trade and cigar industry have against being treated in the same robber fashion as is being meted out to the buyers in Kentucky?

A DRASTIC LAW

The following from the Sun-Sentinel of Winchester, Ky., shows how determined the farmers are to accomplish their object of independence in price-making. To agitate this way may do no harm, but we cannot agree that conditions do now, and we doubt if they ever will, justify such a law. More of the spirit of the Kentucky farmers ought to be evidenced by grain and fruit growers and stockmen. The article follows:

Senator R. B. Brown has introduced the following bill:

Be it enacted by the General Assembly of the Commonwealth of Kentucky:

That is shall be and is hereby made unlawful for any person to engage in the occupation of planting or growing tobacco in this State in the year 1908 without first obtaining from the clerk of the county court in the county in which tobacco is to be planted or grown, a license so to do, which license shall be granted only after the payment to the county clerk of the county issuing such license of a license fee of $50 per acre for each acre to be planted or grown by such person and the clerk's fee for issuing such license. Before issuing such license the applicant therefor shall file with said county clerk his affidavit stating the number of acres proposed to be planted or grown in said county during the year. Any person violating the provision of this act shall be guilty of a misdemeanor and shall be fined not less than $100 and not more than $1,000, or be imprisoned in the county jail not less than ten days nor more than ninety days, or may be both so fined and imprisoned. Because of the necessity of some law licensing the growing of tobacco in this commonwealth, an emergency is declared to exist, and this act shall take effect from and after its approval by the Governor.

W. S. K.

DIVERSIFY

The Owensboro Messenger gives the following very wise and timely advice to tobacco growers:

Every man who has the interest of the tobacco growers at heart, from now until planting time, preach with unfaltering zeal the necessity of curtailing the acreage. The holding down of production to normal or below is the one thing that will keep prices at the present high level for another year.

Regardless of fraternalism or obligation, every grower of tobacco ought to be true to himself and others engaged in the same pursuit. He who tries to take advantage of the situation of planting a large crop will assist in bringing about his own destruction, but at the same time he will be working the destruction of other men who are doing their duty.

The thing to do is to plant a little of many crops and do it at once—right in the face of the high price of tobacco.

The Henderson Twice-a-Week Gleaner says: "Up to January 23 the deliveries of association tobacco in the Henderson district was 9,796,573 lbs."

LAW AGAINST POISONING

The practice of using paris green to kill worms on tobacco has become very general. This method has a great advantage over hand picking and make it possible to produce much more crop per hand. It is a disputed problem whether it is dangerous to handlers of the weed or users of it, but there is no question about the economy in production.

Opponents of the use of poison are asking the Kentucky legislature to prohibit its use and the following are the provisions of a law that is sought:

Section 1. That is shall be unlawful to use paris green, or other poisons, or the mixture of same with any substance, or fluids, on growing tobacco during the years of 1908 and 1909.

Sec. 2. That any person, or persons, violating this law shall be guilty of felony and shall be punished by confinement in the penitentiary for not less than one year, or more than two.

Sec. 3. That any person or persons selling paris green shall be required to record name of buyer, and keep such record open for public inspection, during the years of 1908 and 1909.

Sec. 4. That any person or persons violating Sec. 3 of this law shall be fined in any sum not less than $25 nor more than $50, for each offense.

GREEN RIVER DISTRICT SALE

From Owensboro, Ky., comes the information that all the balance of the 1905 crop of Equity tobacco stored in the Louisville warehouse has been sold. The quantity was 1,375 hogsheads and the prices paid were $8 to $11.50. The total consideration will be about $140,000. It is stated that the distribution of the money cannot be made for some time, on account of the time necessary to arrange all the details of delivery and settlements.

DESPERATE MEASURES

A dispatch from Maysville, Ky., is as follows:

After being defeated in this city in the effort to have an ordinance passed by the city council to put the American Tobacco Company out of business in this city, the Equity people are now getting up a petition to have the board of magistrates of Mason county call a special session and pass an act prohibiting the use of the county roads for the delivery of tobacco into this city. This will be the last move.

FIXING TOBACCO PRICES

During the Government's investigation of the American Tobacco Company before United States Commissioner Shields in New York, T. B. Yuille, head of the leaf buying department, told how the company fixed the price paid growers in order to regulate the supply. A committee of four directors, he says, determines the company's buying policy. Buying is started at the average price, which is raised if the leaf is coming in too slow and lowered if the supply is too great. According to his testimony the American Tobacco Company has buyers in every market in the United States, but does not try to control its competitors by buying into them. The chief competitors, Yuille testified, are the Imperial Tobacco Company of Great Britain and the R. J. Reynolds Company.

TOBACCO STALKS

The disposition to withhold tobacco stalks from the market is growing. "In the form of fertilizer," it is claimed, stalks will return to the grower a much better profit than if sacrificed at the prices generally offered." At the last meeting of the Henderson county union, at the instance of J. A. Tapp of Columbia local a resolution, strongly recommending farmers to hold their stalks off the market, was passed unanimously. The following is taken from the Henderson Gleaner:

Primarily, it was pointed out that stalks are a substitute for the lower grades of tobacco and in consequence the supplying of stalks at 50 cents a hundred to parties who would otherwise be constrained to buy trash tobaccos obviously lowered the price of the latter, and therefore if stalks were not marketed, the lower grades of tobacco would most likely sell for at least 50 cents more per hundred. Moreover, it was stated the Kentucky Experiment Station had officially declared stalks were worth $20 per ton as fertilizer. And further it was argued that when trash tobaccos were selling for one and two dollars per hundred stalks readily sold for $9 per ton, wherefore now that trash tobaccos were selling for $4 and $5 per hundred stalks should, in sympathy, advance in value to $20 per ton as a minimum price.

The committee proposes to get $30 a ton for stems this year. Failing to get that price the committee will doubtless advise members to haul the stems home and apply as fertilizer to the thin lands.

TOBACCO NOTES

The Western Tobacco Journal says: "The volume of business offered on the local (Cincinnati) breaks is scarcely half in 1907 what it was in 1906. High prices keep the value of sales from falling off in proportion. Receipts during the year amounted to 37,317 hogsheads, a decrease compared with 1906 of 18,063 hogsheads. Stocks January 1 are 2,323 hogsheads greater than a year earlier. Of the 11,278 hogsheads in the warehouses January 1, 6,445 are Equity tobacco."

* * *

The same paper says: "Better prices have prevailed, and those who sold on the market reaped the benefit of the boost given prices all around by the Equity pool." This brings up an all-absorbing question with growers; how the organized and pooling growers can get an advantage over the non-poolers. They cannot, unless a friendly agreement is made with the buyers, which there don't appear to be much disposition on either side to seek. Without this it means complete organization and complete pooling, which should be possible.

* * *

Pledging of the 1908 tobacco crop is under way in many districts. This is right. Let us hear from growers of wheat, oats, corn, broom corn, barley, flax, wool, potatoes, apples etc. etc. And why not pledge hogs, cattle cabbage etc. All that is essential is to agree to sell through the committee at the price to be agreed upon when the crop is known. It's very simple. UP-TO-DATE is at your service, gentlemen.

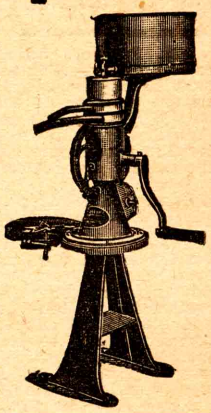
* * *

Growers of any crop need not expect freedom from the exploitations of buyers until they get together and *control the supply* and hold it until *their* price will be paid.

* * *

Occasional sales of Burley tobacco are made, one of the recent ones being 1,000 hogsheads to an independent buyer, according to a dispatch from Winchester.

When You Buy a Cream Separator GET AN EMPIRE AND BE SURE



You would rather buy a cow with a **record to show** what she is able to do—than to chance your money on a scrub, even though the record cow would cost a little more.

Why not follow this same **safe** course when buying your **separator?**

Study the **records** of the different machines. Investigate! You will find that the Empire has the Banner Record among all separators of the world for—

Saving Cream—Saving Work—Saving Time Making Dollars

You can get these records. They are yours for the asking.

And you can easily find out **why** the Empire makes more money for dairymen than any other separator—you will **see** the reasons when you examine the machine.

An Empire is so **simple** that it explains itself.

It has the best record among dairymen, it makes the most money for dairymen for the simple, logical reason that it is the best cream separator made. There is no doubt about it.

And it is only logical that the Empire Factory—the model separator factory of the world—**should** turn out the best separator.

Isn't It Worth Your While To Be Sure?

The price of any separator is more money than you want to waste. You know that the best is cheapest in the end. You know, or should make it your business to find out, that no other manufacturer has approached the Empire Standards of perfection in the designing and constructing of a cream separator—That no other manufacturer has approached the Empire Quality of materials and workmanship.

Wouldn't it be time well spent for you to find out what Empire inventive genius, constructive ability, separator "know-how" and Quality materials have done for other dairymen?

Let Us Send You Our Free Dairy Books

representing the experience of the leading separator experts of the world, and containing Empire Records that will interest you. Write today.

Empire Cream Separator Company

Western Branch: Chicago, Ill. Bloomfield, N. J.

SOUTHERN CALIFORNIA

RAISIN VINEYARDS

Yielding 25 to 50% Annual Income

We are planting Vineyards of raisins and other grapes and selling them at half their matured value. Bring them to bearing FREE and continue their care, if desired. 5, 10 and 20-acre tracts SOLD ON EASY PAYMENTS, as low as $25.00 down per acre.

After four years will net 25 to 50 per cent. on investment, bearing forever, increasing with age, and insuring perpetual income. A splendid annuity, much better than life insurance. Raisins are a sure crop and staple. No waste or loss. No cold storage or hurried shipments; you can hold crop for best price. Write today for illustrated booklet of "cold facts." As offer is limited a small remittance will reserve tract. Reference, any Pasadena Bank.

$90 A MONTH for men to put out Merchandise and Gro'y Catalogs. M.O. House. **Blew Bros., Chicago**

Department of Elevators and Warehouses

The Farmers Society of Equity of Cascade County, Montana, will hold a mass meeting in the court house in Great Falls on the evening of the 14th day of February, 1908, for the purpose of taking preliminary steps toward building an elevator for the use of the society. All farmers in the county are invited.

L. WASMAN, Sec.
Sand Coulee, Mont.

We here propose to answer as one, the very many letters that are pouring into headquarters from locals all over the country inquiring how to go about organizing companies to build elevators, warehouses, etc. We here suggest the necessary preliminary steps to be taken and submit a form of constitution and by-laws, which may be altered to fit any emergency or local conditions.

First—In the first place, if your local desires to build an elevator or warehouse it should call a meeting to discuss the question. If, as is often the case, the undertaking is too much for one local, invite neighboring locals to join you, or, for that matter, have your county union to take the subject up at some stated or call meeting.

Second. After. it is determined that the work must be done, have a committee appointed to select a location and report the probable cost to lease or buy the land and construct the building and also a committee on constitution and by-laws.

Third. When this is done the meeting may be adjourned to a later day to hear reports of committees. Advise us of the time and place of your adjourned meeting and we will advertise it free of charge.

At the second meeting should reports be adopted you are ready to elect officers and begin to take subscriptions for stock. It will be observed in the form presented that the sale of stock is confined to members of the society.

CONSTITUTION AND BY-LAWS
OF
(Elevator Co., or)
The Equity (Warehouse Co., or) of.....
(Cold Storage Co.)
..... State of.....

CONSTITUTION

Section 1. Be it known that we, ...
.....
(Any number over seven)
and others whose names are attached hereto, residents of.....county, State of....., have and do hereby associate ourselves together for the purpose of forming a co-operative company under the laws of the State of....., to be denominated and known as "The Equity.....Company of .....county, and to that end we do hereby adopt this for our constitution and by-laws, by which we are to be governed in our business.

Sec. 2. This company shall have power by and under its name to rent, receive, purchase and hold the necessary real estate and other appurtenances, to erect necessary buildings thereon to accomplish its objects, which are to receive, store, control and market the products of the farm, orchard and garden, and to that end to erect, equip, maintain and operate a..... and such other utilities as may be necessary for the receiving, storage, care, preservation, control and sale of any and all such products.

Sec. 3. The officers of this company shall be a president, vice president, secretary, treasurer and a board of five directors, to be elected annually by the stockholders, excepting the secretary, who shall be elected or appointed by the directors, on the.....day of.....in each year, at the principal place of business of this company. But the first officers elected by the stockholders shall be elected at the time of the adoption of this constitution and by-laws, to serve until the next annual election day as designated herein, and until their successors are elected and qualified.

Sec. 4. The capital stock of this company shall be $....., to be divided into.....shares (number of shares), of the value of $.....each, to be held only by members in good standing of the Farmers Society of Equity.

Sec. 5. The principal place of business of this company shall be at its..... (elevator, or storehouse, or.....) in the town, county and State aforesaid.

BY-LAWS

President

Section 1. The president of this company shall be the executive officer thereof and shall preside at all meetings of the stockholders and of the board of directors. He shall sign, with the secretary, all certificates of stock, deeds, contracts, leases, warrants and exercise all authority and perform all other duties connected with the affairs of this company requisite and appropriate to his office. By virtue of his office he shall be a member of the board of directors.

Vice President

Sec. 2. By virtue of his office the vice president shall be a member of the board of directors. He shall, in the absence of the president, perform the duties and exercise the powers of president.

Secretary

Sec. 3. The secretary shall be appointed by the board of directors. He shall be the custodian of the records of this company which are consistent with his office and the duties herein required of him to be performed. He shall keep full minutes of all meetings of the stockholders and board of directors. He shall jointly with the president sell certificates of stock and all transfers thereof and cancel all retired stock certificates, and countersign all contracts, leases, deeds and all other documents required of the president to be signed by virtue of his office and under the direction of the board of directors. He shall countersign all warrants upon the treasurer for the payment of money. He shall issue all notices for the meetings of stockholders and of the board of directors, upon the request of the president, and perform all other duties required of him by the president or board of directors consistent with and appropriate to his office. He shall also be the business manager for this company and as such it shall be his duty to superintend the property thereof, and all consignments made thereto, and direct and manage the loading, unloading, packing, counting weighing and storing of all produce committed to the care of this company and make proper record of all his acts in relation thereto. Upon the consignment or withdrawal of any produce it shall be his duty to execute to or receive from any consignor a receipt therfeor, the form and substance of which receipt to be suggested by the board of directors. It shall be the further duty of the secretary to inspect and grade all produce as it may be delivered to this company's.....and see that none but good, merchantable produce is placed therein, and see that different grades of produce are placed in different compartments so that each compartment shall contain the same grade of produce. He shall hold his office at the pleasure of the board of directors, by whom his salary shall be fixed.

Treasurer

Sec. 4. The treasurer shall be the custodian of the public funds of this company. He shall collect from the subscribers of stock the several amounts of their subscription, and keep an accurate account of all receipts and expenditures of this company's funds. He shall keep a full and detailed account with the various stockholders and all persons delivering produce to this company's.....and with all other persons doing business with the same, rendering statements thereof on demand. He shall pay out none of the company's money, excepting on a warrant duly signed by the president and countersigned by the secretary. His books shall be open at all reasonable times for the inspection of stockholders or consignors of produce. He shall be required to execute a bond with sufficient surety, approved by the board of directors for the payment of all the company's money to whomsoever due, and for the faithful performance of all his duties. He shall be paid a suitable salary, the same to be fixed and allowed by the board of directors. He shall be by virtue of his office a member of the board of directors.

Who May Own Shares

Sec. 5. Subscriptions to the capital stock of this company shall be made by members in good standing of the Farmers Society of Equity and no more than..... shares shall be sold to or held by any one member.

Transfer of Stock

Sec. 6. Shares of stock in this company shall not be transferable excepting to a member in good standing of the Farmers Society of Equity, and the right of any shareholder or person to vote on questions relating to the interests of this society may be challenged for the reason that he is not a member in good standing in the society.

Stock—How Paid

Sec. 7. Stock in this company may be paid as follows: Twenty-five (25) dollars or more at the time subscription is made, and the balance as called upon by the directors, and subscriptions to stock may be paid all or in part in labor and material, at the discression of the board of directors.

Uses and Privileges

Sec. 8. The uses and privileges of this company's property shall be extended to all members in good standing of the Farmers Society of Equity and to others, at the discretion of the stockholders.

Charges for Use

Sec. 9. Every patron of this company shall, before any of his grain, fruit, vegetables, meats or any other farm produce whatever, shall be stored or placed in this company's....., sign an agreement whereby he promises to pay for such privilege the sum of $.....per thousand, per bushel, per crate, per barrel, to the treasurer of this company, the same to be due and payable when his produce is sold. The amount of charge and length of time of storage to be determined by the board of directors. Moneys so collected are to be used to pay the necessary expenses of the company.

Insurance

Sec. 10. Upon the advice of the board of directors it shall be the duty of the treasurer to insure and keep insured the property of this company, as also all produce that may be stored therein, in a amount sufficient to cover any loss that may occur thereto.

Meetings—Quorum

Sec. 11. At all meetings of the board of directors a majority of the board shall constitute a quorum for the transaction of business. All questions before the board shall be decided by a vote of a majority of the members present.

Number of Votes

Sec. 12. At a stockholders' meeting each stockholder present shall be entitled to one vote, to be cast in person.

Stockholders' Meetings

Sec. 13. Special meeting of stockholders may be called by the president when a majority of the board of directors deem it expedient or when ten or more stockholders request the same in writing. The notice of the time and place of such call meeting and its object shall be given by the secretary, whose duty it shall be to so notify each stockholder by mail, giving him at least five days notice.

Call Meetings

Sec. 14. The president may call meetings of the board of directors from time to time for consultation and advice.

Amendments

Sec. 15. These by-laws may be altered or amended at any regular meeting of the shareholders, but to do so it shall require a vote of two-thirds of the stockholders present.

Note 1. The following form may be used for stock subscriptions:

To the treasurer of the.....company:

I hereby subscribe for.....shares of the capital stock in the Equity.....Company of.....town or county, and agree to pay for same as follows: $.....cash when certificate of stock is delivered to me, and the balance as required by the board of directors.

.....

This.....day of.....190..

Note 2. Each shareholder should be required to sign the constitution and by-laws after they have been transcribed into the records and opposite his name write number of shares of stock taken by him. The secretary should have plenty of room in his record for signatures.

Note 3. The secretary should write this office at once after these things are done, telling us what is proposed to be built, amount of capital stock and value of shares, and ask that necessary supplies be sent. The supplies will consist in part of certificates of stock, storage receipts, entry books, ledger, etc. The cost of these supplies will be very reasonable, the price depending upon the nature and scope of the project.

We will be pleased to further advise our people at any time concerning this important feature of our work.

Springfield, Mass. **FARM AND HOME** Chicago, Ill.

SEED CORN We have originated some of the leading varieties of corn. Our corn all grown under strict conditions for seed. Following varieties are recommended to corn growers as big and sure yielders.

Pride of Indiana Vigorous, medium-sized stock. Ears are large with 16 to 20 rows. The corn is dent and beautiful white color. Great yielder and sure to please. PRICE: one-fourth bushel, 60c; bushel, $2.00; bag, (2½ bu.), $4.50; five bushels or more, $1.75 per bushel.

Central States Dispatch Yellow dent and greatest yielder of any yellow corn we have found. Withstands drought and storms to a great degree. Ears 8 to 12 inches long, very shapely and extremely deep grain. A splendid feeding corn. About 20 rows to ear. Plant a field or more of this great yielder.

Yard Long This is the longest eared corn in the country. Remarkable for its long ears. Frequently 18 inches long with 12 to 14 rows each. Large yellow dent grains. Good to feed and for market. Quite a novelty and interesting at Fairs. Get some of this.

Price On Central States Dispatch and Yard Long Corn: One peck, 50c; bushel, $2.00; 1 bag (2½ bushels), $4.50; 5 bushels or more at $1.50 per bushel. All sorted and cleaned for seed. Order from this advertisement. Catalog free. Write for it.

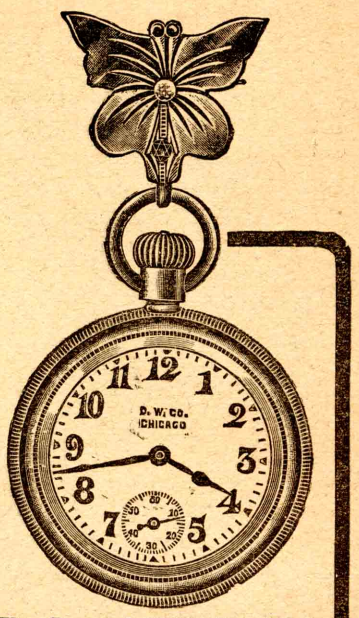
PERSONAL PARAGRAPH TO OUR READERS

EVERY lady reader of this paper ought to be interested in the offer made on this page. Here is a watch offered just for an effort. Here is a genuine gold plated watch absolutely given away just for **trying** for a premium. Look at the picture of the watch, and ask yourself how can any lady "pass up" this offer when the watch is given just for making an honest effort. Besides the watch there is a set of dishes. These dishes are not exactly free like the watch—it is a premium that you must earn **with only a slight effort.** You can earn it by a few hours' work. I know you can easily earn these dishes and anyway you get the beautiful gold watch free. Send your name and address to-day, either on the coupon, or send your name and address to-day in a letter; but write to-day to Mr. Douglas.

Ladies!

Ladies, just write today for this elegant gold-plated watch, a watch that is stem wind and stem set and guaranteed to keep perfect time. You can have this watch just for your effort and promptness in fulfilling the simple conditions of the offer below.



This Beautiful Watch is Free

Yes, we mean **FREE,** if you send your name and address at once and fulfill these simple conditions of our great offer. Just send your name and address and tell us you want the watch.

Remember this beautiful watch IS given away—it is sent you free, prepaid, just for your promptness and your effort in our behalf. Our object in giving you the watch is because we want to introduce our firm in your locality, but even if you do not earn the dishes, you can get the watch anyway. So send your name and address to-day. **That is all we ask.**

We will guarantee this watch to be gold- plated and genuine throughout. We guarantee it to you to be a good time-keeper, more substantial, more durable than many watches sold at high prices. It is only by special arrangement with the manufacturers, who want a few of these great watches introduced at once, that we are enabled to give this splendid gold-plated watch away with our magnificent set of dishes.

An Honest Dinner Set Offer

A real, high-grade, genuine Blue Willow Dinner Set. Not given away, but easily earned. When we say easily earned, we mean easily earned. We do not intend to give you this genuine Blue Willow Dinner Set for nothing. We want some of your time and some of your recommendation and some work from you. We do not want any canvassing or peddling, but we want your help. We want just five hours' worth of your time, and you can give us your time in the evening or in any of your spare hours. If you haven't the time yourself, you can have your children help you. In fact your children can do **all** the work if you will only show them how. **Then this grand, glorious, genuine Blue Willow Dinner Set will be yours.** It will be sent you absolutely free of charge to you, and you pay absolutely nothing for it. Not one penny of your money will we accept.

We cannot describe the beauty of this genuine Blue Willow Dinner Set, with its handsome decorations. So handsome and aristocratic that they fill every woman with rapture. We know that a great many dinner sets have been sold which are not up to expectations, and when we tell you that this is genuine Blue Willow China it ought to be enough. It ought to convince you that we mean what we say, that our offer is an honest one, and that when you have done the work for us, you will get this Dinner Set free. This grand Dinner Set is really worth your while, a Dinner Set of which you and your family will be proud—for this is not a cheap premium, but just the kind of a Dinner Set you would buy at the store for a high price.

There are sixty-one pieces in this beautiful set. We have smaller sets of this glorious Blue Willow ware. We have 24-piece sets and entrancing 30 and 35-piece sets. We also have sets of 176 pieces if you want that many. And every piece is the rarest and best china we can give.

I know you want that kind of china on your table. I want you to have the very best china—the kind of china used in the homes of rich people. I want you to have it and enjoy it, and I want you to picture to yourself how your table will look set with the beautiful genuine Blue Willow china. Look closely at the picture of the dishes. See the handsome and aristocratic decorations—a picture can hardly do justice to the set, but you can get a faint idea of the beauty of the dishes by looking at the picture.

See the rich oriental effect. Even though you become very rich and have the finest kind of house furnishings, you will always be proud to entertain your friends with this Dinner Set, for everyone knows that when you have the genuine Blue Willow china you have the **best** that can be obtained any place.

Now do you want this Dinner Set? This beautiful, genuine Blue Willow Dinner Set, just for a few of your spare hours? Would not your children, or your neighbors or some of the members of your family be willing to help you on the little work we ask? We do not want to delay you one minute. Our offer is limited. Those who want to earn the Dinner Set, should earn it at once.

Just Your Name and Address

Just your name and address on this coupon or on a postal card, or in a letter will be enough. We will promptly send you the material so that you can earn the beautiful genuine Blue Willow Dinner Set. If you decide that you cannot do the work, or that your children don't want to, there is no harm done—just return the material, and you will be under no obligations whatever. We do not ask you to sign any order or any contracts. **Just your name and address** and we will send you everything prepaid, and it will cost you nothing. "Thinking about it" does not earn you any Blue Willow Dinner Set. No harm done if you don't succeed. Send **your name and address today.** Remember, the **gold plated watch,** stem wind and stem set, **free anyway,** just for trying, as is fully explained in our circular. Write at once.

ADVANCE OF THE GRAND ARMY.

NAPOLEON'S name fills more pages in the world's solemn history than that of any other mortal. The advance of his Grand Army into Russia is the turning point in his career and marks the beginning of his downfall. The picture shown herewith from Ridpath's history, the original of which was displayed at the World's Fair at Chicago, marks but one event out of thousands which are fully described and illustrated in the world-famed publication.

RIDPATH'S HISTORY OF THE WORLD

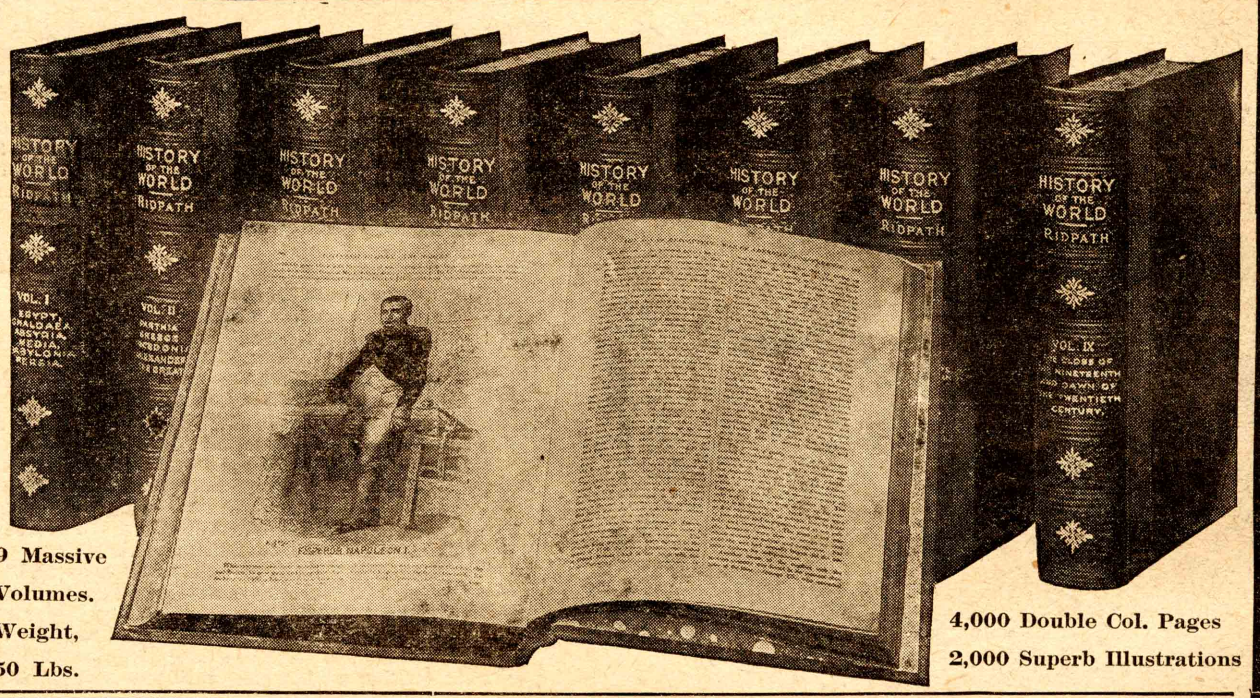
THE PUBLISHER'S FAILURE PLACED IN OUR HANDS THE ENTIRE UNSOLD EDITION OF THIS MONUMENTAL WORK. BRAND NEW, DOWN TO DATE, BEAUTIFULLY BOUND IN HALF MOROCCO, WHICH WE MUST SELL IMMEDIATELY. WE ARE OFFERING THE REMAINING SETS

AT LESS THAN EVEN DAMAGED SETS WERE EVER SOLD

We will **name our price** only in **direct** letters to those **sending the coupon** below. **Tear off the coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath's family derive their income from his History, and **to print our price broadcast** for the sake of more quickly selling these few sets would cause **great injury to future sales. Send coupon today.**

UP-TO-DATE FARMING SAYS:

Ridpath's History of the World may be regarded as a complete library in itself. No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. It embraces the whole round of literature, science, art, philosophy, conquest, exploration, romance and biography. If Dr. Ridpath had written nothing more than American history, that alone would have been a masterpiece. From Washington's time to the present day, it carries the reader along with enthusiastic interest. We cheerfully commend this most popular and complete of all world's histories to our readers.



9 Massive Volumes. Weight, 50 Lbs.

4,000 Double Col. Pages
2,000 Superb Illustrations

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake;** to circumnavigate the globe with **Magellan;** to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know **Napoleon** as you know **Roosevelt.**

RIDPATH in your home means you need never spend a lonely evening. You can associate with the world's heroes; you can cross the Rubicon with **Caesar,** after which Rome was free no more. You can sit at the feet of **Socrates,** the loftiest genius of the ancient world. You can kneel at the shrine of **Lincoln,** "the greatest character of all time; the gentlest memory of our world." It is ennobling to commune with these children of destiny. To be associated with great men and events is to be great one's self, and you will add to your store of knowledge, which is power, and to the richness of your life. You owe it to yourself and family to place this book in your home.

Send Coupon Today

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendour; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and aspiring was ever written by man.

RIDPATH throws the mantle of personality over the old heroes of history. **Alexander** is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. **Xerxes** from his mountain platform sees **Themistocles** with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sails, and help to mould the language in which this paragraph is written. Rome perches **Nero** upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; **Napoleon** fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. **Bismarck** is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says, "You shall not." **Washington** is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false face friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world-figure of his time.

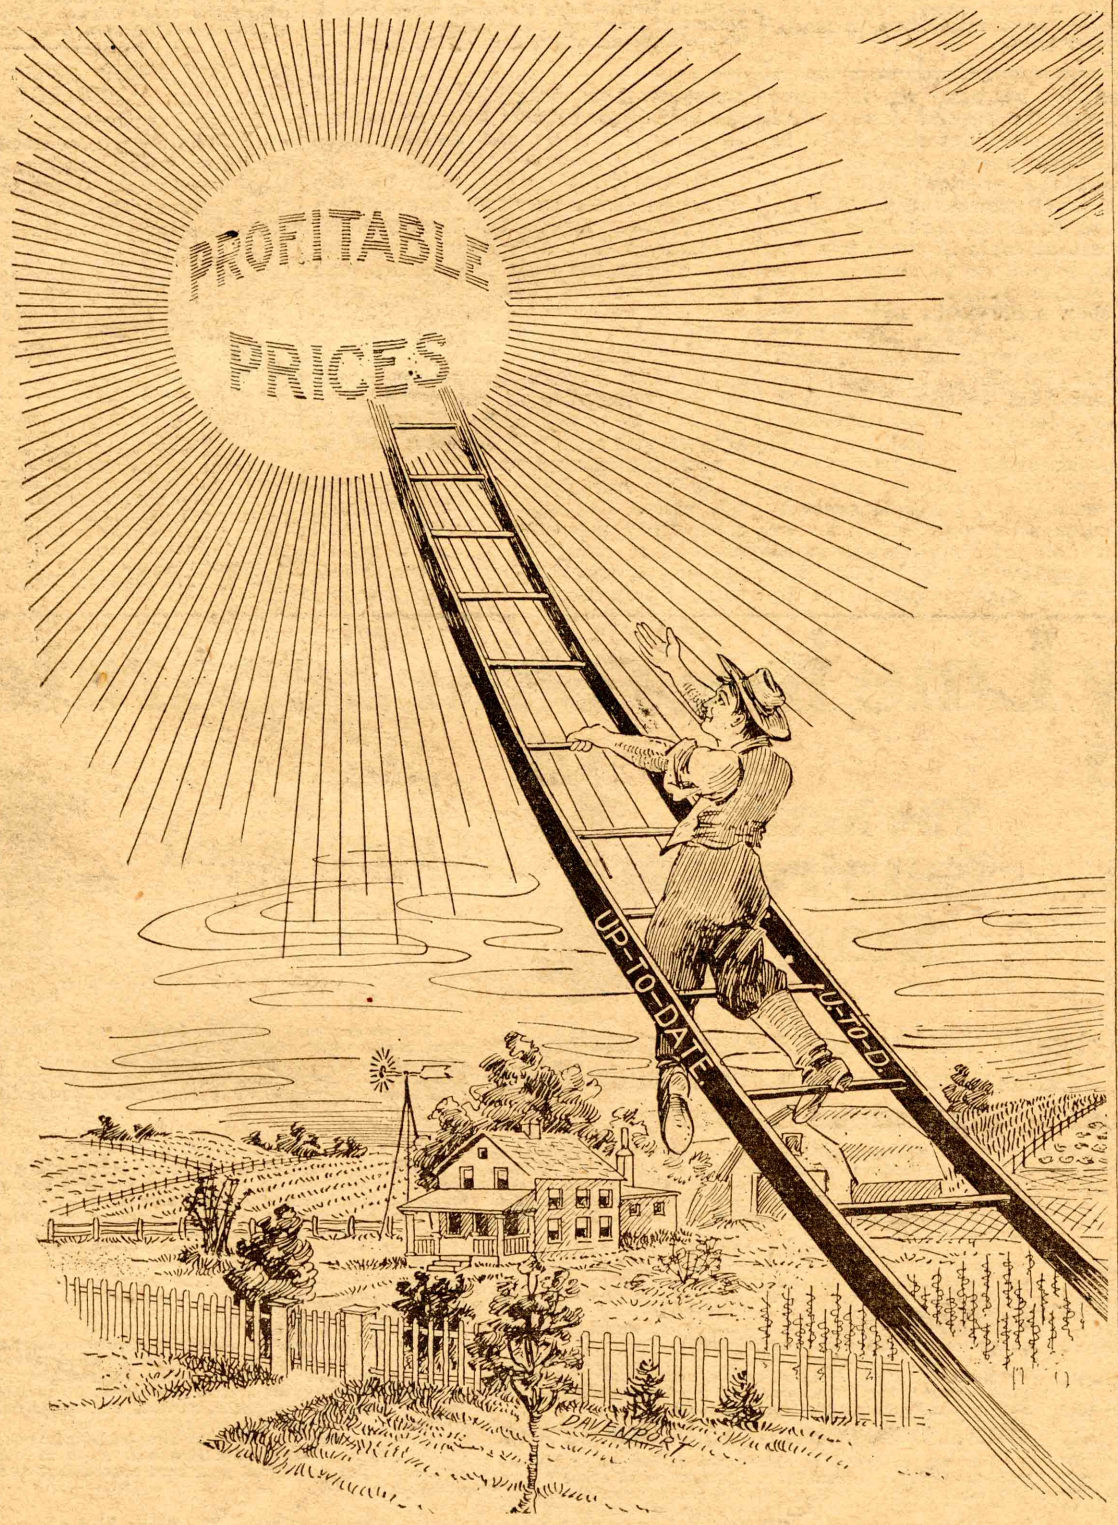
Volume XI | INDIANAPOLIS, INDIANA, MARCH 1, 1908 | Number 5



He Only Slipped and Will Reach the Goal In Time

Gaylordsville, Conn.

Mr. J. A. Everitt, Publisher.

For months I wanted to write you how much I valued your paper. For two years I have given my UP-TO-DATES to fellow farmers in hopes to open their eyes. There is no union in this part of the State that I know of, so I feel like a lost sheep of the flock; but, thank God, I belong to the flock. Let me say right now that your paper was the first to teach me how to market my produce or gain any profit from my hard labor.

I notice the effects already in the city where I market. People are more careful to ask me the price of my potatoes and admit they are worth $1.00 per bushel for food, and are paying that willingly if they can't buy for less. We used to sell them for 50 cents only a few years ago. I think they would go to $1.50 if Lawson would advise the public to buy potatoes instead of copper.

When I was a boy I was taught to get up as early as I could see (if it was dark, light a lantern), work as hard as I could as late as I could see, then do the chores and go to bed so as to get up early in the morning. When I went to market, get up an hour earlier, take the best I had to sell and get home as soon as possible.

It is hard work to get out of an old rut, but it is harder after you mire. I have started to get out on the UP-TO-DATE ladder, and I never let go of a ladder and jump when I am half way up. We as a nation of farmers shall we sink or get out of the old ruts and be free men among men?

In the year 1908
Let there be beside every plate
A copy of UP-TO-DATE.

Wishing you a prosperous new year, I am,

Most cordially yours,
M. G. LEACH.

IMPORTANT ARTICLES IN THIS NUMBER

Page 2. "The Work for 1908." It is with the producers themselves whether the work will be done and the benefits realized. Read the article and the "note" appended.

Page 3. "A Glance Backward and Then an Earnest Look Forward." We commend this article for careful reading and earnest consideration before any other contents of the paper are read.

Page 4. Every article is good. Read them all carefully, but particularly read the feature item "Appeal to Local Unions and All Members."

Page 5. "Co-Operation by Producers with the Consumers of Farm Crops." With a clear field before us now and nobody to come in the way of this paper working out the simple, practical and equitable plan, every interested person, producers, necessary handlers and consumers, should give their hearty co-operation to establish the system. Read it carefully. It will look good to you after having a surfeit of agitation about impractical capital stock exchanges.

Page 15. Especial attention is called to the matter set in italic at top of the first column.

Read the departments. They are all good and up to date. Also read the advertisements. They are all reliable and these people deserve your trade.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE $1.00 PER YEAR. A CLUB OF FIVE FOR $3.00

Foreign Subscriptions, including Canada, $1.50 per Year.

Clubs. Two subscriptions for $1.50; five for $3.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The datest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity whl find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer. The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

THE WORK FOR 1908

What crop does the Farmers' Society of Equity intend to concentrate its efforts on for 1908? This question has been asked several times and, no doubt, it is in the minds of a great many farmers who have not expressed themselves. We will reply:

The policy of the Society will be to promote organization for every crop and in every section, where there is a desire expressed for organization, by any member of the Society or reader of this paper. By this policy a start will be made in hundreds of places and conditions soon produced that will tend toward complete organization at the earliest possible moment.

But the word "concentrate" as used in the question is a good one. It expresses the main policy of the Society. Its efforts will be particularly directed toward organizing the producers of certain crops. To illustrate: The campaign wil be renewed to organize the wheat growers and it will be made broad enough to include all the chief grains. This implies that the campaign will take in States that were not included before in the special wheat campaign and cover all the crops comprised in the Grain Growers Department.

Then a campaign will be conducted for the potato growers and at the same time we hope to reach out far enough to take in the principle fruit producing sections and, if possible, cover all the crops comprised in the fruit and produce department.

To these ends we especially call for the co-operaton of the people interested. If you are a producer of any of the leading grains, hay, broom corn; or of potatoes, vegetables or fruit of any kind, and if you are actuated by a desire to accomplish organization to secure profitable prices for the 1908 crops, and not by mere curiosity, write for the plans and learn how you can help. Every person can help some.

In these campaigns it may as well be understood that the present department unions are not a part of the Farmers' Society of Equity. Also we consider them, as officered and attempted to be run, as impotent to accomplsh the results desired and the longer farmers put their faith in them the more serious will be their losses, and the greater their disappointments. If growers of grain, hay, broom corn, potatoes, vegetables, fruit, etc., crops that come in these two departments, ever hope to be in a position to secure prices of their own making they must begin now to prepare for this desired end. They must go back to the original Equity plan AND STICK TO IT.

We don't want to convey the idea that other interests will be neglected. Much careful work is still required in the tobacco districts; dairymen continue to cry for organizers; the peanut growers are only partially successful; stockmen, on account of the severe decline in their price realize now more than they possibly ever did before the necessity of a good organization to acquaint them with the demands of the market and direct their operations so gluts will not occur, which always results in a decline of prices.

UP-TO-DATE FARMING will be the principal factor in all these activities. Being free from the hundreds of hindrances that attended its publication during the year 1907 it can, and will, give an inspiration to the work that was not possible before.

And while we look ahead to the 1908 crops we intend that this paper shall again exert its influence to put prices of the remainder of the 1907 crops where they ought to be. Looking to this we will resume "The Situation" in a near future number.

As all our dependence for equtable prices depends on the farmers controlling the supply until the real demand is ready for it, we warn all readers, if you still have crops to sell to not dump them at the other people's prices unless they are also the Equity prices. Somebody must hold the crops until the real demand for consumption comes. Don't let it be said about you that you have less backbone than have the middlemen. But hold your own stuff, or if you cannot stop marketing entirely, market gradually.

UP-TO-DATE circulates in nearly every county in the country and at nearly half of the postoffices. Therefore it has an immense influence. Now, if each reader willl say to a few of his neighbors, "Be of good cheer. The old influences that brought farmers from a condtion of complete dependence on the speculators and manipulators of farm crops, to one of almost complete independence, are at work again," the influence and power of this paper will be multiplied.

Please do this.

[NOTE—The above article was written two months ago, but was held from publication on account of the unfavorable conditions throughout the country. The conditions are more favorable now, and if farmers want to exetr the power they should on the 1908 crops, the Farmers Society of Equity is ready and able to help them. But it must be a mutual matter. If the producers of the crops expect help, they must co-operate—not oppose, help—not hinder.]

DO YOU NEED SEED OATS THIS PPRING?

Listen here to what one local union did. They were in need of a lot of seed for spring sowing. Like a wise local they were, they placed an ad in the Business Exchange, and here is a statement of the result:

We received letters and samples from several states and bought about $200.00 worth of seed, so I suppose every member is well satisfied with the ad.
JAMES H. SAUNDERS, Hickman, Ky.

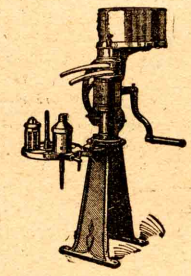
You can do the same thing. Rate is very low.

Ladies, did you ever think how much a good dressmaker can earn? Some of them make as high as $5,000 a year, and they all make a fine living. It is a pleasant, easy occupation. It is easy to learn, and one of our advertisers is now teaching it by correspondence, meeting with great success. They publish a book that gives their plan in detail, and you should have it. Address the American College of Dressmaking, 278 College Bldg., Kansas City, Mo.

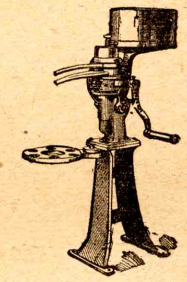
The Quality Line in Cream Separators

The Improved Frictionless Empire

The New Empire Star



The Center Feed Empire Disc



The Empire Line includes not only various sizes and capacities—but three different types of construction—each type made in all sizes and capacities—all backed by the Empire Guaranty.

In other words, Mr. Dairyman, with the perfecting of these new styles or types of machines, the Empire Factory has become the world's headquarters for cream separators—where you can take

Your choice as to **method** of separation,
Your choice as to **size** and **capacity**,
Your choice as to **price.**

No matter **which style** you choose from the **Empire Line,** you cannot miss it on **Quality.**

For in the whole Empire Line you will find that Empire inventive ingenuity, Empire constructive ability, Empire quality of materials, and Empire "Know-how" which has made the name EMPIRE stand for all that's **best** in cream separator construction.

That is why **every** Empire, regardless of **style,** is better than any other cream separator made.

Better because the Empire motto is to produce the best possible, regardless of cost—

Better because the Empire experts are backed by the Empire factory, the best equipped and the best manned factory in the world for the production of cream separators—

Better because these experts and this factory organization are given the best materials in the world with which to build the best separators.

Improved Frictionless EMPIRE

The Improved Frictionless Empire is the object of unqualified praise on hundreds of thousands of dairy farms today—it is famous from ocean to ocean—why?

Because it is better than any dairyman **expects** it to be, better than any dairyman believes a cream separator **can** be until he tries the Empire.

For it not only relieves the drudgery of ordinary dairying but banishes even the drudgery usually connected with operating other separators.

Its frictionless ball-bearings make the turning of an Empire a pleasure compared to the task of turning others. This patent protected bearing, together with its patent protected skimming device, place it in a class by itself as the simple, easy-to-turn, easy-to-clean, durable, dollar making separator.

And strive as they may, other manufacturers **cannot approach** its great advantages—at least not for years to come, not until our patents run out.

So, if you want the best all-round cream separator, the biggest money-maker, the most satisfactory in every way under all circumstances, we still say to you, as we have said in the past, get the Improved Frictionless Empire.

But such a machine, with its patented labor-saving, profit-making features, **must** cost a little more than some people want to pay for a separator. And to such people we say—get an **Empire Star** or an **Empire Disc.**

Our Improvement of Other Types

Because in these machines we utilize **other Empire patents** which place them far in advance of **all other** cream separators made, excepting **only** the Frictionless Empire.

The Empire Star comes nearest the Frictionless Empire in mechanical perfection, the Empire Disc represents the greatest step forward, the greatest **important improvements** that have been accomplished in disc bowl construction since the disc method was first used.

Empire Star

Because we ask less money for the Empire Star than for the Frictionless Empire, do not think for a moment that it is a "cheap" "slip-shod" machine. The Empire Star has a multiple-cone skimming device, consisting of fewer parts and parts more easily cleaned, than any other efficient skimmer on the market, save the Frictionless Empire.

It is not equipped with the frictionless ball-bearing feature, but in other respects the simplicity of its mechanical construction is practically the same as the model Frictionless Empire. No other separator for the money will give such satisfactory service day in and day out, year after year.

Empire Disc

We offer you the Empire Disc at a still lower price than we ask for the Empire Star. Disc separators are old—that is, the basic disc patents expired several years ago. There are, therefore, many styles of disc separators on the market.

And if **you** like the Disc type and want to save money on the first cost of your separator, we say and can prove to you, that the Empire Disc is the most efficient, practical, easy-to-turn, easy-to-clean, durable **Disc** separator that is made—it is the **most greatly improved Disc**—regardless of price asked.

The center feed bowl of the Empire Disc is 20% lighter than bowls of this character in other separators.

The central feed tube, with its three smooth flanges to distribute the milk evenly between all the discs, is an **important** element in its unequaled skimming efficiency.

There are no small slots to make perfect cleaning almost impossible either—no cracks, crevices and corners in which impurities can lodge, stick and stay.

And when you know that the Empire Disc has **only three** closed bearings as against **five** and more in other disc machines, you can draw your own conclusions about **ease** of turning.

Our Free Dairy Books

Let us send you our catalogue of the complete Empire Line, setting forth the unbiased truth about all styles of separators. Then you will have different types before you and can **choose** the kind **you** want. Our book doesn't try to force **one** style upon you. Remember, each of the Empire machines has its full range of sizes and capacities. Take your choice of **Type, Capacity and Price.**

Whether you want a separator right now or not, send for our books. They are brimful of money-making hints for dairymen. Send your request on a postal today.

UP-TO-DATE FARMING

Representing the Union or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume XI | INDIANAPOLIS, INDIANA, MARCH 1, 1908 | Number 5

A GLANCE BACKWARD

THEN AN EARNEST LOOK FORWARD

UP-TO-DATE FARMING is not the voice of one man only. It has always given, and now gives, in words the profoundest thoughts of the deepest thinkers and broadest minded men of this age; men who have devoted long lives of untiring activity to the welfare of others, especially to the promotion of farm organization, in the hope that those who till the soil might be induced to break the chains that hold them to the antiquated methods of the past, and to co-operate to bring themselves abreast of other callings. Such people, speaking through UP-TO-DATE FARMING or otherwise, deserve to be heard by those to whose interests they have unselfishly devoted more than an average lifetime. Of this character are the thoughts and sentiments which follow.

Little more than half a decade ago, such a thing as farmers making the selling price of their products, and securing those prices by controlled marketing, so far as the world has been told of it, had never been thought of but by one man. Fortunately that one man had been for years publishing a paper that was extensively sought and eagerly read by thoughtful, progressive farmers and business men, and in the columns of that paper the new doctrine found its way to the public heart, mind and conscience. At that time, of the many thousands of able publications in this country, the paper referred to was the only one whose columns were open to so strange a doctrine. All the others, if they mentioned it at all, did so only to sneer at the idea or to declare it the deceptive vision of an impractical dreamer.

Of course there had been farm organizations before, earnest efforts for the good of those who till the soil—efforts led by noble and devoted men, but, as was to be expected, they followed the line of the world's teaching that the farmers' only relief must come by controlling their buying and not their selling, except as they might sell in an isolated way in bulk, but on the general market at prices made by the buyers, the farmers' only hope of advantage being in exacting pay in slightly higher prices for getting their own and their neighbors' stuff together. But J. A. Everitt and UP-TO-DATE FARMING proclaimed the startling truth that farming is a business as much as any other calling or industry; that the business way of doing things is for the seller and not the buyer to put a price upon his goods; that farmers, though working as individuals, and scattered all over a great country and the world, could, by organization, co-operation and controlled marketing, fall into these proper lines of business, make equitable prices on what they produced to sell, as other business men of right do.

Of this great truth, thus for the first time proclaimed, was born the American Society of Equity, only an infant at first, but nourished by its queenly mother, the great truth of which it was born, and fostered and directed by its father, the infant soon threw off its swaddling clothes and donned the garments of lusty youth, and next of a noble and powerful manhood.

It is a significant fact that under the undisturbed direction of Mr. Everitt, the Society never ceased to grow, and so long as Mr. Everitt's private purse had to be relied upon for the means of growth, no disturbing factors entered its councils. Under those conditions, no society ever grew as did the A. S. of E., and no truth, at first so universally scoffed, ever so rapidly made its way to the hearts of the people, or so quickly compelled its recognition by the business men, the scientists, and even by the speculative price-maker himself. From Maine to California it was heard of and discussed; from beyond the Lakes to the Gulf its power was felt, and in the Old World and on the Islands of the Sea its light shone. As a white-sailed messenger of progressive thought, and a proclaimer of truth, not new but newly applied, UP-TO-DATE FARMING went through rivers, across plains, beyond mountains, and over seas to other lands, carrying a message that invited to better things. And all this time Mr. Everitt stood at the wheel and paid the expense. It is not Mr. Everitt that is talking now, but the above is a truth the writer challenges every one of Mr. Everitt's traducers, every delegate to the recent convention, every officer by it elected—each and every one of them is challenged to deny that truth if they dare.

But the Society of Equity soon put on the garb of a giant. Then, gathering in good and honest people whose hearts beat in unison with the great purpose it was working out, others came also. Leeches, accustomed to suck life-blood from others, always seek something that has blood in it. Experience had taught the few of whom I am speaking, that farmers are not accustomed to pay heavy fees and dues, and do not accumulate large funds from which the impecunions might draw. But some of them at least had been connected with labor organizations, and knew that labor unions do accumulate funds; that in periods of strikes they have hundreds of thousands of dollars to draw upon. "Where the carcass is there will the vultures be gathered together!" These malcontents could not on their own merits get into the labor unions nor in touch with the labor unions' funds, but they conceived the idea that on the merits of the still rapidly growing A. S. of E. they might do so, and the so-called Equity Exchange, with a name as long as their empty purses, was born, a bastard to rob the legitimate heir of its birthright.

It was then that Mr. Everitt ceased to be "in accord" with those who would divert the society from its legitimate purpose and plunder its treasury to serve other ends. Had he remained "in accord" with them, it would have been to spit in the faces of the honest men who had accepted his teaching, to trample under foot the sacrifices he had made, to confess that all he had expended of his fortune, and of the time God had given him, had been a foolish waste of money and opportunity; and it would have been to stultify himself and his record.

It is not worth while to ask a man capable of doing what Mr. Everitt has done, to do these things. When a man stakes all he has of fortune, of hope and of effort, on a purpose, and when he sees that purpose so near to accomplishment, he would be unworthy of his name were he to stand and see the means of that accomplishment dragged backward into the mire and slime of helplessness. Mr. Everitt never more emphatically showed his worth to the farmers of this country than he did when he ceased to be "in accord" with those who planned the destruction of the society or the merging of it into other things.

With Mr. Everitt it is not so much a question as to who shall lead the society as it is as to where it shall be led; as to whether it shall be saved to work out for the farmers its beneficent purpose of equitable prices for their products on simple business principles through controlled marketing. And in the action he has taken, and is now taking, he has done more for the farmers, and made greater personal sacrifices, than in all else he has done besides.

It is up to the farmers themselves to say what they propose to do about it. Which can help them most, Mr. Everitt and UP-TO-DATE FARMING, with their earnestness and devotion to the simple plan of controlled marketing, or those who have gone off after strange gods, with a complication of purposes and an expensiveness of routine that farmers cannot hope to meet, and with no medium through which to reach the masses, though the members are compelled to pay for one they do not receive and that is seldom printed.

Tens of thousands of members have refused to pay their dues to such a source; and many local unions have wisely held their dues at home rather than tnus jeopardize the money of their members. Upon all such, as was done by a religious hierarchy in the dark ages, the exchange promoters have placed the ban of excommunication. They have been declared not in good standing. Not in good standing with whom? Are you in accord with a million-dollar corporation born in the same monopoly bed where almost all the trusts received their birth and were indued with power to plunder? No law binds you to pay your dues anywhere, but fidelity to principle does. It was principle that led you to subscribe to the society in the first place, and it was hope of benefits in your own business that prompted you to the payment of dues at all. You are the party to decide where those principles are now, and in what those hopes center. If in a million-dollar New Jersey corporation to do you know not what, then pay your dues to that side of the proposition. But what do you lose by not being in good standing therewith?

If, on the other hand, the principles you originally espoused are in the true society as represented by this paper, pay your dues to this society and be in good standing with it. In that case you are sure to get UP-TO-DATE FARMING, the paper that first brought to you the truth that all the other papers withheld, and that you know is still working for the greatest proposition ever before given to the agricultural world.

If the erratic wandering away of the last convention has made you doubtful if it is worth while to pay dues at all, it is certainly legitimate for you to keep up your subscription to the paper that always gives you full value received. If you pay dues, the subscription to the paper is included in the dues; if you do not pay dues, 50 cents will keep you good on our list. A late ruling of the Postoffice Department compels us to quit sending the paper to those in arrears for subscriptions. We don't want to take a single name from our books. On the contrary, we want to add thousands of new names thereto. These truths must be taught. Farmers must come to the front. Unfortunate complications may retard them a while, but clouds never hide the sun long at a time. The mists clear away, and then it shines all the brighter. Such will be the case in this instance. UP-TO-DATE is in the lead. It has more than maintained its position, and we appeal to every reader to keep abreast of it, comply with the requirement of the postal authorities, and let us continue to send it to you. Not only so, but kindly send us the names of any of your neighbors at the same rate. We want to help every ody to the truth of this doctrine. Then when the next annual convention rolls around, the Equity Giant will be "clothed and in his right mind."

WITH UP-TO-DATE'S PUBLISHER

When renewing your subscription or ordering a change of address always clip your address from a wrapper and send along.

Probably no number we ever issued has been more powerful to shape the opinion of readers and cause favorable comment as the issue of Feb. 15. If you did not read it very carefully, do so now. Sample copy will be sent on request.

In the February 15 number on page 5 was a list of orders sent us without full address. If you are interested, look over the list.

Subscribers are urged to renew their subscriptions this month. By a recent rule of the Postoffice Department credit for semi-monthly papers cannot be given longer than three months.

We don't want to lose a single subscriber. On the contrary, we want to double the circulation of this paper and thus double its power for good to farmers. EVERYBODY RENEW AND GET A NEW ONE, is the burden of our subscription campaign, and if YOU have not done your part, we hope you will this month.

In last issue we referred to an order for 100 copies of The Third Power book from Mr. Seymour of Alabama. He has since ordered 500 and inquired price for 10,000. He appreciates the great good that will result from a wide reading of this book, yet the present headquarters of the A. S. of E. in their alleged official paper try to create sentiment against me because I advertised the book at my own expense in my own paper and let members and others have it at less than cost to educate them. Strange, isn't it, what crimes are done in the name of Equity.

Please remember our request about checks. Don't send them for small amounts. Drafts on Chicago or New York are all right, or money orders. Currency carefully sealed in a carefully addressed letter is very certain to come safely.

"R. R. No. —" is the way to write it. Always give county. Write VERY plainly.

THE SITUATION IN KENTUCKY

In a recent article on conditions in Kentucky, we quoted a press dispatch from the State capital to the effect that a considerable number of the legislators from the tobacco sections of the State had agreed to support an act forbidding the pooling of tobacco and providing a severe penalty for its violation. We did not believe an act so destructive of the independence of farmers could be favored by the lawmakers of an agricultural State, but it is a fact that all of us must depend upon the daily papers for our general information regarding current events; hence we quoted the dispatch, and called attention to the enormity of the proposed legislation. The public must not lose sight of the fact, however, that most of the means the daily papers have of getting news, if not actually controlled, are greatly influenced by the monopolistic or trust interests. A personal letter from Kentucky puts a very different face not only on legislative tendencies, but on the reported acts of lawlessness. We contend most earnestly that farmers have a right to sell or withhold their property as best suits them, and to make their own terms of sale as others do, but that gives no license to violate law, or to compel by force others to adopt the same methods. Hence we reiterate our opposition to all lawlessness.

We quote from the letter referred to:

No bill of the nature outlined in a dispatch recently quoted in UP-TO-DATE FARMING has ever been suggested by our legislators. We have kept close watch as to bills touching our interests, and think if any legislation is had along this line it will be favorable to farmers, as a majority of our legislators are for the people, and are friendly to the society in its fight against the trust. The truth of the business is, the big dailies of this section of the country are favorable to the trust, and through their reporters, magnify every act that is alleged to have been done by members of the society, and they falsify and misconstrue everything that may be turned to the disadvantage of the organized farmers. For instance, a man who lost five hogs was reported to have lost ten hogs, two cows and a horse poisoned by night riders. Another man who, contrary to a signed contract, was attempting to ship his pooled tobacco, was stopped by process of law, in a quick, business-like way, was reported as having been forced by a committee of the society to stop the shipment of unpooled tobacco. Masked men with coal oil were reported to have set on fire a tobacco warehouse, when, in the neighborhood where the fire occurred, there was not the least suspicion that anything of the kind had occurred. In the last instance, the paper was asked to correct the report, but it never did.

We have enemies of our organization right among us, self-styled independents, but actual agents of the trust and the tobacco warehouses, our neighbors socially and our friends personally, who are doing us greater wrong just now than anything else, or any other class of people. They are discouraging everybody they can, furnishing hogsheads and having men who have pooled haul their tobacco off by night to break their contracts and avoid legal process, and urging all not in the pool to ship immediately.

We were never so fully convinced that the city papers are so radically against us, until a bill was offered in the State Legislature to regulate the trust or drive it from the State. Then there came a remonstrance from the papers of our largest city urging the defeat of the bill on the false plea that it would destroy one of the largest enterprises of their city. Those papers offer no remedy for the condition of the growers, but urge that the Legislature must not disturb the monopoly of tobacco buying.

As members of the organization we are patiently biding our time, seeing day by day those who should be our friends in this movement, antagonizing our efforts, and, at the same time, taking advantage of the equitable price we have made, and prolonging the time we shall have to wait. Some who did not pool last year have come in with us on the last pool, saying they are willing to lend a helping hand to those who have helped them so much. One man struck the keynote of manhood when he said: "I would have thought myself a mean, selfish man if I had not pooled my last crop when the pool enabled me to get from four or five dollars more per hundred for my other crop."

We have not wholly given our enemies over to a "hardness of heart and a reprobacy of mind." Most of them will finally see their error and join hands with us in our fight for the general welfare—the good of our wives and children—against a monster trust that would beggar us all.

LIMITING PRODUCTION TO MAINTAIN PRICE

Since the financial panic of last fall, which has cost farmers, laborers and the smaller business men so many millions of dollars, the steel trust has taken advantage of its power to trim its sails to fit the cyclone Wall Street raised for it. W. G. Mather, president of the Cleveland-Cliffs Iron Company, a part of the trust, said after a recent confidence of the magnates: "We do not expect to ship in 1908 more than 60 per cent of the ore that our mines sent forward in 1907"; and other heavy ore producers made similar statements. This means that the output of the mines will be reduced from 41,288,775 tons in 1907, to not more than 25,000,000 tons this year. And President Corey of the steel trust said the product of the trust in December of last year was not more than 36 per cent of the usual output, and that it is not now more than 50 per cent.

Thus the trusts control the output to maintain prices, and it would be very unwise not to do so. But suppose farmers should do the same thing! Suppose they should say under present financial conditions, if a normal crop be produced this year the selling price will be much below the normal, therefore we shall only raise half as much wheat, corn, cotton, live stock, etc., as we usually raise. What a howl would go up from one end of the land to the other! Those who speculate in farm crops and take advantage of such financial conditions to put the prices lower to the producers and relatively higher to consumers, smile complacently as they look over the broad farms of the country and declare farmers cannot act with sufficient concert to do that.

Well, we are not discussing what farmers will or will not do, but we do hereby declare that they have a RIGHT to do in their interest what others do in theirs, and if they were organized as well as other classes are, they could do whatever is necessary to secure reasonably profitable prices for their labor and its products.

SEIZES CAR LOAD OF FLOUR

The following is taken from the Indianapolis Star of January 22:

United States Deputy Marshal Lon Boyd went to Richmond yesterday and seized a car load of flour which had been shipped from the Gardner mill at Hastings, Minn., to the Richmond Baking Company. The sacks bore the statement: "Flour manufactured from the finest selected hard spring wheat," but an inspector of the Agricultural Department found that it was not made from hard spring wheat, but contained as one of the ingredients flour manufactured from Durum wheat.

This constituted a plain violation of the Pure Food and Drug Act and rendered the goods liable to confiscation. This is the first seizure made under this law in Indiana and among the first few in the whole country. Two other cars shipped from the mill at the same time were seized, one in Chicago and one at a point in Ohio.

LAW AGAINST "FUTURES" HELD GOOD

Arkansas has a law against dealing in so-called "futures," or gambling in prices. A Chicago brokerage firm brough suit in the Federal Courts at Little Rock to declare the law unconstitutional on the alleged ground that it interfered with interstate commerce. Judge Trieber held that the State Legislature was clearly within its constitutional rights in enacting the law as a police regulation to protect the morals of the public, and that the law was, therefore, constitutional and must be observed.

Appeal To Local Unions And ALL Members

ARE YOU WAITING YET? If so, now is the time to decide. In March this paper will be discontinued to all members who have not paid 1908 dues to the Farmers Society of Equity or subscribed for the paper alone. Of course, if you pay dues to the new A. S. of E. you will not get UP-TO-DATE FARMING, but may occasionally get a sheet devoted to keeping you deceived. The December-January number of the Equity Farm Journal contained twenty-four libelously false statements and nearly every other statement in the paper was false. The publishers and editors are now under arrest for such libels. Is this the kind of a paper farmers need? If so, then the editors and publishers of UP-TO-DATE FARMING greatly misjudged them.

We want every member of the society to read and study the article in this number, "A Glance Backward and Then an Earnest Look Forward," and when he goes to his next local union meeting see to it that the course of the union is determined without further delay. If no regular meeting, see that a special meeting is called.

Remember, the Farmers Society of Equity has not come to destroy the original American Society of Equity, but to save it and put it on the right track again. This was clearly shown on pages 16 and 17 of February 15th number. If you cannot conscientiously support the F. S. of E., then it will be far better to keep the dues in the local union treasury until you have a headquarters you can conscientiously support.

March, 1908, is the crucial time for the Society of Equity. The future of American agriculture depends very much on the action that will be taken by the old members of the society during this month. Report blanks for the Farmers Society of Equity were sent out some time ago to all secretaries. If they are not at hand, send for others. For instructions read first column of "F. S. of E. Official Department" in this paper.

FARMER THE THINKING MAN

E. W. Wickey, of East Chicago, speaking before the Waterways Convention of the Indiana branch of the National Rivers and Harbors Congress meeting at Indianapolis, said: "The farmer is the thinking man of the country today." Certain it is that a great change has me over farmers in the respect of independent thought, and no paper can claim a greater share of credit for this than UP-TO-DATE FARMING. The greatest hope for future improved conditions in business and government in our country lies in the farmers' independent thought, directed by safe leaders and newspapers.

FEBRUARY 15TH THE GREATEST

Many compliments have been passed on the February 15th number of UP-TO-DATE FARMING. It was a good number from every viewpoint, and all agreed that it should satisfy all doubters on the points that have been in controversy since the annual convention. While all old readers wish the controversy ended and the unfortunate past buried, yet thoughtful people admit that better things cannot be expected until the conspiracy is completely exposed and the last conspirator is completely discredited with all loyal members and honest people.

Another fact that this number demonstrated is that a good thing cannot be downed. Perhaps no paper has ever before passed through a fiery ordeal as this one has, and it has come out unseathed and more than conqueror, as evidenced by the fine array of advertisers and the support of its old subscribers. The more desperate the enemies became and the more venomous the shafts they hurled, the greater the force with which they were hurled back and every one has proved a boomerang to them, thus injuring the aggressors multiple times.

Farmers and business men all admit the value of the great work UP-TO-DATE has done and they appreciate that its loss, before its mission is accomplished, would be irreparable. Therefore they have rallied to its support as they probably would not have done if it had not been so unjustly assailed. We are proud of the February 15th number and wish it could go into every farm home in the land so it might be known what a dastardly attempt has been made to carry away the only movement farmers had to gain their industrial freedom and independence and how it was saved.

Sample copies will be sent free on request while they last, and bundles at 1 cent per copy.

THE FIDDLER AND THE ASS

[Mr. Everitt: The writer has followed the controversy between you and your enemies (your would-be traducers) and it brings to my mind the poem I memorized when a boy. I have not since seen it in print, but copy it from memory. Use it, as it is applicable at this time, and play on, brother; I like your music best.—T. S. C., Spencer Co., Ky.]

Within the fields one summer day
A long-eared ass began to bray;
The uplands echoed back his voice,
To hear it made his heart rejoice.

"Oh, what a pity," cried the ass,
"That I should longer feed on grass;
My lungs are strong, my voice is loud,
At concerts I might draw a crowd.

"List to my music, how it fills
The valleys sleeping 'neath the hills;
Tis sweet, I know, for just look what
Great ears for music I have got."

An old musician heard the din
While passing with his violin;
He paused a while upon his way
And bade the old ass cease to bray.

"My long-eared friend," the fiddler said,
"This neighborhood must wish you dead,
For worse than any sounding brass
Is your coarse music, Mr. Ass;
If you wish music, cease your din
And listen to my violin."

He rubbed the rosin on his bow
And tuned the notes both high and low,
And on a stone fixed for a chair,
He played a grand, soul-stirring air.

Scarce had he ceased his tune to play
Than the ass again began to bray;
Nor violin, nor song of bird,
Could for a moment then be heard.

At last the old ass dropped his head
And to the old musician said:
"Music, my friend, is *sound*, you see,
Therefore all sound must music be.
Of mine the world must be the proudest
Because, my friend, it is the loudest."
. . . . . .
How many men we daily pass
Who reason like the braying ass;
They grow to men from braggart boys
And think that brains must make a noise,
They gain high seats in synagogues,
No mystery their vision fogs,
But wise men whisper as they pass,
"There goes a self-conceited ass."

CO-OPERATION BY FARMERS WITH THE CONSUMERS OF FARM PRODUCTS

[NOTE—The mission of UP-TO-DATE FARMING is to educate farmers in the only practical plan for marketing farm crops profitably and to put the plan in operation. In doing this it is necessary to set right the misguided, encourage the faltering and always lead in new fields and show the way. Perhaps in no direction have a greater number been misled than in following the promoters of the capital stock Equity Exchanges as a means of marketing farm crops profitably. It is surprising that any person would seriously consider the plan after four years of work along the right lines, without any capital stock, and it is almost past belief that the promoters of such an impractical, not to say unnecessary scheme, would be found in the head offices of the American Society of Equity itself. The only plausible explanation is in the theory of personal ambitions and private gain, as explained in another article in this number. We will again explain the correct way for producers of farm crops and the consumers of them to co-operate and we advise both the producers and consumers to co-operate to put the plan into effect. Additional copies of this paper will be supplied, upon request, to further this plan.]

Explanation

The Farmers Society of Equity has the most friendly interest in organized labor, necessary and honest merchants and middlemen, manufacturers of honest goods produced under fair conditions as regards labor, reputable professional men, etc. It has declared that its object is to secure equity in ALL THE BUSINESS RELATIONS OF LIFE, and it has no fight against anybody. It does not propose to elevate its class—the farmers—on the wreck of any other class, but by elevating the farmers and agriculture to a higher standard it will lift up and strengthen every other necessary and legitimate business.

In one of the early printed works dealing with the Equity Society, viz.: The Third Power book, published in 1902, there are many expressions of friendliness to organized labor, and all the useful institutions of the country; and numerous illustrations were made to show how the organized farmers could co-operate with them for the good of all.

Heretofore farmers were taught to believe that whatever they gained through organization and co-operation must be taken from some other class or classes. To this end they organized to buy cheaper and to ship direct, thus cutting out the middleman. But all such attempts failed to give the benefits necessary to perpetuate the organizations. Also on this plan farmers antagonized all other classes and made them their enemies.

But then came the American Society of Equity, which recognized the necessity of three classes in the economics of our country, viz.: the producer, the consumer and the distributor. To elucidate this let us ask: Is not the producer busy producing? And is not the consumer busy with his daily work or profession? If so, then how can they take charge of the distribution of all goods? Or if they were to do this, then they must abandon their regular business and become distributors just as truly as the present people are. Now we will ask: What will be gained by dispensing with one set of experienced distributors and putting in their places a set of inexperienced ones? No advantage can be gained and the business of the country would be disturbed in all departments of production, distribution and consumption. Who dares deny the soundness of this argument?

These things the American Society of Equity taught for four years. Then in the fifth year the controlling directors of the society got off of the track. And at the last annual convention they arranged to stay out of line with the true plan of co-operation between producers and consumers and for many other things also. This caused the Farmers Society of Equity to come into existence. (Read also first column of F. S. of E. Official Department in this paper.)

Declaration

The Farmers Society of Equity declares that it recognized the justice of every man receiving a fair price for the goods he produces, and the right of every laborer or NECESSARY middleman receiving a fair wage for service performed. And in granting this to others, the Farmers Society of Equity declares that it is only justice and the right of farmers to receive a fair and profitable price for their products.

No person will question their right. And since the plan of the Farmers Society of Equity has been tested, knowing people admit that farmers organized will have the ability to sell their produce at profitable prices.

To convince the reader of the farmers' power to sell at profitable prices, he is asked to grasp this thought: The farmers produce ALL the food to feed ALL of the people and ALL the domestic animals in the country as well as an immense quantity of some crops for export. They also produce all the wool and cotton from which clothing is made. The farmers, therefore, have first all these things that are necessary for the comfort of the people; indeed, the life of the people and the domestic animals depend on what the farmers produce.

No other goods are so much desired. The farmers' products are indispensable, while all the others can be done without part of the time or all of the time.

Having shown that the farmers have all the food and clothing supply first, and having shown that the people must have the farmers' produce, does it not follow that if the farmers will set a fair and equitable price, which will be a profitable price, on their produce and not sell for less, that the price will be paid?

This is the claim of the Farmers Society of Equity, and it is organizing the farmers for this object. The necessity of organization by farmers is now as apparent to them as it ever was to the manufacturers or laborers. In fact, as the organization of all the other classes was accomplished and they decide the prices the farmer must pay for what he buys, and they also decide the price that will be paid for what he sells, the farmer's position came to be intolerable.

The farmers are justified in their movement to organize from every viewpoint, and if any person doubts their ability to do so, we will say that they have organized in some sections already and by control in marketing their crops have compelled profitable prices. And they can do this for all crops. To illustrate: If the potato growers make up their minds that they will throw off the yoke of the potato kings, all they need to do is to organize in fifty-seven counties as follows: Colorado, 1; Maine, 2; Michigan, 14; Minnesota, 3; New York, 30; Ohio, 2; Wisconsin, 15. These counties produce such a large proportion of the potatoes that if they were held off the market a short time a condition would be produced that would force the agreed price on ALL THE CROP. And it can be the same way with all farm crops, and will be in a short time.

But the farmers are not unmindful of the consumers. They are as much interested in LARGE MARKETS as in PROFITABLE PRICES, and to have large markets the prices must be fair. Nothing can prevent farmers from organizing and nothing can prevent them from putting prices on what is their own, and which the other people MUST have. But, under the present system of distribution, the middleman MAY CURTAIL THEIR MARKETS by charging too high prices for handling. To prevent this THE PRODUCERS CALL UPON THE CONSUMERS TO CO-OPERATE WITH THEM SO UNNECESSARY TOLL-GATES AND ABNORMAL PROFITS may be eliminated. There is no intention on the part of the producers to sell directly to the consumers, because we know this is impractical.

As we said, we recognize three classes as necessary — the producers, the distributors and the consumers. And these three classes, each being necessary to the other, it behooves each to consult the welfare of the others so none of the proprieties will be violated and so there may be true co-operation that will guarantee certainty of results and equity to all.

To the accomplishment of this end we, the farmers of America, do hereby present to organized bodies of laborers or other bodies of consumers our

Petition

To wit:

That you, residents of cities and towns, proceed to appoint a committee or committees to call upon the various receivers of farm produce in your respective cities and towns and select the fairest houses and arrange terms with them for handling produce. Having done this, notify the headquarters of the Farmers Society of Equity at Indianapolis, Ind., and all local unions of our society will ship only to such recognized houses.

By concentrating the business to such selected houses, favorable terms can be arranged for handling, and the selected houses will be obligated to not take any undue advantage by a temporary lack of supply on the market and will also be obligated to not conspire to produce a scarcity so prices can be forced abnormally high. By this plan the dishonest handler who gives short weights or measures, or adulterates goods and makes false reports, can be eliminated.

Consumers can also select the retailers who will give them a fair and square deal. In this way they can have much, if not all, to say about the cost of handling the necessaries of life. By this plan not a dollar of capital will be required and no necessary or legitimate business will be disturbed.

On this program farmers, merchants, honest commission men, professional men and laborers can join, because it is equitable to all and because the two greater classes, the farmers, the producers, and the consumers will at last have something to say about the price received for, and cost of, the necessaries of life. The distributors also will welcome this movement, as it will give them a certainty instead of an uncertainty as at present.

Truckers in the South, or anywhere, potato growers of the East and North, fruit growers and others should at once cast their eyes and centre their minds on their natural markets and send this petition to "organized bodies of consumers" and arrange for the handling of the next crops. At the same time organize in the F. S. of E.

This system in operation will remove the speculative features of business and will not leave the small dealer at the mercy of the large operators, who, under the present system, have power to make and unmake prices often to the injury of the smaller dealers.

Respectfully submitted,

J. A. EVERITT.

An unsere deutschen Bürger.

Inmitten der fruchtbarsten Regionen unseres ausgedehnten landwirthschaftlichen Gebietes, wohnen Diejenigen, die noch mit Freude an das alte Vaterland zurückdenken. Sie sind im allgemeinen unsere erfolgreichsten Farmer, und ihre Nachkommen unsere unternehmendsten und fortschrittlichsten Bürger. Viele dieser guten Leute, besonders die älteren, lesen mit Vorliebe die Wahrheit der Gerechtigkeit in ihrer Muttersprache, und ist es eines unserer größten Betrübnisse, daß wir nicht mehr länger imstande sind, ihnen dieselbe noch fernerhin vorzulegen. Nachdem alle Vorbereitungen getroffen waren, dies zu thun, und nachdem unter großen Unkosten die Zeitung Up-to-Date Farming in deutscher Sprache herausgegeben wurde, gelang es einigen höchst selbstsüchtigen Männern es mit ihren außerordentlichen revolutionären Anschläge es so weit zu bringen, daß es finanziell unmöglich ist, die deutsche Ausgabe fernerhin zu veröffentlichen.

Wir können jedoch unseren deutschen Freunden versichern, daß wir trotzdem ihnen das größte Interesse entgegenbringen und daß wir ihnen ein gutes Fortkommen wünschen. Es ist unser innigster Wunsch, daß sie fortfahren werden, der Lehre des kontrollierten Handels treu zu bleiben; daß, indem sie Hand in Hand arbeiten, es ihnen noch gelingen wird das Vorrecht zu erlangen, wieviel ihre Arbeit werth ist, so daß sie mit dem Reste der Menschheit im gemeinen, für ihre Arbeit einen gerechten Lohn erhalten.

Dies wird zustande gebracht werden. Die Welt und die Zeit schreiten vorwärts, niemals rückwärts. Wichtige Wahrheiten, einmal eingegeben, werden nie wieder vergessen; und das Recht, welches einmal in den Vordergrund getreten ist, wird nie mehr zurücktreten. Auf diese Grundgesetze gesunder Philosophie bauen wir unsere Hoffnungen, und zur Förderung derselben erflehen wir uns die Hülfe unserer guten deutschen Mitbürger. Wir hoffen, daß diejenigen, welche nicht imstande sind englisch zu lesen, ihre Kinder dazu veranlassen ihnen vorzulesen.

1000 MEN WANTED

THE FARMERS SOCIETY OF EQUITY wants 1,000 capable men at once. To organize the farmers of the country so as to guarantee profitable and equitable prices and to keep them organized will require permanent representatives in every county, or group of two counties or more.

In the development of this farmers' society, which is different from the Grange or Alliance or any former farmers' society, it will require representatives like great life insurance companies have. But the inducements to represent such a great and good movement will be greater than can be offered by any other institution.

We call for representatives; we want them from every county in the country and in each community. If you are a man of ability, intelligence and integrity, and command the confidence of the people in your community, and want to engage, temporarily or permanently, in a pleasant, profitable and beneficial business at home or away from home, send your application on the below blank at once.

To applicants will be sent full particulars. You can give all or part of your time, the former preferred. Promotions for deserving people will be certain and rapid until the great society is completed. It has been successful for some, now we want it to apply to ALL crops.

If you live in the grain-growing sections of the West, Northwest, or Central States; the potato-growing sections of the Northern or Eastern States; the cotton-growing States of the South; in sections that grow fruit or vegetables to ship; or that are engaged in dairy pursuits, or any agricultural interest that produces a surplus for shipping, and if you want the producers to price their own crops AND GET THE PRICES, then write to us for particulars how you can help. Use below blank.

To the Farmers Society of Equity,
Indianapolis, Ind.

Gentlemen—I want to help establish the Farmers Society of Equity for profitable prices for *all* products of the farm, therefore please send me full particulars how I can assist as per your call in UP-TO-DATE FARMING. I am now

engaged at .....

....

In the past I have also been engaged in

....

If I am satisfied with what you have to

offer I will give.....

(*Write "all" or "part") of my time.*

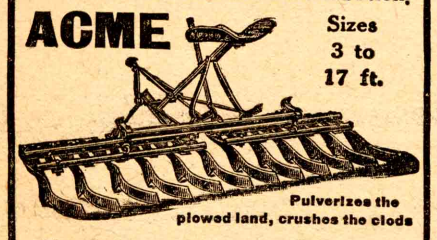
Harrow FREE

RETURN AT OUR EXPENSE IF IT DOESN'T PLEASE YOU

Here is a harrow that looks very different from the old spike or spring tooth harrow.

It *is* different. Every point of difference is a point of big improvement. It is as much better than the old fashioned harrow as a modern plow is better than the Indian's crooked stick.

ACME Sizes 3 to 17 ft.



Pulverizes the plowed land, crushes the clods

The coulters or teeth of the "Acme" work as a gang plow. They turn over and pulverize the ground and give the crop all the soil's benefit. Farmers will tell you that bigger crops grow after harrowing with an "Acme."

Advertisements in Up-to-Date Farming are safe to answer
Have no fear in writing to advertisers—they are **Guaranteed**
See Guarantee of Advertisers in this issue

Up-to-Date Farming should always include the marketing end. This is more than half of **successful** farming. False teachers are the farmers' greatest stumbling block.

The sun crawls back toward the North,
And Nature smiles up in his face;
Old white-clad Winter disappears,
And green-robed Spring steps in his place.

AS THE SPRING OPENS

Those who have passed the meridian of life realize how rapidly time is passing. The busy part of the initial work of another season is upon us, and all over the country the foundation for another crop is being laid.

This period may well be called the mental side of farming—laying plans for the coming season's work. The farmer is no longer a machine; he is a being of intelligence, of thought, and of reason. There is less of lost motion on the farm than there used to be, and more of work to a purpose. Farmers know now why they do things, and they confidently look for definite results to follow every effort.

In only one line are the men of the farm behind their fellowmen of other callings, and in that line they are slow to learn and slower to act. It is the selling side of farming. Amid all the great improvements on the farm—in cultivation, fertilization, rotation of crops and seed improvement—the products are hurled upon the market at the most unprofitable times, at prices made they know not how or why. Nobody else does that way either with their labor or its products.

But, while we urge farmers to do more thinking along these lines, the production side must not be neglected. How is it with the winter work? There are certain jobs that belong peculiarly to the winter, and unless these jobs are done in their logical season, there is loss of values, or, if it is attempted to bring them up later, there is likely to be congestion in the spring work, and the whole crop may suffer.

During the winter is when the most manure accumulates within the barn and about the barn lot. It is a loss not to take care of this great source of fertility. As it is made is when it should be attended to. Farmers can scarcely bring themselves to cleaning out the horses' stalls and the cattle sheds every day, as is done in the great dairies and the livery stables, but manure should never be allowed to accumulate in these places, and it will pile up very rapidly where well-fed stock is kept.

There is some doubt whether it is best to take the fresh manure to the fields in the winter time, but there can be no question as to the propriety of having a convenient sheltered place in which to store it as it accumulates in the barns and stalls. If this has been done, just before plowing is the time to get it to the fields so that as the ground is turned preparatory to the planting, the manure may be turned with it. Then is saved the nitrogen and other volatile elements that are so prone to escape in the air.

In this work the farmer who has a modern manure spreader is a happy man. He is in a position with his team to do the work of two men and teams, and he can do it better than ten men could do it in the old way with forks.

Some farmers do not clean up about the barn and lots oftener than once a year; some not that often. We could mention barn lots that now, on this first of March, have spread over them three or four inches—several tons—of richer fertilizer than could be bought for from fifteen to twenty dollars per ton. A modern manure spreader would be a source of wealth to such farmers as these, and the manure that now lies where it is of no value at all, but in the way, could be placed where it would be worth more to the farm than the spreader cost.

Watch the farm drains this time of year. Whether tile or open, they must not become clogged. The superabundance of water that comes in the spring season must have some outlet, or land that ought not to be will be overflown and crops and soil damaged. This is particularly true of small creeks that flow through most farms. Never permit drifts to accumulate in these streams — they are sure trouble makers.

And the washouts must have attention too. At the breaking up of winter the soil is specially tender. The freezing and the thawing have thoroughly pulverized it, and the water of the heavy spring rains takes advantage of every little drain it can find to rush to a lower level, and it carries the finely pulverized soil with it. Before it is suspected, a ditch may be formed that may ruin valuable acres, or that will take days of labor to fill up. Mole runs are great starters of such ditches, and it requires careful watching and prompt action to stop them sometimes.

What do you think?
The earth takes a drink,
And a thief runs away with the soil;
But trust not to fate,
Still read UP-TO-DATE,
And be sure of reward for your toil.

THE MANURE SPREADER

There is an implement not yet in as general use on the farms as its merits deserve. Men of good financial judgment never make an investment until they are confident it will yield a profit—that is, that it will return the money invested in it and something besides. We believe the manure spreader will do that. When the modern reaper crowded out the old cradle, and the mower the scythe, no tears were shed over the departure of the old implements of torture, and few hesitated to invest in the new.

The same and more may be said of the modern manure spreader. The former implements were time and labor savers; this is a money saver—a utilizer of a by-product. Farmers have long tried to save the barnyard manure, and get out of it, in increased yields, the money there is in it, but the method of doing so has been tedious, laborious and very imperfect. The manure spreader removes the tediousness, lightens the labor, and puts the manure exactly where it is desired, and where it will do the most good.

We shall say more about these implements in our future issues, knowing that the subject is one that our readers are greatly interested in and are desirous of full information pertaining to the subject. Write to any firm that manufactures them, and you will be given full information regarding them. It will be for advertising purposes, of course, but from it you will get the information desired.

HIGH AUTHORITY ON "FUTURES"

That markets are controlled and prices made by those who gamble on what future prices will be, is no longer disputed in well-informed circles; and the method of doing it is worse in its effect upon humanity, both producers and consumers, than is the spirit of gambling it invokes upon the morals of the country.

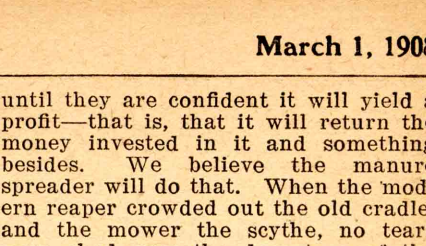
As in all games of chance, there are two sides to it and two parties engaged in it. One party proposes to bet that the price of a certain com-

125,000 Complete Vehicles
Studebaker Sold Last Year

There's a reason why so many Studebaker wagons, carriages and buggies are sold every year. Farmers everywhere realize the superior workmanship and material put into Studebaker vehicles. They know that every Studebaker is made by experts and the skill and judgment used in their manufacture comes from over 50 years' experience. They know that

Point by Point They Are the Best

Better material—better construction—greater convenience—handsomer designs—more **real value** for the money. Ask the Studebaker dealer to show you the wagon shown in cut.



Studebaker Bros. Mfg. Co., South Bend, Indiana

If you mention this paper and send 2c in postage, we will mail you "Studebaker" 1908 Farmer's Almanac.

The Celebrated DeLoach Mill

The World's Standard for 20 Years

Saw Your Own Lumber
For lumber is lumber nowadays, and you can do it better than the other fellow, with our help.

We Set the Pace —Others do the Best They Can

A 15-year-old boy can operate successfully. Two hands cut 5,000 feet per day. 15,000 mills in use the world over. Variable Feed, Friction Set Works, Automatic Steel Triplex Dogs and Diamond Track produce results impossible with other mills. Send for catalog of Saw Mills up to 200 H. P., Steam Engines and Boilers, Gasoline Engines, Portable Corn and Feed Mills, Planers, Shingle Mills, Wood Saws and Water Wheels. Prompt shipment and we pay the freight.

nodity at a certain time will be a esignated sum; the other party as-erts that it will not, and takes the et. If that was all there is to it, would only be a simple hazard like n ordinary game of chance, and ould affect only the parties con-erned except as it would tend to cul-ivate the spirit of gambling in those vho knew of the wager.

But instead of making the bet in he ordinary terms of gambling, one arty proposes to buy the commodity n question to be delivered at a future late named at a designated price. The ther party assumes to believe that t the given date the price of the ommodity will be less than the price amed, and forthwith sells to the ther party whatever quantity the uying party will contract for at the rice. This sets the pace for all who vish to take part in the game, and mmense quantities of the commodity re thus bought and sold ostensibly to e delivered at the same time and at he same price. It may be that the ellers do not own a particle of the ommodity sold, and that the buyer oes not desire a particle of it, and hat neither expects any of it delivered t the time named, the stake played or being the difference at the speci-ied time of delivery between the price hen prevalent and the price agreed pon. If the prevalent price at the stensible time of delivery is less than he contract price, the purchaser pays o the seller the difference; if it is bove the contract price, the seller ays to the purchaser the difference.

To illustrate: If wheat be the com-nodity and a million bushels be the uantity sold, if, at the time of deliv-ery, the prevalent price, fixed by an-ther gambling deal running farther nto the future, is two cents, for in-stance, below the prevalent price, the uyer must pay to the seller $20,000; nd if it should be two cents above he contract price, the seller pays to he buyer $20,000. This is the sum t would cost either in that case to make good the contract, and that is he stake played for. It is not neces-sary that either should have or expect a grain of wheat, but it is evident that, after the deal is made, every energy of one party, good or bad, is exerted to force the price of wheat above that of the contract, while that of the other is as assidiously devoted to bringing the price below that of the contract.

And thus is made the price of every grain of wheat sold on the market by the producer and every bite of bread eaten by the consumer. It defies the law of supply and demand, ignores the labor of the farmer, and mocks the needs of the hungry. And we have used wheat only as an example. Every commercial commodity from the farm must be sold on a market controlled in the same ruinous way.

It is no wonder that our greatest men, since the agitation has been begun, are taking the matter up and condemning it in the most emphatic terms. In a recent special message to Congress, President Roosevelt said:

. . . There should be measures taken to prevent at least the grosser forms of gambling in securities and commodities [farm products], such as making large sales of what men do not possess and "cornering" the market. Legitimate purchases of commodities and of stocks and securities for investment have no connection whatever with purchases of stocks or other securities or commodities on a margin for speculative and gambling purposes. There is no moral difference between gambling at cards or in lotteries or on the race track and gambling in the stock market. One method is just as pernicious to the body politic as the other in kind, and in degree the evil worked is far greater.

A few days later, Hon. W. J. Bryan, in an address in New York, referring to the same subject, used the following emphatic language:

Gambling is one of the worst of vices, and gambling in stocks and in farm products is the most destructive form in which the vice appears. Measured by the number of suicides caused by the New York Stock Exchange, Monte Carlo is an innocent pleasure resort by comparison. Measured by the amount of money changing hands, the contrast is still greater in favor of Monte Carlo; and measured by the influences upon those who do not gamble, the evils of Monte Carlo are insignificant when compared with the evils of New York commercial gambling houses. The New York Stock Exchange has graduated more embezzlers than Fagin's school did thieves. The natural laws of supply and demand ought to regulate prices, but these laws are entirely suspended when a few men can by their bets add millions of dollars to the market value of one product or take millions of dollars from the value of another product.

Then men in charge of the "Louisiana lottery" never did a tithe of the harm that the grain gamblers and the stock gamblers of New York do every day, nor did they ever exercise anything like the corrupting influences over politics. It has been asserted without denial that 99 per cent of the New York purchases and sales of stock and produce are merely bets upon the market value, with no intention on the part of the vendor to deliver or on the part of the purchaser to receive. This is not business; it is not commerce; it is not speculation. It is common, vulgar gambling, and when to the ordinary chances that the gambler takes are added the extraordinary chances due to the secret manipulation of the market by those who are on the inside, the stock market becomes worse than an honestly conducted gambling resort.

Here we have the most unequivocal condemnation of the system by two of the nation's greatest men, the acknowledged leaders of the two sides of American political thought, and UP-TO-DATE FARMING feels proud that for several years it has been the center of the agitation of this question. We cannot conceive how farmers can longer remain indifferent. It is a question of the very greatest moment to them. Their welfare, their living, their income, the education of their children—everything to them in a financial way depends upon the prices paid for their products. Can they permit interests so great to hang upon the result of a bet whose issue depends upon the relative strength of two powerful and utterly unscrupulous speculative forces? If there is no help for it, as some claim, then as an independent vocation agriculture is doomed. But there is a remedy, a sure and an easy one, requiring only a little pluck to apply it. It is for the farmers to co-operate and control their own marketing. Why are they so slow to act?

TOOLS AND IMPLEMENTS

The thing machinists seek most to avoid is lost motion. Farmers scarcely realize that in their work there is such a thing. But when they have to leave their work for an unnecessary trip to town, there is lost motion. When they must stop to repair an implement there is lost motion; and when, to save such a trip or such lost time, they try to work with a dull tool, or an implement out of repair, there is the worst kind of lost motion.

Before the tools and implements are called upon for steady use, is the time to see that they are all in good condition. Take advantage of the hours (as such hours yet will come) when you cannot be doing anything else, and overhaul the tools. Uncle Threadbare will first have to gather them up from the four corners of the farm, but constant readers of UP-TO-DATE know where they are and in what condition they were left last fall. At all events, get everything ready before you harness up the team.

Secure a good incubator on forty days' absolutely free trial. If you like the machine, remit, and if you don't, send it back; no questions asked. Write to the Burr Incubator Co., Box H, Omaha, Neb., for their big free book, and learn about this splendid liberal offer.

The Great Western Endless Apron Spreader

Write Us and Let Us Tell You How

Will Increase Your Crops Next Year $4.00 to $8.00 Per Acre

There Are Several Kinds of Spreaders—All the Best? No Spreader is Best or Even Good Unless it has:

An Oak Pole—not pine
Oak Sills—not pine or maple
Wrought Iron Truss and Stay-rods to keep the frame square
Hickory Double-trees—not rock elm
Malleable Fifth Wheel—not cast iron
Double Oak Bolsters
Wide Front Axle so wheels will track
Front Axle set under the front end of the body so the load is equally balanced on front and rear axles
Gear Wheels and Sprockets keyed on—not pinned on or fastened with set-screw only
Heavy Wheels with big spokes—not light wheels with 1¾ or 2-in. spokes
An Endless Apron—not a half apron
A Hood and End Gate to keep the manure away from the beater while loading
The Great Western Endless Apron Spreader has **all** of these good features.

There is No Other "Just As Good" or Nearly As Good Ask Your Dealer About The Great Western

Don't let the dealer sell you a substitute, that he says is "just as good."

The GREAT WESTERN will cost you just a little more than any other, but for every dollar extra that it costs, you will get $5.00 more in value. The difference in cost will be more than made up in repairs alone, in a short time. Besides this, you will always have a machine that will be ready for business. It won't be laid up for repairs just at the time that you want to use it.

The Man who offers you a machine with pine pole and frame is doing it for a purpose. What is the reason? It is not because he thinks pine better than oak.

He may tell you it's as good but you know different. Then it must be that he buys it for less and expects to make a bigger profit.

Why are some spreaders made with *pine pole and pine frame* instead of oak?—"Because pine is cheaper." *Why* are they made with *cast iron* fifth wheel instead of *malleable?* "Same reason." *Why* are they made with *half apron* instead of endless apron? "Same answer." *Why* are they made with narrow front axle? "Costs less." *Why* are they made light in weight?—"Because every pound of weight that goes into a spreader adds to the cost." *Why* does a light machine pull harder with a heavy load than a big heavy machine? "Because it is soon strained in every part which causes binding and friction in every working part."

We want you to know all about the **GREAT WESTERN SPREADER.** Write us just these words on a postal card or in a letter: "Send me your catalog No. 5A4

We will mail it at once, free, also a book telling you how to handle your manure so as to increase your crops next season $4.00 to $8.00 per acre.

SMITH MANUFACTURING CO., 158 Harrison St., Chicago, Illinois

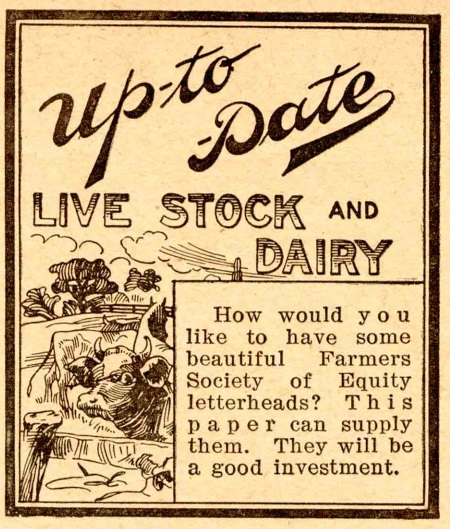
CALVES RAISE THEM WITHOUT MILK. Booklet Free. J. W. BARWELL, Waukegan, Ill



How would you like to have some beautiful Farmers Society of Equity letterheads? This paper can supply them. They will be a good investment.

More true to man than he to them,
Are patient kine and faithful horse;
And when the master cruel proves,
A Christian heart must feel remorse.

WITH OUR FRIENDS

The farmer has few more faithful friends than are well-trained and well-cared-for domestic animals.

Invention has crowded the horse out of many of his jobs; and it has done the same for the working man. But both man and horse still have a place on earth, and find plenty to do.

"Points" apply to almost anything now. The horse has his points; so has the beef steer, the milch cow, the pig, the sheep, and even that universal rural bird, the chicken. Study the "points," and learn to know the best, then devote yourself only to the best.

Is your barn a boarding house? Sure, but do the boarders all pay? Don't keep an animal that don't pay its board, unless it is one that long ago paid its board in advance. The thrifty farmer keeps at least a mental account with his stock, and disposes of those that don't pay.

The State Veterinarian of Missouri is of the opinion that hog cholera is a contagious disease, that the most thrifty specimens and the best kept herds are liable to be infected with it, and that it does not depend upon their feed, quarters, or surroundings, except that filthy quarters or unwholesome feed may aggravate the malady, and perhaps make it more fatal.

The quantity of milk produced by a cow is no longer the only question asked by the productive buyer. The quality is inquired after also; and the quality goes farther toward determining the sale and the price than does quantity. Buyers are getting very particular. Increased intelligence is making them so, and breeders of live stock should take notice.

A friend last fall bought a very thin but healthy grade short horn cow. She was a "stripper," and his purpose was to determine whether a cow of that kind and condition could be made to pay for feed that would increase her flesh. The feed used was oats hay (oats mowed when the grain was in the "dough," and cured like hay), corn and wheat bran. The cow did not increase much in quantity of milk, but it was of excellent quality, and she is now almost fat enough for moderate beef. And the milk has just about paid for her feed. But the feeding was in the country, where feeds were not costly.

The constituent elements of feed are now receiving almost as much attention as is breed and variety of stock. Such words as gluten, protein and carbo-hydrates are becoming almost as familiar as microbe and bacteria. So soon as one begins to feel that he is quite familiar with it all, here comes another string of words that send him to the dictionary and the chemistry division of the encyclopedia.

All right. Let us know the value of our feeds — know what our stock requires for a special purpose, and what feed will best enable them to accomplish that purpose. But while so much time is devoted to finding out all these intricate things, is it not wonderful that so little time is given to finding out what the stock is worth to those who produce it? Both grower and scientist leave the price to be settled by the professional gatherer of profits. But there is an awakening, even on this subject.

Men are running to and fro,
And knowledge is increased,
As the Prophets many years ago
Declared would be the case.
And UP-TO-DATE always at hand,
You're marching with the foremost band.

JAPAN AND AMERICAN STOCK

It is said that the Wisconsin College of Agriculture has sold a Brown Swiss yearling bull to be exported to Japan, and that a large number of Wisconsin bred stock was taken to Japan last year. The people of that little island kingdom are wonderful for rapid development, and it will not be long until the most advanced nations will go there to find the best.

Thoughtful Ben spoke wisely when his Pa proposed to get, for him to read what he would heed, said "UP-TO-DATE is IT."

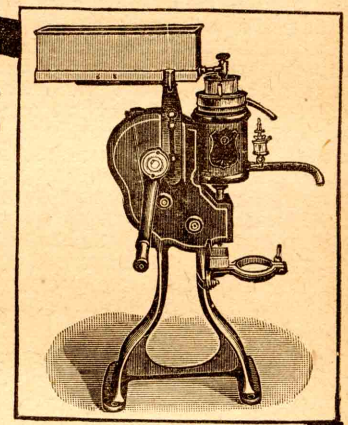
UNITED STATES CREAM SEPARATORS FOR 1908



Have all the qualities that have made the U. S. the standard for many years past, for efficiency, durability and reliability, and have in addition

New and Important Improvements

both in construction and efficiency—increasing their already unequaled ability to handle milk **most** easily, quickly, profitably. Remember: you are buying a cream separator first of all to get **all** the cream—all the money—out of your milk and the U. S. Cream Separator continues to

Hold World's Record for Clean Skimming

for fifty consecutive runs, in competition with the leading makes of separators of the world. This record has **never** been equaled.

Furthermore: the past sixteen years have conclusively demonstrated the durability and the **unequaled** reliability of the U. S. Dairymen to-day buy the U. S. because they **know** it will do for them the **best** work for the **longest** time. Competing separators "claim" anything and everything, truthful and **otherwise,** but the **real superiority** of the United States Cream Separator has been so thoroughly established in **every** way, that no one can successfully dispute it. This is so widely known and **acknowledged** nowadays that dairymen in all parts of the country are rapidly exchanging their old style, unsatisfactory, "cheap" and unreliable separators for the clean-skimming, **STANDARD** and **reliable U. S.**

Owners of Cows

We offer you a Sample Cream Separator that actually separates the cream from the milk by an automatic process that requires no ice, no chemicals, and no extra labor or machinery. All thrifty housewives realize the waste of butter fat unavoidably lost in the skimmed milk under a pan or crock method. Besides this money loss there is the back-breaking drudgery of washing pans and milk vessels, and the loss of valuable time that can be profitably devoted to other important duties. Now a

PEOPLES AUTOMATIC CREAM SEPARATOR

will stop this extravagant waste of money, cream and valuable time. It will increase your present yield of cream from 15 per cent to 20 per cent. It will give you the cream cool, sweet and fresh, directly after it comes from the cow, unaffected by chemical action. It will improve the quantity and quality of your butter all through the year. **It means more cream, more butter, less time. Result: More profit.**

REMEMBER It won't cost you a cent to take advantage of our free advertising offer as we will send one Sample Cream Separator into each community where we have no agent. **Write today as only one person in each locality where we have no agent may have the benefit of this free offer.** Send us your name, and the name of your nearest freight office. Address—

PEOPLES SUPPLY CO., Dept. F, Kansas City, Mo.

THREE QUESTIONS WELL DISCUSSED

Charles Arthur Carlisle, of the Studebaker Bros. Mfg. Co., of South Bend, Ind., recently made a vigorous appeal to the farmers of the St. Joseph Valley in Northern Indiana. He divided his address into several questions, embracing the following:

First. Does it pay the farmer to keep blooded stock? Under this head an effort was made to cover the entire field of cattle, including the beef and dairy type; also sheep, hogs, poultry, etc. The intrinsic as well as the artistic value of high-bred stock and the practical influence in developing the highest efficiency of the animal was clearly brought out in the effort to interest the farmer in systematically undertaking to bring up to the highest possible standard all that he undertakes to develop. Records of recent sales of cattle, sheep and hogs, such as that at Disko, Ind., on last New Year's day, when 115 head of Poland China pigs sold for $29,222.50, an average of $254.10; and recent sales of Berkshires, Chester Whites, Duroc Jerseys and other pure breeds of pigs; the records of sales of fat stock at the recent live stock show in Chicago, the fine sales of pure-bred Guernseys ta Madison, N. J., and of registered Jerseys at Lowell, Mass., and elsewhere, all of equal interest, were presented in evidence of what others are doing and what others can do. Mr. Carlisle maintains that pure-bred stock has a wonderful stimulating influence in developing a keener interest for the boy and the man on the farm, and develops better care, more careful handling, judicious mating, and results in greater profits, pleasure and pride.

Second. Does it pay the farmer to study modern farm science? Under this head, the selecting of seed, planting, cultivating and harvesting of crops; the care of the soil and the feeding of stock on a balanced ration; care of buildings and sanitary methods, were part of the arguments covered in arriving at the conclusion that it "assuredly does pay the farmer to study and apply modern farm science." Mr. Carlisle placed before his large and interested audience the opinions of President Roosevelt, Secretary Wilson of the Department of Agriculture, and the editorial and personal views of a majority of the most able and advanced writers of the day.

Third. Does it pay the farmer to unite the force of his influence with that of his neighbor in the country and in the town? This subject was divided into several parts. In the first the speaker developed the force of co-operation, social intercourse, improvement in community interest, and benefits of good literature. He then took up the question of modernizing the curriculum of the district, the ward and the town school, so as to include modern farm science, and made an urgent appeal for teachers who had a training in this direction.

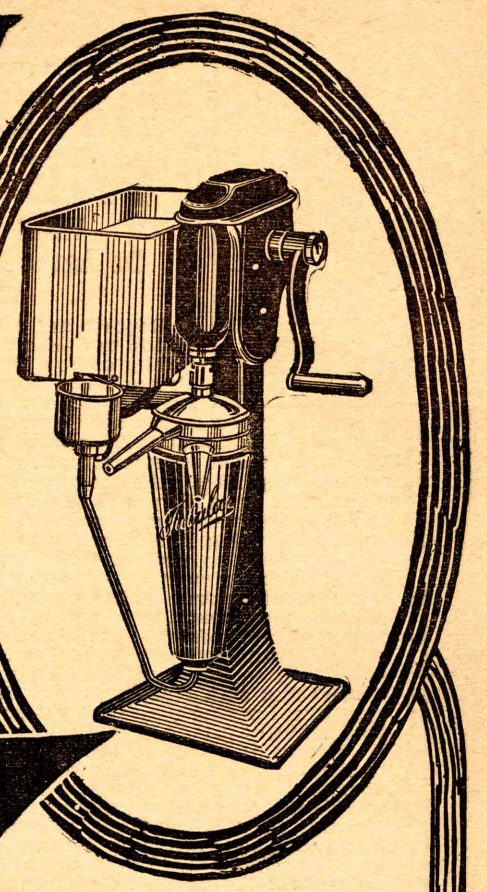
In concluding, Mr. Carlisle often quoted from the address of President Roosevelt at Lansing, Mich., on May 31, 1907, bringing before his audience the President's thoughts upon these great questions and upon the greatest development of American manhood and American womanhood. Mr. Carlisle is an enthusiast in the development of country pure-bred stock, scientific as well as sanitary methods, and devotes his leisure time to this work upon his country place near the city, but above all he takes a keen delight and great interest in every effort to improve the opportunity of the American boy and girl both in country and town.

LIVE STOCK WANTED

Got some good stock you don't want to feed any longer? You can easily sell it through an advertisement in the Business Exchange.

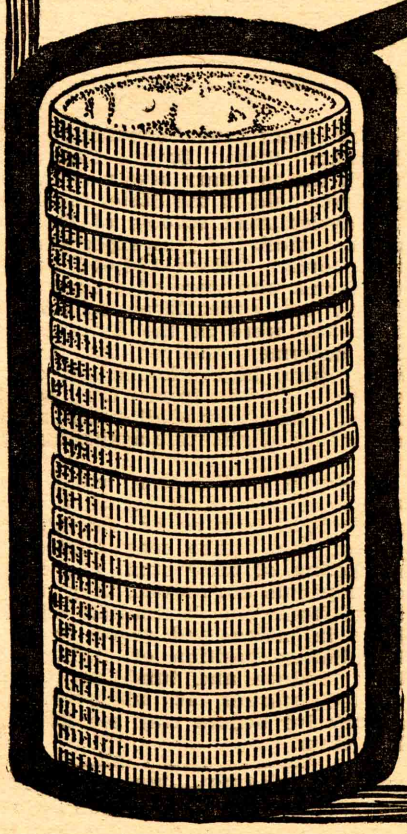
One of the largest and up-to-the-minute fence factories in the country is now being built by the Ward Fence Co. Their rapidly increasing business has made this necessary. Before buying fencing of any kind get their prices. Address The Ward Fence Co., Box 821, Decatur, Ind.

CREAM PROFITS



If you are selling your whole milk to the Creamery you are not getting as much profit from your cows as you should. In fact you are losing 50 per cent. Without increasing your feed bills one penny or milking another cow you can double your cream profits. This is demonstrated by thousands of dairymen and farmers every day in the year.

The Sharples Tubular Separator



gets all the cream in the milk—it skims out every cent of profit, so that you can turn it into cash. Here's one letter that tells the story of how to double your cream profits:

Union Mills, Ind.

GENTLEMEN:—We have a Sharples Tubular. Before we bought it, we had been selling our milk to a creamery at Union Mills, getting not more than $8.00 a month, but **since we have the Tubular, we have been getting twice more,** and are so satisified with the Tubular.

MRS. JOHN C. MILLER.

Such proof as this ought to convince you that a **"Tubular"** will be a money-maker for you. The extra profit will soon pay for the separator while it will keep right on earning these big profits for years. Write today for our new catalog and **free** copy of that valuable book **"Business Dairying."** Ask for book No. 136.

SWEEPING THE FIELD

What The New 1908 De Laval Cream Separators Are Doing.

Reports are arriving in every mail from Maine to California and Canada to Florida, telling of how the New Improved De Laval Cream Separators are sweeping all would-be competition aside. Cow owners and separator users everywhere cannot say enough in praise of the new De Laval. Even competitors are admitting its vastly increased superiority and marvelling at its many conveniences, perfect skimming qualities, ease of running, great simplicity, durability and beauty of design. The new De Laval is ten years in advance of any other separator made today. Nothing like it has ever been produced before and to have done so now is only possible after three years of constant experimenting by the world's best engineers and mechanical experts backed up by our thirty years of experience in the manufacture and sale of nearly a million separators. Improvements have been made in every feature and several brand new styles and capacities introduced. There is a machine for every size dairy from the smallest to the largest and at a price that will fit every pocket, while you may buy for cash or on terms so liberal that the machine will actually pay for itself.

If you own one or more cows, you can make no more profitable investment than to purchase a De Laval machine at once. It will save its cost in less than a year and after a week's use you will prize it as the most valuable implement on your farm. Ask for a free demonstration at your own home and send for our handsome new catalog illustrating and describing De Laval machines in detail. Your only regret will be that you didn't do so sooner. Write today.

PALMER-THORNE CO., INDIANAPOLIS, INDIANA

VALUABLE INFORMATION FOR CATTLE FEEDERS

The Missouri Experiment Station at Columbia has just issued a very elaborate and handsomely illustrated bulletin on the most successful methods of fattening cattle, by Dean H. J. Waters.

This bulletin summarizes the experience and conclusions of about 1,000 of the most experienced and successful cattle feeders of Missouri, Illinois and Iowa, and contains also a summary of the results of a large number of tests with different kinds of feed, different ages of cattle, etc., conducted by the experiment station at Columbia.

It considers such practical questions as the most profitable age to fatten cattle, the proper weight, the best season of the year, the best method of preparing feed, the best sort of shelter, the market demands, the best sort of roughness, etc. It is illustrated with cuts of the different types of beef cattle, including excellent illustrations of the fat steer herd exhibited by the college this season at the Inter-State Fair, Kansas City; the Missouri State Fair, Sedalia; the American Royal, Kansas City, and the International Live Stock Exposition, Chicago. These steers won nine championship prizes, seventeen first prizes, sixteen second prizes, seven third prizes and two fourth prizes. Every steer won at every show, excepting one steer at one show.

The bulletin is for free distribution and may be had for the asking by any farmer or citizen. The station has other bulletins for free distribution on such subjects as cowpeas, alfalfa growing, the most profitable way to winter cattle, etc.

AGRICULTURAL COLLEGES SHORT ON RESULTS

The recent annual convention of the Missouri State Dairy Association, which the secretary says was the best one ever held in the State, found that the agricultural schools of the State did not meet the just expectations of the people. Out of 100,000 boys on the farms who were of proper age to attend an agricultural school, less than 300 were in the State college. The dairymen resolved in favor of agricultural high schools that can be entered direct from the country schools, and that shall teach all the rudiments of scientific agriculture and home economy.

UP-TO-DATE FARMING would urge that such schools also teach the business side of farming, so that the farmers of the future may control the marketing of their stuff, and sell as other people do, so that they may be freed from the domination of gamblers in prices, and saved from the humiliating position of taking what they produce and tumbling it on a glutted market at whatever price speculative buyers may see fit to allow them.

THRIFT TALKS — BY A FARMER
1908 — Leap Year — 366 Days

Are you thinking of milking your cows 122 days out of this year "just for fun?" If you have several cows, it is just what you are doing if you have no Great Western Cream Separator.

You are milking some of them, at least, 732 times each. Now, most people think milking is hard work, and since it is rather an unpleasant job, taking time and costing money, what is the use of wasting one-fourth of your milk, time and work? That is what Uncle Sam's expert says you are doing unless you have a Great Western Cream Separator.

They say that each cow should pay you $44.00 per year where you have a Great Western Cream Separator; if you follow the old wasteful method of doing all your work by hand, you really get only $33.00 a year. Unless you get this $11.00 extra profit from each cow, and which you might just as well put into your pocket, you are practically not only wasting one-fourth of your cream from each cow, but you are throwing away labor which might profitably be spent in some other way.

Of course, if you think it is "just fun" to milk 122 days this year and throw it away, we suppose that is nobody's business but your own, but say! it will pay you to look over facts like these and think about it—there, that is what we want you to do—think, and we are ready to help you.

Sit right down now and write a letter or postal card for our new free book on "Cream Science" and butter profits at the expense of the famous Great Western Cream Separator makers. These are the most valuable and interesting books, carefully written by experts, and they are free to you. All you have to do to get a copy of each one of these interesting books is to ask for free books No. 5E4. Address the makers of the Great Western Cream Separators—The Smith Mfg. Co., 158 E. Harrison St., Chicago, and they will send you right away, promptly, postpaid, these books and much other valuable information. Give the number of the book and state that you are one of our readers.

THE GALLOWAY SPREADER

When Mr. Galloway a few years ago perfected his spreader, and put it on the market at something like $55, there were numerous prophecies that his enterprise would be short lived. Even farmers had been led to believe that a high-class spreader could not be sold at such a price. The answer to these prophecies is to be found in the monumental Galloway spreader business of this day. Mr. Galloway's spreader, as is well known to most of our readers, is of the wagon box type. That is, he manufacturers and furnishes the spreader box with all the operating machinery, and allows the farmers to use it on their own wagon running-gears. We believe it is original with him. It enabled him to put the price of a high-class spreader where every farmer could afford to own one. The Galloway Spreader has borne the test. He knows he is justified in his fearless and broad offer of a free trial of thirty days to all responsible farmers. The machine is making good. The price is extremely low. The spreaders at work are helping Mr. Galloway to sell more spreaders. Another thing that has been a great help to Mr. Galloway in the revolution he is working in the manure spreader business is the liking farmers have for the direct from the factory to the farm plan. Being as much a farmer as a manufacturer, Mr. Galloway could not be induced to do business any other way. Write William Galloway Co., 509 Jefferson St., Waterloo, Iowa.

SCHOOL FOR THRESHERMEN

The Huber Mfg. Co., Box M, Marion, O., makers of the famous "New Huber" Traction Engines and Threshers, have just published a new book called "The School for Threshermen."

This book tells all about Threshing Machines and Traction Engines. You can learn from this book how to thresh easily, quickly and at least cost. You find out how to save power—how to always get good, clean grain—and how to take care of your straw so it will keep in good shape and be worth full value. Such a book as this is not only interesting, but very valuable to threshers and farmers.

The Huber Mfg. Co. offers to send a copy of this book free, and postpaid, to any one who asks for it. You do not have to send stamps for the book, as it is mailed to you free. Send a postal card.

THE OLD WOODEN PUMP

The old-fashioned sweep with its "old oaken bucket" is a thing of the past, but on many farms one still finds wooden pumps—squeaking, wheezing, "cranky" affairs that are out of order half the time. No up-to-date farmer should be satisfied with wooden pumps.

A high-grade iron pump practically never wears out and may almost be said to improve with age. The best pump to buy is one with a glass valve. Well pumps, power pumps, spray pumps and tank pumps thus equipped can be purchased of any hardware or implement dealer. Wooden pumps soon rot and become unsanitary. Get the best iron pump you can find and it will prove a source of satisfaction as well as pure water. Ask your dealer for a *Myers Pump.*

Now is the time to buy fence. When you get it, you want something that will last. The Brown Fence and Wire Co., Cleveland, Ohio, tell us that they manufacture the heaviest fence made, weighing one-half more than other fencing, and consequently lasting longer. Prices are very moderate indeed, considering quality. Readers might think that as it weighs so much more it will cost a lot more freight, but here you are wrong. Brown pays the freight, and you don't have to bother about anything else but getting the fence out of the car. They publish a fine book on fencing, giving valuable information to prospective purchasers, and in it are listed 133 different styles of fencing. The book is free if you mention UP-TO-DATE.

ABSORBINE FOR SHOE BOILS

S. Farnsworth, Lunenburg, Mass., writes April 4, 1907: "Last fall I sent to you for a can of Absorbine. My horse had a large shoe gall, I should say as large as a quart measure, and Absorbine took it all down and I have used only half of the can. I should not be afraid to recommend it to anyone." Absorbine is a mild and pleasant remedy to use. It is prompt and positive in its action and will remove blemishes, cure lameness and pain without blistering or removing the hair. Horse can be used. Send to address below for free book "How to Remove Blemishes." Absorbine is $2.00 per bottle at dealers, or express prepaid upon receipt of price. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

Everybody plants potatoes on Good Friday—that is, they commence then, but if it's a big crop they spend oftentimes a week or more cutting, planting, covering and fertilizing. Why not shorten the time and save money by getting a machine that will do it all? The Aspinwall Mfg. Co., 313 Salem St., Jackson, Mich., make such machines and sell them very reasonable. Write to them for their price book.

PAGE SPECIAL HOG FENCE

So constructed that it's absolutely impossible to pull the woven fabric to pieces or spread the horizontal bars apart. Horizontal Bars are high carbon, double strength, coiled spring steel wire. Page Fence is an economical fence—requires no bottom boards, few posts and few staples. Write for folder and catalog, which tell more about Page Fence.

PAGE WOVEN WIRE FENCE CO.
Box 7913, Adrian, Mich.

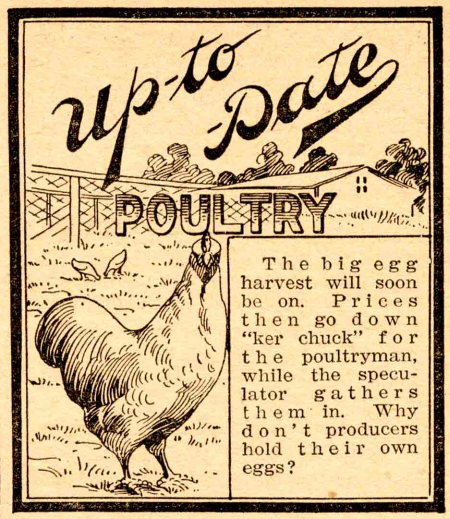
B. H. GREIDER, Rheems, Pa.

MAKE MONEY IN POULTRY

Others do it. You can too. Our big book "Profitable Poultry" tells how. Describes largest successful poultry-farm. 15 varieties of beautiful, hardy, pure bred fowls. Quotes low prices on fowls, incubators, supplies etc. Sent for 4 cents.
Berry's Poultry Farm, Box 124, Clarinda, Ia.



MARKET POULTRY

The first six weeks of a broiler's life must be devoted to growth.

Dressed poultry, except ducks and geese, is best packed in barrels.

All birds should be plucked clean, except capons and a few other classes. classes.

Drawn fowls usually have the head removed, and this should be done at first.

Ducks, geese and squabs should have white skin; broilers, roasters, etc., are preferred with yellow skin and shanks.

No shipment should be made to reach the market later than Friday morning, except by special arrangement with the dealer.

A successful broiler raiser says the value of cottonseed meal is not fully understood. It does not fatten, but puts the flesh on, and the breast of the broiler at ten weeks will be as plump as a partridge, if a small amount of the cottonseed meal is given daily.

Capons are usually kept till they are about ten months old. At this time the market is at its best and the birds have made their most profitable gains.

A chicken from six weeks to two months is about the right age to caponize; the early maturing birds at six weeks, and the smaller ones at two months.

To dry-pick properly, the work should be begun immediately after the bird is killed, and while the blood is still flowing, as after the body gets cold it is almost impossible to avoid tearing the skin.

Never let the dressed stock freeze, unless it is to be retained for some time and sold as frozen stuff. Thawing injures the quality, and decay soon follows. Birds shipped without ice should be entirely dry before packing.

When birds are to be drawn, the operation should be performed immediately after the pinfeathering is finished, or after they have become slightly cooled, as it is more difficult after they are thoroughly chilled.

The food for fattening employed chiefly in England consists of ground oats. Not oatmeal or partially ground oats—the oats, hull and all are ground to the fineness of flour. In Belgium the feed consists of ground buckwheat, and in France it is ground barley.

In packing, the head may be placed under the wing, but the body and legs should be straightened out. Packages holding from 100 to 200 pounds sell most readily. The birds should be packed tightly to avoid any slipping in the package.

FOOD AND FEEDING

The crate-fed bird has a better appearance than a pen-fed one, and it is not a flabby fat, but has nice, solid flesh.

A. F. Hunter says that soft roasters fed in houses show more average gain than when fed in crates. Forty birds are put in a house 7 by 20 feet, with a yard 10 by 15 feet.

It is claimed that pumpkins or squash in the mash causes growth of young stock, the combs redden, and the plumage assumes that brilliancy and gloss which denotes perfect health.

For the purpose of producing white flesh, the Canadian Experiment Station feeds oats, buckwheat and skim milk, and to produce yellow flesh they feed boiled pumpkins, turnips and yellow corn.

Some poultrymen believe in feeding small squashes to give body or bulk to the mashes. They say this resulting mixture is found very satisfactory, and seems to be particularly palatable not only for fowls, but also for dogs and cats.

In crate feeding, if a bird will not accumulate fat during the first ten days it is shut up in the crate, it is very much wiser to take it out. When you put them in the crate you should starve them for the first day or so.

The color of the shell of an egg is a question of individuality of the fowl, but the proper color of the yolk is a question of food.

EGGS AND EGG FARMING

Food is very important, and has everything to do with the making of the shell and the flavor of the eggs.

Hens laying too fast will not always be able to make shells fast enough to protect the eggs.

Unfertile eggs will keep longer and sweeter than fertile ones when hens are given the proper food.

Eggs will stay up full longer in an air-tight package than in a loosely made crate.

Don't leave eggs in the light as a "floater" starts quicker than in the dark.

Don't put eggs in oats or bran, as that draws the moisture from an egg like a poultice.

Eggs that are not over a week old and have not been properly taken care of will look older than some three weeks old that have been well taken care of.

Egg dealers judge an egg by its freshness, not always by its appearance. An expert tester will soon tell whether they are fresh or not.

Eggs sometimes have blood spots large enough to render them unfit for use. The cause is generally some injury to the hens, a strain of some kind usually.

Don't wash eggs with water, as it removes that natural covering of the pores of the shell and allows the egg to evaporate and become stale quickly.

Don't leave your eggs in a draught or where the wind will blow on them, as that seems to dry them up very fast.

To detect a new laid egg from a stale one, hold the egg before a strong light, shading the big end with the hand, and with little difficulty the air space, or vacant spot, will be detected.

Dirty eggs may be cleaned good enough by taking a greasy cloth, lard or butter, and wiping them that way. It will remove the dirt and at the same time close the pores in the shell and keep it air-tight.

Eggs, like all perishable goods, will keep better in cool weather (not freezing) than in warm weather. Warm weather starts what is called a small floater or reddish cloud in the egg. This is the first stage of decomposition, and the longer it is kept in a warm temperature the darker grows the cloud, until it will fasten itself to the edge of the shell and become black and when broken the yolk will break with the white and run together, and will be immediately condemned.

EGGS WANTED

How about those eggs? Nice eggs, good stock and all, aren't they? Are you selling them at market prices? You are foolish if such is the case. Run a twenty-word ad in the Business Exchange and sell them to our readers.

First of March

A thrill of life all nature feels,
And bud and blade look up for light;
Death's somber shade but ill conceals
The green it hid through winter's night.
STELLE.

OUT IN THE ORCHARD

If the orchard has been neglected, as so many throughout the country are, turn in the hogs if you want to see animals get busy. They'll get much that is good for themselves, and they'll pay for it in profitable work in the orchard.

A neglected orchard needs a great deal of brush taken from it. It is no little job to profitably prune an old apple true that has been allowed to grow like a wild crab tree. It is better to do such heavy pruning earlier in the season, but if it has not been done, better do it yet than not at all. Go clear to the top, and thin out wherever the branches are tangled and choked. It pays to paint where large branches have been removed.

A great deal of wood ashes go to waste on most farms. Put them around the orchard trees. They are specially valuable to peach trees. The most effective way to apply ashes to peach trees is to remove the sod so apt to form around neglected trees, or break it up in some way, and then apply the ashes just above the roots.

Watch for the nests of the caterpillars. They are easily seen as soon as they begin to form, and should be destroyed at once. An old broom may be effectively used for that purpose. If the place from which the nest was removed be washed with a soap solution, the destruction will be all the more certain.

We are speaking more of the neglected orchards than of those well cared for, because the neglected ones need most attention. If the pruning suggested above has been done, and the brush all cleared away, as, of course, it should be, break the ground this spring and seed it. As far north as the apple belt extends, we know of no better preliminary crop for this purpose than the field or cow pea. Follow this with clover and pasture with calves, sheep or hogs, or all three at once, except when it is desirable to save the dropped apples. Of course the hogs must be prevented from rooting in an orchard thus treated.

Pear blight seems to be about as destructive as ever it was. In fact, during the last half dozen years it seems to have been more general and more fatal. We are unwilling to say there is no remedy for it, but it is a fact that its ravages make pear orchards unprofitable, and that apple trees seem to suffer more and more each year.

Almost all the old orchard trees are hungry—starving. They have fed so long from the same storehouse, and have had to support so large a family, if they have not been kept properly pruned, that the supply has been exhausted. That is why they get rough and mossy, and bear imperfect fruit. Besides, as they become weakened themselves their enemies marshal their forces and make more successful attacks upon them. Treat an animal that way and the result will be the same. It will become thin, bony, long haired and shaggy, and its enemies, inside and out, will be doubly active. Feed the tree as you would the horse, each on its appropriate food and in an accessable way. Remove from the tree all unnecessary burdens, stir up the soil about its feeders and apply manure. Some say barnyard manure is not good, but we have found it very helpful, especially if pretty well rotted. Fresh barn manure makes an excellent mulch in the fall, and any kind of mulch seems to conserve the tree food and make it more available.

A hungry tree can't bear good fruit,
Nor can a hungry mind;
The first must have fertility,
The next in UP-TO-DATE will find
A mental pabulum complete,
As rich as butter, bread and meat.

SEED CORN WANTED

Have you some good grade of seed corn to sell? Several of our readers want to buy it. Place an ad in our Business Exchange and sell it to the best offer.

GROWING ONIONS

The United States ought to produce its own supply of onions, but it does not. We grow no more wholesome vegetable, nor one that is in much more general use. No doubt it would be used more generally than it is if the supply were more general. The soil and climate of a great portion of this country are well adapted to growing onions, and, when properly handled, the crop is a decidedly profitable one.

The soil for growing onions should be deep, mellow and rich. It should be free from acid and rich in potash, hence a heavy dressing of hard wood ashes or of lime (the latter not so good as ashes), well worked in, is very valuable. Onions are grown from sets, buttons or seeds. Sets are small onions grown from seed the previous year, or divisions of the bulb as in the case of the potato onion and some others. Such onions are called multiplying onions, and are different from shallots, though they multiply much as shallots do. Buttons are small, oval formations grown at the top of the seed stock, as wild onions and garlic perpetuate themselves. These buttons planted in the spring make large, red onions.

Sets and buttons should be planted as early in the spring as the soil can be made in good condition. Plant in rows a foot apart, the sets four or five inches apart in the rows. Planted in this way, the onions when of sufficient size, say from six to eight weeks from planting, may be sold in bunches for use as green onions. When planted for this purpose the sets need not be more than from two to three inches apart in the row, and each alternate onion may be taken out for use as green onions, and that leaves the bed all right for growing mature onions. The sale of green onions may add very much to the value of the crop, as all that is obtained from the sale of the bunches is clear profit, except for the cost of the seed and the labor of preparing and selling; and this profit may be greatly added to if you have sufficient market for green onions by planting the rows six inches instead of a foot apart, and then taking out each alternate row as well as each alternate onion in the rows that are to stand. We would not recommend this plan, however, except where land is scarce, as it adds somewhat to the difficulty of cultivation and of holding the early weeds in check.

To grow onions from seed, make the rows a foot apart, drilling the seeds lightly in the rows so as to insure a stand, and later thinning to the required number in the row. It is safer to go over the patch a time or two in thinning; the more vigorous plants may thus be selected to remain.

Of course, we are writing rather for small growers; field growers must suit their methods to the size of their fields.

Vick's Garden & Floral Guide and 4 packets Flower or Vegetable **Seeds** retailing at 25cts. **10c**

Ratekin's Seed House, Shenandoah, Ia.

SEED CORN We have originated some of the leading varieties of corn. Our corn all grown under strict conditions for seed. Following varieties are recommended to corn growers as big and sure yielders.

Pride of Indiana Vigorous, medium-sized stock. Ears are large with 16 to 20 rows. The corn is dent and beautiful white color. Great yielder and sure to please. PRICE: one-fourth bushel, 60c; bushel, $2.00; bag, (2½ bu.), $4.50; five bushels or more, $1.75 per bushel.

Central States Dispatch Yellow dent and greatest yielder of any yellow corn we have found. Withstands drought and storms to a great degree. Ears 8 to 12 inches long, very shapely and extremely deep grain. A splendid feeding corn. About 20 rows to ear. Plant a field or more of this great yielder.

Yard Long This is the longest eared corn in the country. Remarkable for its long ears. Frequently 18 inches long with 12 to 14 rows each. Large yellow dent grains. Good to feed and for market. Quite a novelty and interesting at Fairs. Get some of this.

Price On Central States Dispatch and Yard Long Corn: One peck, 50c; bushel, $2.00; 1 bag (2½ bushels), $4.50; 5 bushels or more at $1.50 per bushel. All sorted and cleaned for seed. Order from this advertisement. Catalog free. Write for it.

The Best Potato on Earth
For Home Use and Market

Market gardeners, truckers and all others who grow potatoes for home or market will prize this potato ahead of all others on account of its *extreme earliness, good table qualities, fine size and shape, great productiveness and splendid keeping properties.* Just think of one variety of potatoes combining all of these qualities *in high degrees.* We positively assert and have abundant and undoubted proofs that EARLY SIX WEEKS MARKET POTATOES do make good-size, merchantable tubers *in six weeks from planting.*

We don't refer to a solitary instance. This potato can be *depended* upon for such results every time *if planted when the growing season has arrived, and the weather is favorable.* With unfavorable weather they will, of course, require longer. The potatoes cook fine and dry from the time they are large enough until late spring. Size is medium, skin light flesh color, shape like in illustration. They are perfect beauties, heavy and sure yielders.

One pound Early Six-Weeks Market Potato yielded 147 pounds of fine, sound, smooth tubers. Ripened in 75 days, and produced marketable potatoes in six weeks as you claimed. This is the most valuable variety of potatoes ever introduced. R. TAYLOR.
Ashland Co., Wis.

I like the Six-Weeks Potato very much. I divided with my neighbors. One of them says they are the best he ever saw. They are excellent keepers. They are first-class in every respect.
E. HARTMAN.
Sutton Co., W. Va.

We have had much experience with this potato and are prepared to state that owing to their quick growth, escaping the drought, bugs, blight, etc., and extra yielding propensities, they make larger average yields for the ordinary potato grower than late varieties that often times are left to take their chances against unfavorable influences. This potato, *strange to relate, keeps sound, solid and fresh late into the spring, equal to any late potato that we ever saw.*

Size for use in six weeks. Ripen in ten weeks. 1 year yielded 420 bushels per acre next year, 380 bushels per acre; 2 years later, 600 bushels per acre. Get the genuine seed from us. We introduced and named this potato.

We have the genuine seed. Price very low, considering how fine this potato is *By mail postpaid:* 1 pound, 30c; 4 pounds, 75c. *By freight or express:* 1 pk., 60c; bu. $2; bbl. $4.50.
Catalog free.

O. K. SEED STORE, Indianapolis, Indiana

Cloud," "Frost Moonlight" and "Boundless Sea."

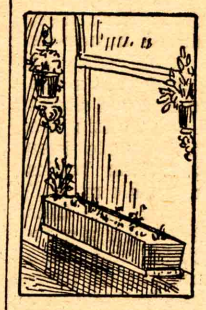
There is but one Syrian variety. This is the fragrant, early "Iris Reticulata." It is very hardy and is very bright in color.

The German iris blooms in May. There are many beautifully colored ones in this class, among them being the Florentine, white with blue streakings; the Queen of May, a delicate old rose; the Kharput, a royal purple and the Hector, a soft yellow tinged with a rich violet red.

Next to bloom is the Spanish variety. They come early in June and are smaller than the German kind, but are very hardy. This variety is good for winter forcing.

THE RAISING OF SEEDLINGS

Everyone of us feels a thrill of pleasure over something which we ourselves have done especially well,



and there is nothing which will create a more pleasant feeling of satisfaction than the raising of seedlings of house-plants, such as geraniums, etc., watching them from seed-leaf stage to the plant in full bloom. This is not so difficult a matter as one might think. Only give them care, the proper soil and drainage and they will do the rest for you.

The best time for starting the seeds is in late February or early March, the early start giving the seedling a good chance before summer comes. They must have a season's growth before blooming and the early start means early blooms for the following winter.

The soil for these baby-plants should be as rich and delicate as possible, made of equal parts of loam, leaf mould and sand, thoroughly mixed and sifted.

The smallest seeds should be sown in pots; others may be put in boxes. These boxes should be three or four inches deep and should be filled within an inch or so of the top. Holes for drainage must be put in the bottom and then a layer of pebbles or pieces of broken crockery, over which it is a good plan to put a layer of moss such as bulbs come wrapped in.

Across the box make tiny furrows, an inch and a half apart; then drop the seeds one by one at least half an inch apart in these furrows. Do not cover too closely; vary according to the size of the seeds, some need to be scarcely covered at all.

Be very careful in watering. One good way to water them at the very first, is to cut a piece of blotting paper so that it fits down inside the box and pour the water on that. They will not need watering very often before the little plants appear.

If you wish to make sure of their sprouting, dip old cloths in warm water and pack them down over the surface of the soil. This acts much as an incubator does to eggs.

The room where your seedlings are should be kept as warm as seventy degrees Fahrenheit during the day and never below sixty degrees at night. If your seeds do not germinate as rapidly as they should, it will more than likely be because they need a little more warmth. The boxes should be examined frequently and when the little sprouts appear, take off the cloths from the top.

Transplant when the sprouts begin to touch each other. This should be done for the first time when the plants have from two to four leaves. For the second transplanting use pots from two to three inches in diameter. From this time on, the growth is rapid and transplanting must be done frequently.

When warm days come, these pots should be sunk in the ground, resting on an inch-deep bed of ashes to prevent earth worms creeping into the pots. One must lift the pots occasionally, for if the roots are protruding, the plant should be repotted at once.

Some of the finer seeds should be sown in pots on the surface of the soil and a piece of glass placed over the top. These should be watered by setting in a saucer of warm water for a few minutes.

"PATCHES"

Line your ironholders with a piece of asbestos cloth. It is a good plan to put a strip of this under the ironing sheet to protect it. This cloth may be purchased at the hardware dealers.

If you wish to absorb the odors of turpentine in a freshly painted room, slice an onion and leave it for some hours. The smell of the turpentine will be gone and that of the onion scarcely noticeable.

Put a cupful of salt with parings that you burn in the stove. This will prevent the unpleasant odors which sometimes arise.

Shake your rugs from the sides, as shaking from the end is likely to loosen the woof.

To save your dress skirts from many a spot of grease there is nothing like a deep ruffle with a heading.

A good polish for floors, oilcloth and linoleum is made from melted candle grease and turpentine in equal quantities.

UP-TO-DATE FOR US

It always seems so strange to me,
To papa, too, I guess,
Why so many farm papers
Come from the public press.

I guess it's 'cause some people
Never heard about the one
We take, down here at our house.
As good as it there's none.

Pa used to take a lot of them,
Like others I could state;
But now he only takes just one,
And that is UP-TO-DATE.

Yes, UP-TO-DATE's the best of all;
It teaches young and old,
The simple little lessons
How crops we always ought to hold.

Until, with all our neighbors,
We form a little ring,
And play a fine accomp'niment
To make the gamblers sing

A song they do not like a bit,
And never sang before
But one my paper says to me
They'll sing forever more.

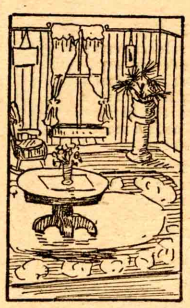
So everybody get in line
To get all that is coming;
Subscribe right now to UP-TO-DATE,
And keep the wheels a-humming.

Then in the year of nineteen eight,
Our crops will be worth selling;
And the gambler sure will get his dues
In a place that don't need telling.

R. C. C.

HOW TO MAKE A NORTH ROOM CHEERFUL

If your sitting or living-room faces the north, don't despair over the fact that no sunshine can enter there. Go to work and manufacture some.



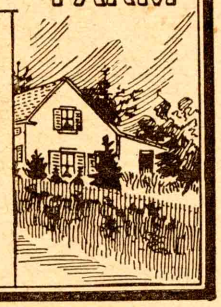
Don't put dark or medium dark colored paper on the walls, but choose instead a rich, warm yellow that can not help but make you recall pleasant days and mellow sunshine. At the windows have yellow sash curtains, preferably of silk, that can be pulled back so as to allow all the light possible to enter.

The pictures in this room should be colored ones, bright little landscapes and pretty tinted heads, and all these should be in gilded frames.

For your large plant, purchase a brass jardiniere. Place this in the darkest corner and see how far the sunlight has penetrated. Of course this kind of jardiniere costs more at first, but it will last a lifetime, and one need not constantly fear lest it be knocked over and broken.

Do you want a piano? If so, of course you want the best, and yet don't want to have to pay any more than you have to. There was an advertisement in our February 1 number that should appeal to you; it is of the D. S. Andrus Co., 125 Baldwin St., Elmira, N. Y.; M. Doyle Marks, vice-president and manager. They make a special offer of allowing their instruments to go out on one year's free trial. Write to Mr. Marks for complete information.

Up-to-Date HOME ON THE FARM



We often hate for one little reason when there are a thousand why we should love.
—Anon.

THE MOTHERLOOK

You take th' finest woman with th' roses in her cheeks,
An' all th' birds a-singin' in her voice each time she speaks;
Her hair all black an' gleamin' or a glowin' mass o' gold—
An' still th' tale o' beauty isn't more th'n halfway told.
There ain't a word that tells it; all description it defies—
Th' motherlook that lingers in a happy woman's eyes.

A woman's eyes will sparkle in her innocence and fun,
Or snap a warnin' message to th' ones she wants to shun.
In pleasure or in anger there is always han'someness,
But still there is beauty that was surely made to bless—
A beauty that grows sweeter, an' that all but glorifies—
Th' motherlook that sometimes comes into a woman's eyes.

It ain't a smile exactly—yet it's brimmin' full o' joy,
An' meltin' into sunshine when she bends above her boy
Or girl when it's a-sleepin', with its dreams told in its face;
She smoothes its hair an' pets it as she lif's it to its place.
It leads all th' expressions, whether grave, or gay, or wise—
Th' motherlook that glimmers in a lovin' woman's eyes.

There ain't a picture of it. If there was they'd have to paint
A picture of a woman mostly angel an' some saint,
An' make it still be human—an' they'd have to blend the whole.
There ain't no picture of it, for no one can paint a soul,
No one can paint the glory comin' straight from paradise—
The motherlook that lingers in a happy woman's eyes.
—*Chicago Daily Tribune.*

WHAT MARK TWAIN SAYS ABOUT BIRDS

"The moment Tom begun to talk about birds I judged he was a goner, because Jim knowed more about birds than both of us put together. You see, he'd killed hundreds and hundreds of them, and that's the way to find out about birds. That's the way that people does that writes books about them and loves them so that they'll go hungry and tired and take any amount of trouble to find a new bird and kill it. Their name is ornithologers, and I could a been an ornithologer myself, because I always loved birds and creatures—and I started out to learn how to be one, and I see a bird sitting on a dead limb of a tree singing with his head tilted back and his mouth open, and before I thought, I fired, and his song stopped, and he fell straight down from the limb, all limp like a rag, and I run and picked him up, and he was dead, and his body was warm in my hand, and his head rolled about, this way and that, like his neck was broken, and there was a white skin over his eyes, and one little drop of blood on the side of his head, and laws! I couldn't see nothin' more for the tears, and I hain't ever murdered no creature since that warn't doing me no harm, and I ain't going to."

KEEPING HOUSE BY SYSTEM

Some one has said that keeping house without system is like sailing a boat without a rudder. No business man would expect success if his affairs were not conducted in a systematic way. System in our housekeeping lightens a great many labors. Don't start to do one task, suddenly begin on another, and before either of these are finished, go to a third. Confusion and a doubly tired feeling are the result. I have found it a good idea to plan my meals for a whole week. When one gets at it and really gets started they can accomplish wonders in a short time, and by referring to your plan every morning you do not have that awful thought harassing you all morning of "what are we to have for dinner today?"

Of course farmers' wives are subject to many interruptions, but if the work is planned for the week it will only be the easier done even though the interruptions do come.

THE BEAUTIFUL IRIS

Iris was the beautiful Grecian goddess of the rainbow and from her this flower of many hues obtained its name. The iris is a royal plant. The Court of France from the time of the pious Louis VII to Napoleon used it as their emblem. From the name of Louis came the French title fleur de lis, which means the flower of Louis. This flower was probably a white lily, but a later king, Francis I, preferred a golden lily upon a purple field as his emblem. Ruskin called this "Our flower of chivalry, with a flower for its leaf and a lily for its heart."

The common American variety of iris is known as the blue flag lily. These are beautiful in coloring, texture and form. Three of the six velvet-like petals droop downward, while the other three stand proudly erect. Here we find the whole scale of purple and lavender tones, while delicately shading into them are rich golds and yellows set off effectively by tiny streakings of black.

Bulbs of the iris may be set out in the spring, although autumn is the better time. All varieties multiply rapidly under good conditions. According to blooming time, they should be planted in this order, Syrian, German, Spanish, English and Japanese.

The Syrian and German iris like the sun, the English and Spanish wish to be sheltered a bit, while the Japanese variety takes a great deal of everything necessary to plants—heat, moisture and rich soil. They are all hardy plants and require but little attention.

If you have a lily-pond, plant some Japanese iris along its margin, for this variety loves the water and thrives best there, although it will grow beautifully in the garden, when plentifully watered. This variety comes into blossom some time late in June and blooms all through July. The names of the Japanese iris are significant of the country in which they originated; for instance, "Waves on Moonlight," "Sky," "Amidst the

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

This is a holding society, we might say, WITHIN THE ORIGINAL AMERICAN SOCIETY OF EQUITY. It is not intended TO SUPPLANT THAT SOCIETY permanently, but only so long as it is diverted from the true and original plans and against accomplishing the original objects, also while that society is in the hands of unwise counsellors and is not a real equity society.

The officers and members of the F. S. of E. believe in one farmers' society for the entire country and for all the crops, as proclaimed by the founder of the A. S. of E. But we believe that society cannot safely abandon its principles, change its plans and set up new objects as readily as the wind veers from one point of the compass to another. We believe that the original plan of the society was sound and the objects were the most desirable. We have seen the chief object largely accomplished, hence the plan is practical.

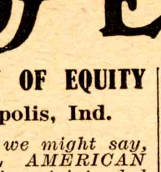
Some of the reasons that impelled the friends of the A. S. of E. to provide the Farmers Society of Equity as a holding society are as follows:

The present counsellors and some of the directors in the A. S. of E. have departed from the true principles of the society, have largely discarded its plans, have disregarded its traditions and teachings, have abandoned some of its important objects and added others, in violation of its charter, have dissipated the headquarters by setting up the departments in a distant city, have denied the members the right to continue the legal official paper, have substituted an alleged official paper that is published at irregular intervals and is devoted to malicious abuse, insults, slanders and libels against the founder of the society to the enormous damage of the organization and the farmers' business, and last the conduct of the headquarters has been such that the chief officers, and the publishers and editor of the alleged official paper are under arrest for violations of the law, while several officers and employees have fled to escape arrest.

As the name indicates, it is a farmers' society. Its organized forms are local unions and a national union; a county union may be organized where three (3) or more local unions in the county will join to organize one. Also a State union may be organized where five (5) or more county unions will join in organizing it. Full instructions for organizing county and State unions, and their duties, will be sent on application to headquarters.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.



Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of the original A. S. of E., and which refuse to continue with the *new* A. S. of E., will be accepted into the Farmers Society of Equity on resolutions passed by a majority of members or delegates. In such cases provisions will be made for the support of the county and State unions and their activities defined. Unions thus affiliating will be chartered by the F. S. of E. and supplies and seal sent on receipt of report and 50 cents additional. Any ten or more members of an old local that does not affiliate with the F. S. of E. are recommended to elect officers and report as a *new* local, but are not required to pay the *fee* but the *dues*. Where less than ten, the members going with the F. S. of E. will be considered as members at large.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers' Society of Equity is to *obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Prosperity on the farms is what farmers make it. No class of our people have it more in their power to make and maintain prosperity if they want it.

The planting, growing and harvesting of a crop does not necessarily mean prosperity to farmers. Prosperity can only come through profitable marketing.

Nothing makes a shallow, narrow, selfish man speak ill of another so quickly as to see the man succeed.

He is a real man who can see another man succeed and will buckle on his armor and pitch in to make the one effort a greater success. Even though he may not lead the procession he knows, and the world knows, he is necessary.

The third power is the farmers' power.

We must make this power a real power, when it will be the greatest and best power on earth.

Farmers are making history.

Will they be defeated, or victorious?

Pardon the question; they will be, must be, victorious.

Every effort by farmers to better their conditon that fails leaves them worse off than before. The present effort, the best of all, must not fail.

Farmers are all right if left to follow good plans. The trouble has been with leaders who would lead them by false paths to wrong conclusions.

The man who now says, "I told you farmers won't stick together," libels the class. They are sticking to the true principles and plan of equitable co-operation and woe be to he who has deceived one of them into a delusion, when the delusion is dispelled.

We are proud of what UP-TO-DATE FARMING has accomplished in educating farmers and teaching them to think independently. We are proud of its stand to SAVE the principles of co-operation that it taught for five years. We are proud to have had the power to expose wrongdoers, and it will be a special pride to see that the traitors to our society are punished as warnings to all people in the future who may think they must promote selfish ambitions and exploit wild theories to the jeopardy of millions of honest, hard-working and poorly rewarded toilers on the farms.

Special Notice

In March 15th number we will give some formerly unwritten history of the October convention and show that all chartered local unions of the American Society of Equity of North America are associated with the society as represented by the second convention and headed by President Mitchell.

RESOLUTIONS

[*NOTE—It is impracticable to print the many resolutions received as much as we would like to. The following are selected as expressing about the average sentiment and may be taken as models by other unions. We are always pleased to receive the resolutions, even though it is not possible to print them.*]

Glenwood Local No. 1

Whereas, the fifth annual convention of the American Society of Equity was held at Indianapolis, Ind., beginning October 22, 1908; and

Whereas, there was in that convention an element discordant with the past traditions of the society, and the official paper, known as UP-TO-DATE FARMING, was dropped as the official paper and a new paper — the Equity Farm Journal — was adopted by part of the said convention as the official paper; and

Whereas, this local union does not believe the action taken was just for the following reasons:

First. Equal representation was not accorded all the States in proportion to membership.

Second. That the society had a contract with Mr. Everitt and UP-TO-DATE FARMING and it had no right to abrogate it without some previous notice.

Third. And as the said action was taken in a spirit of jealousy and spite against our president, J. A. Everitt, and against the best interests of the society, in the judgment of this local union. Therefore be it

Resolved, that we repudiate the action as above set forth and refuse our support to the Equity Farm Journal and pledge our active support to UP-TO-DATE FARMING.

Resolved further, that we express our confidence in Mr. Everitt and his devotion to our cause as expressed in the Society of Equity.

Be it further resolved, that the secretary shall send a copy of these resolutions to UP-TO-DATE FARMING and to the Equity Farm Journal.

D. H. Latta, John Bogle and A. V. Stark, committee; A. N. Beyer, secretary, Glenwood, Ellis Co., Okla.

Hall of Clay Hill Local Union No. 1602

The following preamble and resolutions were unanimously adopted at our meeting January 20, 1908:

Whereas, the national officers and directors in 1907 departed from the original principles and objects as incorporated in our society; and

Whereas, they did deprive our president of all the power vested in him by the constitution; and

Whereas, they did then plot, conspire and scheme to organize a million-dollar Exchange detrimental to the true cause of Equity; therefore be it

Resolved, by Clay Hill Local Union No. 1602, that we condemn such actions as revolutionary and unconstitutional, hence void.

Resolved, that we repudiate the acts of the late national convention in that it attempted to annul a contract of its own society and did alter the constitution to the damage of all local union members.

Resolved further, that we demand UP-TO-DATE FARMING as our official paper, and we consider James A. Everitt our logical leader; and be it further

Resolved, that inasmuch as the late convention has departed from the true principles of Equity, we are compelled to recognize the Farmers Society of Equity and the officers elected at the second convention as the true head of our organization, and to them we pledge our hearty co-operation and support.

R. F. Garrett, president; B. F. Boultinghous, assistant secretary, Rockport, Ind.

STRANGE INVENTION! NEW PECULIAR APPARATUS
BEST EVER HAPPENED! CAUSING GREAT EXCITEMENT

MILLIONS MADE HAPPY. Wonderful but true, **no more farm, town or city homes without a bathroom and something more. THE ALLEN PORTABLE BATH APPARATUS** operates with **one gallon of water,** yet does more than a tub full. **Used everywhere that water exists.** Everybody has water, hence everybody can now have their own bathroom. **Cost but $3.75** ready to use—**cost nothing to operate.** Makes a bathroom of any room at home, or when traveling—even better, **does more than bathrooms costing $100.00.** Sounds strange, even impossible, yet its being done.

SEE HOW SIMPLE, EASY, CONVENIENT: To use—place Metallic non-corrosive fountain on wall or shelf—fill with water—turn screw—**that's all**—thereafter it **works automatically.** A bath, **hot or cold,** in one operation, **5 minutes' time,** your skin constantly flushed with **clear running water,** pores opened, cleansed, invigorated by **hundrds** of little soft **self-cleansing teeth** working gently, thoroughly. Only clear, running water touches the body—a delightful, tingling, sparkling spray that refreshes while it cleanses.

CLEANSING, FRICTION, MASSAGE, SHOWER BATH ALL IN ONE —same time. What a pleasure --Could anything be more perfect? Just think--**No tubs to clean, bowls or buckets to fill--No wash rags or sponges**--No dirt, splashing or muss. No plumbing, tools, valves--not even a screw to set. Move it about at will. Simple, durable, handsome, sanitary. Saves time, expense, labor, space. The ideal bathroom for town and country homes, travelers, roomers. No experiment.

USED AND PRAISED BY THOUSANDS.

INSURES CLEANLINESS WITHOUT DRUDGERY, inconvenience, annoyance—promotes health, beauty, happiness, sound sleep—prevents colds, La Grippe, contagious and other diseases.

C. R. MARTIN, PA., writes: **"Outfit is a marvel** of effectiveness, convenience, simplicity. Certainly will create a sensation."

H. H. CRAFT, KANS., writes: **"A God-send** to any family."

W. W. DRURY, O., writes: "Exceeded my expectations. Mechanically perfect, attractive. Can bathe in **one-fourth the time** of ordinary methods."

Guaranteed by an old, reliable house, capitalized for $50,000.00. Price complete, ready to use, only $3.75 and up. Sent to any address. Order now,--you'll be satisfied. Send card anyhow for full description, valuable book, catalogue, testimonials--ALL FREE.

BIG MONEY FOR AGENTS SALESMEN, MANAGERS--at home or traveling, all or spare time. **Here's proof: M. G. Stoneman, Mont.,** writes: "My sales run **over $1200 per month.** Best seller on market. **Enclose order for $6187.00." W. A. Macoubrie, Kans.,** writes: **"Made $50.00 in 4 hours."** Hundreds making big money. You can, its easy. This invention new. Millions everywhere eager to buy. **Write to day for EXCLUSIVE Agency proposition, stories of success. All free.**

A. S. OF E. HEADQUARTERS

Must Agriculture Resort to Deception?

A circular letter sent out from the "Equity Co-Operative Exchange" at Minneapolis, begins like this:

To Equity Members:
We wish to call your attention to the fact that the Equity Co-Operative Exchange is in a position to handle your business in this market, to just as good advantage as the other fellow.

And in another letter of same date, viz.: February 5, and same enclosure, is this advice:

A peculiar thing about prices, is the regular up and down periods in every week or ten days. Therefore we would advise shipments during the time that the market is on the decline, and by the time your car arrives here it will invariably strike an advancing market. . . . We advise everyone, whether our shippers or not, to hold back information as to the available supplies that you have on hand, and recommend that in giving out information, where it is necessary to give any at all, that it would appear that there is practically no grain left in the country, and on crop conditions make them as poor as possible.

Comment on above should not be necessary, except to say they are very wide from true Society of Equity teachings. Before Theo. G. Nelson got control of a part of the society, farmers were not comforted with the fact that one commission house could do as well as any other fellow, but were taught controlled marketing. Also the problem of marketing, if we dare believe the advice, has at last been solved in the astounding advice to "ship during the time the market is on the decline . . . and INVARIABLY strike an advancing market." This reminds us again of the editor of a farm paper in West Virginia who objected to the Equity plan of controlling supply to compel the price. His advice was: "Always market at the highest price." But no less astounding is the advice given about reporting supply. Any person who will advise deception will practice it, and our advice to Equity members and everybody is to have nothing to do with them. Any business that cannot stand on truth and the light of correct knowledge deserves to fail. The business of agriculture does not need to depend on fraud and deception to live and prosper.

Charles U. Pierson, State organizer of North Dakota, is making an extraordinary effort to surpass the editor of the Equity Farm Journal as the champion liar. He is also aspiring to be a candidate for attention from the State or Government officials.

He says in a letter to G. S. Bugbee, Maxbass, N. D., with reference to the session of the convention Friday evening:

He [Mr. Everitt] was seen to come upstairs in the elevator on the fourth floor in the Hotel where the Hall was located and where the convention was held, but instead of coming into the meeting he sneaked off into the Bed-room adjoining the Hall, where he sat and listened to everything going on and what was said about him by the other National Officers, and was not man enough to come in and present his charges. What do you think of that? Have you got confidence in him under these conditions?

We have reproduced from his letter verbatim et literatim. Now let us see: The convention hall was on the second floor, yet this great wizard, Pierson, transports it to the fourth floor to suit his purpose, and he sets it down beside the room (adjoining) where Everitt sat and listened. Wonderful! How does he know that Mr. Everitt was not in bed sleeping the sleep of the righteous while the traitors to the society were delivering themselves of their vile excretions? But the transportation of the hall was surely imaginary in Pierson's mind, because it was on the second floor when the convention was held and to the writer's personal knowledge it is there yet. Perhaps the drinks in Indianapolis (a change of water affects some people) made Pierson see things in distorted forms, but the convention

Clip Your Horses this Spring

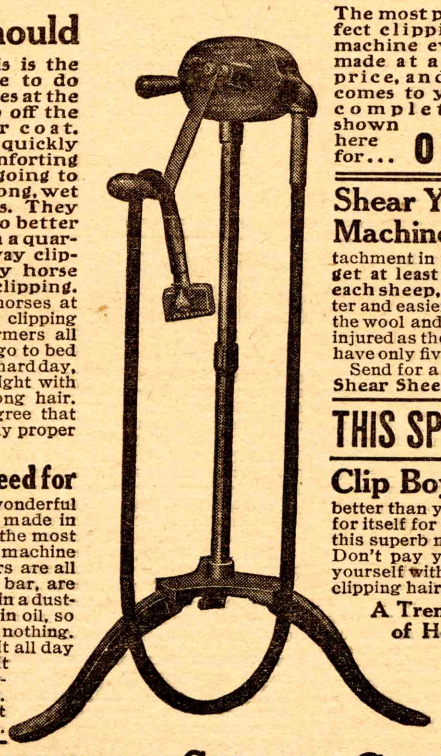
AND EVERY SPRING with the Great Enclosed Gear Machine

The Stewart No. 1 Horse Clipping Machine

Every Horse Should be Clipped and this is the machine to do it with. Don't put your horses at the spring work until you clip off the long, thick, heavy winter coat. When clipped they dry out quickly at night and get good, comforting rest; their food instead of going to furnish heat to dry out the long, wet hair, nourishes their bodies. They rest better, feel better and do better work. You can clean them in a quarter of the time. In every way clipping is beneficial, and every horse worth the keeping is worth clipping.

It's a positive shame to put horses at hard work in the spring without clipping them first, and progressive farmers all realize it. Just as no man will go to bed in his wet, sweaty clothes after a hard day, so no horse should stand at night with a thick, wet, sweaty coat of long hair. All great horse authorities agree that clipping in the spring is the only proper thing to do.

The Machine is Guaranteed for 25 Years Every part of this wonderful clipping machine is made in the most perfect manner and in the most modern and complete clipping machine factory in the world. The gears are all cut right out of the solid steel bar, are hardened file hard, are enclosed in a dust-proof gear case and run always in oil, so that friction and wear are almost nothing. It runs so easy a child can turn it all day and not tire, and so perfect is it made that we unreservedly guarantee it for 25 years. There is 6 ft. of steel flexible shaft, making it easy to reach all parts of the horse.



The most perfect clipping machine ever made at any price, and it comes to you all complete as shown here for... **ONLY $6.75**

Shear Your Sheep with this Machine, Too Using our special shearing shaft and knife attachment in place of the old hand shears and **get at least 20c worth more wool from each sheep,** and the shearing will be done better and easier. There will be no second cuts in the wool and the sheep will not be maimed or injured as they are from the hand shear. If you have only five sheep it will pay you to have it.

Send for a copy of our *free book* **"How to Shear Sheep."**

THIS SPLENDID MACHINE SHOULD BE IN EVERY FARM STABLE IN AMERICA

Clip Boys' and Men's Hair with It This machine clips human hair to perfection. A couple of minutes completes the job on anyone, and it can be done better than you ever dreamed of doing it with the shears or the old hand clippers. The machine will more than pay for itself for this use alone the first year. Why pay out $1.50 to $3.00 for a pair of hand clippers when you can buy this superb machine for so little more and you can do so much more with it and it lasts so many years longer? Don't pay your good money to the barber for doing this work either—do it yourself with this machine and save your money. You can make money, too, clipping hair for others with this outfit.

A Tremendously Liberal Offer to Every Farmer and Owner of Horses Get one from your dealer or fill out the attached coupon and mail it to us for one of these splendid machines. When you get it try it out thoroughly in every way, compare it with every other machine you have ever seen, clip your horses with it and clip the hair of all the boys and men about your place, and if you don't find it better in every single respect than any other machine you have ever seen or heard of, send it back at our expense and **we will refund every cent you paid for it.**

Don't Put it Off—Get one from your dealer or send your order direct to us or write for our BIG NEW CATALOG of Clipping Machines.

CHICAGO FLEXIBLE SHAFT CO.
224 ONTARIO ST. CHICAGO, ILL.

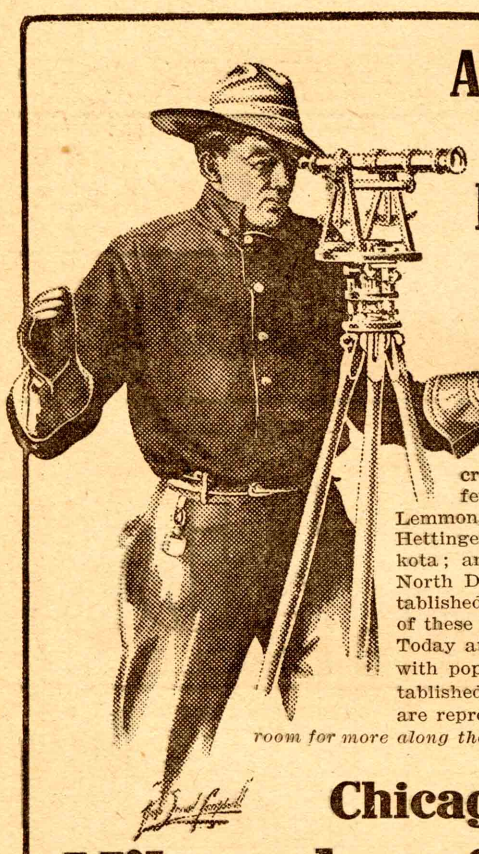
hall was on the second floor all right. (P. S. Mr. Pierson, please write it down.) And the second convention which was in progress Friday night was held in a room on the fourth floor in a remote part of the building. Now if the proceedings in the convention hall could be heard in that room, then the Denison Hotel has the most remarkable acoustic properties of any building we ever heard of. We have known of sound requiring a half hour to travel up one flight of stairs and then not have force enough left to penetrate through one door, when a person was called to get up in the morning, but this phenomenon that Pierson would have the honest farmers of North Dakota believe skins that stunt and lays it in the shade at 110 above. He asks you to believe that the sound from the convention hall traveled up two flights of stairs and far along the coridors and through a door where "he sat and listened to everything going on."

Mr. Everitt is writing this and he will say that the conspirators managed that I would be notified that the hearing would not be that night. When I reached our convention room I learned of it and arose to go to the hall. I was pulled down and told to not go near them. If I had gone, the program would have been changed, and it was only because of my absence that the fiends unburdened themselves. Every charge made against me there has been refuted, six people are under arrest for publishing them and three have fled. And this arch deceiver Pierson says: "What do you think of that?" and "Have you got confidence in him under these conditions?" We will say: Can you have a particle of confidence in such a clumsy liar as Chas. U. Pierson? If he does other things as clumsily as he lies, he is a bungler indeed.

About a year ago the Canadian branch of the A. S. of E. seceded from the parent society and embarked in the capital stock schemes and ownership of official paper. At the next annual meeting the popular newspaper heading giving the account was "Another Dream Shattered." The opinion of the majority of members present at the meeting was, that they had enough and desired to close up its affairs with as little loss as possible. Do present indications point to a different fate for the American Society?

Chas. U. Pierson says "the Producers and Consumers Equity Exchange is incorporated by the American Federation of Labor." Let's see. The president is Geo. W. Wickline, of Illinois, who has attached himself to every farm organization that came along and that offered an opportunity to farm the farmers. The secretary is of St. Louis, a Catholic priest, and the treasurer is Thos. Emmerton, farmer, of Wisconsin. Does the bunch look like A. F. of L. people? Pierson ought to be a hatter, as, by talking through his hat so much he certainly punctures a lot of them. If Pierson would have been at the Briggs House in Chicago, as the writer was for two days wrestling with the hydra-headed monster when it was trying to be born last July, he would know better what gave it birth. But laying aside the matter of its incorporators, it is clear enough that it suckled at the teat of the A. S. of E. for months before it assumed to have an independent existence.



Along the New Line to the Pacific Coast

Through the Dakotas, Montana, Idaho and Washington, the building of this railway opens up a country full of *money-making possibilities.* Rich farm lands are now selling at $10 per acre and upwards. They are bound to increase in value within the next few years. Three new towns—Lemmon, Butte County, South Dakota; Hettinger, Adams County, North Dakota; and Bowman, Bowman County, North Dakota—have recently been established. Three months ago the sites of these towns were open prairie lands. Today at each place a well-built town, with population of close to 500, is established; many trades and professions are represented. *But there is plenty of room for more along the Pacific Coast extension of the*

Chicago Milwaukee & St. Paul Railway

In the Dakotas, and in Montana, along the new line, the soil is a dark loam with a clay subsoil; good water is plentiful; rainfall is ample to raise the crops; the climate is healthful; the air is dry and invigorating; winters are mild; growing seasons are long. The deeded lands sell at $10 per acre, and upwards. *Last season many farmers made enough money from their first year's crops to pay for their land.* The Judith Basin, in central Montana, offers exceptional opportunities in farming, particularly in wheat and alfalfa raising.

The fruit-grower will find a good field along the new line in Washington. Apples, pears, plums, cherries, apricots and small fruits grow well there. Last year hundreds of acres of bearing orchards produced crops which brought from $500 to $600 per acre.

UP-TO-DATE FARMING
Indianapolis, Ind.

The Whole Sheet False

There were twenty-four criminally libelous, false statements in the December-January number of the bastard sheet, alleged official paper — Equity Farm Journal — and many other false statements of a milder type. If there was one unadulterated, true statement in it, we have not been able to discover it.

Farmers have been deceived all their lives and have been following false leaders most of the time, but there never was a time in the history of American agriculture when they were expected to be such sorry dupes as at the present time. Do the farmers of this country want such a paper as the official paper of a movement founded on the principles of equity and justice? If they do, or if a single farmer does, then they deserve all the ills that have attended farming in the past, to be perpetuated in the future. We will not believe they will allow such a sheet to represent "the noblest occupation of man," as proclaimed by the first President of our country.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION. *I attended a meeting at Minot, N. D. The State organizer, Mr. Pierson, was there and he said a lot of things about you. After the meeting I got a copy of the Equity Farm Journal, in which they say you tell untruths. (1) That you deny the idea that the new press should be the society's property; (2) and the seed corn story; (3) and the three names you did business under; (4) and that the second convention had less than one dozen delegates. Cannot you clear these matters up to the satisfaction of all minds?—A reader of Up-to-Date Farming for ten years and one who gives you credit for launching the A. S. of E., S. S. Petry, Berthold, N. D.*

ANSWER. (1) Pierson, Bowne, Nelson, Pauley and that gang would take the clothes from my body, the roof from over my head, the food from my mouth, if they could, just as they think, because the members of the society contributed $387.81 toward buying an $18,000 press and I paid the balance the press should belong to them. I know Nelson, Gentner, and Bowne would have taken the press away from me, as Nelson and Gentner took a copy of my subscription list "by strategy," as C. U. Pierson said, if they could have schemed to do it. Who ever heard before of people going over the country and printing in a paper such preposterous claims? They do it to deceive the members. How long will the members submit? (2) A pure invention. I never sold any corn under such a name except a sweet corn that is listed in nearly all seed catalogs. Never represented any corn as found with Egyptian mummies. The story is absolutely false. (3) Also the names J. A. Everitt Seed Co., O. K. Seed Co., and United States Seed Co., "three names to catch more suckers," as they said. Pure invention also. The only name we were doing business under was J. A. Everitt, Seedsman, a corporation of which I was president. Any person can easily verify my statement and prove theirs false. (4) Whether there were a dozen, or more or less, matters not. There were enough true and loyal delegates to hold a legal convention, and there would have been many more if the true and loyal ones had not returned to their homes in disgust before the second convention was called. How long will farmers stand to be deceived by these liars?

Q. *We received an application for an organizer's commission from Winchester, Tenn., but he failed to sign his name. Whose is it?*

Q. *What does "R. R." stand for in F. S. of E. blanks?—Sumner S. Beam, Black Creek, Ont.*

A. "Rural Route."

Q. (1) *When a local union as a body refuses to go with the F. S. of E., can ten or more of the members assemble and pay their dues and form a new local of the F. S. of E.?* (2) *Can a member send his dues to headquarters, $1.20, and become a member at large?—Ernest A. Beach, Hanks, Ky.*

A. (1) Yes. (2) Yes. See also F. S. of E. official page.

Q. *In your issue of December 1, 1905, you state that there had been donated $1,605.10 toward the Equity press, and in your issue of February 1, 1908, you state the amount as only $381.81. What explanation have you to make?* (2) *Why did you change the name of the A. S. of E. to the F. S. of E.?* (3) *If you still publish the official paper, why did you not publish the proceedings of the last national convention?* (4) *Why is it you now only want farmers to join the F. S. of E.?—Tom McGrath, Donnybrook, N. D.*

A. (1) Refer to page 9, December 1, 1905, issue of UP-TO-DATE FARMING under "Press Fund" and you will find the item "A Friend, $1.000. The friend was the writer, J. A. Everitt. The thousand dollars was paid as I have paid all the balance except $381.81 contributed and $80 for shares. Any difference is accounted for by the shrinkage between amount subscribed and the amount paid, I suppose. Mr. Tubbs kept all the records and money until he turned the money over to me to apply on the press with his statement, which I have. (2) See pages 16 and 17 of February 15th number. (3) Because they were not delivered to me and I could not get them. (4) It was thought wise by the second convention to do this in view of the conduct of the first convention.

Q. *I have a few questions to ask, which I beg of you to answer for me and give me the true facts, as I must have them true, right and corrcet.* (1) *Is it a fact that President Barnett has not resigned? and did you know it to be so when you printed it in your paper?* (2) *How did it happen*

EQUITY GRAIN BIN

Storage question has been solved. I have thoroughly examined it. It is absolutely water proof, fire proof, rot proof, wevil proof, and is dryer of damp grain. Will last a lifetime, and costs much less than a timber granary. For particulars write to Geo. M. Boll, Mt. Hope, Kan. In my judgment this bin will solve the grain storage problem on the farm.

H. B. SHERMAN.

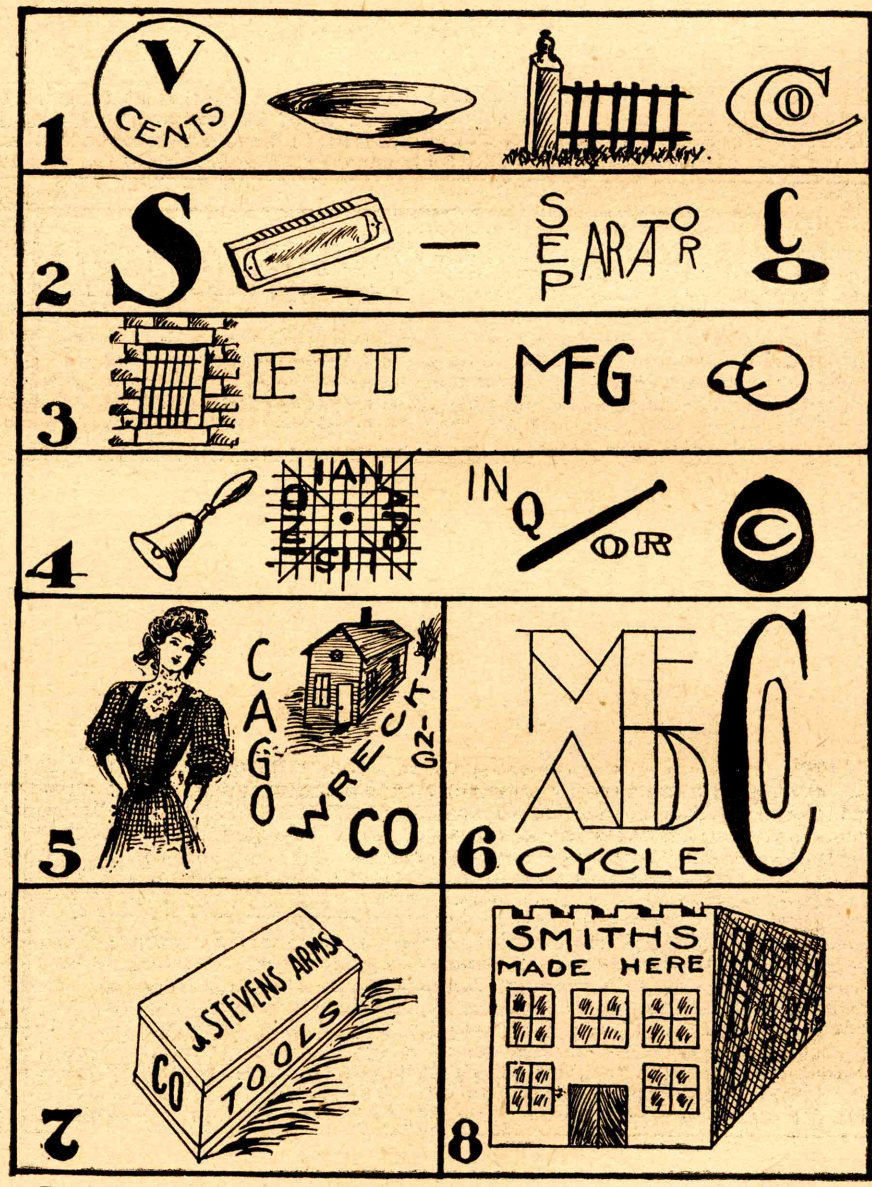
THE NEVER FLINCH HOG CATCHER

One man can catch and hold the largest and most vicious hog for the purpose of ringing, altering, taming or removing tushes. Always ready, unbreakable, pays for itself first time used. Price $1.00 delivered. Write for full description. Agents wanted.

The Never Flinch Hog Catcher Company
Wapakaneto, Ohio, Dpt. I

Another Puzzle for You

The returns from the Rebus in the February 15 number have been so gratifying taht we are going to try our readers' skill again. This time we have eight different Rebuses to offer. Each one represents the name of a firm whose advertisement appears **in this issue of the paper.** These are not hard, and by looking through the advertisements you will be able to make each one out. Try for yourself and see and send us the result. It may be we will get no correct answer **(and in that case the prices go to the one nearest correct)**, so send the best solution you can.



Read the following conditions:

Arrange your answers neatly and number each consecutively, allowing an entire line to each.

When you answer tell us in not over fifty words which advertisement in this issue appeals to you most. This advertisement must be one not included in the Rebus nor relate to Up-to-Date Farming or The Third Power book.

For the best solution and article we receive on or before March 15, we will give a prize of $1.50 in cash. The next best will receive $1.00 and the two next best 50 cents each.

No money required to compete for, or to get a prize if you are entitled to it. This is a bona-fide offer made by the publisher of UP-TO-DATE FARMING and there is no "catch" in it.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of April 1, and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMING, (Rebus Dept.) INDIANAPOLIS, INDIANA

SEED CORN

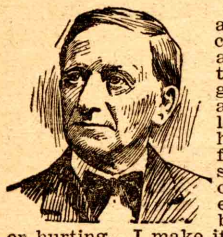
(LARGEST SEED CORN GROWERS IN THE WORLD)

Don't Wear A Truss



Brooks' Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb. It absolutely holds firmly and comfortably and never slips; always light and cool and conforms to every movement of the body without chafing or hurting. I make it to your measure and send it to you on a strict guarantee of satisfaction or money refunded and I have put my price so low that anybody, rich or poor, can buy it. Remember, I make it to your order—send it to you—you wear it—and if it doesn't satisfy you, you send it back to me and I will refund your money. The banks or any responsible citizen in Marshall will tell you that is the way I do business—always absolutely on the square and I have sold to thousands of people this way for the past five years. Remember, I use no salves, no harness, no lies, no fakes. I just give you a straight business deal at a reasonable price.

C. E. BROOKS, 7197 Brooks Bldg., Marshall, Mich.

FAT PEOPLE

I Will Send You a Trial Treatment Free

I can reduce your weight Three to Five Pounds a Week and turn ill health into robust health, mental sluggishness into activity, and relieve that feeling of fullness and oppression by producing healthy digestion and assimilation. No distasteful dieting or starvation, no exercising, no nauseating drugs or sickening pills that ruin the stomach. I am a regular practising physician and a specialist in the successful reduction of superfluous fat. My new and scientifically perfected method strengthens the heart and enables you to breathe easily, and quickly removes double-chin, large stomach and fat hips. Prominent physicians advise their patients to take my treatment and leading doctors themselves are my patients. I absolutely guarantee satisfaction in every case. Write to-day for free trial treatment. I will also send you free my new book on Obesity. It will give you detailed outline of my treatment; it will be sent you free. Address

HENRY C. BRADFORD, M. D.,
826 Bradford Building, 20 East 22d Street, New York City.

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

that Speer was appointed to the position that he held, and by whom recommended? (3) Tell me about the Kentucky State meeting and what success you had there; have been told that you attended same. Please give me the facts of these questions and oblige.—Henry V. Liebig, Mascoutah, Ill.

A. (1) President Barnett did resign. (2) Speer was recommended to the Board of Directors by Tubbs and myself. Understand now that while an office of director of organization was created by the 1906 convention the officer was not elected and Speer was appointed by the board. Therefore they had a perfect right to remove him for incompetency or any other good cause. There was nothing wrong in recommending Mr. Speer, neither in appointing him to the position, but the wrong was in the Board of Directors continuing him after I had recommended his removal and after the result of his work showed clearly that he was incompetent for the position. Please read on page 26 of February 15th number of UP-TO-DATE FARMING for some more light on how things were done in 1907. I refer to the affidavit covering the Garrett M. Walrod letter. (3) You asked me to tell you about the Kentucky State meeting. I don't know what your object is, but I will say that on the urgent invitation of many members in Kentucky to attend the meeting, I went down. As I expected, the convention was in control of delegates who were at the national convention. Perhaps you know that Kentucky had nineteen delegates to the convention, and the convention was largely dominated or influenced by one Mr. Borland, the same man who was very prominent in the national convention, and who has the power to sway the ordinary delegates with his oratory and figures of speech. I went to the convention hoping that I could be of some assistance to them. On invitation I spoke to the delegates and told them of some of the things that had transpired at headquarters during 1907 and made some reference to the convention, and again claimed that the delegates were deceived and gave them some reasons for my claim.

Lawyer Borland followed me and delivered an address that was a mass of evasions and misrepresentations. His ability as a speaker and to make apt illustrations that had no bearing on the subject whatever and the fact that he followed me, I could see rather left the convention in his favor, and as they were deploring that so much time was consumed and so much business to be done, an opportunity did not present for me to make any reply to his address, but I did at various times refute statements made and set them right. Particularly was this the case when Secretary Robertson placed the blame for failure to get official papers on the publisher. I obliged him to admit that he did not make his report to UP-TO-DATE FARMING, but that he made them to the headquarters of the American Society of Equity. By his own showing there were over 1,000 more members in Kentucky than were on the subscription list of UP-TO-DATE FARMING.

I stayed till noon of the second day, when I was obliged to leave. I left with the committee on resolutions the following recommendations:

First. "The most important matters before this convention, as it appears to me, is to take such action as will maintain the organization of the society already accomplished in the State, by the payment by members of the 1908 dues and produce conditions that will cause the organization to increase.

Second. "In view of the conduct of the present active headquarters of the A. S. of E. a great many members in Kentucky will not support it. I may safely say, a great majority of them will ont.

Third. "For this convention to declare in favor of supporting the headquarters as now conducted will alienate a large number of members and will operate against the development of the society in the State.

Fourth. "I cannot support the headquarters, nor can UP-TO-DATE FARMING consistently support it.

Fifth. "Therefore I believe, for the good of the organization in your State, this convention should resolve to keep all funds from fees and dues in the State except the portion that should go to the official paper, UP-TO-DATE FARMING. This to continue until a headquarters is established that will properly represent the society and maintain the true principles and the original plan, and will assure the wise expenditure of the funds for the accomplishment of the objects of the society.

Sixth. "If this recommendation is rejected, and if the convention concludes to support the national headquarters as now conducted, in my judgment it should also indorse the alleged official paper."

Q. *The Green Lake local union have decided to not pay dues to the A. S. of E. headquarters, and as we understand the F. S. of E. advocates the original principles and plan of the society, we want to know if the Farmers Society of Equity is legally incorporated under that name. I was selected to write to you for this information.—A. E. Westling, Princeton, Minn.*

A. The F. S. of E. does advocate the original principles and will accomplish the original objects by the simple, tried and proven plan that gave many benefits to farmers already. The F. S. of E. is not incorporated, but is at present considered a holding society. This was deemed the proper way by many of the best informed members of the old society. The object sought is to be in a position for both factions to come together as soon as the principles of Equity again prevail with the old headquarters. The F. S. of E. is qualified to charter local unions, which it does free on report of new ones or old ones on payment of 50 cents. Each local organized, or affiliating, is also supplied with seal, supplies, etc. Read first column on F. S. of E. official page and pages 16 and 17 February 15th issue.

Read What This Man Says:

Claremont, Minn., Dec. 29, '07.
Mr. Wm. Galloway, Waterloo, Ia.
Dear Sir:—I must say that the spreader I bought of you last spring is a Grand Spreader. I have spread all kinds of manure—even hard, frozen chunks and it scatters everything. You can't break it. My neighbors all have large ones and always breaking down, but the Galloway is the one you can't break. My pair of 3-year-old colts weigh 950 lbs. each and they handle it easy. The big ones take 4 horses every time. Wishing you a happy and a prosperous new year, I remain, Yours truly,
D. HISSAM.

Furniture! MAMMOTH BARGAIN SALE Furniture!

The Chicago House Wrecking Co. announces its most wonderful, mammoth Bargain Sale of high grade Furniture, Carpets, Rugs, Household Goods, Office Fixtures, Desks, School House Furniture and Furniture used in furnishing homes, offices or buildings of any kind. The material we are offering in this advertisement was bought by us at ***Sheriffs' Sales, Receivers' Sales; Assignees' Sales, Manufactures' Sales, Etc.***

WE ARE ORIGINATORS AND THE ONLY HOUSE OF ITS KIND IN THE WORLD.

We do not resort to any ordinary methods in securing the bargains we place upon the markets of the world. No Forced Sales of any kind occur without the presence of our representative. Thus you see millions of dollars worth of products are annually placed in our hands and disposed of by us at prices that seldom represent the original cost of production.

Our wonderful Furniture Exhibition Room located at our main plant in Chicago is the marvel of visitors.

We devote an entire building 160x600 ft. to our display of Handsome and Ornamental Furniture and Household Goods Bargains. Visitors from every part of the globe have gazed with astonishment and wonder at our enormous collections of useful merchandise.

We offer you an opportunity of purchasing by mail, direct from the advertisement, selections made with greatest care from our enormous bargain stock. Here you have an opportunity to make selections quickly and correctly. You are backed by our binding guarantee. So you buy with entire confidence. You know positively you will get what you purchase. That's why we are successful. That's why our business has reached its extensive proportions, until today it is one of

Chicago's Leading Enterprises.

We advise you to purchase quickly. Our stock is an ever moving one. It may be here today and gone to-morrow. Take advantage of this chance while it presents itself to you Our customers who have dealt with us in the past recognize the virtue of quick action. Bargains wait for no one.

There are thousands of other bargains in our catalog. Be sure and have a copy handy.

Satisfaction guaranteed or Money Refunded. That was our motto when we opened our doors for business and it shall ever continue to be our motto. We need the confidence of every customer.

See the bottom of this advertisement in regard to our catalog and take advantage of the suggestion offered. No matter what you need in the furniture line, we can supply it. By that we mean we will save you from 30 to 60 per cent. If you find you are mistaken and have not secured a bargain as represented by us, we are ready to protect you by taking back the merchandise and refunding your purchase price.

Should your needs not be represented by the articles shown in this advertisement, please explain them to us. We have everything in the furniture line from the cheapest kitchen chair to the most expensive Oriental Rug. From this mammoth stock you can surely satisfy your every want at the lowest bargain prices.

The World's Bargain Center

Thousands of satisfied customers everywhere have learned to recognize the virtue of our business. We stand between you and high prices. The greater part of our stock consists of absolutely brand new, first-class merchandise that we have secured in connection with our purchase of stocks at SHERIFFS' and RECEIVERS' SALES. Our enormous warehouses are overflowing with merchandise secured from such sources. Our wonderful growth and expansion is the best evidence of our ability to serve you. Merchandise of the highest quality is sold at sacrifice prices. Each day some new addition to our stock compels us to dispose of what we have on hand. The time to buy is when these bargains, shown you in this advertisement, are calling on you for action. Send us your order today and be convinced.

Our Guarantee We guarantee absolute satisfaction. A satisfied customer means more to us than a large sale. Every article you purchase from us is guaranteed absolutely as represented. If you find it to the contrary, we hold ourselves in readiness to make good our representations. If the goods received are not as represented, we will take them back and refund your purchase price at once. There will be no argument about the return of your money. All you need to say is that "goods are not satisfactory." That's enough for us. Money will be promptly refunded to you. Send us your order today.

We cheerfully invite investigation as to our responsibility. Our capital stock and surplus is over $1,000,000.00. We refer you to any commercial institution in Chicago or anywhere else. Look us up in Dun's or Bradstreet's; ask any Express Company; write to the editor of this or any other paper; if you want more positive proof, write to our depository, the Drovers' Deposit National Bank, Chicago.

Volume XI INDIANAPOLIS, INDIANA, MARCH 15, 1908 Number 6

NEW 1908 IMPROVED DE LAVAL CREAM SEPARATORS SWEEPING THE FIELD

"Peaches and cream," is what one man says of the new Improved De Laval Cream Separators. Another writes: "You don't begin to claim nearly enough for the new machines," and so it goes — everyone who has seen the new De Laval Farm and Dairy Separators can not say too much in their praise. From Maine to California and Canada to Florida, reports are arriving in every mail telling of how the De Laval is sweeping all would-be competition aside.

Ten New Styles---Ten New Capacities Ten New Prices

The new De Laval line has a machine for every size dairy from the smallest to the largest and at a price that will fit every pocket, while you may buy for cash or on terms so liberal that the machine will actually pay for itself. It includes several new capacities never before offered, making the line by far the most complete ever placed on the market. There is the proper machine for every cow owner, no matter what his requirements may be.

Improved In Every Feature

The new patented centre-balanced bowl with its separate spindle is a triumph in separator construction and the whole machine from the patented "anti-splash" sanitary supply can to the base, is a lesson in mechanical beauty, simplicity and convenience, operating as smoothly and noiselessly as a watch. Only one tool — a screwdriver — is required to set the machine or to entirely remove its parts. The new De Laval sells on its appearance alone while back of that are those unsurpassed mechanical and skimming qualities that have made the De Laval the world's standard. Nothing like it has ever been produced before and it is fully ten years in advance of any other separator made today.

Place Your Order Early

Anyone owning two or more cows suffers a daily loss if he is not separating his milk with a good separator. Those who are thinking of purchasing separators should not delay until Spring or even another week to do so. Your daily losses without a separator will soon pay for one. If you don't know your nearest local De Laval agent, send for his name and address and our new catalog at once and request a free demonstration of one of our own machines in your own home. Don't fail to examine the new De Laval line before you buy, otherwise you must surely regret it later on. Furthermore, it will pay you to act quickly, for although the capacity of the De Laval factory is one-half greater than a year ago, it is more than likely that the demand for De Laval machines cannot be met promptly a month or so later when cows begin to freshen and grass comes. Don't delay. Write today.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

"Neighbors, Give Your Boys and Girls a Chance"

Abraham Lincoln used these words in closing his address to his old friends and neighbors just before starting for Washington to assume the duties of President of the United States. He knew the value of an education, and that the best education is acquired by reading good books. He had walked many miles to borrow a book, and knew that the boy or girl who is started in life with the habit of reading good, wholesome books has a great advantage over the boy or girl who reads dime novels or cheap, trashy literature, or who does not read at all.

FATHERS, qualify your boys and girls for the great battle of life. The day must come in the course of events when their chairs will be empty by your fireside, and they will be out struggling alone in the world. Equip them now for this struggle. It will repay you a thousand-fold.

MOTHERS, you know, as all the world knows, that the success in life of your boys and girls is heaven to you. There is little else in the world worth living for. "Give your boys and girls a chance." Give them an education which will fit them for the stern realities of life. Teach them to love home by making the home so attractive that it is worth loving. Place in your home good, interesting, truthful books for your children. In this day and age of fierce competition it is little short of a misfortune for any boy or girl to grow up without the equipment of a good education and especially a knowledge of History. In the words of Lincoln, **"GIVE YOUR BOYS AND GIRLS A CHANCE."**

THE PUBLISHERS' FAILURE PLACES IN OUR HANDS FOR IMMEDIATE SALE THE UNSOLD EDITION OF THE WORLD'S FAMED PUBLICATION

Ridpath's History of the World

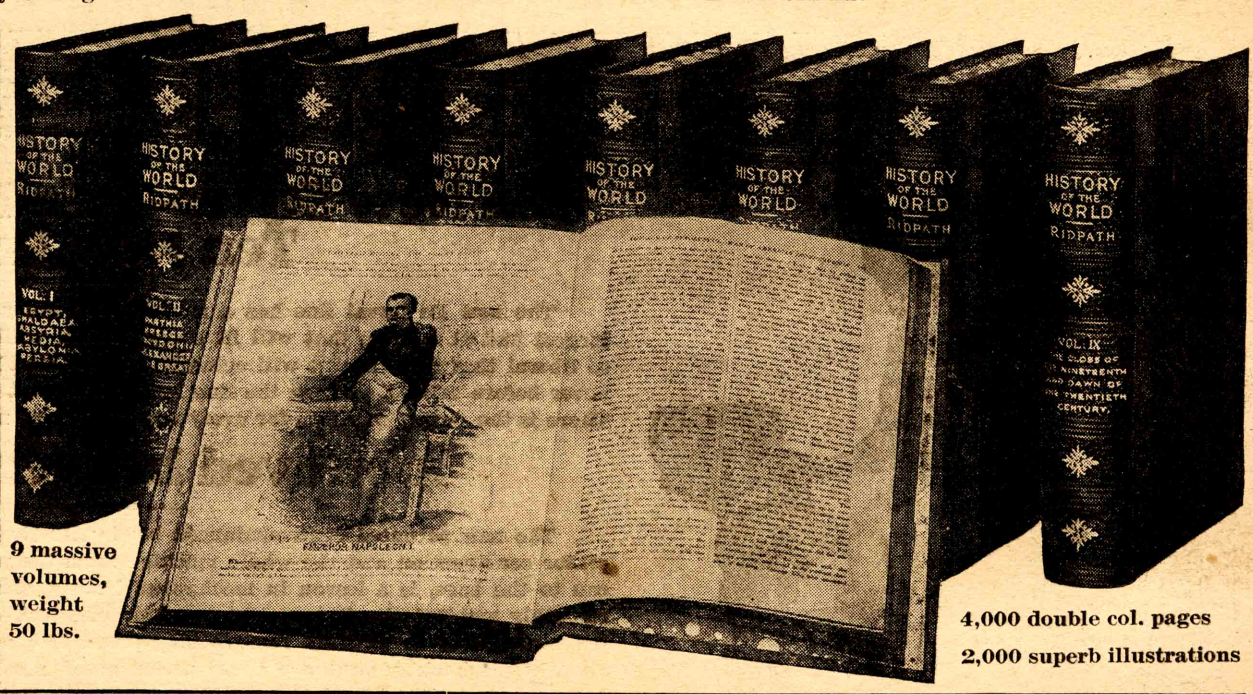
BRAND NEW, beautifully bound in Half-Morocco, which we must sell immediately. We are offering the remaining sets

AT LESS THAN EVEN DAMAGED SETS WERE EVER SOLD

We will NAME OUR PRICE only in DIRECT LETTERS to those SENDING THE COUPON below. TEAR OFF THE COUPON, write NAME and ADDRESS plainly and MAIL NOW BEFORE YOU FORGET IT. Dr. Ridpath's family derive their income from his History, and TO PRINT OUR PRICE BROADCAST for the sake of more quickly selling these few sets would cause GREAT INJURY TO FUTURE SALES.

UP-TO-DATE FARMING SAYS:

Ridpath's History of the World may be regarded as a complete library in itself. No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. It embraces the whole round of literature, science, art, philosophy, conquest, exploration, romance and biography. If Dr. Ridpath had written nothing more than American history, that alone would have been a masterpiece. From Washington's time to the present day, it carries the reader along with enthusiastic interest. We cheerfully commend this most popular and complete of all world's histories to our readers.



9 massive volumes, weight 50 lbs.

4,000 double col. pages

2,000 superb illustrations

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake**; to circumnavigate the globe with **Magellan**; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know **Napoleon** as you know **Roosevelt.**

RIDPATH in your home means you need never spend a lonely evening. You can associate with the world's heroes; you can cross the Rubicon with **Caesar,** after which Rome was free no more. You can sit at the feet of **Socrates,** the loftiest genius of the ancient world. You can kneel at the shrine of **Lincoln,** "the greatest character of all time; the gentlest memory of our world." It is ennobling to commune with these children of destiny. To be associated with great men and events is to be great one's self, and you will add to your store of knowledge, which is power, and to the richness of your life. You owe it to yourself and family to place this book in your home.

Send Coupon Today

RIDPATH takes you back to the dawn of history; long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendour; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and aspiring was ever written by man.

RIDPATH throws the mantle of personality over the old heroes of history. **Alexander** is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. **Xerxes** from his mountain platform sees **Themistocles** with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sails, and help to mould the language in which this paragraph is written. Rome perches **Nero** upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; **Napoleon** fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. **Bismarck** is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says, "You shall not." **Washington** is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false face friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world-figure of his time.

Volume XI **INDIANAPOLIS, INDIANA, MARCH 15, 1908** **Number 6**

SHALL IT BE "GOOD-BYE?"

DEAR SUBSCRIBER:

You know the work that UP-TO-DATE FARMING has been doing all these years, the work of educating mankind to a great truth that seems to have been forgotten, and of defeating a vicious business system whose victims scarce realized its enormity and knew of no escape—you know this work must be continued by somebody.

Whatever may have crossed our path; whatever may have injured our progress; whatever may have impaired the even tenor of our ways; this paper has never faltered in teaching the doctrine of farm price-making, controlled marketing and the divine necessity for equity in business. The unanimity with which those who have so long been with us in these lines, continue their support of UP-TO-DATE FARMING by renewals, tell us more plainly than words that they are imbued by the same spirit and are determined as we are to make these truths living business realities. We wish we could take everyone of them by the hand and thank them for their help in the cause and bid them God speed.

But a few have not yet responded. We don't know why, but we believe this reminder will be sufficient and that all will send their renewals at once.

If you are in arrears, we don't want to take your name off our list. UP-TO-DATE FARMING has visited you so long that you seem like a part of our family —our Up-to-Date People—and we don't want to miss you this year, and the coming years, while this paper is accomplishing its mission.

Perhaps you have been disturbed in your mind by unfortunate affairs which we were powerless to prevent. We have tried in a straight-forward and truthful way to make all these matters plain. How well we have succeeded, you yourself must determine. But should a lingering doubt as to the justice of the course of UP-TO-DATE remain with you, future events, as they transpire, will dispel it.

And this is another reason why you should not let your subscription stop. Every subscriber will want to know if the editor of this paper, or his enemies are vindicated in the courts. For an impartial, unbiased report of the trials of the various people, you will want UP-TO-DATE FARMING. But there are many other reasons why you should continue it. Chief among them is the fact that more of weal or woe for future American agriculture is bound up in this paper than in any other one published.

Shall it be "Good-bye?"

We are hoping that before the time comes for mailing the next number you will authorize us to keep your name on our list for another year. Don't wait on others—they will all take UP-TO-DATE FARMING.

This isuse of UP-TO-DATE FARMING may be the last one you will receive unless you renew, as a new rule by the post office department limits the time of credit a publisher may extend to his subscribers. If it is not convenient for you to pay now and if you let us know when you will, we can accommodate you under such conditions.

In pleasant anticipation of your renewal, we now thank delinquent friends as we have in our heart thanked the tens of thousands who have already sent their renewals.

We cannot believe it will be "Good-bye" while the mission of UP-TO-DATE FARMING is unaccomplished.

HOLDING CROPS

Crops can be held so as to control the marketing. To say they cannot is to say that farmers are compelled to sell whenever the buyer says so, and, of course, at the buyer's price, and that is to say that the agricultural population even of this country is not a free people. People that must dispose of their property whenever and at whatever price the buyer, the market or the system demands are not free and cannot be under any such conditions, no matter what form of government they may boast, nor what flag floats over them.

But farmers can hold their stuff, and sell only when prices suit them, as other people do, if they will but exercise the independent courage that is inherent in them, and prepare to take care of their products, again repeating "as other people do." They do not have to do anything that has not already been done in like lines by somebody else, hence they have an example, more or less applicable, to follow all the time.

When we declare farmers can hold their products, and sell only as it suits them to sell, we speak advisedly, for they have done it. The tobacco growers of Kentucky and Tennessee afford a noticeable instance. If reports are to be believed, there has been more or less lawlessness connected with this effort, and that is something all good people must condemn, for, in spite of conditions, the laws must be observed and common rights respected. The reports of lawlessness in these sections are no doubt greatly exaggerated, and some of the outrages were possibly instigated by the buying trust in order that the blame might be attached to the farmers to bring condemnation upon the movement. This is the way the monopolistic powers deal with the common people; and the only two cases of conviction for Kentucky outrages of which we have heard, were of one negro and one white man, both of whom afterwards confessed that they were induced to do what they did by the agents of the trust.

But conditions in the tobacco-growing sections had become desperate. There was virtually but one buyer, and that was the Trust. There were two companies, the American that bought the leaf to manufacture in this country, and the Imperial that bought to export abroad, but they never competed with each other in price. When the movement for controlled marketing began, the tobacco situation in Kentucky, as described by a writer in the American Review of Reviews, was as follows: "Current rates for tobacco in January, 1904, meant, according to Kentucky calculations, less than 30 cents a day for an able-bodied man's work in raising it; and out of the 30 cents he must feed, clothe and lodge himself and his family," and, we may add, maintain his home and support his domestic animals, for, as a rule, tobacco growers depend upon that crop for almost their entire sustenance.

That they have actually controlled their marketing, forced the trust to terms, and improved their condition is shown by the same article in the American Review of Reviews, a most conservative magazine, from which we quoted a while ago, and the article was not written in the interests of the tobacco growers, but primarily to condemn some of their alleged methods. We quote:

> Against all this let it be clearly set forth that the association has accomplished certain results. By raising the price of tobacco from less than $4 per 100 pounds to a fraction more than $9 it has brought the plain people out of the miry pit, the slough of debt and despond, and set their feet in the way of prosperity. The towns show it faintly,—in the country he who runs may read. New-painted houses, fields in good heart and tilth, miles on miles of new wire fences, rubber-tired traps drawn by spanking teams, most of all the good roads pushing out fanwise to reach the remotest regions, and the netted telephone wires, over which if they choose the back-country folk can hear the big world breathe, all tell the same story. Bank deposits have quadrupled, the money circulation well-nigh doubled. Mortgages have shrunk beyond the convenience of investors, and land values so increased that the countryside is in danger of growing purse-proud.

As we have said, the American Monthly Review of Reviews is an ultra conservative magazine, and if a moiety of what is declared in the above paragraph is true, then what has been gained is worth all the effort is has cost, barring the alleged lawlessness; and if it is true that outrages have mingled in the movement, the work of controlled marketing did not breed them, but the unprincipled action and cruelty of the trust and the stubbornness of some farmers who refused to join with their fellows in a reasonable and proper effort for the common good. We must again enter our protest, however, that none of this justifies the violation of law.

Cotton is another crop that has successfully figured in controlled marketing and the making of prices by the growers. In the course of an address recently delivered in the National House of Representatives, Congressman Clayton of Alabama said the South had from 250 to 300 million dollars worth of cotton which it had held, and upon which it could get money as soon as the English shippers decided to give the cotton producers the price which they (the growers) thought they should receive.

In confirmation of the statement made by Congressman Clayton, a recent press dispatch from Memphis, Tenn., tells us that cotton growers of Arkansas have just concluded negotiations with Memphis banks, whereby $2,250,000 will be loaned on cotton stored in that State and held by the growers. The cotton so held, estimated at 60,000 bales, is to be sold to spinners direct through the Memphis market.

If the growers of tobacco, a product which is in no sense a necessity, and of cotton, an important commodity and one very nearly essential to human comfort, but not a food, can hold their crops and so finance them that they may demand and approximately receive prices made by themselves, to the great improvement of their financial condition, what should the producers of the more important commodities, wheat, corn, live stock, etc., think of themselves if they fail to do likewise?

These other crops and commodities require somewhat different provisions made for holding them. Wheat and corn must have storage that will protect them from harmful weather conditions and from the ravages of insect pests. But all these problems have been solved, and there is no longer any mystery about it. As those who have bought at "forced sales" on glutted markets, not for use but for speculative purposes, have held their purchases and controlled the very markets producers should have controlled, they have taught farmers how they could do it themselves. It only remains for them to provide the facilities, which they are abundantly able to do. The will and courage alone are lacking; and the gains made in better and steady prices, the profits coming to the producers instead of going to the speculators, would meet all costs in perhaps a season.

In the matter of live stock it is scarcely different. If it is thought impracticable to control shipments, it is still easy to control sales. It may be necessary to build at the market centers independent yards in which to divert surplus shipments, where stock may be cared for at actual cost, and feed furnished at legitimate market prices with no special tariffs or charges added. All this is entirely practicable, live stock men are abundantly able to do it, and it would place them in the very control of the market the growers of the stock deserve to be. In such case there would never be on the market more than the market required, and prices would necessarily be steady.

Farmers are not the helpless instruments of production they have been taught to believe themselves, and if they don't bring their good calling up to the business standard its importance marks for it, they alone are to blame, and they are living below their opportunities in this rapidly advancing age.

SOME CONTRIBUTED QUOTATIONS APPROPRIATE TO THE OCCASION

He that is valorous and dares to fight,
Though drubbed, can lose no honor by it.
Honor's a lease for lives to come
And cannot be extended from
The legal tenant.
'Tis a chattel,
Not to be forfeited in battle,
If he that in the field is slain
Be in the bed of honor lain,
He that is beaten, may be said
To lie in Honor's truckle-bed;
For as we see the eclipsed sun
By mortals is more gazed upon,
Than when adorned in all his light
He reigns in serene sky most bright.
So valor in a low estate
Is most admired and wondered at.

BUTLER.

The crow may bathe his coal-black wings in mire
And fly with the filth unperceived away,
But if the snow-white swan should so desire
The stain upon his silvery down will stay.

SHAKESPEARE.

PRESIDENT MITCHELL WILL PRESIDE

From the Hutchinson (Kansas) News of February 5th we quote as follows:

"Mr. W. H. Mitchell claims that he was elected by the legal delegates and that he will preside at the next annual convention. He says he will occupy the chair and wield the gavel, and Kansas is with him. . . . The Kansas members feel that they are in the right and they are standing, every one of them, with the faction that elected Mr. Mitchell president. That Mr. Mitchell will preside at the next national convention is believed, for they believe he is in the right and he has the backing of the people who founded the society and of the people who want to see the organization carried on as it was at first intended."

THAT YOU MAY UNDERSTAND

Some Heretofore Unwritten History of the Recent Convention

No one should be blamed for striking in defense of self or good principles. The laws of God and man alike justify that. Still, UP-TO-DATE FARMING is tired of seeing its columns marred by a continuation of the wrangle that had its origin with the meeting of the board of directors a year ago, or perhaps, more properly, in the 1906 convention.

The troubles may be said to have arisen out of the espousal by a majority of the board of certain schemes to organize the consumers of farm products and establish stock corporations called Equity Exchanges, which were clearly unconstitutional and which could be in no sense of any greater advantage to the farmers than the commission houses already in existence, while in this case the farmers were expected to finance them in the interest of ambitious individuals seeking jobs, and in retaining in the employ at headquarters a number of incompetent employees. These things President J. A. Everitt, with his characteristic honesty, backed by his usual vigor, opposed, with the result that the wrangle reached its zenith in the convention of last October.

Our readers are no doubt as tired of it as we are; but we are now approaching the "parting of the ways" with some of our highly esteemed and, we believe, sincere and honest members and subscribers who may have worse than wasted their money in paying dues to the alleged officers of the A. S. of E.; at least, who have paid their money to such people as will not enable us to continue sending them this paper. Also there are many members who from doubt, hesitated heretofore to renew their subscriptions. Assuming that all members of the Society of Equity are fair-minded and want to do right and will do right if not deceived into doing wrong, we feel justified in giving them these final words of more definite explanation.

An Unusual Convention

What pretended to be the fifth annual convention of the American Society of Equity of North America convened at Indianapolis, Ind., October 22, 1907.

It was a remarkable convention in many respects. From the hour of its opening it was apparent that there were people in the convention who were determined to carry out a program of their own without any regard to courtesy, custom or equity.

The program that was arranged previous to the convention and printed in October 15th number of this paper was discarded and a new program substituted. The original program provided a place for the president's annual address and placed the election of officers on the last day of the convention, following all precedents and the logic of business. The new program provided for the officers being elected the first business after seating the delegates and the president was not accorded an opportunity to deliver his address.

We might say much more about this convention that was unusual, such as it having been the special work of the secretary and his assistants for months to make it to order; denying members of the A. S. of E. the right of speech on the floor and granting it to members of the A. F. of L.; announcing one hotel as the official headquarters and then steering most of the delegates to another; securing a representation from three near by States, not the greatest in membership, that dominated the convention, etc.

Would it be any wonder if a convention promoted and managed as this was and as revolutionary as its proceedings proved it to be, would make mistakes? But its mistakes were fortunate for the original society and we may believe that an all-wise Providence directed the convention and made the efforts of those who entered the convention hall with one of the most infamous conspiracies ever conceived against a good movement, impotent.

To explain: The corporate name of the Society is, The American Society of Equity of North America. In this name the charter was granted by the State of Indiana.

The committee on revision of constitution and by-laws changed the name to The American Society of Equity and so reported to the convention. Their report began as follows:

ARTICLE I

NAME AND MEMBERSHIP

This organization shall be known as the American Society of Equity.

The convention received the amended constitution and by-laws, passed on the amendments and finally adopted it with the name changed. The convention adjourned Friday night.

* * *

By Friday the 25th it was evident to thoughtful people that the society would emerge from this convention bearing very little resemblance to its former self. It had assassinated its plan, attempted to annul a fair contract, indorsed a million-dollar capital stock company, obligated the membership to buy only goods bearing the union label, added to the objects of the society contrary to the charter and contract with its members and, from appearances at that time, was going to close its business and adjourn the convention under a new name.

At this stage of the proceedings a few delegates who were deeply concerned for the future of the society met to consider what to do to save the society, if anything could be done. They knew if the convention then in session adjourned under the altered name that it would be a new society by name, with some new objects, with a new official paper and new officers. It did not look very good to those delegates. They knew that the old plan was sound, because they had received benefits by it. They were satisfied with the objects and they believed the same official paper that had brought the society from nothing to its present power could be depended upon to continue its development.

At this juncture legal advice was sought and the whole situation was laid before one of the ablest attorneys in the country. His recommendation was that delegates who were dissatisfied with the acts of the convention then in session should assemble and organize the annual meeting, or convention, of the American Society of Equity of North America and transact the business of such a convention. Then if the first convention adjourned under the name "American Society of Equity" it will have forfeited the charter, and the second convention would be the only legal convention and the officers it would elect would be the officers of the American Society of Equity of North America for the next year.

This program was carried out and the first convention did adjourn holding to the changed name.

Following the adjournment of the second convention and at the first meeting of the board of directors the following action was taken:

On motion of Mr. Everitt, seconded by Mr. Harding, it was resolved that this board of directors call upon the directors elected by the other convention and make known the action of the convention.

Carried.

The provisions of above resolution were carried out.

When the acts of the second convention became known to the officers of the first and they were informed of the change of the name, the words "of North America" were written in the draft of the constitution with pen and ink. But this act did not change its status.

Far-Reaching Effect

Members of the A. S. of E. are asked to view the condition that now is presented calmly. Remember that the delegates participating in the second convention repudiated many of the acts of the first convention, considered them illegal and clearly against the best interests of the society. To show that that convention was not actuated by any spirit of spite or jealousies, it was made a part of the proceedings, declared and published as follows:

The action we have taken is a precautionary one, to save the society from mischievous counsels, wrong purposes and evil influences. Should these continue to dominate the organization, we stand ready to act, and act promptly.

For nearly two months the officers elected by the second convention were passive as regards steps to assert their rights, hoping that the officers of the first convention would realize their position and either go into court to test their title or make overtures to the other officers for a satisfactory adjustment, which would include resuming UP-TO-DATE FARMING as the official paper as was desired by nearly all the members.

In December, however, it became apparent that hope for a settlement need not longer be entertained. When the officers of the illegal convention notified the members that if they selected UP-TO-DATE FARMING as the official paper they would lose their membership it became evident that it was their intention to kill either the society or the paper. For instance nearly all the members wanted UP-TO-DATE FARMING as the official paper. Therefore if they took what they wanted the society would be without members. But the officers argued that by this threat they would force their official paper on the members and UP-TO-DATE FARMING would be killed.

When this condition presented itself it was concluded to make the second headquarters an active one. As any mail addressed to the American Society of Equity of North America would go to the other headquarters it was decided to temporarily do business under the name of the Farmers Society of Equity.

The situation, therefore, resolves itself into the following:

1. The present acting officers of The A. S. of E. and the headquarters they represent, have no legal standing.

2. All local unions (and other unions also) holding charters from The American Society of Equity of North America, are subject to and have their authority from the organization and headquarters of which W. H. Mitchell is president and whose official paper is Up-to-Date Farming.

3. The Farmers Society of Equity headquarters, Indianapolis, Ind., is the representative of the legal society chartered by the State of Indiana under the name, The American Society of Equity of North America. The name now used was chosen temporarily, to distinguish it from the false society.

4. The first convention adopted practically a new constitution. It increased the fee and dues; denies local unions direct representation in the national convention and suspends members three months in arrears.

5. The society as represented by the second convention is under the former constitution with a few amendments which are mainly set out in the first column of "Official Department" in this paper. The fee and dues remain the same, the rule of membership was amended to guard against interlopers getting into future conventions, representation is provided for every local union, and members are not suspended until twelve months in arrears.

6. The pretended constitution sets the annual national convention in December, entirely too late for determining minimum prices and providing for the holding of products for controlled marketing, as many crops will be largely disposed of by that time. The real constitution (that represented by the F. S. of E.) retains the former time for the national annual convention, October, which is the most suitable time of the whole year considering the duties of the convention.

We deplore these conditions very much and no one regrets them more than Mr. Everitt. But we are not responsible for them. Those who made them, the first convention, are the ones responsible. They succeeded in legislating the society out of existence, but the second convention saved it. We publish the facts as they are and ask that the members view the situation in all calmness. A knowledge of the facts as now published will bring relief to many members, as those who paid the 1907 dues will be in good standing for 1908 even though they may be undecided about paying the 1908 dues, and they can participate in the 1908 convention next October.

Members should not, however, expect the official paper to continue to them without payment, as a recent post office ruling (affecting all papers) forbids this. Of course it is hoped that each member will pay his dues to the F. S. of E. at once, but if for any reason he prefers to not do this, then he should renew his subscription at

SOME POINTS EVERY MEMBER SHOULD KNOW AND REMEMBER

THE BY-LAWS of the American Society of Equity of North America (expediency name Farmers Society of Equity) acknowledge members in good standing until twelve months in arrears (this is the 1907 law unchanged). Hence all members who paid dues in 1907 will be members; in fact until the end of 1908, according to the law. However, the official paper will not be sent them except a renewal is sent.

The by-laws also provide for the national annual meeting in October as heretofore. This is the most logical month of all to meet and decide the minimum prices for the year's crops, which should be the chief duty of the meeting.

The by-laws of the new A. S. of E. suspend members three months in arrears. Hence all members of 1907 who do not pay their dues for 1908, by or before that time, are no longer members.

The by-laws of the new society also provide for the annual national meeting in December, beginning the first Monday. The revolutionary convention appears to have forgotten all about its chief duty of agreeing on minimum prices and set the time of meeting when the bulk of some of the chief crops will be sold.

At the convention next October all the troubles that have arisen in our society can be remedied, and we predict will be. It will be like waiting a year and then the members who should have seen that equity prevailed and that justice was done at the 1907 convention, can hold a convention that will be a true convention of Equity for a true Society of Equity.

We believe, after members read the article "That You May Understand" on this page that they will see more light ahead than they have for months.

The present situation is most interesting with important developments to follow. Therefore it behooves every member to renew his subscription to UP TO-DATE FARMING at once. We make a special offer of 50 cents to members, or your own subscription for 1908 and a new subscriber for a year for 75 cents. We make this offer to double the circulation of UP-TO-DATE FARMING, and as a result, its power to get profitable prices will be doubled.

once and proper allowance will be made when paying dues later.

Our sincere hope is that a way will be found, speedily, to remove all the troubles that our society has encountered since the convention of 1906, nearly a year and a half ago. In the meantime please understand that there are not two societies in the field, but only one. The name Farmers Society of Equity had to be selected for identification and insure mail reaching the proper place.

A FAKE CONSTITUTION

How Can a Society Live Under It?

Following is a review of the constitution adopted by the first convention, by Mr. W. C. Webber of Rochester, Minn. He was a delegate to the convention.

Some time previous to the late annual convention, and in accordance with a resolution of the board of directors, the president of the society appointed a committee to consider necessary revisions to the constitution and to recommend amendments to the convention.

After devoting several days to its work, this committee had thoroughly gone over the old constitution and revised it so that it might be a credit to an organization like the A. S. of E. This revised constitution was turned over to a similar committee appointed by the convention, which included one member from each State represented and also included several members of the president's committee. With but few changes, the convention committee reported practically the same constitution that was drafted by the president's committee, and much to the satisfaction of the members of that committee, it was adopted.

Imagine our surprise, therefore, upon receiving a copy on December 7th of the newly printed "Constitution and By-Laws," which is a conglomeration of errors, misfits, contradictions and omissions, including provisions that were never considered by the convention. And yet it is signed by the officers elected at that convention, as havquire too much time and space to refer to all of the errors and omissions here, but let us consider just a few of the most flagrant.

In providing for officers of local unions it provides quite distinctly that there shall be both a secretary and treasurer—two offices—and yet under "Duties of Officers" it doesn't mention a secretary at all. Under the heading of "Treasurer" it provides for the duties of a "secretary-treasurer," which combination is not provided for. And then it goes on to say that he shall pay out all money on warrants signed by the president and "secretary."

But the greatest lot of inconsistencies and incomprehensible contradictions appear in Article IX. We defy any member to figure out, from this, what the national union consists of.

How is the representation in the national convention apportioned?

If *local* unions are the most important of all the organized forms of the society—if they are the real governing power—then why should they not be entitled to representation at the national conventions?

Does it not look as if every effort was being made to cut out the real farmer entirely—to disregard his membership and deny him the right to representation?

Section 1, Article IX, provides, first, that *all* organized unions of the society shall be represented at the national union—this means local, county, State, district and department unions—*all*.

But later it provides that if a State union exists in a State, then only that "State union" shall be entitled to send delegates—cutting off the local and county unions entirely. In Section 1 it is provided that State unions shall elect a delegate for each "400" members in the State. Section 2 says that the State union shall be entitled to one vote for every "200" members in the State and that a delegate should be elected for every 200 members—instead of 400 as provided in Section 1.

Which is right? What does it mean? Again, Section 1 provides that if a State union has *not* been organized, then organized county unions shall be entitled to send one representative for every "300" members in the county. But in Section 3 this, too, has been changed. Section 3 says that these county unions which are entitled to representation, shall be entitled to a vote for every "200" members, etc.

Which is right? What does it mean? Section 3 continues with this sort of vagueness — "and apportionment of votes shall apply to all *county unions* in *un*organized counties as herein laid down," etc. How can there be *county unions in unorganized counties?*

But how about the all-powerful local union? It simply has nothing to say in national conventions, according to the constitution. The *real* members of the society, the sole support, the man for whom the society was originated—the farmer out in the local union—he is "not in it."

The officers elected by the first convention claim over their own signatures, that the convention adopted this constitution, which makes it impossible for many local unions, members in many States, to have a voice in the conduct of the business of the society.

Unless there is a State union—or in the absence of such—unless there is a county union to which the local belongs, then that local is "out of it."

How about the members in Alabama, New Jersey, Oregon, Utah, Washington, North Carolina, Ohio, Tennessee, W. Virginia, ennsylvania, Iowa, Montana, and every other State?

These States have many members and many local unions, but they don't happen to have any county unions nor State unions. So we simply "freeze" them out, deny them representation.

North Carolina has local unions in t different counties, but only four of these have county unions, so the members in six counties have no voice in the national conventions—not even through State delegates, because there is no State union there. Ohio has about 1,200 members — fifty-six local unions in thirteen counties and yet none are entitled to representation in national conventions. Is it any wonder that members all over the country are furious with indignation? Is it any wonder that the farmers see evidence of disruption all along the line, are protesting against and disapproving the acts of those who aim to ruin the only organization that ever promised the farmer his freedom?

Again, referring to the new so-called constitution, we find no provision whatever for salaries to the officers of the national union, excepting that the board of directors shall receive $3.00 per day when working for the national union. Are the national president and secretary-treasurer working for $3.00? It looks very much like it. They are members of the board of directors and no other provision is made for their compensation. Not even is it provided that the board shall determine their salaries. *They cannot draw one dollar of salary,* according to this constitution. Under the heading "Official Salaries" is included two sections that have nothing to do with the title of that article —referring only to "official paper." The men who "drafted" this constitution to suit themselves are to be congratulated upon their ability in this line.

Look at Article XIII, General Provisions, Section 11. Let every delegate to the convention take notice. This is included, mind you, like all the rest, as if it had been adopted by that convention. It says that the "Equity Farm Journal," published at the headquarters of the society, is the official paper, etc. Somebody wants to shift the responsibility of that "poor excuse" of a paper upon the convention. Well, we can't blame them much.

As a matter of fact the Equity Farm Journal had never been mentioned, never even thought of, when this constitution was adopted. That Equity Farm Journal was an "afterthought" entirely—the creation of the few whose object was to "turn down" UP-TO-DATE FARMING.

Of course everybody knows that the farmers *will not* stand for it, that even that *convention* wouldn't stand for it. So it was done after the convention had adjourned and the delegates had gone home.

But the serious part of it is, *how does it get into the constitution?*

Was that an after-thought, too? Are constitutions things that can be tampered with in this way? If so, this one needs a little more of it.

Was *this* constitution passed by that convention—this constitution as it now appears over the names of the national officers? If not, then how can it be a constitution?

Members of the president's committee on constitution know that this is not the result of their work as submitted to the convention.

Members of the committee on constitution, appointed by the convention, know that this is not the constitution reported by them. Delegates to the convention who heard the reading and adoption of the constitution, know that this one, in its entirety, is not what was adopted.

It simply goes to show what a "bungling" job they made of it all. And the result is that there is *no new constitution.* This one means *nothing.*

The society, if it proceeds at all, must proceed under the old constitution. We appeal to the members in this matter. Certainly we cannot go ahead under the constitution that these present officers are passing out to us. Shall we go ahead under the old constitution which makes UP-TO-DATE FARMING the official paper, and which provides for compensation to the national officers — small though it be — and which entitles full representation to all the organized unions in the society?

Yes, let us adhere to the true principles of the society, let us carry out the original plans of Equity. Let us refuse to be led away to destruction without a star to guide or a rudder to steer us. Let us get along with moderate co-operation from organized labor—and other organized classes —but let us not be hopelessly absorbed by them. The way is open and clear, thanks to those who, through all this trouble, have had an eye to the ultimate triumph of the farmer.

Let us proceed, then, as the *Farmers Society of Equity.* Let us, as members and as local unions, proclaim in our meetings our loyalty to the founder of the society and resolve to follow our true inclinations, defying others to *drive* us where they *choose.*

W. C. WEBBER,
Rochester, Minn.

(NOTE—Since the above was in type the proceedings of the convention has been printed. A casual sketch of it does not reveal that it contains the constitution as adopted, but in various places rather unintelligible discussions are printed on amendments proposed. The review is based on the pamphlet of constitution ond by-laws as formerly published.—Ed.)

Loyal to the Members

THE enemies of Mr. Everitt said that he was out of accord with the board of directors and would not be governed by them, and for these reasons they told the delegates he should be removed. Delegate O. W. Stevens wrote to President Mitchell in February, 1908, as follows:

"I have no faith in a man who will not be governed by a board of directors."

And, no doubt, the other delegates felt the same way. But they were deceived. Mr. Everitt stood absolutely loyal to the members and the society, while a majority of the board betrayed the members and were traitors to the society. The question now is, Who will the members put their faith in? In these times of almost universal graft and betrayal of trusts in public places, will the members censure Mr. Everitt, and condemn him, because he would not be controlled by the rebel board?

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR. A CLUB OF FIVE FOR $2.00
Foreign Subscriptions, including Canada, $1.00 per Year.

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY.* Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The datest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

HON. JAMES E. WATSON.

Joint author of the Watson-McCumber Federal Grain Inspection Bill now up for consideration by the national Congress at Washington, the passage of which, and its enactment into law, being practically assured.

In his championship of this measure, Mr. Watson at once lays claim to the friendship and gratitude of the largest and poorest paid class of toilers in the country—namely the American farmers. Give us more men like Watson and McCumber is the wish of UP-TO-DATE FARMING.

WHEAT PRICES A GAME OF CHANCE

Though the incidents mentioned below are "ancient history" as we now count events, they are of very recent occurrence, and they well illustrate how prices of the most important farm products are made.

January 28 wheat sold in Chicago at $1.02, and at that price J. Ogden Armour is said to have sold large quantities of it for future delivery; that is, or what is really the transaction, he bet that the price of wheat would go down. How much he "sold" on such a wager is not known; but three days later, reports, true or false, genuine or forged, hired to be sent or sent as real news, no one knows, but the effect was the same—reports came of heavy shipments of wheat from Argentine, a panic was precipitated on 'Change, and the price of wheat dropped January 31 to 95¼ cents per bushel!

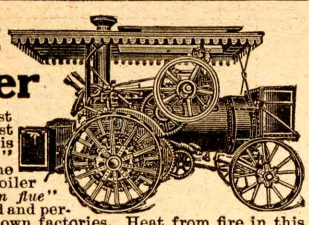
Now see the result. Suppose Armour had sold on the 28th, 500,000 bushels of wheat, which he could have done as these deals are made without owning a grain of real wheat, the purchaser must pay him the difference between the price at which he "sold" and the price at delivery, or 6¾ cents per bushel, equal to $375,000. No one seems to know just what Armour did win, but it was the opinion on 'Change that his "profits," his winnings, that day amounted to from seven hundred thousand to a million dollars. All because reports of heavy shipments of wheat had come, or had been made to appear to come, from the Argentine.

But the pathetic side of such transactions is the real side. Suppose a farmer had a thousand bushels of real wheat that he was unable to deliver on the 28th, but that he could and did deliver on the 31st. Armour's winnings cost him $6.50. Suppose an unsuspecting country buyer, though well informed and prudent as a business man could be, attracted by the price of $1.02, shipped on the 28th, ten thousand bushels from Kansas to Chicago. It reached its destination on the 31st, and the shipper lost $675 on the game that Armour is said to have played.

And again. In all games of chance, or speculative deals of this character, what one gains or wins another, or others, must lose. If Armour won a million dollars somebody else lost a million dollars.

We break up gambling houses, we forbid "bookmaking and pool selling," we destroy gambling devices, and the spirit of the churches and the moral sentiment of the age declare we do right. Why, then, cannot some way be found to stop this most pernicious of all gambling, gambling that sets a price on every drop of sweat that falls to fertilize the broad acres of our farms? This is a matter that affects farmers most of all, and they must make the Legislatures and the Congress hear them.

Most Power



You get most power from least fuel with this "New Huber" Traction Engine —because its boiler is the *"return flue"* type, developed and perfected in our own factories. Heat from fire in this boiler passes *forward* in a large flue, through the water, and then this heat comes through the water *again*, in tubes, to the smoke stack in the rear. Thus, the boiler has *double* heating capacity. Heat passes through the water *twice*. The "New Huber" Traction Engine has many other *exclusive* features, about which we tell in our new catalog of Traction Engines and Threshers. This catalog we send you **FREE** for the asking. Send no stamps. Just ask. No matter how you may wish to use a Traction Engine, you should get our catalog before making up your mind to buy. Write us today.

STELLE.

ONLY PRELIMINARY

The "stubborn glebe" once more yields to the plowshare's winsome glance, and again at night "the weary plowman homeward plods his way." Such thoughts bring up the dreaming school days, but—well, the old poetic lines filled a niche in many early lives and made easier weary tasks.

All is bustle on the farm these days. The farmer who "took time by the forelock" and got everything ready in advance is the one that can smile while he works now, because he is not behind.

The manure spreader is a labor saver this time of the year. Many farm profits are wrapped up in the by-products, one of the most important of which is the manure gathered in the barn and barnlot. If it is still there it is in the way, and yet there is good money hid away in it. If you have a manure spreader it is but a small job to put it exactly where it will do the most good, and where you will get the money out of it in the very next crop.

It would be a pity and a loss to have to stop the main farm work to repair gates and fences. There will yet be days when you can look after such jobs as that without interfering with the main work. "Redeem the time."

One of the worst of all the petty annoyances on the farm is the summer supply of fuel, whether it be wood or coal. See to it that this is laid in early, so that the women won't have to "scrape around" for something to cook with, so that your dinners will not be late and unsatisfactory, and so that you won't have to stop in some "special pinch" to get wood.

Uncle Threadbare, who is an intimate acquaintance of ours, burns rails for cook wood nearly every summer. They make good wood and the women like it, but he can't spare the rails; and he don't intend to burn them, but it seemed like he just couldn't get up wood when he had less else to do, and now he is so busy, when his wife asks for wood he dashes out, snatches a rail, and soon has it into stove wood.

Don't over crop. Land is getting too high priced to make a plaything of it, and life is too short to spread it too thin over big fields. Men fail because they don't do enough, but the worst failures are in trying to do too much. In such cases the land cannot do its best and the farmer wears himself out to little purpose. Undertake only what you can do well and then see that you have a good stand so that every foot of the ground will have its reasonable work to do, and then see that the growing plants have every encouragement to do their best. There is more profit in growing a thousand bushels of corn on ten acres than in growing the same quantity on fifteen or twenty acres.

Akin to soil fertility is the importance of good seed. One cannot afford to bother with inferior seed. It makes a doubtful business all through the crop, and more doubtful still at harvest time. And, since like begets like, a difference is very apt to show up in the marketing. Beginning a battle right is commencing half way to victory.

Farmers have done more for the world than any other people, but they have done less for themselves. They have felt burdened with the obligation to supply the universal need for food and clothing, but they have forgotten that they have needs of their own which the sale of their products must supply. This matter they leave to the "other fellows," who are always on the watch for a "sharp bargain," and the farmer generally gets the sharp edge.

Said Jim to Dod,
Don't be a clod;
Avoid such ruthless fate.
Progressive men
We may be when
We all read UP-TO-DATE.

TESTING SEED CORN

G. I. Christie of the Purdue Experiment Station has found that the average corn produced last year is not very reliable for seed, and seed for this spring planting should be selected with unusual care. Mr. Christie suggests the following method of testing it:

Take a box made of inch lumber of any convenient size, say about 2 by 3 feet and 3 inches deep. Through the ends and sides about 2½ inches from the bottom, bore small holes 2 inches apart. Through these holes, string a light galvanized wire, which will divide the box into squares 2 inches to the side. Then fill the box with garden soil or sand and it is ready for use. The ears should be laid on the floor or racks in a row so they can be numbered. From ear No. 1 remove five kernels, each from a different part of the ear, and place these in square No. 1, remove five kernels from ear No. 2 and place in square No. 2, and so on until all the ears have been tested. After placing the kernels, moisten the material in the box thoroughly and cover with a glass or rug to keep the surface from drying. Place the tester in a room of ordinary living room temperature or about 70 degrees Fahrenheit. After five days examine the corn and any ears that fail to show a strong germination of the kernels should be removed and discarded.

THE HESSIAN FLY

Wheat growers know what the Hessian fly is; that is, they know it through its ravages in the fields, yet it is safe to say that many farmers whose crops year after year have been damaged by it, never saw the insect. The adult Hessian fly looks quite like a small mosquito, and they appear both in the spring and in the fall. But the fly itself is entirely harmless so far as injuring the wheat is concerned. The business of the adult insect is to lay the eggs for the future brood—it never eats and it does not live but three or four days. The eggs laid in the spring are deposited where the grubs do but little damage, but they provide for the fall crop of flies, and these are the ones that lay the eggs that hatch the mischief makers. They become flies in September, October or November, according to climate, just in time to find the fields of winter wheat growing green, and they immediately busy themselves laying eggs on the young wheat plants. The eggs, very minute specks almost invisible to the naked eye, are deposited in the rib groove of the blade very near the base. The egg hatches in a few days and the little grub, aided by gravitation, makes its way down the groove into the sheath that covers the stem. Here it begins to feed on the sap and to grow, one or even more being at the base of every leaf perhaps. Of course the sap taken starves the plant. As its period as a grub is finished, it imbeds itself in the stem and becomes a crysalis, that looks very much like a small flax seed. In this state it remains all winter, to hatch out the brood of flies in the spring. By stripping off the blade sheath in the fall the grub may be found. Any time during the winter the "flax seed" may be found in the same way.

This is a hard insect to fight. Where wheat has a vigorous fall growth, pasturing it down may de-

FAIRBANKS, MORSE & CO. - CHICAGO, ILL.

stroy many eggs and grubs, or, later, many "flax seeds," and thus diminish the next spring, and consequently the following fall brood that injures the subsequent crop. As we have said, the fly lives but a very few days and has but a short time in which to lay its eggs. If the farmer could know just when the insect matures in his locality, and not sow until the brood had perished, he would have the pest beaten. Farmers know that late sown wheat is damaged less by this insect than the early sown, and that is the reason.

APPLYING MANURE

Domestic manures are not so popular as they deserve to be because the way they are usually applied puts them at so great a disadvantage they cannot prove their worth. When commercial fertilizers are bought at from $20 to $25 per ton, they are handled with care and economy. In the first place ,the ground is put in the best condition to receive them, and they are then put where the growing plants can most certainly feed upon them. The result is seen at once, and the commercial fertilizers are boomed.

But the barnyard manure that does not have to be bought, but which possibly has more available plant food ton for ton, is treated very differently. If it is hauled out at all, it is dumped in piles here and there, to be scattered out with a fork at "a more convenient season"; or it is thrown from a wagon in shovel or forkfuls, thus putting too much in spots and none in other places. The result is not so readily seen, and barnyard manure is not much thought of.

Another implement is needed, and that is a pulverizer of barnyard manure. The manure spreader is a great aid in pulverization, but we believe finer pulverizing would be better. So far as applying is concerned, the spreader leaves nothing more to be desired. With the manure pretty well rotted, reasonably pulverized, and dry enough that it won't mud up, the manure spreader will distribute it evenly all over the field. If this be done on plowed land that has been rolled, dragged or harrowed down, and then harrowed afterwards and before planting, the farmer need not wait long for results.

A farmer cannot buy an implement that will sooner pay for itself than a modern manure spreader, provided of course he makes enough manure to justify the investment required to get one. Where there is a deficiency in the quantity of manure made, neighbors might profitably and pleasantly club together in the purchase of one to be used around.

HAVE REGARD TO THE SEED

None of Our Up-to-Date People will plant doubtful seed, nor will they plant cheap seed to save a few cents or even dollars. The difference in the cost of good and bad seed is not to be considered. It takes just as much work, and occupies the land just the same, if it does not draw from it as much fertility, to grow an imperfect crop of indifferent stuff from poor seed, as it does to grow a good crop of first-class stuff from high-grade seed. The best is none too good for those who till the soil. They must take many chances at best, but they should take no risks of their own choosing, or that they could avoid.

Farmers who wish to get seed from abroad should not delay the getting. It is already late as this paper reaches the reader. Being ready is half way to the victory. Waiting has caused many a farmer to plant seed he had decided not to plant, and led to a season's struggles against adverse conditions and the harvesting of an inferior crop. Get the best seed, and get it in good time.

We have received a catalog from F. E Myers and Bro., of Ashland, O., and it is a magnificent example of the catalog makers' art. It is one of the most substantial and complete catalogs we have ever seen. Myers Pumps of all kinds and Hay Tools are known the country over. Most dealers sell them . They are standard. If you need a pump for water or spraying or Hay Tools, etc., send for the Myers catalog. Mention UP-TO-DATE FARMING FARMING in writing.

SEED CORN WANTED

Have you some good grade of seed corn to sell? Several of our readers want to buy it. Place an ad in our Business Exchange and sell it to the best offer.

Out in Washington they say they have the best climate and farming lands in the United States. Those who are thinking of a new location should investigate. Write The Big Bend Land Co., Room 10, 3 Washington St., Spokane, Wash.

BUY A MANURE SPREADER

A manure spreader is one of the greatest modern helps on the up-to-date farm. It is a proven fact that by far the greatest percentage of fertilizer is *wasted* by old methods. A manure spreader saves this.

RIPE grain waits for no man.

The loss of golden hours in the field means the loss of golden grain and the loss of golden profits.

So the profits that *you* make from *your* grain depend upon your harvesting machines.

Trouble and tinkering, breakdowns and delays through *unreliable machines* would mean the loss of time and money —would mean needless expense and worry.

You cannot afford to risk your profits on doubtful harvesting machines.

And there is no reason why you should.

Because *you know* the machines you can *always depend upon*.

Since the click of the first reaper—more than *two hundred* concerns have offered harvesting machines to the farmers.

Out of these two hundred and odd, over *one hundred and ninety*, up to the present time, *have disappeared* because *their machines were not right*.

This means that thousands of farmers tried such machines, lost money through them and condemned them.

Through these years of "testing" the farmers found the best and placed their greatest confidence in six machines.

You know the machines that have earned first place through this test of time.

And you know that the

Champion, McCormick, Osborne,
Deering, Milwaukee, Plano,
Harvesting Machines

hold their undisputedly supreme position today—

—Because they are right—
—Because they have always done the best work—
—Because they have always satisfied their users—

Because they have proved by many years of use that they can always be depended upon.

That is the reason (there can be no other) they have *earned* the approval of the farmers.

This means that they have withstood *all* the tests of *all* conditions of harvest fields *everywhere*.

It means that they are built on the right principles.

It means that, of the numberless types of harvesting machines put out in the years past, these embody the ideas that have been most successful in actual work.

It means that they are the net result of all the good that has been developed in a half century's experience and experiment and that there is no feature about them that is untried or experimental.

Today these machines are more popular than ever.

This means that they have steadily led in improvements from year to year, thus holding the place they have established as the standard.

In order that these machines shall continue to be the best, the International Harvester Company pays more than $350,000 a year to more than two hundred men in its Department of Improvements.

By working together the manufacturers are able to erect and maintain Experimental Shops and Laboratories to work out every principle and detail of harvesting machines, which would be far too costly for any one single manufacturer working alone.

Thus this company is able to discover and devise better methods of operation, better principles of construction so as to make these machines more efficient, more easily operated—better for you and better for your pocketbook.

This company and the interests it represents have spent many millions for improvements and no single manufacturer working independently could afford to pay even a fraction of the sum this company pays for the greatest inventive genius and the highest mechanical skill necessary to produce the most improved harvesting machines.

The demand for them is so great that it enables the International Harvester Company to own its own coal and iron mines, thus securing the best fuel and ore; its own iron and steel mills, thus producing the best iron and steel; and its own forests and saw mills, thus securing the best lumber.

For the same reason this company is able to select the best of all raw materials and maintain factories equipped with machinery of the highest type, manned by workmen of the greatest skill.

Thus this company is able to produce a quality of construction, which could not possibly be maintained to supply the comparatively small demand which would come to an individual manufacturer.

In materials, workmanship, design and mechanical principle, in every feature of construction, the International line has a potent reason for its superiority and the satisfaction it gives you.

Call on the International dealer and secure a catalog.

If you do not know an International dealer, write us, and we will be glad to give you the address of the one nearest you.

Equal in importance to a perfect machine is perfect twine. The most perfect twine made may be had in Champion, McCormick, Osborne, Deering, Milwaukee, Plano and International sisal, standard, manila,and pure manila brands.

"What fools these mortals be." Price of live stock and dairy products could be as steady and equitable as any commodity in the country in 12 months if farmers will have it.

AS SPRING COMES

Hope hovers over lot and field,
Where neighing horse, and lowing kine,
And grunting pig, and cackling fowl,
And bleating flock, the farmer finds.

A STITCH IN TIME

On the border line between winter and spring, stock need a little better care than at any other time. Instinct if not memory makes them restless. They seem to anticipate the change that is coming. They are apt to tire of the winter feed, and unexpected loss of flesh and strength may result. Vary the feed as much as possible this time of year.

Sheep require special care. Ewes and lambs should be sheltered from the cold spring rains. Our experience is that it is not enough to furnish the shelter; the sheep must be put in and shut up. It is seldom that sheep will voluntarily seek shelter from the worst storm.

Sows that are permitted to run out and to root may injure the pigs by running too much, especially in muddy fields. Wild animals do not make so many mistakes as domestic ones. The attention man has given them seems to have blunted their natural instincts and man's reason must supply what he has destroyed in them.

For several days after foaling, mares must be kept from green grass. Green grass in early spring eaten by the mother is very apt to scour young colts. We have known some valuable colts lost from that cause.

The farms are being looked to more and more for the beef and mutton supply, and stock farming is becoming more in vogue. Much stock will still be produced in the West, but there is no longer room for the vast herds that a few years ago roamed on the Western plains. All of this is a strong argument against vealing calves. It may be true that there is a greater per cent of profit in a good veal calf than at any other stage of the animal's life, and it is unfortunate that it is so, for it increases the temptation to sell. But there is not enough money in the veal calf, and the larger animal is needed. Suppose the veal brings $10, which you consider perhaps two-thirds profit. Instead of selling, keep the calf until it is two, three, or four years old. You then get $30 or $50 or $75 for it. These sums may not be more than one-third profit, but they bring more clear money. It must be confessed, though, that such results require judgment in feeding and handling.

In view of the so-called financial stringency, one cannot bank much on price, so long as stockmen persist in shipping without any system, but people must eat, and there must always be a market for bread and meat stuff. It is therefore safe to raise stock. If growers were as wise as those are who sell to them, and put their stuff on the market only as it is needed, they could easily solve all the hard times problems so far as they are concerned.

The dairy interests need controlled marketing about as bad as any other branch of farming. There is almost absolute monopoly control of dairy products after the raw material leaves the hands of the producer; and the price of that material, the goods in first hands, is made by the handlers with a view to the handled profits in spite of conditions.

Live stock men and dairy people are restless. They are not satisfied with the markets as they find them. Prices are too uncertain, and much of the time they are anything but remunerative. Still shipments are poured into the yards without any attempt at control, and results continue unsatisfactory. It is a pity stockmen are so slow to learn. In their case the buyers, or rather the commission men, would aid them if they would make an effort to control shipments, for the commission men would prefer a steady supply and steady prices. We feel sure they will manage differently by and by.

A friend in need
'S a friend indeed;
Such UP-TO-DATE I've always found.
Though old or new,
'Twixt me and you,
In doctrine it is always sound.

LOUISVILLE LIVE STOCK MARKET

We print below an article clipped from the Bourbon Stock Journal, of Louisville, Ky., under date of January 20, written by its editor, Wm. A. Burnett:

Doubtless our readers have been already informed through another channel that the Central Stockyards would be opened today under another management, a new management, and that among other buyers there would be Armour & Co., Swift & Co., the National Packing Company and the Kentucky Packing Company. The first three named recently figured largely in the famous agitation of the beef trust and they propose to revolutionize the live stock business in Louisville.

A few years ago when the Central Stockyards were first built they made a hard fight for the business, thousands of dollars were spent by the promoters of this concern, trying to convince shippers that their market was the best, but as time wore on the majority of the shippers wended their way back to the Bourbon Stockyards, and the facts and figures show that the verdict of the shipping public was that the Bourbon Stockyards was the only market in Louisville.

CALVES RAISE THEM WITHOUT MILK. Booklet Free. J. W. BARWELL, Waukegan, Ill

Clip Your Horses this Spring

Don't put your horses at the hard spring work before clipping off the long, thick winter coat. Unclipped horses sweat much, dry out slowly and are liable to all kinds of cold, pneumonia, etc., from standing in a long, wet coat during chilly spring nights. Clipped horses dry out quickly, rest well and their food does them good. They can be cleaned in a quarter of the time. ***They look better, feel better and do better work.***

Progressive Farmers and Horseowners Everywhere all Clip in the Spring

This Splendid Stewart No. 1 Clipping Machine

is unquestionably the most perfect clipping machine ever made at any price. The gears are all cut from the solid steel bar, are file hard and completely enclosed. They run in an oil bath and will practically never wear out. So well is this machine made, and of such high grade materials, **that WE GUARANTEE IT FOR 25 YEARS** against all defects of workmanship or materials.

Clip Boys' and Men's Hair with this Machine, too. It does it easily, quickly and well. Save the $1.50 to $3.00 that you pay for hand clippers. Make the price of the machine by clipping for others.

Shear Your Sheep with it, using our special shearing shaft and knife. It gets 20 cents worth and up more wool from each sheep than by hand shears. Send for our ***free book,*** "How to Shear Sheep."

Comes at ONLY $6.75

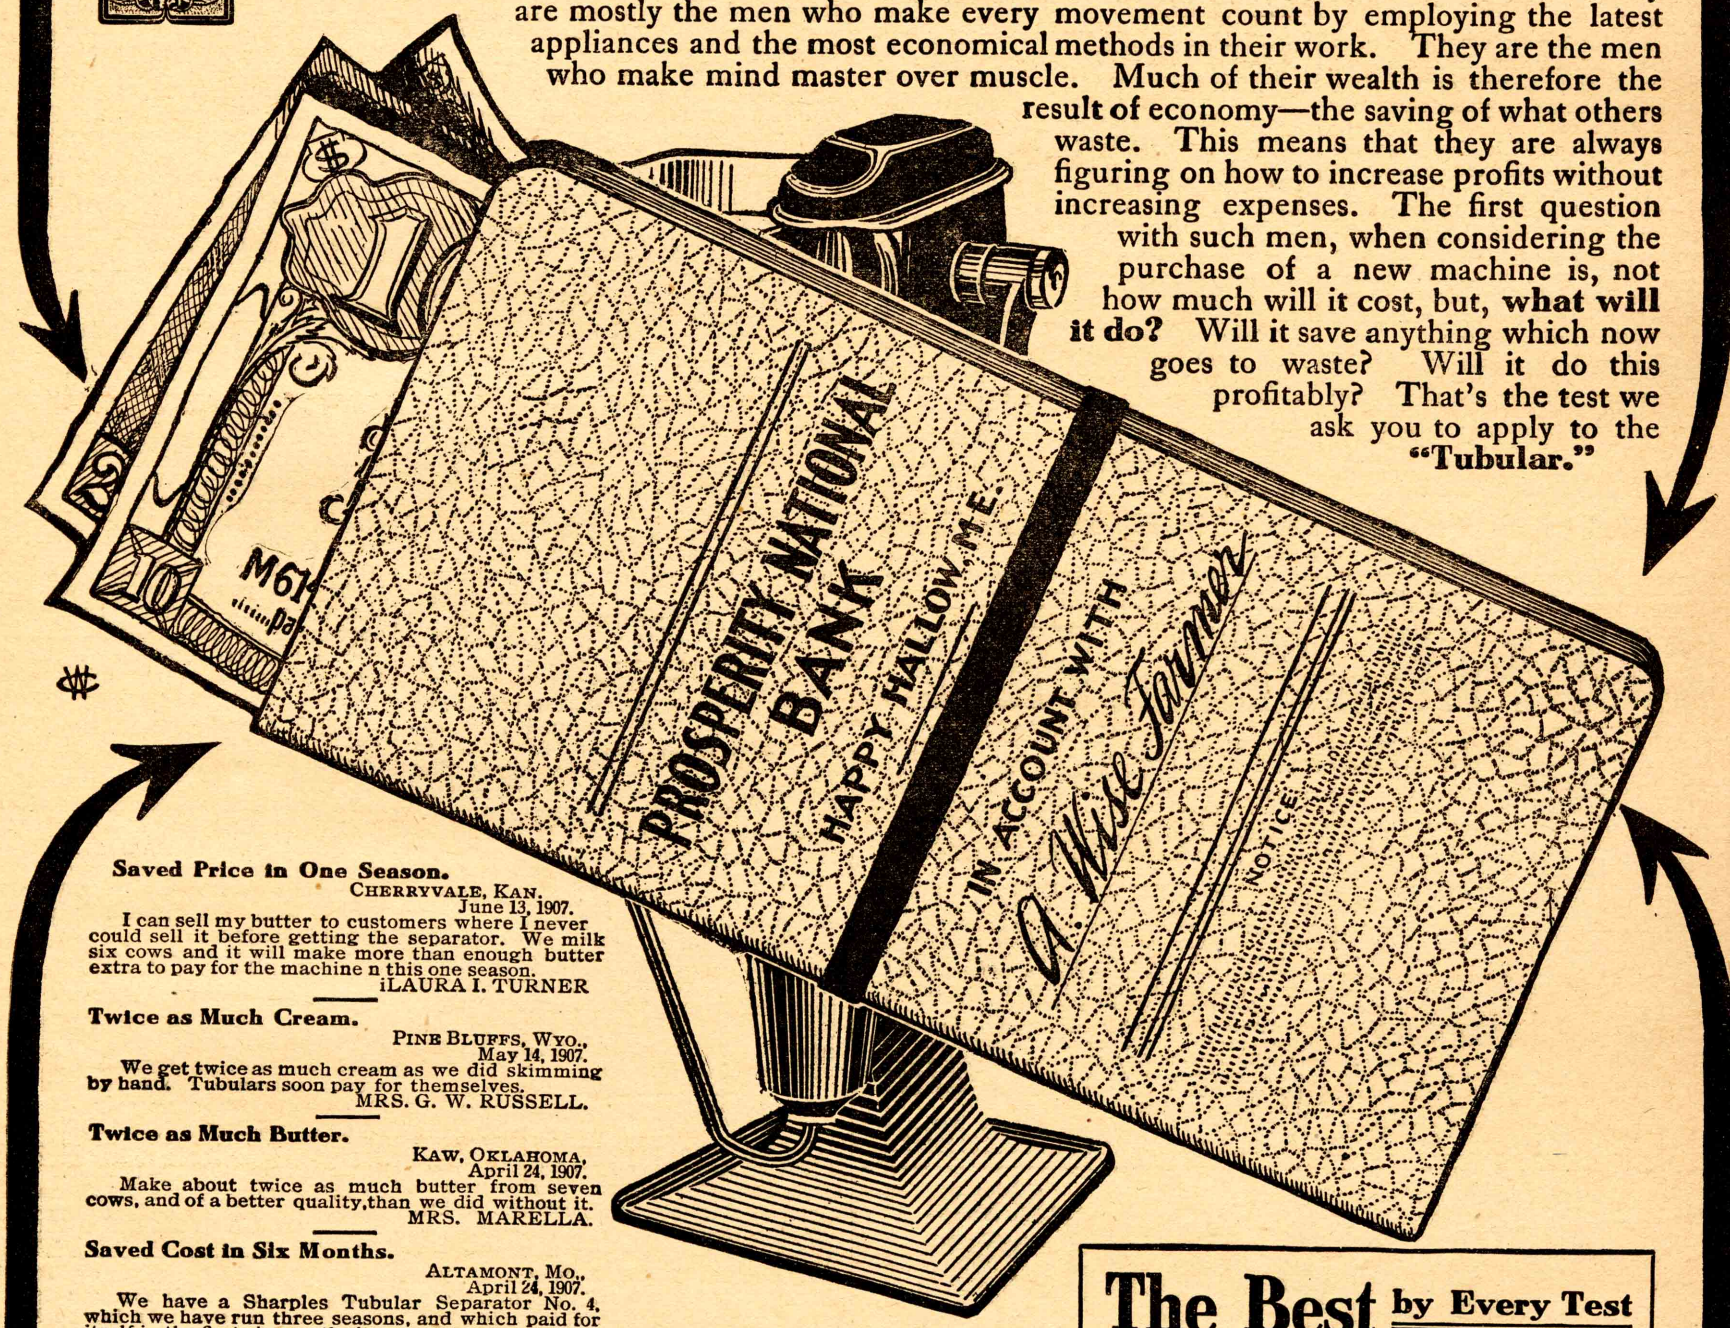
Our Special Offer: Get one of these machines from your dealer. If he hasn't it, send direct to us. When you get it clip your horses with it and clip the hair of all the boys and men about your place; compare it in every way with all other clipping machines you ever heard of, and if it doesn't do better work and prove better in every way, send it back and get every cent you paid out. Get one of these machines from your dealer now. If he hasn't it send $2 direct to us and we will ship C. O. D. for balance. Write for our big new 1908 Catalog of clipping and shearing machines. Write today and ask for Catalog No. 24C.

CHICAGO FLEXIBLE SHAFT CO., 224 Ontario St Chicago, Ill.

Back of the Bank Book

Is the "Tubular" Cream Separator

EVERY dollar of the farmers' and dairymen's money in the banks of this country represents hard labor and wise economy. It represents head work as well as hand work. But it is a fact that the farmers and dairymen whose balances in the bank are the biggest are not always the men who work the hardest with their hands—nor even the ones who farm the most acres or milk the most cows. They are mostly the men who make every movement count by employing the latest appliances and the most economical methods in their work. They are the men who make mind master over muscle. Much of their wealth is therefore the result of economy—the saving of what others waste. This means that they are always figuring on how to increase profits without increasing expenses. The first question with such men, when considering the purchase of a new machine is, not how much will it cost, but, **what will it do?** Will it save anything which now goes to waste? Will it do this profitably? That's the test we ask you to apply to the **"Tubular."**



Saved Price in One Season.

CHERRYVALE, KAN.
June 13, 1907.

I can sell my butter to customers where I never could sell it before getting the separator. We milk six cows and it will make more than enough butter extra to pay for the machine n this one season.
iLAURA I. TURNER

Twice as Much Cream.

PINE BLUFFS, WYO.,
May 14, 1907.

We get twice as much cream as we did skimming by hand. Tubulars soon pay for themselves.
MRS. G. W. RUSSELL.

Twice as Much Butter.

KAW, OKLAHOMA,
April 24, 1907.

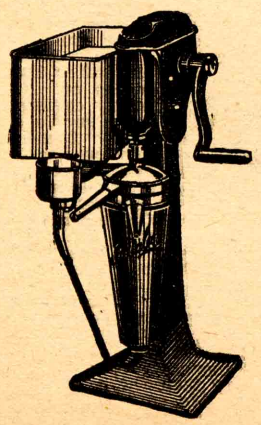
Make about twice as much butter from seven cows, and of a better quality,than we did without it.
MRS. MARELLA.

Saved Cost in Six Months.

ALTAMONT, MO.,
April 24, 1907.

We have a Sharples Tubular Separator No. 4, which we have run three seasons, and which paid for itself in the first six months it was run.
ROSS DeFORD.

The Best by Every Test



We ask you to apply this test because it will be to your interest to do so. If the **"Tubular"** will increase your profits without increasing your expenses you ought to have it. It will. It will make every cow you milk earn more money. That's why we want to put a **"Tubular"** back of your bank book. Thousands of farmers and dairymen testify to the merits of our machines. They say the **"Tubular"** pays for itself in a short time. When it has paid for itself all that it saves is clear profit for there's no expense—it won't cost you a dollar a year for repairs. We've built it so that it can't.

If you are economically inclined; if you want to save money and increase your bank account here's your chance. Our valuable book, **"Business Dairying"** will show you how, and our latest catalog tells all about the **"Tubular."** We'll send them both **free** if you will write today, ask for book No. 136.

Not One Man's Hobby

But All the Good Cream Separator Hobbies for You to Choose From

Take **your** choice of **style** or bowl device, **your** choice of size, capacity and price—from the

EMPIRE LINE of Quality Separators

Don't allow yourself to be talked into buying some special type of separator or paying some special price—until you have first seen the different styles of separators of different prices in the Empire Line and the advantages they offer you.

The entire line bears the Empire name and the Empire Guaranty.

There is no stronger backing in the world.

By making separators that make the most dollars for dairymen the Empire Cream Separator Co. has long been the most popular company in the business.

And the Empire Line has been increased and strengthened so that you might have a wide choice of styles and prices and still have the benefit of—

Empire inventions, Empire construction, Empire materials, Empire "know-how" and all the other advantages that the Empire factory, the best equipped cream separator plant in the world, affords.

Free Dairy Books for You

Write today for catalog and price list of the Empire Quality Line of Separators—the fairest, most impartial separator book ever printed. We have other free dairy books of vital interest to every cow owner because they point the way to larger profits. Write us today. A penny postal will do.

Frictionless EMPIRE
(Cone Bowl Device)

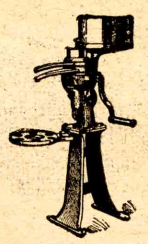
The simplest, easiest to turn, easiest to clean, most all-around satisfactory cream separator in the world. It makes the most dollars.

EMPIRE Star
(Multiple-Cone Device)

In the Empire class for simplicity of construction, skimming efficiency and work-saving, dollar-making features. No other make deserves comparison with it.

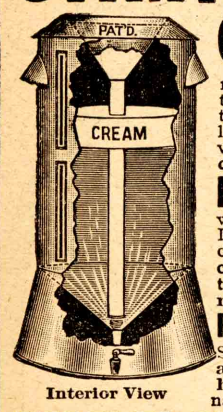
EMPIRE Disc
(Disc Bowl Device)

The most improved, the lightest, easiest to turn, easiest to clean, most simple and durable Disc separator made. Get the books and compare.



EMPIRE CREAM SEPARATOR CO., Bloomfield, N. J.
Western Branch: Chicago, Ill.

SAMPLE CREAM SEPARATORS FREE



Interior View

Owners of Cows We offer you a Sample Cream Separator that actually separates the cream from the milk by an automatic process that requires no ice, no chemicals, and no extra labor or machinery. All thrifty housewives realize the waste of butter fat unavoidably lost in the skimmed milk under a pan or crock method. Besides this money loss there is the back-breaking drudgery of washing pans and milk vessels, and the loss of valuable time that can be profitably devoted to other important duties. Now a

PEOPLES AUTOMATIC CREAM SEPARATOR

will stop this extravagant waste of money, cream and valuable time. It will increase your present yield of cream from 15 per cent to 20 per cent. It will give you the cream cool, sweet and fresh, directly after it comes from the cow, unaffected by chemical action. It will improve the quantity and quality of your butter all through the year. **It means more cream, more butter, less time. Result: More profit.**

REMEMBER It won't cost you a cent to take advantage of our free advertising offer as we will send one Sample Cream Separator into each community where we have no agent. **Write today as only one person in each locality where we have no agent may have the benefit of this free offer.** Send us your name, and the name of your nearest freight office. Address—

PEOPLES SUPPLY CO., Dept. F, Kansas City, Mo.

EMPIRE MANUFACTURING CO., Box 68-Z, Quincy, Ill.

Don't fail to mention UP-TO-DATE FARMING when writing advertisers.

erroneous use of a very commonplace expression, that competition is the life of trade, so it is in most instances, but not in the case of the stockyard business; in the stockyards business we have long since learned that concentration, not competition, is the life of the industry; the more buyers and sellers we can bring together, the more stock that can be accumulated at one place and time, the better the market and more advantageous for those who patronize it.

The Louisville live stock market owes its present position as a market to the untiring efforts of the live stock commission merchants; they have spent thousands of dollars annually in trying to build up the market to protect the interests of the shipper, and to uphold a free and open market where every and all buyers have an equal chance.

The question now arises, do the shippers who patronize this market wish such conditions to continue, or do they wish to throw the trade into the hands of a concern where the big packers will have things their own way?

For a number of years the tobacco raisers in this State have felt the bonds of tyranny imposed upon them by the tobacco trust, and but recently have risen up in rebellion. Now this great trust octupus seems to be laying plans for action in another direction, and while we heartily welcome buyers in our market, we cannot conscientiously stand aloof and see our market become controlled by a few and finally all competition ended.

We presume many of our readers are posted on this fight, and possibly some are interested in it. Mr. Burnett's article explains the situation well, and "hits the nail on the head"; it gives us a good example of the insatiable greed of the meat trust.

This reminds us of an experience when a boy. Not being blessed with a superabundance of the wherewithal, several youngsters slept in one bed. In those days the "boys' bedroom" reminded one of the inside of an Armour refrigerator car, and it took some little steeling of the nerves to brave the icy sheets over the featherbed. An older brother, who, it seems, should have developed into a high official of the meat trust, often resorted to strategy in order to secure a warm bed. Under the ruse of studying his lessons, he would stay up until the others were asleep, and then when he thought the "signs were right," would undress, jump into bed, and unceremoniously push the younger brother out of his comfortable position, and despite protests, back-fighting and oftentimes tears, occupy it himself.

The livestock commission merchants of Louisville have warmed the bed and built up a market for the surrounding country. Now, when they are beginning to reap the just reward for the time and expense given the movement, just when they are beginning to enjoy a rest after their great work, and ease up on their oars a little, they are called upon to give it all up to the "older brother."

If the shippers know their interests, and if they have any regard for justice and equity, we are sure they will oppose any such scheme for a crowd of Chicago men to secure control of their market. If they do permit it, they will regret it later on.

CONSTITUENTS OF FEEDS

When the writer was a boy, the milch cows almost everywhere in the Ohio and Mississippi Valleys, ran at large during all the growing season, and got their feed as nature prepared it for them—the most perfectly balanced ration that has ever been provided. During the winter season they still broused at large in the shelter of the forests, and what nature still held in store for them was supplemented by a little corn fodder (the blades pulled from the stalks and cured or the entire stalks cut up as now), husks taken from the ears that were fed to the horses and hogs, or shelled to be ground into meal for bread, and they were given the "nubbins" that were not considered good enough for the other purposes.

But that happy-go-lucky way of feeding won't count any more. The great ranges have gone with the old implements of husbandry, and we must now furnish pastures and feeds of our own providing. It is no wonder that we begin to inquire what a living animal needs to enable it best to accomplish a required work. The living body is a machine capable of doing different things. We may desire it to build up more cells and thus increase its size—grow. We may wish it to lay on fat, and get ready for the market. We may wish it to manufacture milk to be used as food or from which to gather butter. Or we may wish it to perform arduous labor, in which case it must have strong and tireless muscles.

Isn't it strange that we used to think that the same feed, and in the same quantities, would accomplish all these different purposes? Just as well fed cotton into the gin and expect it to turn out wool; or apples into the mill and expect it to yield flour; or forest leaves into the refinery and expect it to make sugar.

The living animal body is an everyday miracle. It beats any chemist's best equipped laboratory, and can resolve substances into their different elements, and make more different things out of them than can anything else, unless it be the growing plants. Still, if man can learn the things most required for the different purposes, and then know what feeds best furnish them, and feed accordingly, a great point is gained certainly.

It has been discovered that the important elements of food, both for man and beast, are protein and the carbo-hydrates — elements in which carbon and hydrogen are combined. The latter may be roughly mentioned as the heat-producing and bone-building substances, while the former is regarded as the basis of all the animal tissues. This, it is claimed, gives us a key to the value of feeds, and the Maine experiment station has made an analysis of what the station considers the three standard feeds — cornmeal, as the market source of carbohydrates; cottonseed meal, as the market source of protein; and mixed hay as the chief farm source of carbohydrates. These feeds are classed by their dominating elements; they all carry more or less of the other elements. A hundred pounds of cornmeal carries what is equivalent to 72 pounds of carbo-hydrate material and nearly six pounds of protein. It is, therefore, a heating, bone-building, energy-giving and fat-producing feed.

One hundred pounds of cottonseed meal contains nearly 35 pounds of protein, 18½ pounds of carbo-hydrates and nearly 9 pounds of digestible fat, which is equivalent to almost 20 pounds of the carbo-hydrates, and giving to 100 pounds of cottonseed meal the equivalent of 38 pounds of carbo-hydrates. Cottonseed meal is, therefore, a tissue-building, a heat generator, a giver of energy, a bone maker, and a fat producer — a valuable all-round feed, and specially useful to growing animals.

Mixed hay, about equal parts of timothy, red top and clover, was found to contain in 100 pounds, about 5 pounds of protein, nearly 43 pounds of carbo-hydrates, and a little more than 1 pound of digestible fat, which would increase the carbo-hydrates to the equivalent of nearly 46 pounds. Thus mixed hay is found to be a strong energy giver, heat generator, bone builder and fat producer, but for growing and work animals and milch cows, it needs to be supplemented by a protein feed, a tissue builder.

Got some hogs, calves or horses you don't want? Somebody else wants them; try a few lines in the Business Exchange. It pays!

Have you an organ in your home? If you haven't, you are not getting half the pleasure out of life you should. Think of the times you have visited your friends and after listening to some pieces on the organ, reluctantly come away, hating to leave such a source of enjoyment. There is no modern invention that equals the organ. Every family can afford one nowadays, and they can get the best cheap. The Cable Organ Co., 606 Steinway Hall, Chicago, Ill., is making a special free trial offer to the readers of UP-TO-DATE FARMING, and now is your chance. You have possibly heard of the Burdette Organs sold by this company. They have been on the market for fifty years, and many thousand purchasers are delighted with them. Mr. Cable guarantees them perpetually, insures them free and also includes a series of free music lessons. He says after close investigation that no other company is making as liberal an offer as he is. Write today for his catalog—a postal will bring it.

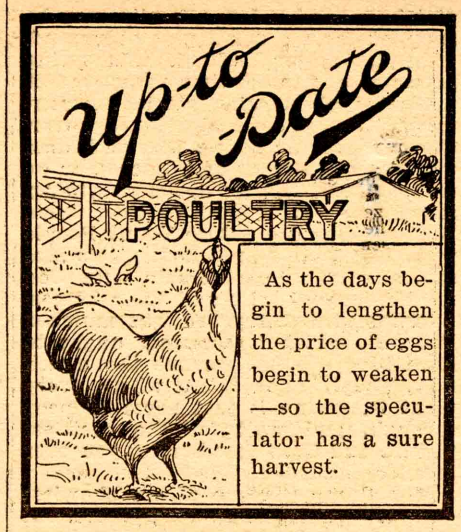
Des Moines Incubator Co., 183 Second St., Des Moines, Ia.



As the days begin to lengthen the price of eggs begin to weaken—so the speculator has a sure harvest.

AILMENTS — REMEDY AND PREVENTION

Draughts are as dangerous to poultry as to human beings.

Some of the commonest poultry diseases are catarrh, roup, gapes and leg weakness.

It is not necessary that one have a chestful of medicine to successfully combat disease in the poultry house.

Improper housing is responsible for the greater portion of the diseases that afflict poultry.

Scaly leg is extremely difficult to get rid of when once it has a foothold among the fowls.

It will usually be found more satisfactory to kill and bury the sick birds than to undertake to treat them.

The painting of the roosts with a liquid lice-killer destroys the little mites that cause the scaly formation upon the legs.

If the healthiest and most vigorous fowls are kept for breeding, reared under satisfactory conditions, and fed moderately on wholesome food, disease will seldom appear.

In case a cankered throat presents itself, peroxide of hydrogen may be used with confidence that a cure will be effected, unless the disease has reached a very advanced stage before treatment was commenced.

Remedies innumerable have been suggested for colds, but if these colds in their different forms are treated with either quinine, listerine or peroxide of hydrogen, cures will be effected.

A cheap remedy for mites is vinegar. Put it on with a sprayer. Two quarts in a ten-quart pailful of water will help a lot in ridding the premises of these pests.

When a swollen face accompanies other symptoms of a cold, use peroxide of hydrogen. Run well on the outside of the head, inject in minute quantities into the nostrils, and apply to the interior of the throat by the means of a swab or wing feather, diluting it one-half for internal treatment.

Another good, all-round remedy available for many kinds of colds, and so-called roup, is: Tincture of aconite, ten drops; tincture of bryonia, ten drops; tincture of spongia, ten drops; alcohol enough to make one fluid ounce. Mix. Of this a teaspoonful should be given in each quart of drinking water. At the same time fowls having a discharge from eyes or nostrils should have the eyes, nostrils and throat washed out twice daily with a solution composed of one part peroxide of hydrogen, one part listerine, and four parts water. Or, simpler yet, equal parts of warm water and vinegar.

THE MARKET DUCK

The best method of picking ducks is to steam them.

Leave the head and upper portion of the neck unpicked and the legs and feet intact. Sometimes the feathers are left on the first joint of the wing and on the tail.

Never singe ducks, as it leaves the skin oily and uninviting.

Unless your birds look clean and attractive, do not ship to market. If poorly prepared they will bring poor prices.

The origin of the Indian Runner duck is disputed, although generally accepted as coming from India.

It is generally known that considerable Rouen blood has been used in the make-up of the Indian Runners.

The Indian Runner is of a nervous disposition and scarcely ever will continue long enough on the nest to hatch its own eggs. They are great foragers, and yet will stand confinement better than almost any other variety.

The greatest claim for Indian Runner ducks is that they are great layers, averaging from 125 to 130 eggs per year each. The carcass weight is about four pounds, dressed.

For producing what might be called broiler ducks—at ten weeks of age—no variety equals the Pekin. They are quick in growing and very prolific. For winter roasting they are not so good, as their flesh is soft and oily, but when first parboiled before being roasted, this oiliness is done away with. As egg producers they will lay about two-thirds as many eggs as the Indian Runners.

MISCELLANEOUS

Secretary of Agriculture Wilson says the poultry and eggs produced on the farms annually aggregates more than $690,000,000.

The farm price of eggs in 1899 was 11.15 cents per dozen as an average for the United States; in 1903, 12.37 cents; in 1904, 17.20 cents; in 1905, 18.70 cents; in 1906, 17 cents; and in 1907, 18.20 cents.

Dressed poultry in New York sold for 10.78 cents per pound wholesale in 1899; for 12.97 cents in 1903; for 12.57 cents in 1904; for 13.36 cents in 1905; for 13.20 cents in 1906, and for 14.90 cents in 1907.

The Secretary of Agriculture says the poultry products are worth more than the wheat and perhaps as much as the hay.

The reports of the Secretary of Agriculture cannot be considered complete, in referring to the poultry and egg crops, as no account is taken of the large amount of poultry and eggs kept in towns and even cities. If it were possible to get a complete report, there is no doubt that it would be shown that poultry leads the procession of the world's industries.

GREIDER'S FINE Poultry Catalogue

for 1908 is larger and better than ever. Tells all about pure-bred poultry and illustrates 60 varieties. Contains 10 beautiful chromos of leading breeds—pretty enough to frame. Tells of best Louse Killer, how to cure diseases, make money. Only 10c postpaid. Send to-day for a copy.

I Am the Paint Man

2 Full Gallons Free to Try—3 Months Time to Pay

You Pay No Freight to Try My Paint

I Have a new way of manufacturing and selling house paint that's unique—that's better.

Before my plan Paint was sold in two ways—either ready-made—or mixed by a local painter. Both these ways are at fault.

Ready-Made Paint settles hard in cans—and mineral pigments and chemical acting driers in ready-made paint eat the life out of Linseed Oil—which is the LIFE of all paint.

Painter-Made Paint can never be properly made by a painter—because of lack of heavy mixing and grinding machinery.

My Paint is **ready to use**—but not **ready-made.** My Paint is **made to order**—after the order is received—packed in hermetically sealed cans—(extra size to insure a full gallon) and dated the day the Paint is made.

Pure Linseed Oil and pure, **fresh paint ingredients** are used in my Paint. Such materials, found at local stores, are usually adulterated.

I sell my Paint **direct from factory to user**—at very low factory prices.

I pay freight on six-gallon orders or over.

When the order of six gallons or over is received, use two full gallons to test it—and if you are not perfectly **satisfied, in every particular,** return the balance of the order to me—and the two gallons you have used shan't cost you a penny.

No other paintmaker offers such a liberal proposition. My Paint is sold to responsible people on three months' time, if desired. I make three brands of Paint to suit the requirements of my immense trade.

My strictly Pure All White Lead Paint is absolutely the best paint in the world. My 40-60 Brand Zinc and Lead Paint is the best paint in its class on the market. My Durability Paint has an immense sale everywhere, and is sold under five-year iron-clad guarantee. The Purity of my Paint is guaranteed under a forfeit of $100.00 in gold.

Send for my beautiful Paint Book and big Color Cards to select from—best Book—largest Cards ever published. They are FREE. With the Paint Book I send Free Book of all kinds of Painters' Supplies, sold at **Direct-to-you Prices.** Write TODAY. My Plan insures you Satisfaction and lowest prices on Paint.

Up to Date ORCHARD AND GARDEN

Prospects for a good fruit crop are reported excellent. What prospect can your section report for good prices?

THE FIRST FLOWER

It is only a little crocus
But it tells a charming story;
That returning rain and sunshine
Will clothe the earth in glory.

A PEEP INTO THE ORCHARD AND GARDEN

The "big" duties of the farm cause neglect of the garden, but the garden is worth more to the family than any other spot ten times its size.

In cleaning up the garden look well to the weed seeds. Of course, if the dead weeds have stood in the garden through the winter, most of the seeds are already shattered off, but some may yet be destroyed by handling the weeds and trash with care, and burning them.

There is no better garden manure than the cleanings from the hen house. Those who burn wood have a valuable garden dressing in the wood ashes. For onion beds it can't be beat.

The gooseberry row needs to be made very rich, and the plant likes a northern slope.

Clean up the orchard. It is late to prune, but better prune now than not at all. Sunlight destroys fungus growths, and it should be allowed to sift all through the tree tops.

Plan the garden according to system. Long rows are more convenient than the old-fashioned beds. It is easy to grow more than one crop on the same ground. For instance, plant the pea rows three and one-half feet apart. About the time the peas begin to bloom and you quit cultivating them, plant a row of early potatoes in the middle. By the time the peas are ready to be torn away the potatoes are ready to work. You may now plant midway between the potato rows, where the peas grow, a row of turnips. A little thought will enable you to keep every part of the garden plot busy, and a large family may be supplied from a small plot of ground.

In the flower scheme this spring get some of the old-time favorites. A profusion of morning glories on anything it may be desirable to cover, cypress vines on stakes like an Indian wigwam or in front of windows, or on trellises, nasturtium, dwarf or vining, anywhere — it is hard to beat them. We hope Our Up-to-Date Young People will study plants and flowers this season, and go in partnership with God in the ornamentation of their homes.

If the strawberry bed was mulched last fall, which it certainly ought to have been, do not remove the mulch now, simply open it up where every plant is, giving it just room to peep through, and wait for the prettiest picture and the finest berries you ever saw.

The Cosmos is one of our showiest and most profuse flowering plants, but if planted in rich soil it grows large and branching, and is easily broken by the wind. For an autumn bloomer there is nothing quite so showy as the phlox with its profuse and brilliant bunches of bright purple flowers. There are no better fillers, for any nook or corner that is liable to be left to grow to weeds.

PRUNING AND SPRAYING

The Tennessee experiment station gives some good advice as to pruning and spraying.

Prune out the dead wood, the water sprouts and suckers. Keep the trees from becoming bushy. Do not spray right after a rain while the limbs are still wet—try not to spray just preceding rain. The spray should thoroughly dry on the limbs, thus giving it the best chance to adhere. An ideal spray day is a quiet, bright one, when the air is dry and cool. Study the formulas of sprays and the different makes of nozzles and use only the best fitted for your conditions, realizing that there is a proper time to spray and the best results are obtained only at such time. Spray thoroughly. I doubt if one-tenth of the people who spray do so correctly. Above all else, spray carefully, doing thorough work by covering not only one side, but all sides of the twigs.

To spray a tree properly it is best to begin at the topmost branch and spray down, doing one side of the tree at a time. Should a breeze be blowing, take advantage of the same and spray but one side of the tree, going up one row and down another; when the breeze changes or becomes quiet, complete the spraying of the trees. Spraying should be discontinued when a strong wind is blowing, likewise in cold, freezing weather the wash should not be applied.

Big Potato Crop at Least Expense

YOUR CHOICE Of These Chairs FREE

AN EXTRAORDINARY OFFER to readers of Up-to-Date Farming—a chance to secure one of these magnificent upholstered chairs FREE for just a little time and effort.

You Can Talk;

You know UP-TO-DATE FARMING and all about the great work it is doing for farmers. The rest is easy.

This is an offer that doesn't come often. It will not do to delay. Start your club this very day. It will surprise you how easily you can get subscribers Then one of these grand chairs is yours—or both for a little effort. Note the thickness of the pieces in each. Not a thin stick used—made stronger than seems necessary.

EQUITY MORRIS CHAIR

This is one of the finest Morris chairs you have ever seen. It is made of finest materials. The back adjusts automatically. No rods, ratchets or springs. Made of quarter-sawed oak and the frame is as nearly indestructable as it is possible to make it—full piano finish and hand carved. Back is reversible.

WHY? We want to quadruple the circulation of UP-TO-DATE FARMING at once so it can compel profitable prices for the 1908 crops. Each new subscriber means added power; each new one makes each former subscriber more powerful, individually. That's our reason. **HERE'S OUR PLAN:** You want one of these chairs, we know you do. These are two of the most beautiful, most comfortable chairs you ever saw. They are honest chairs. The best material in each of them. They will be the pride of every possessor and a joy forever. The regular subscription price of UP-TO-DATE FARMING is $1.00 a year. It's worth it, too, as subscribers know. But others who have not read it don't know its value. It is these people we want to reach until it goes to every farm home in the country. You know them. Some of them are your neighbors. We calculate 25 or more are your neighbors. So we are going to make it worth your while to get them to subscribe. Read the following great offer.

OUR OFFER **FOR 25 YEARLY SUBSCRIBERS AT FIFTY CENTS EACH WE WILL SEND YOUR CHOICE OF THE CHAIRS ON THIS PAGE.** The regular subscription price of UP-TO-DATE FARMING is $1.00, and you might get subscribers at this price and keep the difference for your pay. "The laborer is worthy of his hire," is an old and true saying and every person who pays $1.00 a year for this paper makes a good investment. But you can give the subscriber your commission if you want to. What we want is new subscribers. What you want, we are sure, is an "Equity Chair."

There are 25 or more people in each community who can be secured as subscribers to UP-TO-DATE FARMING when you explain that it is the only farm paper that teaches the **marketing end of farming.** Every farmer ought to take this one paper no matter how many others he takes, because it is in a class by itself and is cultivating a field heretofore neglected. **And this field is the one that grows the crop of dollars.**

IF YOU BEGIN A CHAIR IS SURELY YOURS

You may say; Oh, I cannot get 25 subscribers there is no use to begin. But you do not know until you make a real, genuine effort. You know that every farmer **OUGHT** to take UP-TO-DATE FARMING. Since this is so, why cannot you get his subscription? But suppose you don't get 25, you can get the chair anyhow. For instance, if you get only 10 subscribers send us 50 cents each, $5.00, and $4.50 cash extra, and either chair will be sent you; or 15 subscribers and $3.00 cash extra; or 20 subscribers and in addition $1.50 cash; or 25 subscribers and no extra cash.

LOCAL UNIONS INTERESTED

There are a great many local unions that this offer ought to interest. One or both of the chairs would be a great acquisition to the meeting hall, or we would send two alike, if preferred. The president and secretary would appreciate them very much. If your local union has not paid up yet, this is your opportunity. If the secretary will send 25 names for UP-TO-DATE FARMING at 50 cents each, either chair will be sent, or a less number and the small cash payment as explained.

DESCRIPTION OF CHAIRS

The photographs very faintly show the good points of these chairs. They are strong and massive and the lines are simple and attractive. Very handsomely designed, and made from the very best selected heavy quartered oak, full piano golden oak finish, and highly rubbed and polished. Seat is made of steel construction, with six 5-inch coiled springs.

ROCKER is upholstered in genuine fine black Chase leather, which is guaranteed for ten years, and filled with curled hair.

MORRIS CHAIR is upholstered in finest Velour, of green and black or red and black, and is guaranteed to keep its shape. Every article used in the construction of these chairs is high-class—made to last.

They are each equipped with patent adjustable back which marks the greatest improvement in chair manufacturing in 20 years. They are perfectly automatic, adjusting themselves to your every movement. You simply lean backward or forward or lie at rest and the chair follows. No rods, no ratchets, no levers or springs. Chairs cannot get out of order. These are simply two of the best chairs ever manufactured. Strong and durable, built for solid and enjoyable comfort. Something you will use for a lifetime, and be prouder of the longer you have it. Surely they are worth a little of your time.

WHY NOT BEGIN TODAY?

We ask you to work in a good cause. An "Equity" chair is worth the trouble, to say nothing about the sentiment that will always associate with it and the consciousness of having benefited every member of your club. We want every secretary, every organizer and many others to possess an "Equity" chair.

There are many spare hours and rainy, cold or odd days when you can't do anything but hang around the house. These are the times to earn an "Equity" chair and on these days you will find your neighbors in the house also and possibly grumbling because prices are down. The best way to boost prices is to boom the circulation of UP-TO-DATE FARMING.

WE WANT TO MULTIPLY THE CIRCULATION OF UP-TO-DATE FARMING BY FOUR AND DO IT BEFORE THE 1908 CROPS ARE HARVESTED.

We believe it can be done. Let us go at it to win and it will be done. Then we will have profitable prices for the 1908 crops and YOU will have one of these beautiful, luxurious "Equity" chairs to sit in when you enjoy well-earned prosperity that you cannot reach in any other way.

The chair is all ready to ship. Send in your club as soon as possible. If you cannot get enough at once, send what you can get and the balance in cash and then hold the cash back as you send others. Let us know if you are going to get an "Equity" chair.

A Double Opportunity The club raiser can ask the regular subscription price of $1.00, sending us $12.50 and make $12.50 besides. Agents can make at least $5.00 or more a day. UP-TO-DATE FARMING is not a cheap paper. Its subscribers pay for it on its merits. It is the most valuable farm paper AND SHOULD GO INTO EVERY FARM HOME.

Other Benefits Nearly all the people who embrace our offer for an "Equity" Morris chair will be farmers. If we succeed in quadrupling the circulation it will give us nearly three-quarters of a million subscribers. This number of farmers reading this paper and knowing the minimum prices that will be set on the next crop, can compel profitable prices.

Don't Delay It behooves you to not delay. We have chairs for as many as earn them. To the alert and enterprising always goes the best rewards. A word to the wise is sufficient.

We want everyone to help. Don't think this is addressed to "the other fellow." It is a chance for YOU to secure a luxurious chair and to make quite a sum in cash.

We are depending on YOU, reader. Help us and help yourself.

MORRIS ROCKER

The photograph very faintly shows the good points of this splendid Rocker. It is strong and massive. Back is patent adjustable—perfectly automatic. If you want to lie down press back and with little effort the trick is done. Cannot get out of order. It is upholstered with genuine black Chase leather which is guaranteed 10 years. Made of quarter-sawed oak, full piano finish.

Ranch Life in the Rockies

Still Plenty of Chances to Get Rich and Secure Free Homes.—Book of 100 Views and Map Free.

A new book has been published describing ranch life in the West. There is an enormous demand for the volumn—truly, everybody wants it. Reads like fiction, yet absolutely true. It describes big ranches, tells how farmers and ranchmen are amassing huge fortunes and shows how new citizens may do likewise.

The book gives the government land and mining laws, fish and game laws, together with a late county map of Colorado. Contains 100 photo engravings of farm and ranch views, cowboy life, etc. Editions cost $2,000 to issue.

The book is free—do you want it? To introduce our big illustrated western family magazine (established 1903) we sell you the above described ranch book and our famous monthly magazines whole year, all for only 30c, cash or postage stamp. Clubs of 3 and 3 books, 70c, 5 for $1. Money back if not pleased. Our magazine prints views of scenery, stories of adventure and sketches and tells all about the West. Act quick, send to-day. Address,

Inter-Mountain Farm Magazine, Sta. 16, Denver, Colo.

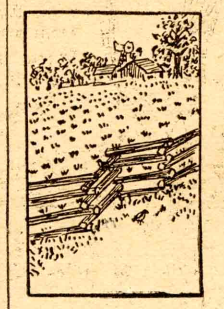
Up-to-Date HOME ON THE FARM

"Be gentle! The sea is held in check not by a wall of brick but by a beach of sand!"

OUR FRIEND, BOB WHITE

On a pleasant day we can hear this little fellow telling us his name over and over again calling in the cheeriest of voices, "Bob White! Bob White!"



When the rain is coming down and Bob has hidden himself in the undergrowth he calls out, "More wet! More wet!" in such a way that we are glad there is more wet, be the sky ever so dark. In order that larger flocks of these insect and weed destroyers may be seen year after year, the birds must be given protection from the sportsman's dog and gun. More stringent laws must be made regarding their slaughter and the people educated as to the quail's value. In time of deep snow, grain should be thrown out where they can easily find it, as it is then they suffer most. Many times they are completely snowed under and freeze to death.

They like best the fruits of many of our native trees and shrubs, such as wax myrtle, mulberry, rose, haw, wild cherry, elder, trumpet creeper, red maple, sassafras, locust, clover, chestnut, witch hazel and sumach. They also delight in the seeds of such troublesome weeds as crabgrass, corn cockle, hawkweed, ragweed, sorrel and wild morning glory. They eat the potato bug with relish, a delicacy most birds do not affect. Often they make a meal on chinch bugs, cotton weevil, locust and cucumber bugs. Few birds do so much good and so little harm as the cheery little quail. Almost all the help they need is protection from men with guns and a little grain in the worst weather.

They rear from two to three families a season. Usually they sit upon

eighteen eggs, but sometimes almost double that amount has been found. Their nest is built on the ground, protected by tall grass or a thick bush. The little birds are ready to run about very soon after they are hatched.

By watching the birds' habits a little in one's own neighborhood, one can very quickly find out just what the quails need most, either in the brooding season or during the winter. Any kindness paid them will be richly rewarded by the good deeds and cheery whistle of "Bob White! Bob White!"

FOR THE FATHER'S EYE

To be honest, to be kind, to earn a little, to spend less; to make upon the whole a family happier by his presence; to renounce where that shall be necessary and not be embittered; to keep a few friends, but these without capitulation; above all, on the same grim conditions, to keep friends with himself. Here is a task, for all that a man has of fortitude and delicacy.—Robert Louis Stevenson.

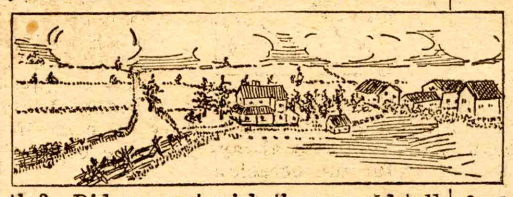
"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

DID YOU?

Did you ever try to entertain a stranger and find it a very difficult matter? Why? Was it not because you were not cognizant of their likes and dislikes, their tastes and the things they enjoyed most?

If they were of a genial, friendly nature, frankly telling you what they did or did not prefer, did you not find your task lightened? But if they were so reserved and reticent and cold that they fairly froze your good intentions for their entertainment, did you not feel non-plussed and wonder what you could do to thaw them out a little? Did you not wish they would tell you what they would most enjoy doing while at your house? And when they went home, did you not wonder if they had had any part of a good time?



That is the way the editor feels towards the readers of this home page. She has been trying to entertain you, has asked you about your likes, your tastes; but you have been too reserved to tell her. Can there not be a little more friendliness in the future?

Editor "Home on the Farm."

REASONS FOR OPTIMISM

Dr. Henry Van Dyke gives the following as some of the reasons why he thinks life is a blessing and hopes the world is growing better:

1. Because I was born that way.
2. Because my father and mother were very good to me.
3. Because there is a lot of useful work to be done in the world, and very interesting.
4. Because it is a pleasure just to know things, and everybody can know something.
5. Because there are a great many people in the world of the same kind (though not of the same degree) as Edward Everett Hale, and it is good to keep company with them.
6. Because marriage is a success when it is real.
7. Because it is free to go a-fishing, even though you catch but little fish.
8. Because good books are cheap, and the best are the cheapest.
9. Because virtue wears better than vice.
10. Because God lives in the world. A consistent religion is at the foundation of all optimism.

THE COUNTRY HOME BEAUTIFUL

We read a great deal in most of our magazines about the plans cities have had by which their yards and alleys have been made more attractive. Every year committees are appointed to see after making the city beautiful. Seeds are given to those who cannot afford to buy them and in many cities, packages of seeds have been distributed among the school children. This work has done a great deal of good. If our brothers and sisters of the country have not followed suit, it is high time they begin to think about it.

Let us be sure that summer does not find any debris of tin cans, ashes or anything of like character in our back yards. If there are unsightly outhouses which must remain and fences that are not good to look upon, let us see what lovely vines we can find and cover up all these ugly scars on an otherwise beautiful landscape.

Let us get out our seeds and sort them over and plan just where we are going to plant this and that kind.

Of course since our husbands and sons believe in and practice rotation of crops, we must do likewise. So we will not plant our sweet peas and nasturtiums where they were last year, but seek out a new spot to beautify. There is nothing prettier than a bed of old-fashioned mixed petunias, and how eagerly they seem to respond to all the love and care bestowed upon them. They make a gay border for the walks, require little attention and bloom all summer long.

Avoid Doubt Buy Studebaker Buggies

Never any doubt about the lasting qualities of a Studebaker carriage or buggy. It's the material that goes into them—plus the way they are made—that makes Studebaker vehicles of such high quality, perfectly proportioned and easy running. The "know how" which can only be derived from long experience goes into every Studebaker buggy—fifty years of expert skill and planning.

In Studebaker Buggies

you'll find the best vehicles money can buy, because the choicest materials such as are obtainable only through the facilities of the world's largest vehicle factory make the Studebaker superiority.

If you appreciate Quality and Satisfaction, **ask the Studebaker agent** to show you the new 1908 Studebaker buggy. Over a smillion Studebaker vehicles now in use. If you mention this paper and send us two cents for postage, we will mail you "Studebaker" 1908 Farmer's Almanac—FREE.

Studebaker Bros. Mfg. Co., South Bend, Ind. *Largest Vehicle Makers in the World.*

If the vegetable garden is just beyond the door yard, screen it off by a hedge of sweet peas for the summer and just back of the sweet peas plant cosmos for the autumn blossoms.

But whatever flowers you have, don't spoil the lawn. Leave that unbroken and keep it cut pretty short all summer. If you have a wind pump, the grass can be kept green by the use of the hose, and there is nothing more soul-satisfying, nothing more restful to look upon, than a green, well-kept lawn. If there were bare spots in it last year, get grass seed now before the snows have all gone and scatter so that the seed will get a good start.

Make your country home beautiful. You have all nature to help you, the woods and the blue sky for a background. I have seen some country homes from which I was glad to escape, but I have seen others, so cool, and clean and sweet, so lovely in their wealth of blossoms, that I have wished to remain always. Make your country home beautiful and the boys and girls won't want to leave it.

CLOTHES FOR THE YOUNGSTER

The small baby should be dressed in as few garments as possible and these should all be soft and warm.

Tight bands should never be used, as they are very injurious.

When baby has grown into short dresses, be sure they are short enough,

otherwise his little toes will catch in the hems and cause him many falls.

All the weight of his clothing should hang from his shoulders. And do not dress him so finely that he will not feel free to play.

He should be taught that while clothes must be thought of less than many things in life, yet it is a duty to himself and others to always look the best he can for the occasion.

How Do You Lighten Your Housework?

THERE are but few housewives who do not have "short cuts" for their work that would prove beneficial to other readers of this page. We would like to hear from you, and all articles printed will be signed with the writer's name or initials just as we are directed.

READ THE FOLLOWING

We would like to know in an article of not over 100 words (if possible) and will give the following prizes for the best suggestions:

FIRST PRIZE—$1.00 cash.

SECOND AND THIRD PRIZES—Each one year's subscription to Up-to-Date Farming for you or your friend.

FOURTH, FIFTH AND SIXTH PRIZES—Each one cloth-bound copy of "The Third Power" book.

All suggestions must be received on or before April 1 to be considered

In case of a great many good suggestions, neatness, arrangement and general construction will be considered. All MSS. submitted to become our property and none will be returned. Address all communications to Editor "Home on the Farm," care UP-TO-DATE FARMING, Indianapolis, Ind.

MARCH

The cock is crowing,
The stream is flowing,
The small birds twitter,
The lake doth glitter,
The green field sleeps in the sun;
The oldest and youngest
Are at work with the strongest;
The cattle are grazing,
Their heads never raising;
There are forty feeding like one!

Like an army defeated
The snow hath retreated,
And now doth fare ill
On the top of the bare hill;
The ploughboy is whopping — anon — anon!
There's joy on the mountains;
There's life in the fountains;
Small clouds are sailing,
Blue sky prevailing;
The rain is over and gone!

WILLIAM WORDSWORTH.

"PATCHES"

If the feet prespire too freely, put pulverized alum in the stockings and wash the feet with alum water.

To scale fish easily, dip them first into boiling water.

A kitchen apron made of oil cloth is a great labor saver.

To prevent icing from cracking when the cake is being cut, add a teaspoonful of cream to each egg when beating them.

Make your starch with soapy water. This will give gloss to the linen and prevent the irons from sticking.

So long as we love we serve. So long as we are loved by others I would almost say we are indispensable; and no man is useless while he has a friend.

ROBERT LOUIS STEVENSON.

Mr. Sever, general manager of the Western Newspaper Association, Chicago, writes us that he has received many coupons cut from our February 15 number, that were just blank, no name, no address, or any clue as to who sent it except by the postmark. So he told us to tell our subscribers that if they wrote to him and did not receive a reply, it was probably because they forgot to sign their names. If you are one that did not receive a reply, write again, and you will hear from him immediately, if you mention UP-TO-DATE.

Mr. Sever, our readers will remember, has been advertising Ridpath's History in U$-TO-DATE. They are fine books, and if you already do not have them, ask for his circulars and sample pages. They are all free. Always mention UP-TO-DATE FARMING.

Beeler & Robb, patent attorneys, 60-62 Baltic Bldg., Washington, D. C., have just issued an interesting book entitled "Handbook for Inventors and Manufacturers." If you are interested in new inventions or machinery, write for a copy. It's free, if you mention this paper.

One of the few advantages of life in the city over that in most of the country homes is the opportunity to have a bath

room in every house. Bathing is as necessary as eating and sleeping and is frequently neglected in country homes on account of the inconvenience and trouble attendant to it.

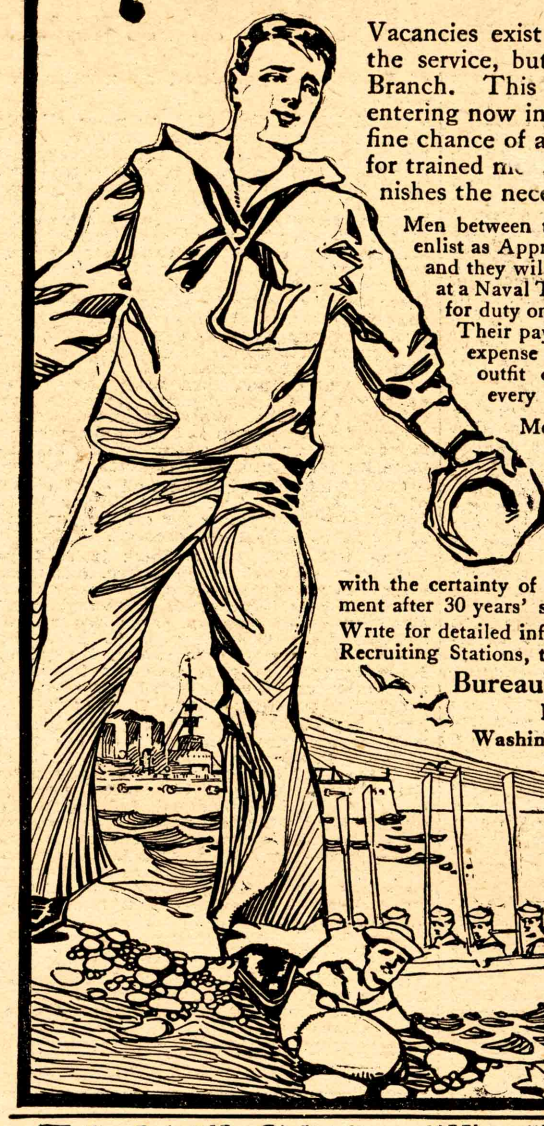
This difficulty is overcome by an invention of the Allen Mfg. Co. of a portable bath apparatus, which heats the water automatically and has everything ready in five minutes time. When you are through there are no tubs to clean, no wash rags or sponges, no dirt, splashing or muss. Moreover, it is very cheap — far cheaper than a bath tub. You ought to find out about it. Write for catalog to Allen Mfg. Co., 1250 Allen Bldg., Toledo, O.

A Subscriber Writes

One of our subscribers writes as follows: "Of all your ads that of the Sharples Separator Co. appeals to me most because the separator they make is the most sensibly arranged of any I ever saw. They are easy to run and a perfect skimmer. Every farmer should have one.

This is certainly a good testimonial for the Sharples people, and we would advise you to write for their catalog before buying. Write for their interesting free book No. 136, address Sharples Separator Co., West Chester, Pa.

The Navy Needs Young Men



Vacancies exist in nearly every branch of the service, but especially in the Seaman Branch. This means that a young man entering now in the lowest grade stands a fine chance of advancement. The need is for trained men and the Government furnishes the necessary training, *free*.

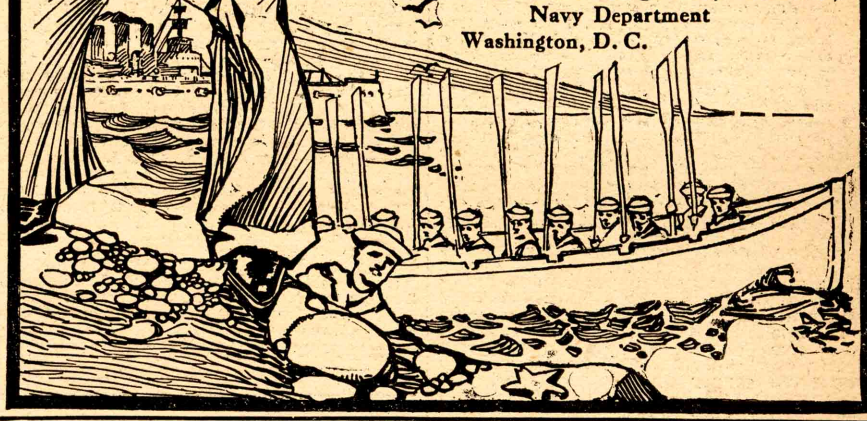
Men between the ages of 17 and 25 years can enlist as Apprentice Seamen at $16 a month; and they will be given a course of instruction at a Naval Training Station, which fits them for duty on board ship, in higher ratings. Their pay begins the day they enlist—no expense for board or lodging—complete outfit of uniform worth $60 given every recruit.

Men having a trade will be sent to one of the Trade Schools for instruction.

An opportunity is offered sober, industrious young men to fit themselves for a life position, at good pay, and with the certainty of a comfortable income on retirement after 30 years' service, or a pension if disabled.

Write for detailed information and addresses of Navy Recruiting Stations, to

Bureau of Navigation, Desk 7,
Navy Department
Washington, D. C.



CONGO NEVER LEAK ROOFING *Always Dry and Tight!*

Study the subject of roofs. Send for catalogues; ask questions; investigate. We give you this advice because we feel sure that after you have looked into the matter thoroughly you will decide upon Congo.

Congo can stand the *minutest examination*. In fact, we urge this method for our own good as well as the consumers', because it increases trade and makes for us life-long friends.

Congo deserves its leading position among ready roofings, because it has all the qualifications needed in a durable, waterproof roof.

If you have a leaky roof, you can appreciate how annoying and expensive it is. Congo avoids all this.

These are facts well worthy of consideration, and if you put up a new building, or if your old roof gives trouble, use Congo. Congo can be laid right over an old roof, and you can do it yourself. No special tools or skilled labor required.

Send for Free Booklet and samples and see for yourself.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

This is a holding society, we might say, WITHIN THE ORIGINAL AMERICAN SOCIETY OF EQUITY. It is not intended TO SUPPLANT THAT SOCIETY permanently, but only so long as it is diverted from the true and original plans and against accomplishing the original objects, also while that society is in the hands of unwise counsellors and is not a real equity society.

The officers and members of the F. S. of E. believe in one farmers' society for the entire country and for all the crops, as proclaimed by the founder of the A. S. of E. But we believe that society cannot safely abandon its principles, change its plans and set up new objects as readily as the wind veers from one point of the compass to another. We believe that the original plan of the society was sound and the objects were the most desirable. We have seen the chief object largely accomplished, hence the plan is practical.

Some of the reasons that impelled the friends of the A. S. of E. to provide the Farmers Society of Equity as a holding society are as follows:

The present counsellors and some of the directors in the A. S. of E. have departed from the true principles of the society, have largely discarded its plans, have disregarded its traditions and teachings, have abandoned some of its important objects and added others, in violation of its charter, have dissipated the headquarters by setting up the departments in a distant city, have denied the members the right to continue the legal official paper, have substituted an alleged official paper that is published at irregular intervals and is devoted to malicious abuse, insults, slanders and libels against the founder of the society to the enormous damage of the organization and the farmers' business, and last the conduct of the headquarters has been such that the chief officers, and the publishers and editor of the alleged official paper are under arrest for violations of the law, while several officers and employees have fled to escape arrest.

As the name indicates, it is a farmers' society. Its organized forms are local unions and a national union; a county union may be organized where three (3) or more local unions in the county will join to organize one. Also a State union may be organized where five (5) or more county unions will join in organizing it. Full instructions for organizing county and State unions, and their duties, will be sent on application to headquarters.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of the original A. S. of E., and which refuse to continue with the *new* A. S. of E., will be accepted into the Farmers Society of Equity on resolutions passed by a majority of members or delegates. In such cases provisions will be made for the support of the county and State unions and their activities defined. Unions thus affiliating will be chartered by the F. S. of E. and supplies and seal sent on receipt of report and 50 cents additional. Any ten or more members of an old local that does not affiliate with the F. S. of E. are recommended to elect officers and report as a *new* local, but are not required to pay the *fee* but the *dues*. Where less than ten, the members going with the F. S. of E. will be considered as members at large.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers' Society of Equity is to *obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Enemies of UP-TO-DATE FARMING have sent many notices to its subscribers to notify the publisher to stop the paper and in some cases stated, or tried to have the subscriber infer, that to take the paper was in infraction of a United States law. Also in a few cases secretaries of county unions have sent notice to the publisher to stop all papers going to a county and in more cases secretaries of local unions ordered the paper stopped for all the members without giving a list.

We need hardly to say to the subscribers that such requests are ignored. We have never failed to stop the paper when the subscriber requests it or we receive creditable notice through a secretary. Subscribers should resent such activity as mentioned above and above all, don't be deceived as to your privilege and right to take UP-TO-DATE FARMING.

The man who has a thousand friends, has not a friend to spare,
And he who has an enemy will find him everywhere. EMERSON.

Blessed is the man who gives nothing, for his motive will not be impugned.

The Question Box should always be read carefully. Usually you will find the questions answered there that are in your mind.

Who ever read in the objects of the A. S. of E. one that gave the society power to publish newspapers? Like a good many other wild schemes of the gang that rode to power in that deceived convention, they don't know where they're going, but they are on the way.

Q. What is the first and chief object of the revised A. S. of E.?

A. To publish a newspaper. There are also other objects, but they must all wait on the accomplishment of the first.

Justice and Equity to All. That is the motto on the emblem of the Farmers Society of Equity. If you are not willing to live up to it, don't join the society. But remember it means much to farmers when they get justice and equity.

When in doubt do the equitable thing and you will be right.

The great annual opportunity for farmers is now. Embrace it by joining the Farmers Society of Equity and thus prepare for profitable prices.

The best insurance policy for a profitable year is a membership in the F. S. of E.

What benefiteth it you to know your troubles if you have no remedy? All farmers' troubles can be cured through the F. S. of E.

After the convention it was promised that all the farm papers would now help to boom the A. S. of E. This is a boom that appears to be lost with the people who left the State. If any member meets the boom or the three lost men, please return them to Indianapolis.

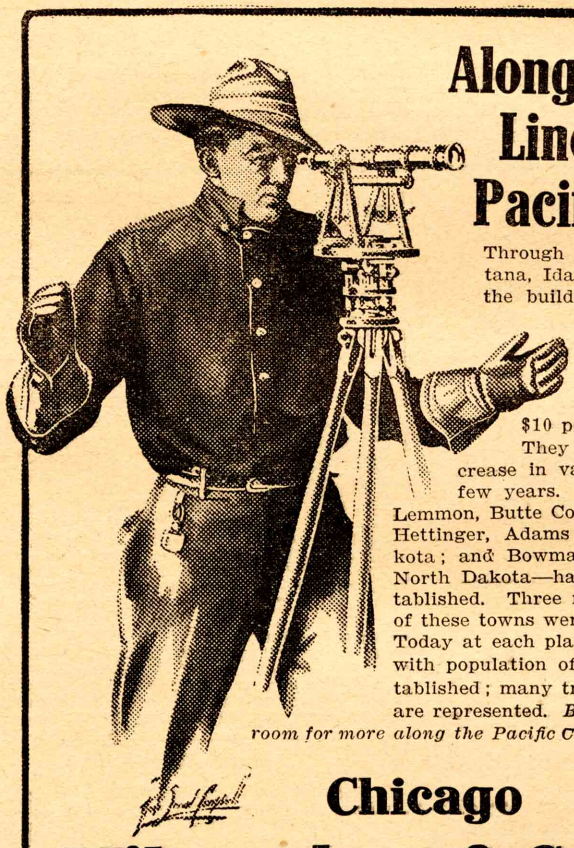
We have not heard of any criticism against the State of Indiana for making a contract for fifty years with the American Society of Equity. Do you suppose the opponents of having one official paper for fifty years will attempt to repudiate the contract with the State at the next convention?

The reward of $100 as offered in last two numbers is still in force. Won't somebody please try to earn it? Also we want evidence against people who make any slanderous or libelous statements about Mr. Everitt. Be sure to send the envelope or wrapper in which you receive any printed matter and have oral statements verified by one or more witnesses.

DELEGATES' ADDRESSES

The publisher of this paper wants the names and addresses of all delegates to the October convention. We will thank any person who has the best interests of the society at heart to send all he knows, to reach us on or before March 30th next. We were entitled to these before the convention and asked for them, but Secretary Tubbs refused to furnish them.

Those who have been false to UP-TO-DATE, I hope to God have been assigned to their fate. M. H. S.



Along the New Line to the Pacific Coast

Through the Dakotas, Montana, Idaho and Washington, the building of this railway opens up a country full of *money-making possibilities.* Rich farm lands are now selling at $10 per acre and upwards. They are bound to increase in value within the next few years. Three new towns—Lemmon, Butte County, South Dakota; Hettinger, Adams County, North Dakota; and Bowman, Bowman County, North Dakota—have recently been established. Three months ago the sites of these towns were open prairie lands. Today at each place a well-built town, with population of close to 500, is established; many trades and professions are represented. *But there is plenty of room for more along the Pacific Coast extension of the*

Chicago Milwaukee & St. Paul Railway

In the Dakotas, and in Montana, along the new line, the soil is a dark loam with a clay subsoil; good water is plentiful; rainfall is ample to raise the crops; the climate is healthful; the air is dry and invigorating; winters are mild; growing seasons are long. The deeded lands sell at $10 per acre, and upwards. *Last season many farmers made enough money from their first year's crops to pay for their land.* The Judith Basin, in central Montana, offers exceptional opportunities in farming, particularly in wheat and alfalfa raising.

The fruit-grower will find a good field along the new line in Washington. Apples, pears, plums, cherries, apricots and small fruits grow well there. Last year hundreds of acres of bearing orchards produced crops which brought from $500 to $600 per acre.

Pamphlets describing these openings are free for the asking

A Miller, General Passenger Agent, CHICAGO

F. N. Hicks, Traveling Passenger Agent, 313-314 Lemke Bldg., INDIANAPOLIS

TRIAL POSTPONED

The publishers and editor of the Equity Farm Journal, Nelson, Gentner and Bowne, were arrested on the charge of criminal libel at Chicago, on February 11th. They were taken before Judge Crowe, when they asked for a postponement of the trial until February 18th, which was granted. Then they asked for another postponement until March 6th, and as this date approached they pleaded that they were not ready and secured a third postponement until March 18th. Readers can draw their own inferences.

Following is an advertisement that appeared in the Chicago Daily News March 6:

To Whom It May Concern:

All parties are hereby notified that the undersigned, on February 27, 1908, has severed any and all connections with the Equity Publishing Company.

JOHN GENTNER.

NOTHING TO DISCOURAGE US

To UP-TO-DATE FARMING:

The Federation of Labor is twenty-six years old. Our Society of Equity is only five years old. I believe we can become as powerful in our cause as the laborers are in theirs, and that we'll do it in fewer years. "Profitable prices for farm products" is the foundation of the nation's prosperity. Let us do all we can to secure profitable prizes by—

1. Holding our crops for profitable prices, and, if we have to make notes to enable us to do so, make them come due at various times of the year rather than all at one time.

2. By educating farmers up to the point of doing likewise.

3. By demanding such legislation as will put a stop to buying wind in the name of "futures," and will effectively prevent gambling in the prices of farm products.

Arco, Minn. AUG. W. KRUGER.

SUBSCRIPTION PRICE OF OFFICIAL PAPER

When Mr. Everitt printed UP-TO-DATE FARMING monthly he supplied it to the society at 25 cents a year; when it was semimonthly it was supplied to members of the society at 30 cents a year; and when a weekly at 50 cents a year.

The price the society is paying out of the members fees and dues to the alleged present official paper is 50 cents for a pretended monthly, but which really is issued at irregular intervals less than monthly.

Has any member analyzed this matter? The present officers of the society and publishers of Equity Farm Journal never stop crying "graft" at Mr. Everitt. If he grafted the society at the above prices, what are the present publishers doing?

Before January first you got the paper four times a month at a cost of 50 cents. Now you get a **promise** of the paper once a month at 50 cents, or at the rate of $2.00 if issued weekly. If there was graft in the old arrangement, why is there not four times as much graft in the new one? But farmers are not expected to see these things; just close their eyes and work as hard as they can and let a few slick citizens do their business for them.

REPORT OF CONVENTION

Each member of the A. S. of E. should obtain a report of the proceedings of the fifth annual convention of the society (so alleged) from the secretary of his local or county union and read it. It will confirm every word that UP-TO-DATE FARMING has printed about that meeting and its acts. We received a copy on March 5th, too late to review it in this number, but may do so in April 1st number. The only particular reference that we will make to it is what is called the "executive session," being the meeting Friday night and contained on page 29.

We will say that Mr. Everitt was in the convention hall only at short intervals on Friday afternoon. He was present when the Friday evening meeting was arranged for but later he was told by several delegates that the order had been changed again, and he believed it. It looks as though his enemies conspired to have him absent. But this is not important. Mr. Everitt was then in the second convention which was more important, besides, it was probably best to let his enemies have full swing. At this meeting the charges were first openly made. This emboldened the people so much that they further published them with the result that the head officers and others are under arrest, and bond, awaiting trial. The acts of this meeting must be under a cloud for the reason that they are omitted from the report with the following explanation:

[NOTE—On January 7, 1908, Mr. Everitt charged the newly elected president and secretary-treasurer with criminal libel of him in the alleged writing and publication of a circular letter containing charges to support which evidence was heard by the convention. Inasmuch as the matters contained in the charges will be made a subject of judicial inquiry it is deemed inadvisable to make public at this time the evidence submitted to the convention. Accordingly, we publish only the discussion had relative to the charges made against Mr. Everitt and made by him against other officers, with the record of action taken by the convention.]

TRIED IT AND FAILED

To UP-TO-DATE FARMING:

The Farmers Union in Southern Illinois has, within the last year, tried what a few misguided men in the A. S. of E. are now trying—pretending that the society should own and publish its own paper. In this case the publisher owned a little plant which he wished the union to take off his hands, and induced it to do so. It very soon proved the white elephant such publications usually do, and in less than a year the union was anxiously seeking a publisher. They finally got the same party to take it back, on what terms I do not know. But the venture was a most miserable failure.—A. M., Mt. Vernon, Ill.

PUT IT IN BIG LETTERS

MR. EVERITT: I received the German Third Power book. The translation is most excellent. Do not fail to make mention of the book in big letters in UP-TO-DATE FARMING that it can be furnished in English and German. Tell all your friends and enemies too, that you have the Third Power book in German and English. It will preach the gospel of Equity and Christianity to all the nations. Dear Mr. Everitt, go on and proclaim the truth and don't be afraid. The truth must be proclaimed before the people can be free. Farmers have always been deceived and humbugged and it is time they awaken. I respect and love UP-TO-DATE FARMING and your great book. I have renewed and also sent a new subscriber.

J. J. SCHNEIDER, Danube, Minn.

[*May God's richest blessings be yours, Mr. Schneider, and may all the benefits that can only come through the true society of Equity established be not much longer delayed for you, is our sincere wish. We will proclaim the truth as the power is given us by our subscribers. Our only ambition is to proclaim the gospel of Equity to all the land and to all the inhabitants thereof. What a great power would be placed in our hands if each present subscriber would now do as you have done, i. e., renew and send a new one. We cannot hardly have patience with the indifference of some farmers, however.—Ed.*]

LET OTHERS DO LIKEWISE

Murphy Union, A. S. of E., at a meeting held February 21, unanimously adopted the following resolutions:

Resolved, that we feel the importance of the two factions of the society being united. That we realize that great harm has already resulted, and fear that entire failure of purpose will be the final result if an agreement is not reached.

Therefore we earnestly solicit the officials of the county union to request each local union to take a vote as to which branch of the society they prefer to follow and send a delegate to the county union to cast the vote as instructed, with the understanding that if each county union in the State takes similar action and reports to the State union, all pledge themselves to submit to the majority.

And further resolved, that we believe the war against J. A. Everitt is unjust and uncalled for, and unanimously instruct our delegate to cast his ballot in favor of J. A. Everitt as our leader and UP-TO-DATE FARMING as our official paper.

Signed: J. T. Mardis, president; Wm. Sheehan, secretary, Falmouth, Ky.

[NOTE—Mr. Everitt is not seeking leadership. All he desires is that capable and honest leaders are put in charge of the society and again place it where it was when the 1906 convention met, and developed it.—ED.]

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues will not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say; "I saw it advertised in Up-to-Date Farming."

Agents Wanted

Agents Dollar an hour or sample returnable. Automatic Curry Comb. Sample postpaid, 40c. Particulars free. Clean Comb Co., Dept, B. Racine, Wis.

$200 to $300 per month in the real estate business. $10 capital will start you. Experience unnecessary, as I prepare you and appoint you my special representative. Write for my free book. C. H. Gray. Pres., 873 Century Bldg., Kansas City, Mo.

E. F. J. SETTLED IT

I am a member of the A. S. of E. and belong to McHenry Local Union, organized July 20, 1907. Our membership fee was $2.35 and our understanding was to get the official paper for one year, but I know better now. This Equity movement I was greatly interested in and was waiting for the reports from the national convention. Now I read all I could about the *mix-up*, in UP-TO-DATE, but that was one side. Was glad when I got the Equity Farm Journal, the other side, that settled the question—I am strongly for Everitt and UP-TO-DATE FARMING.

JOHN DYBWAD,
McHenry, N. D.

MEETINGS

Send the dates of your meetings. Organizers are especially urged to make their dates sufficiently in advance so that they can be published in this paper one or more times. Also send us names to whom we will send sample copies free. We can help you very much. Use this paper. Forms close ten days before date of issue.

LEELAWAN COUNTY (Mich.) UNION will hold its quarterly meeting at Cedar City April 8th. All locals are requested to send delegates. Meeting will be called at 10 a. m., and important business will come before it.—Frank J. Beits, Sec., Provemont, Mich.

BARREN COUNTY KY. Mr. J. H. Quigley of Nabob P. O., will hold meetings as follows: Sulphur Licks, Whites School House, March 7; Temple Hill School House, March 14; Eighty-eight, March 21; Roseville School House, March 28,. All meetings at 7 p. m. sharp.

CHRISTIAN COUNTY UNION, F. S. of E., will meet at Baldknob, Ky., April 4, '08. Locals are requested to send a full delegation, as there is considerable important business.—Henry Grace, Sec., Haleys Mills, Ky.

ENGLISH (IND.) LOCAL UNION will meet March 14. We have the most interesting meetings in the history of our lodge and our union is in better shape for business than ever before.—Aaron L. Moore, Sec.

Michigan State Union

The Michigan State Union will hold its semi-annual meeting at Reed City, Mich., April 2, 1908, at 2 P. M. All local unions in the State are specially urged to send delegates to this meeting, as much depends on it as to the future prosperity of the cause of Equity in the State. This cannot be too strongly impressed on the membership. The principle of Equity is here to stay, and the measure of success to be obtained depends upon the course to be pursued.—E. N. Ball, Sec., Ann Arbor, Mich.

Ohio Campaign

The Farmers Society of Equity began the Ohio Campaign in Huron county, March 7, by organizing a large local at Monroeville, with the following officers: A. P. Horn, president; H. C. Jones, vice president; J. D. Fish, secretary; C. P. Stolz, treasurer. Other meetings have been arranged for throughout the county. J. D. Fish, Monroeville, is county organizer.

Lake county will follow Huron county and its initial meeting is set for March 14. Mr. L. D. Dayton, Painesville, is county organizer. Quite extensive preparations have been made in Lake county and it is believed the county will soon be solidly in the F. S. of E.

Notice to Michigan Members

Geo. G. Wynans, Hamburg, Mich., State organizer for Michigan, desires to correspond with any people who want his services in any part of the State. Remember he is your State organizer, and it is his duty to go to you at your call, or send some person. If each local union will write him for terms and instructions and hold a mass meeting before spring work begins, the membership will be doubled or quadrupled. Also, if communities where there are no local unions will hold meetings under his direction the State can be organized before the next crops are ready to market. This means more than any person can conceive of for Michigan farmers.

MONTANA WANTS AN ORGANIZER

A capable organizer is wanted in Montana at once. Conditions for work excellent. A good opportunity. Address L. Wasman, Sand Coulee, Mont.

DEAD ON THE QUIET

J. A. Everitt, President
Farmers Society of Equity
Indianapolis, Ind.

Dear Sir and Brother: Yours of the 12th inst. at hand, as is also The Third Power book and sample copies of Up-to-Date Farming, for which please accept thanks.

We have carefully investigated the A. S. of E. as well as the F. S. of E., and have arrived at this conclusion, that, as we desire to give the farmers of Lake county the genuine article, we have decided to give the Farmers Society of Equity our hearty and faithful support.

I am enclosing herewith endorsement as per your request, and trust that I may be able in a few weeks to get some of the farmers of this county started in the right direction.

Perhaps I had best mention the fact that I have a commission as county organizer from the A. S. of E. issued by C. A. Windle; the committee who have been conducting the investigation of this matter have not as yet decided just what disposition to make of it. However, I can assure you that there will be no locals of the A. S. of E. organized in Lake county unless it is done by someone besides myself and done dead on the quiet.

Trusting that the decision arrived at by us may be satisfactory to you, and again assuring you that the 1800 men in the Lake county Trades and Labor Council of Lake county will stand by you, and give you all the assistance in their power.

I am yours fraternally,
L. D. Dayton,
Supt. Public School Bldgs., Painesville, O.

A SPECIMEN REPORT

Dear Editor of Up-to-Date:

Our local union meets on the first and third Saturdays of each month. We are trying to carry out your plans. In a letter from Secretary Staats he says our local union has not paid the 1908 dues. He is mistaken, for while we have not paid to the new A. S. of E., we have paid to the original A. S. of E. and sent in the name Farmers Society of Equity, so we would know they reach the right place. Also received a letter from C. O. Drayton saying he would like to come to Patoka and make a talk if we would furnish him a hall. We wrote him that we didn't want to hear him and rather insisted that he stay away from our neighborhood. I trust that all locals will put forth a greater effort to carry out the plan to emancipate the farmers.

Tom Ballance,
Sec. Chance Local Union, Patoka, Ill.

MINIMUM PRICES

The following minimum prices were agreed upon as fair and equitable for the 1907 crops at the annual convention of the American Society of Equity, October 22-25, 1907:

Wheat—No. 1 Northern and No. 2 red, on basis of Chicago market, per bushel	$1.20
Corn—Until January, 1908	.55
Thereafter to April 1	.60
After April 1	.65
Oats, per bushel	.60
Barley, per bushel	1.00
Rye, per bushel	.60
Buckwheat, per bushel	.85
Flax, per bushel	1.50
Irish Potatoes—Until January 1	.70
After January 1	.80
Sweet Potatoes	.80
Beans, white	1.50
Beans, red	2.00
Hogs, per pound	$0.06½ to .07
Sheep, per pound	.05½ to .05¾
Lambs, per pound	.06½ to .07½
Cattle	.06 to .06½
Hay, No. 1 Timothy, per ton	17.00
Clover Seed, per bushel	$11.00 to 12.00
Timothy Seed, per bushel	3.00
Wool, at country markets, per lb	.30

PRIZE WINNERS

Our rebus of February 15, was eminently successful. Several hundred readers contested, and about one in five gave the correct answer. Many gave the correct answer, but either neglected, or omitted writing an article on the best advertisement and why they so considered it. Of course these we did not judge at all, as they did not comply with the conditions.

The correct solution to the rebus is as follows:

Of all the many farm papers
That circulate throughout our State,
The one I like best
Of all of the rest,
Is the one that is called Up-to-Date.

Below are the names of the prize winners, with their essays. Also we add a list of ten deserving honorable mention:

First Prize—$1.50

Wm. L. Robison, R. R. 3, Springfield, Ohio.

The advertisement that appeals to me most is that of the Sharples Separator Co. It appeals to me for several reasons:

First, it attracts attention.

Second, the print is excellent and no one will have any trouble to read it.

Third, the picture of the separator placed before those large shops makes an impression that the machine must have a great many excellent qualities to require such large shops to produce them.

Fourth, the reading matter impresses anyone; if in need of a separator, this is the one to buy.

Second Prize—$1.00

M. I. Gee, Tennison, Ind.

No other ad interests me half
Like the wonderful Edison Phonograph,
Because it takes me to a plane
Where none without it could attain.

The choicest songs the world can sing,
Around each fireside, is a thing
So little dreamed of years ago,
No ad can beat this one, I know.

Third Prize—50 Cents

Enoch N. Bengtson, R. R. 3, Rush City, Minn.

The ad in this issue which appeals to me most is the Edison Phonograph:

First, because of its durability and cheapness, and beauty of tone.

Second, because of its inventor.

Third, because I love to hear music.

Fourth Prize—50 Cents

Mrs. Nels. Ihle, Slater, Iowa.

The Great Western Spreader ad appeals to me most. The great big piles of barnyard manure are veritable gold mines when cast over the fields with the spreader, which is one of the greatest helps the up-to-date farmer can have. Time and labor are saved, and the increased crops soon pay for the machine. No farmer should attempt to farm without one.

Honorable Mention

Isa K. Martin, Box 492, Logan, O.
Mrs. J. T. White, Beach Grove, Ky.
H. P. Lederer, New Market, Ind.
Mrs. Mary C. Parks, Callaway, Neb.
Wm. McNutt, Dover, Ky.
Julia E. Pierson, New Salisbury, Ind.
R. H. Headings, R. R. 4, De Graff, O.
J. H. Kelly, Sec. L. U. 4677, Burrton, Kansas.
Fred F. Wright, Charlotte, Mich.

A NEW PUZZLE

Below we give in slightly reduced form exact reproductions of the corners of eight advertisements in this issue. Some of the advertisements are rather small, but you can find them all by looking closely. These are not hard, and by looking through the advertisements you will be able to make each one out. Try for yourself and see and send us the result. It may be we will get no correct answer (and in that case the prizes go to the one nearest correct), so send the best solution you can.

Read the following conditions:

Arrange your answers neatly and number each consecutively, allowing an entire line to each.

As a part of this contest it is necessary that you tell us in not over fifty words which advertisement in this issue appeals to you most and give some good reasons why it does.

The advertisement you write about must be some one other than those in the above puzzle, and must not be signed by Up-to-Date Farming, J. A. Everitt, or Farmers Society of Equity. Letters not containing such an article, of course, cannot compete for the prizes.

If more than four send correct solutions, then the ones who wrote the best articles will be given the prize.

For the best solution and article we receive on or before April 1, we will give a prize of $1.50 in cash. The next best will receive $1.00, and the two next best 50 cents each.

No money required to compete for, or to get a prize if you are entitled to it. This is a bona-fide offer made by the publisher of Up-to-Date Farming and there is no "catch" in it.

Try your skill, as you stand an equal chance with any of our readers.

Winners will be announced in the issue of April 15 and prize money forwarded immediately. Address all answers to

UP-TO-DATE FARMING (Rebus Dept.) INDIANAPOLIS, INDIANA

A. S. OF E. HEADQUARTERS—NOTES FROM THE FIELD

Directors' Meeting

The by-laws of the A. S. of E. provide for a regular meeting of the board in February. It was attempted to be held on the 25th ult., but only four directors came. Seven directors are necessary for a quorum.

Barnett at Headquarters

President Barnett came to headquarters to attend the board meeting. This, we believe, has been his first visit since the time of the board meeting in January. We don't know whether the board accepted his resignation at this meeting or not.

Journal Men at Headquarters

Editor Bowne and Publisher Nelson and Gentner of the Equity Farm Journal were in the city to meet the directors.

Trial Set for March 18th

The criminal libel case against Bowne, Nelson and Gentner, after three continuances, is now set for trial at Chicago, March 18th.

Speer Arrested

Princeton, Ind., Feb. 28, 1908.

JAMES A. EVERITT,
Indianapolis, Ind.

DEAR SIR—I beg to advise you that Charles A. Speer of Fort Branch, Ind., was this day arrested on the charge of criminal libel and appeared before the judge of the Gibson County Circuit Court and pleaded "not guilty" to the indictment. Owing to the fact that the docket for this term of court is crowded the judge set this case for May 13, being the fourth day of the next term of court. Yours truly,

We suppose it will be much comfort to the publishers and editor of the Equity Farm Journal to know that Mr. Speer was not ignored. In their February number they considered it very unfair to cause their arrest for reprinting from Speer's paper and leaving Speer go free. If these people will just have a little patience, none of them will have good cause to feel slighted.

The writer was not surprised to find a cordial welcome from the people of Gibson County. An individual who displayed the disposition that Speer did at headquarters cannot stand well at home. The first man we approached said: "His name is a reproach all through this section and nothing will please the people better than to see him go up for his dirty work." Many statements were made about his general good-for-nothingness, that he is a disturber and does not enjoy the esteem of the citizens of the county. Among other tales told was one connecting him with a transaction for a church organ that surprised us greatly. His paper is not patronized by the Fort Branch merchants nor is it subscribed for to any considerable extent by the people of the community.

DID HE DECEIVE YOU?

Above is addressed to the members in Virginia.

We are just in receipt of a circular over the signature of C. V. Parkins, Secretary Virginia State Union. We would not notice this if it were not for the fact that it caused a county union in Virginia to leave our society and join with the Dark Tobacco Protective Association. Thus these human fiends are doing all that can possibly be done to kill the society. The circular contained these statements:

The delegates from Virginia believed that the late president, J. A. Everitt, was using the society for his personal gain and not for the advancement of the cause.

We are not surprised that they believed this, because it was pumped into them from the time they reached Indianapolis until they left. Now to disabuse their minds let them try to find one solitary case to prove its truth. Try it. You owe it to yourselves, to say nothing about what you owe to your members and Mr. Everitt. When you find it, or if you think you find it, we'll print your findings in this paper.

That it was openly charged, and we believe truthfully charged, that J. A. Everitt was carrying from ten to fourteen trashy or fraudulent advertisements under various names in UP-TO-DATE FARMING, in all of which he had a personal money interest, either as sole or partial owner.

False. A lie. This lie was, he says, "openly charged" (to all the delegates) "and we believed truthfully charged." Yet it is a lie. Some delegates still say they were not deceived. Let Parkins identify the advertisement and I'll prove to the satisfaction of any honest man that the Virginia delegates were deceived.

That J. A. Everitt, as president of the A. S. of E., had made a fifty-year contract with himself personally, and much to his advantage, to supply UP-TO-DATE FARMING as the society's official paper.

Lie the third. The board of directors in a regular meeting agreed on the terms of the contract and authorized the secretary to make the contract with J. A. Everitt, publisher. The minutes of the board meeting showing that this is true, and the contract with facsimile signatures and approval of the society's attorney, were printed in this paper on page 5, November 15, 1907, number. If the members of the society know their interests, they will know that this contract is the most valuable asset the society has and they will guard it as sacredly as the charter of the society from the State of Indiana, which is another illustration that fifty-year contracts are wise sometimes.

That this paper (the Equity Farm Journal) is the property of the whole society.

Lie the fourth. Parkins knows, if he knows enough to advise at all, that

Contract For Official Paper

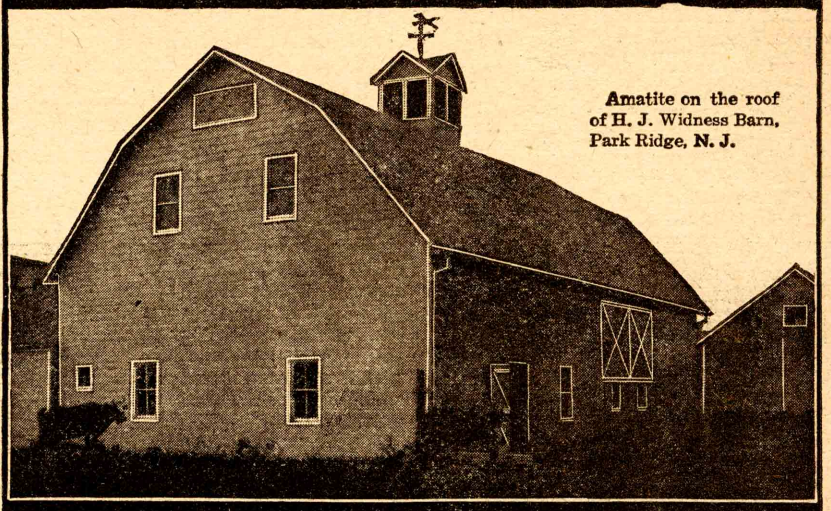
ONE of the present directors of the A. S. of E. wrote to a friend of mine and said: "The best thing Mr. Everitt could have done would have been to tear the contract up in the presence of the convention." I replied as follows:

"I have never done one act, in my relations with the society, that I am ashamed of. That contract was made by the first board of directors with me (not myself with myself, as falsely stated by my enemies), to protect the society. It is the most valuable asset the society has. The very perpetuity of the society in the lines originally provided, depends on this contract. Void it and I predict the death knell of the society has been sounded. No, sir, I would not do what you recommend and thus stand as having been a party to a questionable transaction. By such a course I would forfeit every claim to the confidence of members and could not retain my self-respect. Any time a majority of the members want the contract voided it will not be held against them, but before such time it will serve the purpose for which it was made, viz.: to teach controlled marketing, to organize farmers, to direct the marketing of farm crops, to get profitable prices for farm crops, to secure equity in all the business relations of life, and to PRESERVE the society during its corporate life to the farmers."

I have repeatedly published that I will not hold the contract against the society if a majority of the members want it annulled and this may be considered a part of the contract. Therefore, if the time comes when the paper is not true to the members, or the publisher is making too much money, the members have the remedy in their hands. But the idea of getting rich, is the most remote from my thoughts. If the farmers of America will allow me a comfortable living until the society is established, I will be happy.

J. A. EVERITT.

A GOOD BARN SHOULD



Amatite on the roof of H. J. Widness Barn, Park Ridge, N. J.

HAVE A GOOD ROOF

Amatite ROOFING

Best for Every Farm Building Because It Needs No Painting

WHEN you go to buy roofing next time, ask the dealer how much he would charge to keep it properly painted for ten years.

You'll be astonished to see how much a painted roofing really costs. You will find that the painting every two years **costs more** than the roofing itself.

The best and most economical solution of the roofing problem for you is to buy Amatite Roofing instead of one that needs painting.

Amatite needs no painting or coating.

Lay it on the roof and the work is done for many years. You have no maintenance expense to figure on when you buy Amatite. The first cost of Amatite is its only cost for the entire period.

If Amatite costs twice as much per roll as painted roofings, it would still be more economical to buy because there is none of that big extra expense for paint.

But Amatite does not cost twice as much—in fact, it costs less. In other words, it is actually cheaper in the long run to cover your old roof with Amatite, than to keep on painting it year after year.

Write to-day for a Free Sample and Booklet on Amatite. It will pay you. Address nearest office.

SEED CORN We have originated some of the leading varieties of corn. Our corn all grown under strict conditions for seed. Following varieties are recommended to corn growers as big and sure yielders.

Pride of Indiana Vigorous, medium-sized stock. Ears are large with 16 to 20 rows. The corn is dent and beautiful white color. Great yielder and sure to please. PRICE: one-fourth bushel, 50c; bushel, $2.00; bag, (2½ bu.), $4.50; five bushels or more, $1.75 per bushel.

Central States Dispatch Yellow dent and greatest yielder of any yellow corn we have found. Withstands drought and storms to a great degree. Ears 8 to 12 inches long, very shapely and extremely deep grain. A splendid feeding corn. About 20 rows to ear. Plant a field or more of this great yielder.

Yard Long This is the longest eared corn in the country. Remarkable for its long ears. Frequently 18 inches long with 12 to 14 rows each. Large yellow dent grains. Good to feed and for market. Quite a novelty and interesting at Fairs. Get some of this.

Price On Central States Dispatch and Yard Long Corn: One peck, 50c; bushel, $2.00; 1 bag (2½ bushels), $4.50; 5 bushels or more at $1.50 per bushel. All sorted and cleaned for seed. Order from this advertisement. Catalog free. Write for it.

O. K. SEED STORE, Indianapolis

the paper does not belong to the society.

Please call the attention of the members to the fact that UP-TO-DATE FARMING has ceased to be the official paper.

Correct you are, as far as the new A. S. of E. is concerned. But wrong as regards the original, Simon pure, chartered society is concerned. And it will not cease until a court voids the contract or until a majority of the members desire a change.

Remember, that the splendid new presses and other facilities for issuing a great paper, bought and paid for by our members, are the property of the ex-president.

You lie the sixth time. The members paid $387.81 as reported by Secretary Tubbs and only this amount was turned over to the publisher. The publisher got half price from some of the members for subscriptions, supplied a great number free and furnished millions of sample copies free. They'll never get such cheap service from any paper in the future. When the directors wanted a weekly paper we gave it, when they insisted on a German paper we furnished it, and when the demand came for a Norwegian paper we approved it and turned all the subscription money over to the publisher of the paper. Tell us why it is considered, by some people, a crime for Mr. Everitt to make an honest living? Mr. Everitt furnished a weekly true and pure official paper for 50 cents a year and these falsifiers and blackmailers call it a graft. They now get out a false sheet less than once a month at 50 cents a year and Parkins and his kind don't see any graft in it, although the cost is four times as much. But farmers must always be deceived.

You will have noticed that UP-TO-DATE FARMING has absolutely failed to publish the proceedings of your national convention.

Wilful, deliberate and malicious deception. Parkins knows that the proceedings were not furnished us and we could not get them. Yet he maliciously gives the members in Virginia to understand that we have committed some breach of contract, or good faith.

I further call your attention to the fact that the United States postal authorities have admitted the Equity Farm Journal to the second class mailing privileges, thus recognizing it as the official paper of the A. S. of E.

The entry was secured through misrepresentations the same way as they have accomplished everything that they have done. "Borrowed garments never fit well."

TO THE MEMBERS OF VIRGINIA WE SAY THAT C. V. PARKINS HAS WILFULLY FALSIFIED FOR THE PURPOSE OF DECEIVING YOU. HIS FUTURE UTTERANCES SHOULD BE TAKEN WITH DUE ALLOWANCE.

* * *

We have seen circulars and letters with similar contents sent out by officers and others. We will not attempt to review them now. They were conceived by people in the same frame of mind, were distributed with the same motive in view and will have the same effect.

Members can conceive how many of the delegates to the convention were deceived. They will not blame them so much for that. But in view of later developments, it is inconceivable why some of them will still claim that they were not deceived and why they continue the campaign of insults, slanders and libels to injure a person whose every thought and act has been toward the establishment of the genuine American Society of Equity. To the accomplishment of this he forewent all recreation, disregarded usual work-hours, made the hours of night serve the cause as the hours of day, and gave of his limited money resources as freely as he gave his time; waived all selfishness or self-interest, cheerfully accepted what was given in return, and his only regret has been that he could not do more. Since the reward that Mr. Everitt is reaping his years of sacrifices and devotion is possible in this day and generation, then truly we need a Society of Equity.

EQUITY GRAIN BIN
Storage question has been solved. I have thoroughly examined it. It is absolutely water proof, fire proof, rot proof, wevil proof, and is dryer of damp grain. Will last a lifetime, and costs much less than a timber granary. For particulars write to Geo. M. Boll, Mt. Hope, Kan. In my judgment this bin will solve the grain storage problem on the farm.
H. B. SHERMAN.

NORTH DAKOTA MEETING

On March 4 there came to this office a pamphlet containing a report of the annual meeting of the North Dakota State Union held at Devil's Lake, November 19, 1907.

We are not aware whether this was printed and distributed promptly or was delayed uneil this time. For deceit, maliciousness, treachery and perfidy the statements made before that convention by National Secretary Pauley and President of the Department of Grain Growers Theo. G. Nelson, have no parallel in all our observations.

People will contend that it was impossible to deceive the delegates at the national convention. It was no more impossible than for a couple of unprincipled and unscrupulous persons to poison the minds of the delegates to the North Dakota convention, as we find, by reading the early proceedings, that there were a number of Mr. Everitt's friends there who had gone to defend him against all odds.

This experience is only one of hundreds since the recent unfortunate and revolutionary convention and proves conclusively that a few such people can, by discarding truth and honor, and appealing to the prejudices that are so dominant in human nature, brand the best man who may have ever lived as a scoundrel and the populace will shout "Amen." It was in this way that the people took up the cry against the Saviour: "Crucify Him! Crucify Him! The people are always, apparently, seeking for a victim. Pauley and Nelson knew this. They knew that the North Dakota people knew there something "rotten in Denmark" and they, knowing their friends and coconspirators were guilty, saw their opportunity to make Mr. Everitt the scapegoat.

We wish we could reprint that report complete and comment on it in full, but this is impracticable. We will make a few extracts and comment on them and pronounce all the unfavorable references and reflections on Mr. Everitt, as contained in the report, as equally false.

On page 28 Pauley charges Mr. Everitt with misappropriation of society money.

We charge that this is false. We charged before the convention that Secretary Tubbs, aided and abetted by Directors Drayton, Sharp and Scott, misappropriated the society's funds and I charge so now. The convention was so deceived and dominated by the above-named people and their friends, including Pauley and Nelson, that they refused to allow Mr. Everitt to present his proof. They tell you that an opportunity was afforded Friday night. We say again that Mr. Everitt was given to understand that charges would not be heard then and he engaged in other important business. Besides, what good could come from hearing the charges then when the work of the convention was done? What possible good?

Page 28 Pauley said:

"Mr. Everitt had been handling the funds of the society through his own bookkeeper up to the 12th day of March."

This is as false as words can make it. Mr. Everitt handled none of the money of the society except the pittance paid him as salary, neither was it handled by his bookkeeper.

Page 30 Pauley said:

"And these expert accountants went over these books to see if they could bring his [Everitt's] *bondsmen in for misappropriation of funds so that it might be returned to the society, but they could not tell whether it was the society or what it was, as it was bunched in the entries, so many dollars for this and so many dollars for that, and you could not tell what it was for—printing, or seeds, or what."*

This is pure fabrication. Again we say Mr. Everitt did not handle a dollar of the society money and was not required to give a bond and did not give a bond. Hence Pauley's statement on its face is an invention, as all the charges against Mr. Everitt are. The claim that entries were "bunched" is false. The society's accounts were kept by Secretary Tubbs and they were not kept with accounts of printing and seeds. The statement is as false as h—l. (Pardon the passion displayed, but how can a person exercise forebearance under the circumstances?)

Pauley said "Mr. Everitt resigned." The motive was to cause the people to believe he was guilty of wrongdoing and resigned to escape something worse.

Mr. Everitt did not resign. He said he would not accept any office from *that* convention and he is proud of his decision and more proud as time passes. Does his discernment not deserve commendation?

Pages 34 and 35. Mr. Pauley wants to convey the impression on these pages that he was Mr. Everitt's friend. This is a part of the tactics resorted to by all hypocrites to work on the credulity of their hearers. "A bad man becomes worse when he apes a saint."

Page 36. Pauley says:

"*the contract was furnished* [for the official paper] *and it was signed by Mr. Everitt and his secretary, of which you will find a facsimile in Up-to-Date Farming, and signed by Mr. Everitt as an individual.*"

This is as false as all the others. If you have November 15th UP-TO-DATE FARMING, refer to page 5 and you will see how false it is. Pauley assumes that you have not got the paper or will not look it up, so he lies to deceive you and says "it was signed by Mr. Everitt and his secretary . . . and by Mr. Everitt as an individual." The facts are, the board of directors of the A. S. of E. met and authorized the secretary of the society to make a contract with Mr. Everitt, the publisher of the paper, and to be approved by the society's attorney, which was done.

Page 37. Pauley has not presented the

matter about the Equity press to Mr. Everitt yet. Why don't he? Because he knew that the members contributed about $300 and he wanted the delegates to the North Dakota convention to believe that the members bought an $18,000 press and Mr. Everitt had it.

Page 40. The North Dakota should not forget that Theo. G. Nelson is now under arrest and awaiting trial, or rather dodging to prevent trial, as he has begged for postponement three times. Nelson commits further criminal libels on this page and has repeated the same stories that were sent out over the names of National President Barnett and National Secretary Pauley. (To what depths our original, beautiful and noble society has descended!) Nelson's charges were inventions; false fabrications and made to deceive the honest farmers and will result in delaying the accomplishment of the good objects of the society. Yes, the delegates to the convention went to Indianapolis Everitt's friends, as many were who went to the North Dakota convention. But they went away poisoned against him. Why? Let the North Dakota people answer.

On page 51 Mr. Johnson, a delegate, is reported as saying:

"I want to say that I have turned over since I came here. I feel altogether different than I did after dinner, and I want to confess it, and I want to ask every man here that has not already turned over to study this thing and if he can see fit, to turn a new leaf."

..The delegates to the national convention were dceeived as were the delegates to this State convention. These cowards who led in the North Dakota meeting took advantage of Mr. Everitt's absence and consummated their object, which was not for the good of the society. At Indianapolis, notwithstanding Mr. Everitt and his friends were there, they did things in such an underhanded way that we knew not just what they were doing and the charges that were used to poison the delegates' minds were not known to Mr. Everitt until after the convention was over. Since then they have all been refuted, six of the offenders are under arrest—Pauley, Nelson, Speer, Barnett, Bowne and Gentner—while three others have fled to escape arrest.

On page 87 is recorded that a vote of thanks was given to National Secretary Pauley. When the truth is known, and enough should be known now, any delegate to that convention who desires to retain his self-respect; who believes in justice between man and man and who can assert his manhood and refuse to be the dupe of designing people, will want to reconsider his vote and reverse it.

[NOTE—The above is written in usual editorial plural and second person; but not wishing to evade responsibility or escape identity, we say it was written by yours devotedly, J. A. Everitt.]

CHARLES A. SPEER

Was appointed to the office of director of organization of the A. S. of E. in December, 1906. He failed to accomplish the results expected and President Everitt asked the board to remove him and finally called a board meeting March, 1907, for this special purpose. The majority of the board granted Mr. Speer a further trial. In August President Everitt called the board again for the same object, as the year was passing and Speer was accomplishing nothing and he would not allow those who could direct organization, the opportunity. At the meeting the majority of the board—Tubbs, Drayton, Sharp and Scott, put through a harmony resolution and thus secured Speer in his office until the annual meeting. When Speer took his office there were several hundred organizers and the best conditions for development the society ever enjoyed. When he vacated it there were not a dozen organizers active, and the increase in membership for the year was 11,000 and the wheat-producing States, where Mr. Everitt was allowed to conduct a campaign for a short period, were responsible for the increase.

Speer was recognized at the convention as one of the leaders and no person has been as false as he in defaming Mr. Everitt. To illustrate his animosity he made a motion in the meeting called by the conspirators Tuesday night (the first day of the convention) that all friends of Mr. Everitt be expelled from the hall.

Speer was indicted by the Gibson County (Ind.) Grand Jury for criminal libels published in his own paper and was arrested February 28, 1908.

CHARLES A. SPEER

Every week or so I am in receipt of a paper called the "Fort Branch Herald" in which the editor, Mr. Speer, is loud in his denunciation of Mr. J. A. Everitt, formerly president of the A. S. of E. While Mr. Speer holds himself immaculate, I want to submit something to show that he is probably guilty of the very things that he accuses Mr. Everitt of. (1) In the spring of 1907 I sent him a money order to pay for the admission of a new member and the dues of an old member. I received a letter from Mr. Tubbs asking me to get the old member to pay up his dues; further, the new member never received his paper at all; since the convention the old member has been getting the Equity Farm Journal. What did Speer do with the money?

(2) The Porter local union sent Speer money to pay for three Equity song books from which they never as much as received an answer. Is this Equity? Shouldn't Mr. Everitt have been given the money to pay for the paper which is now a year in arrears? And shouldn't the new member have had his paper for the last year? And shouldn't Porter local union have received their song books to sing farmers to the front?

Concerning the late convention held at Indianapolis, I want to say that Mr. Speer tried to be dictator to the Indiana delegation. I received letter after letter from him asking for a delegate that would be hostile to Mr. Everitt. We sent one, Mr. Wilson, who is said to have got lost while taking in the sights of the capital city, but this we do not know, but he got to the convention, and saw things in the right light. We are glad that he undertook the journey alone because those who allowed themselves to be led by the sharpers were led into doing things that leaves a red stain on the garment of Equity, which will be hard to wash away. When Mr. Wilson returned he reported things just as UP-TO-DATE FARMING has reported them. Therefore, I accepted it; so did three-fourths of the members in this locality.

Mr. Everitt, there is not a stain on your garment as I can see. Go ahead and face the thing as you have been, like a man, remember that even our noble Washington had to face the Conway plot. Time will vindicate your name and success will crown your efforts. I hope all our members will reason on this.

JOHN C. LEMMON, Sec. 2205.
R. R. 4, Montgomery, Ind., March 6, 1908.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

QUESTION: (1) *Our local is in a tangle. We have been receiving Up-to-Date and we also have a copy of the Equity Farm Journal. We don't want the Journal, but we do want our old paper.* (2) *Also, we want to know why it costs $2.50 to join now and $1.50 dues a year. When we had been paying $2.00 and $1.20? Please enlighten us so we may be in better spirits.—Arthur Cook, Sec., L. U. 581, Wier, Ky.*

ANSWER: (1) Report to the Farmers Society of Equity, Indianapolis, Ind., and you will be headed right for victory and you will get UP-TO-DATE FARMING regularly. If you report any other way your money will be wasted and you will not get the paper you want and the one all farmers need more than any other. (2) Tubbs, Speer and Mulholland failed to accomplish anything in 1907 on account of incompetency and spending their time promoting wild cat schemes, then they put the blame on the fee and dues which they claimed were too low. (See page 2, Oct. 8th, 1907, number.) They succeeded in pulling the wool over the eyes of the delegates to the convention and that accounts for the change. The fee and dues in the Farmers Society of Equity remains as before, $2.00 and $1.20 respectively. Of fee keep 25 cents in L. U. and send $1.75 to headquarters; of dues, keep 35 cents and send 85 cents to headquarters. Headquarters pays all organizing expenses and for the official paper.

Q. *Will members who joined the A. S. of E. be members of the Farmers' Society of Equity?—Henry Frank, R. R. 2, Marathon, Wis.*

A. Yes, on payment of $1.20, the annual dues for 1908.

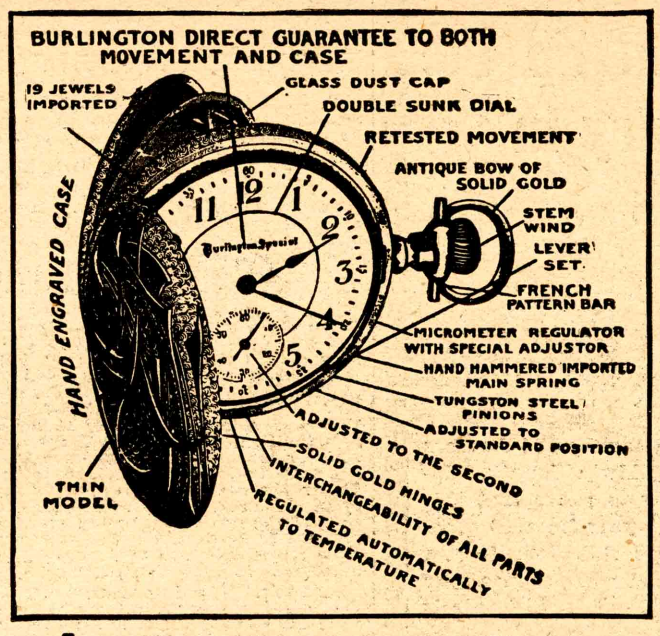
Q. *If I lose the fee or due stamps, will I have to pay for them?—Several Inquirers.*

A. No. The bill sent was simply a memorandum to aid us in keeping accounts. The stamps cannot be misused without detection on account that the member's date on his subscription label will always be a notice to him if fees and dues were rightly reported.

Q. *Why is the fee to join the F. S. of E. $2.00, while here in Wisconsin they ask $3.00?—Several Inquirers.*

A. You have the names confused. The F. S. of E. adopted practically the 1906-1907 constitution and laws of the A. S. of E., continued the same fee and dues and continued the original plan. The A. S. of E. at the last convention adopted practically a new constitution and by-laws,

WE CHALLANGE



$2.50 a Month

Buys either men's or ladies' Burlington Special — (acknowledged the finest and best made watch in the world)—and at the Rock-Bottom—direct price. Sign the coupon and get the free Burlington catalog.

the Waltham and Elgin

We challenge these huge **quantity** products to a competitive **TEST** with the great **quality** watch—the Burlington special—our free watch book explains.

$1,000.00

$1,000.00 has been deposited with the Colonial T. & S. Bank, of Chicago, to back up the Burlington against any and all watches of the same grade in the Elgin and Waltham lines. We make the challenge irrespective of price, **no matter what price** the Elgin and Waltham charge. The test is to be a test of quality, grade for grade. Judges are to be named by both sides, and the loser in this test is to forfeit his $1,000.00. The bank now holds the $1,000.00.—Why do not the Elgin or Waltham accept this challenge?

Write us for a copy of this challenge and full explanation of our new direct Burlington offer—the ***rock-bottom*** *price—$2.50 a month offer: Sign the coupon below and get the free watch book.*

How the Challenge Started: The Waltham Watch Company published a challenge to all foreign factories to put 50 foreign watches against 50 Waltham watches in a competitive test of **time keeping**, the whole 100 watches to become the property of the winner. For copy of this challenge read our free booklet.

Why Did the Waltham Company carefully confine its challenge to foreign competitors? Of course the Waltham can afford to challenge Swiss watches, for American-made watches are certainly better — but would the Waltham dare to face a test with the Burlington?

YOU TOO **are invited to make a test** of the Burlington—for we offer to send any responsible man or lady anywhere a Burlington watch prepaid **—no money down—returnable after the test at our expense—the test does not cost you one cent.**

More than that: **If after the test you want this superb timepiece, we will let you keep it at the very ROCK-BOTTOM price (the very same price the wholesaler [must pay) and (if you wish) on terms of $2.50 a month.**

We'll prove to you, to all the public RIGHT NOW that the Burlington watch is absolutely superior.

So send your name today and get the Burlington catalog free. Make no mistake. Don't buy a watch until you are posted.

A Test by Uncle Sam!

A test by the United States Government Naval Observatory has already been overwhelmingly complimentary to our factory. Out of the eleven watches which the Government accepted, ten of them were made in our factory. What an overwhelming majority for the quality product! It simply shows what a quality product means when Uncle Sam makes the test!

OUR BOOKLET **will quickly convince you that the Burlington watch, on which there is only one rock-bottom price (the same rock-bottom price EVERYWHERE) is THE watch for the discriminating buyer; that it is THE watch for the man or woman who wants, not the largest selling brand which everybody has, but the best watch, the watch bought by experts, THE watch that is absolutely perfect in its many points of superiority — the BURLINGTON watch.**

YOU WILL BE POSTED on *inside* facts and prices when you send for the Burlington Company's free book on watches.

Book on Watches FREE

Just your name and address—that is all

Write at once **for the free book. It will tell you what you ought to know before you even examine a watch. It will tell you the inside facts about watch prices and will explain the many superior points of the Burlington. Just send name and address right now, today.**

A New Railroad Opening Up the Finest Farming Country in the United States

Here is the Chance You Have Been Looking For

A grand opportunity will be offered a limited number of farmers during the next three months to buy a farm in Baldwin County, Alabama, at $20 or $25.00 per acre. We stand ready to prove that this land will produce as much in dollars and cents each year from 40 acres as the best 160-acre farm in the North. It seems ridiculous to you practical farmers that we will claim that $20.00 land will produce four times as much as land that is worth $150.00 to $200.00. Yet this is absolutely true. All we ask is that you investigate and find out.

Are You Looking for a Chance to do Less Work and Make More Money?

Join one of our excursions on the first and third Tuesday of each month and see for yourself. To show you that we are anxious to have you prove these facts we offer, that we will credit on the purchase price of your farm the cost of your railroad fare, round trip, to Robertsdale or Summerdale, Baldwin County, Alabama, and return, during the next three months. We will be glad to furnish you definite information and send you one of our books giving you facts and figures as to what can be done in the farming way in Baldwin County.

We Will Prove it to You

We have Mr. C. H. Lee, who is representing our company, and will accompany you on the excursion on the first and third Tuesday of each month and will be delighted to show you these lands without any expense to you.

The Chance of a Lifetime

Now, don't overlook this, because it is a chance of a lifetime. Why cultivate land that costs you $100.00 to $200.00 an acre when you can cultivate land that costs you, now, $20.00 or $25.00 per acre and produces four times as much each year and with less work.

If you do not wish to purchase this land to farm it yourself, what better investment can you find in the world than this? It is sure to double and triple in value during the next two or three years. It is a new country just opened up by a railroad and the best land will be selected within the next several months. Those who can investigate at once will be able to secure the most desirable locations.

A Most Delightful Climate

Remember, we guarantee every statement we make and only ask that you take enough interest to investigate. You owe it to yourself that you investigate immediately. This country has the most delightful climate in the United States, being pleasant both summer and winter. The water is the finest in the world. There are no serious drawbacks.

Where can you find a country for farming that there isn't some objection to? In the North the long winters are objectionable and are expensive as well, while in Baldwin County, Alabama, you can produce vegetables in your garden the year around.

Investigate—Come and See Us—You Cannot Afford to Overlook this Chance

We can give you the best bank reference in the world. Our titles are perfect. You are dealing with responsible people. We are only anxious you should know of the great advantages to be derived from this land.

Write at once for particulars to **C. H. Lee, Sales Manager, care of Southern Plantation Development Company, 1017 Unity Bldg., Chicago.**

raised the fees and dues and launched out on new plans for different objects. In short, the F. S. of E. is the original A. S. of E., while the new A. S. of E. is—well, it's hard to tell. If the proceedings of the convention were published complete and without alterations, you could judge for yourself.

Q. *Wouldn't it be the best for the Government to price the markets so it would be a Government report and price?—Wm. H. Cherry, Reedsburg, Wis.*

A. Inasmuch as the Government will not do this, it is not worth while to discuss the merits of the idea. If the Government priced farm crops, they naturally would be expected to make prices on all other commodities.

QUESTION. (1) *How can you start a new organization by changing the name and slight changes in the constitution?* (2) *Can we work under the A. S. of E. charter and pay dues to it and hold to Up-to-Date Farming as the official paper?* (3) *If we work under the F. S. of E., will we have to give up the A. S. of E. and get new charter?* (4) *If so, how obtained?* (5) *Does it cost members of A. S. of E. anything to join the F. S. of E.?* (6) *Have locals any right or can they hold their dues from headquarters and be in good standing?* (7) *Under the constitution of either the A. S. of E. or the F. S. of E. have we a right to shut the door and make the members take an oath to keep certain things secret?* (8) *How many members of A. S. of E. in Tennessee are in good standing?*

ANSWER. (1) Not a new organization. See page 3. (2) Secretary Pauley said no. This decision forced the name Farmers Society of Equity. If this privilege, which all members are entitled to in equity, and which should be granted to all citizens of a free country, had been granted the members, there would not be a Farmers Society of Equity name. (3) The F. S. of E. will send you a new charter. (4) Fifty cents only including supplies. (5) The annual dues $1.20. (6) The A. S. of E. of N. A. by-laws holds members not suspended until twelve months in arrears for dues. This is the law of the F. S. of E. is working under. See page 3. (7) You can meet behind closed doors. You cannot *make* a member take an oath, but of his free will he may bind himself before a proper officer. (8) We don't know.

UNPARALLELED PERFIDY

As an example of the depths that some human beings can descend to, we offer the following:

In the December-January number of the Equity Farm Journal, on page 8, under the heading "His Day to Forget," C. W. Bowne (the managing editor) delivers himself of a column and a quarter of abuse and falsehoods about Mr. Everitt and then says: "If you don't believe it, read the following written by himself and purporting to be something they will say about him a thousand years hence:"

The matter referred to was printed as a four-page folder and below is a reproduction of the title page:

FARMERS' PROBLEMS

No. 4.

THE FARMER MAN AND THE WISE MEN

BY IRA M. BENNETT.

For Free Destribution by the American Society of Equity, INDIANAPOLIS, IND.

FAC-SIMILE REPRODUCTION

The reader will please notice that this was written by Mr. Ira M. Bennett and was published by the American Society of Equity, and without the name of the author no copies were ever printed.

Mr. Everitt had no part in its publication, but it was ordered printed by Mr. Tubbs, and they were distributed by him, or under his directions. But no discredit could attach to Mr. Everitt if he had ordered them printed.

Chas. W. Bowne was at the headquarters of the A. S. of E. and in the office of UP-TO-DATE FARMING for more than a year and he knew the above facts regarding this piece of literature. It is perfectly clear that he has stultified himself and by this and many other deliberate falsehoods, maliciously uttered, has forfeited every claim for credence among honest and self-respecting people. Such perfidy surely has not a parallel in the knowledge of the readers of this paper. We can not believe that there is a single member of the American Society of Equity who will allow a paper bearing the name of Chas. W. Bowne on its pages to enter his home. If he does, it will be like inviting a thief in the night to enter and rob him of goods, honor, virtue, confidence in humanity and self-respect. Any person who will, should not be a member of the original society, but the same may not be claimed for the present abortion. Oh, Equity, what crimes are committed in thy name!

BEAN GROWERS WANT TO REPORT

In February 15th number we printed a plan submitted by Mr. M. N. Drake, Trufant, Mich., to get a report of potatoes in the hands of producers in 1907 and 1908. This brought the following letter from Mr. F. C. La Mont, secretary Local Union No. 5069, Chester, Mich.:

MR. J. A. EVERITT,
Indianapolis, Ind.

DEAR SIR—In reading the February 15th issue of UP-TO-DATE FARMING I read the letter of Mr. M. N. Drake of Trufant, Mich., to the potato growers to make a test report of their crop held by the members of the society and also by non-members.

I think the idea a good one and while Mr. Drake is compiling his reports on the potato crop, by a little extra effort on his part Mr. Drake could also handle similar reports from secretaries of local unions in regard to the bean crop. Therefore I suggest that all the local secretaries that are located in the bean-growing counties make a report as near as possible of the amount of beans held by the members and also non-members of each locality where a union has been organized, and with this report enclose a dime to help meet the expenses of mailing and making the reports.

Nearly all our members are largely interested in growing both the Pea Bean and the Red Kidney. At the present time the quotations on Red Kidney are not up to the growers' expectations.

I trust that Mr. Drake will pardon me for heaping more work upon him, but at this critical period of the society's welfare I think that every good member should do whatever duty that is called upon him to do for the furtherance of the society's interests. Yours for Equity and Everitt,

F. C. LA MONT.

The matter was submitted to Mr. Drake and he has agreed to handle the bean reports also. Therefore cut out this blank, answer the questions and send to Mr. Drake with 10 cents. Put on the report or your letter the seal of the local union. In due time Mr. Drake will send a private report so the organized bean growers may have this information that the non-organized do not have. It is hoped that this information will determine whether to hold for better prices or not.

MR. M. N. DRAKE,
Trufant, Mich.

ONE MAN RULE, CONVENTION RULE OR MEMBER RULE

Probably no falsehood has been given wider publicity than the one, that Mr. Everitt submitted to the convention a draft of a constitution that provided for the election of a president and he should appoint all the other officers.

Members should all know that at the July meeting of the board of directors it was provided that an advance committee on revision of constitution and by-laws should be appointed by the president and the president should be chairman of that committee.

This committee met a few days before the convention to perform its duties. Mr. Everitt submitted to the committee a draft of a constitution and by-laws, or rather amendments to the old constitution and by-laws, and following is the exact wording of the part relating to officers of the National Union, their duties, etc.:

OFFICERS

SECTION 3. The officers of the National Union shall be a President, a Vice-President, a Treasurer, and a Board of Directors including these officers and the presidents of all active State unions.

The officers of the National Union shall be elected at the annual meeting by ballot, or, in case of but one candidate for any office, by acclamation, for a term of one year from the date of election or until their successors are elected and qualified. . . . The board of directors shall consist of the president and vice-president (ex-officio), and the directors as herein provided. They shall constitute the executive board of the society and shall be responsible for the proper conduct of all business pertaining to the society, including all detail work of national headquarters. They are authorized to remove incompetent employees when in their judgment it becomes necessary, and to advise and direct the uolicy of publishing the official paper. They shall engage or appoint a national secretary and a national organizer, together with all assistants required by these officers and necessary to the proper conduct of the work of these offices and the proper development of the society.

DUTIES OF OFFICERS

SECTION 4. The duties of the officers of the National Union, aside from those special duties that may now or hereafter be required of them, shall be the same as usually devolves upon such officers respectively. The president shall have general supervision of the work of the society, sanction and approve special campaigns of organization, and may, upon the advice and consent of the board of directors, perform any other acts and duties as properly devolve on an executive officer.

* * *

The secretary shall be engaged by the board of directors and shall perform his duties subject to the approval of the president and board of directors.

* * *

OFFICIAL SALARIES

SECTION 5. The salaries of the president, secretary, treasurer, national organizer and all employees of the National Union shall be determined by the board of directors with a view of keeping all legitimate expenses within the bounds of reason and the ability of the National Union to compensate the most capable employees obtainable for the conduct of the affairs of this organization in a thorough, business-like manner, that will compare favorably with similar organizations.

Above are all the references to national officers, their duties and their salaries in the draft submitted by Mr. Everitt to the committee. Has any reader ever read anything fairer, more concise and at the same time explicit and comprehensive? In view of the unsatisfactory experience Mr. Everitt had with the old secretary and (mis)director of organization, is it any wonder that he sought, for the welfare of the society, to guard against a repetition of those troubles by making the offices of secretary and national organizer appointive? Besides, he was simply following the down-to-date method employed by nearly all the large and successful organizations and corporations who now appoint their secretary for the time of good behavior instead of electing him for a year.

Can the reader detect a single weakness in this draft that would give the president any more power than such an officer should have? Can you imagine that it was in Mr. Everitt's mind to acquire unusual power, to make the society a one-man society — governed by one man?

To show how false the people are who had charge of the convention and who now are in charge of the society and publishers of the false alleged official paper, we quote from the first issue of that paper dated November, page 2:

While waiting for a report of the committee on credentials, considerable commotion was stirred up over the scattering of some printed extracts, which read in part as follows:

"Extracts from the Constitution and recommendations submitted by Mr. Everitt, to the special committee, *selected by him*, to revise the Constitution of the American Society of Equity. It speaks for itself and shows how Mr. Everitt believes in one man rule. If he would be permitted to select the secretary and the National Organizer of the society, it would hardly be necessary to hold any convention at all. It is hoped the delegates here will assert their rights and select a committee from the convention to provide a constitution broad enough and strong enough to provide for the wants of the membership at large, and then elect officers that will see that the laws are enforced. Then and not until then will you have equity and an organization that you can look up to.

"DUTIES OF OFFICERS.

The very objectionable amendment to the constitution was as follows:

"Section 4. The President shall have general supervision of the society's headquarters and its activities in the field. *He shall employ a competent secretary and other help as necessary* to give correct and efficient service and he shall determine the salaries paid. *He shall also select a National Oorganizer* and such assistants as necessary, and determine their salary. He shall plan or give his sanction to all campaigns before they are undertaken. He shall also contract for all expenses for the National Union or delegate this authority to others under his supervision. He shall sign all charters and commissions with the secretary, or delegate this authority and perform the duties that properly devolves on an executive officer."

We want the reader to compare section 4 above with the correct copy of section 4 preceding it and note how it has been garbled and doctored. Is this not sufficient to condemn the perpetrators of such a cowardly act and those who later compounded the wrong by publishing it broadcast to all the members. And this is the kind of a campaign that was kept up all through the convention by circulars, word of mouth and in the city newspapers. The delegates believed what was told them, but they were told falsehoods and yet some of them say they were not deceived.

* * *

Equally fair, we notice, is the matter of representation at State and national meetings in this draft submitted by Mr. Everitt. It gives direct representation to all unions — local, county, section, department and State — quite in contrast with the constitution adopted by the revolutionary convention and which is reviewed in this number.

The people who have misrepresented Mr. Everitt, impugned his motives and maligned his character to accomplish their own selfish ends have turned their hands against the best interests of every farmer in the country. These pretended friends of farmers are many times more dangerous, as they are many times more unprincipled and unscrupulous than were the opposers of the society when Mr. Everitt started it. Then the opposition was through ignorance, but now it is "anything to down Mr. Everitt and his paper." And why? It cannot be because Mr. Everitt has not been valuable to the society, because all it is he made it. It is not because he has not been true to the society, because he was true when nearly all his co-officers were false. It cannot be that his paper has not promoted the society, because it is the only one that ever did, and to it belongs the credit for establishing the society from nothing and bringing it to its recent power and influence.

But why do they want to down Mr. Everitt and UP-TO-DATE FARMING? Answer: Because they are true to the true principles and plan and objects of the society, and because they will not join with ambitious people to change the plans so the society can be manipulated to their personal aggrandizement. These are the reasons for the basest conspiracy ever conceived and conducted against any person or institution. And these are the very reasons why the farmers of America should uphold Mr. Everitt and support UP-TO-DATE FARMING.

How to Shear Sheep

Many owners of sheep continue to use the old hand shears to the injury of their sheep and the loss of much good wool. It is an indisputable fact that with the hand shears it is impossible to clip the wool evenly or to do it without putting second cuts in much of the fleece. The modern way to shear is with a good machine, and you will find what is unquestionably the best one in the field and the most reasonable in price is advertised by the Chicago Flexible Shaft Company in this issue. The Stewart No. 8 machine is a good one and will pay for itself by the additional wool secured, the freedom from second cuts, the absence of injury to the sheep and the great ease and rapidity with which the work can be accomplished. Their catalog will be sent free on request.

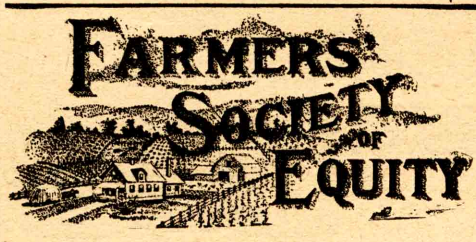
Here Is a Book for You

It's the big, handsomely illustrated catalog of the Ohio Carriage Mfg. Co., makers of the celebrated "Split Hickory" brand of vehicles, also of high-grade harness, whose factories are located at Columbus, Ohio.

You take this book, sit down of an evening, and see the handsome photographic reproductions and read the full descriptions of more buggies and a fuller line of harness than you could see displayed in ten big salesrooms.

This book is fairly a library of information on the question of making and selling vehicles and harness. We would personally like to see this book in the home of every one of our readers who are interested in a vehicle or harness of any kind.

We have never known of their not doing exactly as they advertise. Better write and get this book if you are interested in their line. It's free. Simply a postal, addressed to H. C. Phelps, President Ohio Carriage Mfg. Co., Station 99, Columbus, Ohio, will bring it to you by return mail, postpaid.



Letter Heads and ENVELOPES

Your business card, name of your farm, your name and address with this beautiful design printed and delivered at following prices:

100 letterheads and 100 envelopes, delivered	$1.25
250 letterheads and 250 envelopes, delivered	2.10
500 letterheads and 500 envelopes, delivered	3.25

When printed in two colors, the rural scene green and the lettering black, it makes a very beautiful letterhead. Be up-to-date with business-like stationery. For letterheads the design is larger. Address

FARMERS SOCIETY OF EQUITY, Indianapolis, Ind.

THIS WONDERFUL BLISS PIANO FREE TO GIRLS

Any Girl Can Earn This Grand Little Instrument In A Few Hours Time

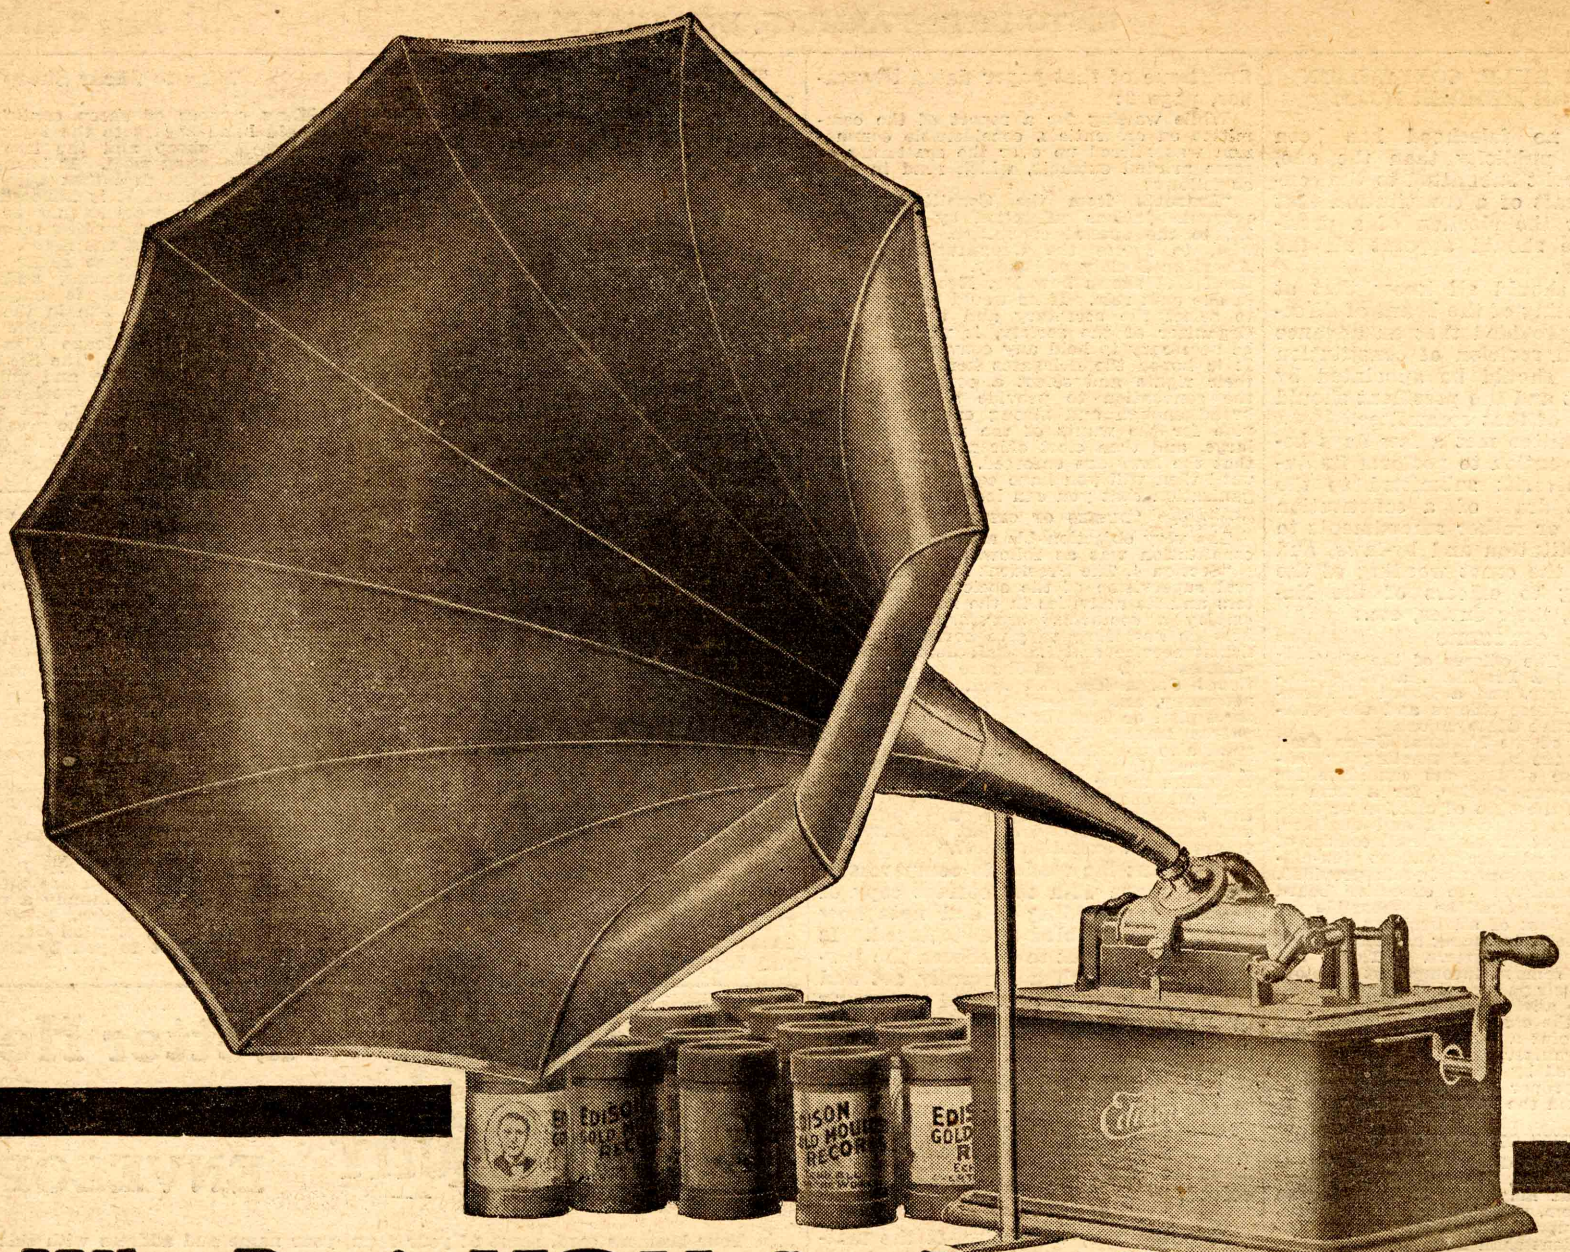
Just think, girls, I give this beautiful little piano, which is a miniature reproduction, in appearance, of the big pianos costing hundreds of dollars, for just a few hours of your time spent in pleasant work in our behalf. This **GIRL'S PIANO** is 10¼ inches high and 14¼ inches wide. The center board is beautifully decorated in colors and the name lettered in gilt, making this piano one of the most beautiful in appearance. It has a xylophone key board and gives a sweet melodious sound. Keys are 2¾-inches and are a deep white, with imitation black keys just as shown above. **You will be surprised and delighted with this wonderful little Piano,** and to make our offer still more interesting, we are not only going to give you the piano **FREE, but also teach you how to play it,** with OUR SELF INSTRUCTOR MUSIC CHART, which is sent free with every piano, and which will enable you to play any of the simple melodies in a few hours' time. With this chart, you do not have to be a musician to play the Bliss Piano.

SEND NO MONEY JUST YOUR NAME AND ADDRESS and I will send you by return mail, all charges paid, 12 of my famous Swastika Spoons. These are regular, **full size silver tea spoons,** with the mysterious **Swastika Cross** on the handle, as an emblem of good luck. All your friends and neighbors will be glad to take one or more of them to help you earn your piano as spoons are something everybody can use and **Souvenir Spoons are all the rage everywhere.** Our famous Swastika Spoons are the most unique Souvenir Spoons ever offered. They are **big value** at 50c each, but in order to get them introduced, we are going to let you sell them at **the low price of 25c each,** which is a bargain price for a Souvenir Spoon of this fine grade and unique design. After you have disposed of the 12 spoons at this low price (which is a small number when you get started) **send me the $3.00 you collect** and I will ship you the **Bliss Girl's Piano** by return express, **also the self-instructor music chart,** just as agreed, without costing you one cent of your own money.

WRITE ME TODAY and see how easy it is to earn this valuable little present selling my fast-selling Swastika Spoons. The sooner you answer the sooner you can get your Piano and Self-Instructor Music Chart. **Be the first girl in your town** to get a Bliss Piano and surprise all your friends with it. Anyway, let me send you full particulars of my free offer, telling you just how you can easily and quickly earn this Girl's Bliss Piano. No harm done if you do not care to try but let me hear from you anyway. I will send you the spoons at once, charges paid.

C. A. CUMMINS, Pres.

213 Van Buren St., Desk 7003 CHICAGO.



Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely **nothing** but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them) and our Free Trial Certificate entitling you to this grand offer. Sign this coupon now, get these catalogs and select your records at once. Remember the free concerts. Sign this coupon right now or send a postal card or letter if you prefer. But do it now. No obligations, just get the catalog. Sign the coupon and mail it to us right away before you forget it. Address F. K. Babson, Edison Phonograph Distributers, Edison Building Chicago.

EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, APRIL 1, 1908 | Number 7

MICHIGAN'S OPPORTUNITY

★ POTATOES ○ WHEAT ⊙ PEACHES
✱ BEANS + APPLES ✠ GRAPES

EXPLANATION—The words and signs above constitute the key to the map. Where one or more of the signs appear in a county they indicate that that county produces the crop or crops largely that the sign or signs stand for. (See next column.)

The State Union of Michigan will meet at Reed City, Osceola County, April 2d and 3d.

This will be Michigan's opportunity to arrange for organizing the State, pledging the crops and to market the 1908 crops at profitable prices.

We know every farmer wants these things done. We also know that every fair business and professional man and even the people who work for wages want farmers to organize to remove the uncertainties attending their markets so greater prosperity may come to all.

We will also say that we believe these things can be done if the forthcoming convention does its duty. How to do them it is the purpose of this article to show.

Michigan holds an important position in the production of some crops. We mention potatoes and beans among the most important. Besides these she produces heavily of wheat, apples, peaches and grapes. Three counties in Michigan produce about 85 per cent of the essential oil of the country.

If producers of these crops in Michigan will organize and control them, they could be largely in a position to get their own prices. Take wheat as an illustration. The crop in 1906 was 13,644,000 bushels, of which only 4,700,000 bushels was shipped out of the county where grown. But as the State does not produce as much wheat as her people consume and large quantities are shipped in from Western and Northwestern States, growers of the State could certainly get an advantage in price equal to the freight on wheat shipped in if they would demand it through concert of action. We are now assuming that Michigan stood alone, but she will have good support from other wheat producing States, the question is more one of being ready to act when the time comes.

Similar illustrations may be made for peaches, apples and grapes. The Michigan crops supply quite definite markets at certain seasons. When the season arrives these markets look to this State for the supply. And what would result if the demand found the supply held for fair prices? In all probabilities the growers' price would be paid. Of course without organization in all the principal producing sections perfect results should not be expected. The benefits that will be sure to result, however, will justify Michigan in organizing for any of these crops, and we hope other States will lend powerful aid.

There are 44 counties in the lower peninsula of Michigan that produce some of the crops named in large quantities; 28 of these raise potatoes

[*Continued on page 17*]

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

A FEW PERSONAL WORDS FROM THE EDITOR

NOTHING could possibly be more gratifying than the thousands of letters from subscribers commending the course pursued by this paper during the last five months and the satisfactory outcome, the result of our policy. Very true, a few did not approve, as all the people never are unanimous on any one subject or policy. We, however, console ourselves that those who disapproved were deceived and stubbornly refused to be undeceived by the overwhelming mass of evidence and prof of the justice and equity of our position.

To those who thought too much time was taken to prove the claims of UP-TO-DATE FARMING in the unfortunate controversy, if such it may be called, and to other subscribers, we want to say that in the future UP-TO-DATE FARMING will surpass itself in urging united action by farmers to better their condition through organization, co-operation, pledging of crops, control of supply and scientific or at least systematic marketing.

Thus, pledging this paper to continue the fight for the farmers' industrial freedom and independence we again call upon all members and subscribers to continue their support and to increase their zeal to extend its circulation and the organization of the society. We are in the contest to win, and with truth, justice and equity on our side we WILL win.

The fight for the farmers' rights has but fairly begun. But we honestly believe the greatest obstacles have been overcome and their worst enemies have been encountered and routed. Therefore may we not hope the calling that gives to mankind bread, meat and raiment will soon be exalted to the position to which it is entitled by divine and human right, but which it has always been denied?

As there are several thousand subscribers who have not yet renewed their subscriptions, although we have reached the twelfth hour, we want to thank them one and all for their kind favors in the past, and to wish them happiness, good health, and, if farmers, that they may soon live under better conditions on the farms than ever in the past. And now, to such, unless they conclude to renew after receiving this April 1st number, we say "Good-bye!"

J. A. EVERITT.

Cost of Lumber Reduced

Lumber costs can be reduced one-third and every lumber user may be his own sawyer through the ownership of one of the celebrated De Loach mills. Any contractor, builder, manufacturer or farmer will appreciate what this saving means; to be independent, to haul your own logs and saw up your own lumber on your own premises just as you want it, and at a cost far below the retail price, means not only economy but convenience, time-saving and efficiency.

For a catalog telling all about saw mills, steam engines, boilers, gasoline engines, portable corn and feed mills, planers, shingle mills, wood saws and water wheels, address De Loach Mill Mfg. Co., Box 850, Bridgeport, Ala.

One hundred and fifty Post Holes four feet deep and ten inches in diameter in ten hours with no trace of tiredness is one Pennsylvania Farmer's record with Iwan Bros. Post Hole and Well Auger. This wonderful implement has interlocking steel jaws that simply eat out the soil and do not give the slightest resisitence from suction when they are lifted out full. It is easy to dig a post hole in one minute. This labor-saving implement is simple and durable in construction, and one day's work with it saves enough to cover its cost. Write Iwan Bros., Dept. 27, Streator, Ill., for more information.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR. A CLUB OF FIVE FOR $2.00

Foreign Subscriptions, including Canada, $1.00 per Year.

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

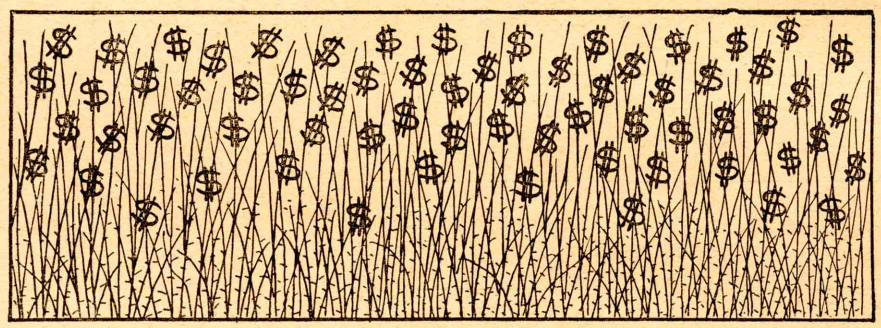
Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

FARMERS OWN THE EARTH

Above is a true statement.

Considering that farmers actually own the earth, then why should they be the most dependent, the hardest worked and poorest paid class of people on earth?

The answer is: They have not known how to preserve to themselves a just reward from the results of their toil. But this time may be past now. This paper teaches how and it is going to be more powerful in the future to put the plan into operation than ever before.



So, Mr. Farmer, if you are not sure that your crop of dollars will be as large this year as it ought to be, subscribe for UP-TO-DATE FARMING at once. You ought to subscribe now while you are preparing for the crops.

If you have farmed ten years or more, you have produced in that time an immense pile of stuff if it were all put together. To produce this stuff you have worked hard, early and late. But what have you got to show for it outside of the increase in the value of your farm, which you owe to the increase in population and development of the county?

If you got a fair profit from every bushel, or bale, or pound of the mountain of produce; if you get a fair wage for every day's work, the large bag of money will represent your worth. But If you did not, the smaller pile more nearly represents it. If you want to put yourself in a position to extract every cent of profit that you are entitled to from the mountain of produce that you will have in the next ten years, you must read this paper and help to extend its circulation. It is a great power now. It must be a greater power.

James Oliver, manufacturer of plows, died recently and left a fortune of about $63,000,000. Suppose there are 5,700,000 farms in the United States (United States census of 1900) it means that each farm contributed over $10 to his net wealth. And Mr. Oliver is only one of the thousands of millionaires farmers are making, yet many of them balk when urged to pay 50 cents, $1.00 or $2.00 to guarantee a fair share of the wealth they produce to themselves. Farmers have, actually, the best opportunity to get rich, every one of them, if they would only embrace the opportunity. And they would embrace it if designing people who want to keep them servants to make millionaires would let them alone, or if farmers would say to them, "Get thee behind me."

Renew Now—Subscribe Now!

THIS IS THE LAST COPY YOU WILL RECEIVE if your subscription expired December, 1907, or before, unless you renew now. See your address on wrapper. TO ALL SUCH we make this offer: **Send 50 cents and your time will be extended to January, 1909.**

We send with this paper a renewal blank. See it and use it. This is the last chance and you know the power of this paper must not be weakened.

To all whose time expired since December, 1907, we will extend their subscription one year from expiration for 50 cents. Address

Up-to-Date Farming, Indianapolis, Ind.

WITH UP-TO-DATE'S PUBLISHER

We take very much pleasure in calling the very special attention of all our readers to the great offer of EQUITY chairs for clubs as printed in this number on page 19. It will not be necessary to say more here. The page tells the story and we make these remarks here merely to call the attention of readers to the beautiful, massive, luxurious Equity chairs. While it is not practicable to put one of these in each home, we do expect them to soon be in each community and the proud possessor will be envied by his or her less fortunate neighbors. See page 19.

A few secretaries have requested that UP-TO-DATE FARMING be discontinued to their members. Few of them had the forethought to send a list of the members, and as our subscription list is not arranged by local unions we were required to write for the lists. A few smart secretaries got very indignant because we made such a request. Here is a sample:

Armour S. D. Mch. 9, 08.

to Up to date Farmer now in regard the names that want their paper Stopped every man in our Local Union but one man wants it Stopped now you need not bother me any more about for a Bolter like your self always wants something. Yours

J. W. ROBERTS.

Of course we could not comply with such indefinite instructions as above and we are very sorry because it is a shame to waste a paper like UP-TO-DATE FARMING on such material as the person signing the above letter.

☞Did you notice that "Renewal Blank" in your paper? We look for it to come back with 50 cents. This will pay any arrearage subscriber ahead to January, 1909. This is a very SPECIAL OFFER that you should NOT fail to embrace. Look at your address on wrapper.

"At Home" wa sthe only address a subscriber gave who sent $2.00. Of course we could not execute the order until he wrote again. When we received his complaint he wondered whether we intended to defraud him; of course our explanation was satisfactory to him, but it will be more satisfactory to all parties if people will resolve to always write their address in full. We have received as high as twenty-five letters in a day with insufficient address.

And here is another from a secretary who should not be expected to appreciate a paper like this:

MR. EVERITT:

Dear Ser. Answering your letter of the 11th; inquiry of the matter of printed, and opinion
at that time you may was A member of the American society of the A. S. of E.
And now I have all my printed and other's of my members don by the American Society of Equity
I will say to discontinue the Up To Date paper for me.

Yours truly.
G. LUEKEN, Sec., Stanton, Mo.

The Equity chair offer, as in last issue, made an instantaneous hit. From reports received, hundreds of clubs of 30 are under way at this writing and from present indications many of Our Up-to-Date People who love equity and justice, will soon be enjoying rest in an Equity chair. This offer is repeated in this number. Read it. New subscribers or renewals count.

DRIVEN TO DESPERATION

A Long Distance View of the Kentucky Night Riders

UP-TO-DATE FARMING stands for law and order and against lawlessness. It cannot stand otherwise. But it is a fact that law itself may sometimes become the aggressor, or, perhaps a better way to put it, an oppressor. The greatest advances the human race has made have been in defiance of law and the then present order of things. We are not unmindful of the import of what we are saying, and we are writing not to encourage anarchy, but to make as strong a plea as it is possible for us to make against those things which lead to and impel, if not compel, anarchy. The history of the human race proves that there is a limit beyond which men and women, civilized or savage, will not endure; and the higher the state of civilization the more tremendous the explosion when the limit is reached. We presume there is not an intelligent being living on earth today who does not hope to not live to see the day when the masses, goaded to desperation, shall feel compelled to openly and forcibly resist the classes entrenched behind law—too often law of their own stealthy or corrupt procuring.

Do not shudder at what we are saying, nor too hastily condemn. That watchman is the most criminal of all who sees the danger approaching and refuses to give the alarm. Such eruptions have been, and they have come to the most civilized peoples and countries. True, they have seen Havoc ride the pale horse of death and nations go down in blood; but they have come, and almost seared the pages of history on which their terrible story was written. In almost every case (may we not say in EVERY CASE?) those who made the laws were responsible for the cataclysms. Greed and corruption got the ear if not the heart of the ruling classes, and secured the framing and enacting of laws that, step by step, more noiseless than the assassin's tread, added to themselves power after power to oppress until endurance was possible no longer.

However much we may dislike to confess it, there is such a tendency of things in this country. There is growing up here a dominant class, if not a ruling class, that has secured and is securing class laws that confer special privileges not in the interest of the masses of the people, and that the true government of this country, the people, never would have enacted had they understood them and their purpose. After such enactments and the people complain at the oppressions which follow, the oppressors point to the laws and shout 'anarchist" at the complainers, and compel the executives and the courts to enforce the laws, no matter how unjust their operation nor how corruptedly procured. It is against this tendency of things we most earnestly but respectfully warn our lawmakers.

The nearest a culmination of such trouble that has ever occurred in this country since its birth (we do not regard the late war of this character) is the struggle now going on between the tobacco growers and the tobacco trust. In this struggle UP-TO-DATE FARMING has unequivocally espoused the side of the growers as being the side of justice and of right, but our readers know that we have as unequivocally condemned lawlessness and pleaded for the observance of law and the maintenance of order. But, as we said near the beginning of this article, there is a limit to human endurance, and when that limit is passed and no other remedy seems possible, the most law-abiding may become lawbreakers. In this unfortunate condition in Kentucky and Tennessee the origin of the trouble is precisely the same as that of all such troubles in the history of the past,—law intrenched selfishness and greed, embodied in this case in the so-called Tobacco Trust. But no doubt those responsible for its immediate precipitation are stubborn, or unwise, or corrupt growers who take sides with their oppressors, the trust, as against their friends and neighbors who would if they could peaceably save them from the wrongs and oppressions of the trust. It is incomprehensible that any farmers could be induced to stand out against their own class and themselves in such a struggle, when they must know that fairness and justice is on their side; but they will do so—those have always been found who would do so—and if laws are broken such persons must bear the responsibility. Had there been no Tories in America at the time of the Revolution, the minions of King George could never have found a footing on our shores.

But to show how this tobacco situation is viewed from a distance, as well as what is thought of the tendency of things to which we have referred, we copy the following article from "The Bystander," Los Angeles, Cal., a publication of select but world-wide circulation:

In certain portions of Kentucky and Tennessee, there is being waged day after day and night after night a bitter and dramatic warfare. Set in the civilization of the twentieth century, in an era of the "unprecedented," it is strangely out of place, or it is a rainbow of promise in the industrial sky. Which? That is the question, and in that aspect it is of interest to those without the zone of belligerency.

On one side of this grim, relentless battle is a band of sturdy farmers. These men, hitherto law-abiding citizens, made of that stuff which is the country's bulwark, both in time of peace and in the hour of national peril, have suddenly become a mob, whose episodes read like a chapter from Caesar. Hitherto defenders of the law, they have now spurned it and seek in the torch what formerly they sought in the courts.

On the other side is arrayed the American Tobacco Company, just as rapacious, just as vindictive, but seeking its end through means which, while within the pale of the law, are equally as far removed from the pale of right.

The admitted facts are that the American Tobacco Company, after it had combined the tobacco manufacturing concerns of the entire country, thus effectually destroying even the semblance of competition, divided the tobacco-producing section into districts. It apportions to each district one of its own buyers. The price put upon tobacco by that buyer was as unalterable as the laws of the Medes and Persians. Prices were thus arbitrarily fixed and the grower of tobacco had but one of two things to do. He could accept that price or he could keep his tobacco. There was no other alternative. And the tobacco unsold was worth nothing to him.

Lounging leisurely upon his divan in Gotham, the head of the tobacco trust says to the grower:

"You and I do not agree on prices. This is a free country. I accord you the right to keep your tobacco. I demand the right to fix the price I am willing to pay for it. You are violating no law in keeping the product and I none in offering for it what I feel disposed to give. You go your way, I will go mine."

That is logic. That is law and such law as leaves the farmer helpless in the face of a wrong. That is our system of jurisprudence which inspires the cogtative to exclaim, "Lo, that which was the beautiful hath become unsightly, as Hinnon became Ge-Henna."

In the meantime back in the Kentucky hills, the days are bringing to maturity the mortgage on the old homestead. The cattle need fodder, the pigs need corn, the field needs a fence, the children need shoes, the wife needs clothing and the table needs food.

The farmer is not much at figures. Necessity snatched him early from school, but with a penny pencil and the wrapper of the weekly paper, he can figure out that the cost of producing the tobacco which he has stored, according to market value, is more than he is offered by the trust.

He thinks of the velvet carpet into which his boots sank as he walked out. He thinks of his own bare board floor through which the winter winds whistle at night. He thinks of the heating device in the trust's great building, and then of the mule sled and the hillside back at home. He thinks of the marble lavatories of the trust and of the tin pan hung against the side of the house near the well at home.

And he thinks of the hot sultry days, the long hours of tedious grinding work in the summer sun, the tired nights, the pitiful hope afforded by that season of toil, and at last of the disappointment of it all. And he says to the sentry within him, his own conscience: "This is not right. It may be lawful, but it is not just. If the price on this tobacco is to be fixed arbitrarily, why should not I who have sweated and suffered to raise it, fix that price, rather than this man who has never turned the soil in his life?"

Ladies and gentlemen, who is nearer the right? Thus face to face with the tyranny of the American Tobacco Company, the grower had either to take the money or take to the woods.

At that time, the price of tobacco brought from $1 to $5 per hundred pounds. The farmer was every year getting a little deeper in debt and the trust was every year waxing fatter on the spoils of labor.

At last the growers said, "These people have organized to ruin us. Let us organize to protect ourselves."

This they did. They formed an association, not to plunder but to defend, and now the price of tobacco ranges from $7 to $25 per hundred pounds. Compare the figures. Out of this defensive alliance, forced upon farmers as the last and only resort, has grown the feud that now rages between the tobacco producers and the American Tobacco Company.

The trust has tried every means to disrupt the organization. The courts have been appealed to, the State militia has been brought out to slay its own citizens, fighting for the paltry privilege of living on cornbread and pork. Every device that greed, directed by cunning, could employ to break up the defensive alliance, has been resorted to by the trust, with more or less success; but still those determined men, actuated by the same grim purpose that sent their forefathers to face the troops of King George, fight on, and the sympathy of every honest man in this country is with them in their holy, though violent, crusade.

For what are they to do? For what is a man to fight? The courts that are created to protect them, have spurned them and are arrayed on the side of the trust, and I add with regret, rightfully so under the laws they are to interpret.

The military forces, created for the purpose of protecting their homes, are employed in behalf of this foreign interloper whose mission is avowedly to ruin. Then what in the name of God can they do but fight for their rights? Nothing, unless they starve in order that the stockholders of a concern whose very business ought to be outlawed, as a public menace, may have a few more dollars to add to their criminal store.

The trust bought the holdings of weak and disloyal men who had placed their tobacco in the farmers' pool. It put a premium on all tobacco raised by outside growers, thus appealing to the cupidity of the men whom it had consistently robbed for years. By this traffic in scoundrels, it was enabled to cope with the men who seemed for awhile to hold the trump. And when it did this, it tossed the last straw on the camel's back.

Immediately the Night Riders began to terrorize the country. The barns of these dumper growers, pacified like swine with swill, were burned by members of the association. The warehouses of the trust were fired, and throughout the section these masked men, like wraiths, moved upon the triators and upon the votaries of Mammon.

They had tried the courts for justice. They couldn't get it there. They tried appeals, and they gained no ear that did not find the clink of silver louder than the appeal to right and reason. And now they tried the torch, and when the forked flames of the contraband warehouses shot athwart the black skies of night, they struck terror to the arrant knaves whose outrageous extortion had engendered the limitless ferocity of those determined men. The buyers of the trust trembled. "Their coward lips did from their color fly," as night after night these men rode through field and village, applying the torch and warning the vicars of greed to shake Kentucky's soil from their feet.

Now, the sentiment of the "safe, sane and conservative" element is undoubtedly with the trust and against the Night Riders. One indignant redactor, whose eight-page Palladium of Liberty carries a very profitable advertisement of the trust's brands, bolder than those on the scene of action, declares that every "mother's son of them should be shot down in their tracks."

And those words constitute the text for this article. Now, let us keep our jackets on and curb our capricious distemper while we seek the merits.

Why shoot down *many* hitherto law-abiding citizens lawlessly fighting for their very homes, in order that a *few* hitherto lawless aliens may reap the benefits of an equally lawless campaign of extermination?

As between the lawless farmer fighting for a chance to make an honest living and a lawless trust, fighting for the privilege of making a dishonest profit, every inherently honest man will not long hesitate to choose sides.

The farmer wishes a pittance to keep his family alive and preserve his home a bulwark to the State. The trust wants an unholy surplus to be eventually wasted in riotous living, on the bribing of judges and the purchase of law-making bodies, on the maintenance of a feudalism of money that is fatal to the State and poisonous to society.

The Governor of Kentucky, acting clearly within his legal rights and undoubtedly in the line of duty, has stationed throughout the region of war, guns and sons-of-guns to protect the property of the trust, but not one hand save those bearing the torch, is raised in defense of the men whose homes are at stake. Of course the spectacle is deplorable. It is a potential arraignment of our laws that men should be driven to this desperation. But it really matters little whether the American Tobacco Company loses a few pounds of tobacco or whether many men, goaded by its tyranny, are forced into lawlessness. But it is of the greatest concern that the country at large understand the principle involved—that we be informed whether the Kentucky Night Riders constitute a recurrent spectacle of the barbarous past or whether they present in their lawlessness a harbinger of the immediate future.

I am no advocate of the fire-brand, but in an age when the most vital question of about nine-tenths of our population is the condition of the family larder and the inventory of the clothes rack, there is apt to be two sides to the perpetration of a misdemeanor by a large band of citizens, who, having always obeyed the letter and the spirit of the law, suddenly forsake it, and

---

SUBSCRIPTION PRICE REDUCED. Because of issuing semi-monthly instead of four times a month, as during 1907, the subscription price of UP-TO-DATE FARMING will be *50 cents a year* until further notice, instead of $1.00 a year.

SUBSCRIBERS IN ARREARS are invited to send 50 cents now and their arrearage will be cancelled and their time extended to the end of this year. This applies to ALL subscribers whose date with address is December, 1907, or earlier. Those subscribers whose date is in 1908 will be credited a year from old date of expiration.

THIS IS YOUR LAST COPY if you don't renew. We have made the special offer as above, and as explained on page 2, to insure a renewal from each present subscriber and thus maintain the power and influence of this paper. Future numbers will be made like they were in 1904, 1905 and 1906, when UP-TO-DATE FARMING was an irresistible power to compel profitable prices. Not a single present subscriber can afford to let this paper stop, but ALL should be greatly interested in extending the circulation of the only farm paper that taught the correct method of marketing crops to compel profitable prices.

FOR THE LAST TIME we will ask, Shall it be GOOD-BYE? Will you let 50 cents stand between you and profitable prices for your future crops?

brave the gatling guns of the State and the ambushed assassin, to win their cause.

These men had always been types of admirable citizenship. They had worked hard. They held the esteem of their fellow citizens, could borrow money at the bank on their own notes, which is a better certificate of personal integrity than the credentials of the church. They kept the peace if left alone, and struck only when assailed. I contend that such men are not apt to rub out the good score of a lifetime and become criminals unless the provocation is great.

Now, what was the provocation? It was that which I believe will soon provoke the entire nation, unless some rational check is put upon the acquisitiveness and the greed of that small number of men who are the helmsmen of our various trusts, those who control our financial system. It is the same provocation that made infuriated mobs in Paris boil the hearts of careless princesses, and evolved a Nemesis for national wrongs out of shoemakers and fish-wives. It is the same provocation that made Spartacus organize gladiators who had amused oppressors, into a mob that slew the oppressors.

This contest is not one for principle only. It is one for bread. The amende honorable for a violated principle may be deferred, but an outraged stomach, supported by the pitiful appeal of an unfed child of your own blood, engenders in the mind a pugnacity that brooks no restraint.

The torch that fires those warehouses was not soaked in oil in the lairs of these Kentucky farmers, made outlaws by the very sovereignty which they have created. That torch was made in the executive offices of the American Tobacco Company, when a crew of commercial bandits directed the war of extermination upon these men; when they planned the raid upon the pittance of the grower; when they directed a policy of "Gouge and spare not." With the farmer the lawlessness consists in the use of fire. With the trust, it consists in the use of malicious, moral force, diabolic contrivance to plunder legally, and the latter is infinitely more dangerous and more nefarious than the former, for it is entrenched in our law system, while the former is open and above board, easily detected and easily punished.

The fire-bug is fighting a battle of defense, the extortioner one of offense. The purpose of one is to preserve that which it has. The purpose of the other is to acquire the spoils of a remorseless war. One is trying to lift the yoke of a master. The other is trying to rivet its shackles about the galled ankles of its slave.

And these Night Riders are not without precedent—a precedent that stirs to tingling every drop of patriotic blood in the land. Up in Boston in the good year 1773, there was organized a similar band. They didn't call it Night Riders, but they threw the gaff into the neck of greed just the same. A party of quiet men went aboard the ships of one George and did to his tea what the Kentuckians are doing to the tobacco of the trust, and for exactly the same reason. I see no difference between the tyranny of a king and that of a cunning American magnate, who destroys by an acquired instead of an inherited right.

I would sooner be the slave of a lazy, listless, half-witted king than the serf of a soulless American buccaneer of finance. I do not care in what form my liberties are destroyed, if they are destroyed. I would as soon die by the kick of a mule as by the ravage of a fever. The main thing is to avoid either and this is the object of those Night Riders.

Now, the conservative citizen says, "They do not have to raise tobacco. They can raise corn or they can hire out for wages, alternatives that would spare society this outrage upon its laws." Yes, they can raise corn. The early colonists could have continued to submit to the insolence of their royal master and rounded out amiable careers as loyal citizens instead of soiling their names with the charge of treason and sedition.

Every man who shouldered a musket against the troops of George was a wilful lawbreaker. The fruit of that masked Boston mob is the American republic. The question here then is simply this: Have these men the right to adopt the tactics furnished by the trust in defense of their property? Law is but an expression of the people's concerted will for the protection of their property rights. And when the law fails in this, it is and ought to be inoperative and void. That tobacco for which the farmer can find no market, through the machinations of the trust, is just as effectually destroyed as that to which they in turn apply the torch. It is only a difference of means, and it matters nothing if in one instance it is accomplished by the application of fire and in the other by the application of the trust method, the stifling of competition and the gagging of trade.

But there is a larger scope involved.

This country is today in a bad way financially. Of course, we love to preach confidence and paint rosy tints on lowering clouds. But the truth is that thousands of people are thrown out of employment. An army of jobless men, large enough to fell the government, clamors not for charity but for work. Soup houses are being established throughout the centers of population to feed the hungry, and this soup is wetting the throats of no professional hoboes. It is going down into the stomachs of men who are looking for work—good men, honest men who have tramped for weary weeks in search of work, the thousands who are expatiating the sins of a few stock jobbers, who have usurped control of the nation's finances.

This picture of the hungry horde cannot be exaggerated just now. They are confined to no particular section. They exist North, East, South and West, and while they stand in line for bread or for work at the employment agencies established by charitable people, the creators of these trusts go nonchalantly on their primrose paths, and when told that the people can't even get bread, naively inquire as did Marie Antoinette, "Why don't they eat cake?"

Excess after excess, possible because a few trust apostles have choked the stream of finance, have squatted upon its source and effectually control it, continues despite the fact that millions are starving who want work, who piteously beg for a chance in the land whose wealth they have created.

Do you think they will always bear up under these outrages? Remember they are sensible men, patient, docile, and sticklers for the square deal.

Louis Phillipe thought they would. The robber barons thought they would. The Tarquins thought they would. But as surely as water seeks its level, there is a savagery dormant in human nature which when aroused will not spare that which provokes it. The eventual triumphs of justice must be admitted as unequivocally as the law of gravitation, or life is a hideous lie. Continued oppression prophesies revolution unerringly, peaceable if possible, with blood if necessary. It will come unless the conditons that impel men to force, are removed.

THAT RENEWAL BLANK

One of them was mailed in each copy of March 15th number and we never had such a prompt and general response to an appeal before. It looks as though everybody is going to send it back with a renewal. But for fear some neglected to use it at once and that it may now be misplaced, we enclose another one in this issue. Look out for it. You will find it between the leaves somewhere. Look for it and do what hundreds of others are doing this day—renewing their subscription for THE PAPER WITH A MISSION and the best mission of any paper on earth. From the encouraging reports coming from every county — we almost said every postoffice — we are impressed that UP-TO-DATE FARMING is dearer in the hearts of the people now than ever before.

WILL THE CONSUMERS EXCEL PRODUCERS IN ORGANIZING?

The following dispatch from Columbus, Ind., and published in the daily papers of March 20, is interesting:

The Consumers' Protective Association, which has just been organized here, bars from its list of members any owner of a store, any salesman, any stockholder in any company which sells goods to the public, and also attorneys. One section of the by-laws reads: "The purpose of said organization shall be to aid in the enforcement of all laws relating to the sale of all commodities, or articles of household and personal use or uses, to the end, that the articles shall be as represented."

It is the intention to organize branches of this association all over the State, and woe be unto him who sells a member something which was not just as advertised. The association here starts out with a large number of members, and the wheels of the organization will begin grinding at once.

AN EXAMPLE OF THE LAW OF CONTRARARIETY

The following we select from an exchange. It very correctly portrays some of our recent experiences and is submitted for the thoughtful consideration of our readers:

This is a topsy-turvy world. The people who owe you gratitude fail you and hate you because you have befriended them, and ultimately consume themselves with envy "the saw of the soul." Those who owe you nothing come to you spontaneously paying the debts of gratitude due you from others, but at the same time broadening and benefitting themselves. It was a wise business man who said to a young salesman: "Keep going—you will get business where you least expect it; you won't get it where you expect or ought to get it—keep going—you are bound to get what you deserve in the end."

CAUTION

Some people watch for the names and addresses in UP-TO-DATE FARMING and send them letters and literature that are calculated to harm the good work we are doing. This conduct reminds us of the stanza by Samuel Butler as follows:

Like an owl that in a barn
Sees a mouse creeping in the corn,
Sits still and shuts its round, blue eyes,
As if he slept, until he spies
The little beast within his reach
Then darts and seizes on the wretch.

Our friends are cautioned against them. They mean no good to the farmers, for whom all our efforts are put forth.

GRAIN DEALERS DON'T LIKE FEDERAL INSPECTION

"Representatives of grain growers, shippers and exporting interests from the principal cities of the country met here and adopted resolutions in opposition to the Grain Inspection Bill now before Congress." This is the substance of a dispatch from Washington.

We are inclined to think that there were no grain growers present, as stated. As they are all credited as coming "from the principal cities of the country" the grain growers were probably those that raise grain on the boards of trade. The resolution further recommended that efforts be made on the part of the Grain Exchange to secure the adoption of uniform wording in rules relating to grain inspection and also as near to uniformity in practice in grading as is practicable under the varying characteristics of the different sections of the country in soil and climate.

UP-TO-DATE FARMING recommends, first, organization of farmers and the inspection and grading of grain to be in the hands of the farmers' society. But, as this may not come immediately, we recommend as the best alternative federal inspection and grading. To leave it entirely with the handlers will not secure the relief desired.

A BLOW TO CATALOG HOUSES

Catalog houses have been dealt a severe blow by a recent decision handed down by Judge Hough of the United States Circuit Court in a suit brought by the Empire Cream Separator Company and the Vermont Farm Machine Company against Sears, Roebuck & Co. of Chicago.

As all our readers know, the complainants are two of the largest manufacturers of cream separators in the country. In the separators they make they use a patented bowl by which the cream is separated by centrifugal action. The patent used brought about a radical departure from the old style of cream separators. It is a most valuable invention and is unsurpassed in the manufacture of these machines. Sears, Roebuck & Co. readily recognized the value of it and used the same idea in making their "Improved Economy" separators. They have been selling them in great numbers to unsuspecting customers.

The decision rendered gives judgment to the complainants for a sum equal to three times the actual damage done, inasmuch as the infringement was wilful, and made with full knowledge of the responsibilities attendant.

POSTPONED AGAIN

The trial of Theo. G. Nelson, John Gentner and Chas. W. Bowne, publishers and editor of the Equity Farm Journal, which was last set for March 25, was postponed again. The time now set is April 8 next.

This is the fourth postponement and it was fought by Mr. Everitt and his attorneys on every point. Finally the judge allowed it on submission by the defendants' attorneys of an affidavit that the attendance of their chief witness, Martin L. Wade, could not be secured. Wade is the author, so claimed, of the story printed in the December-January number under the heading "Can This Be True?"

We had hoped to force these people to trial this time so the result could be printed in this, April 1, number, but it was impossible. Readers can draw their own inferences.

WALROD ARRESTED

From the Indianapolis Star March 24, 1908:

Garret M. Walrod was placed under arrest yesterday by a warrant served upon him by the sheriff. Walrod was placed in jail on a charge of libel. The warrant was sworn out by J. A. Everitt of the Society of Equity on the 9th of January. Walrod has been out of the city ever since.

MR. EVERITT, Editor:

I live in the Stemming tobacco district. We have all pooled our tobacco. We most heartily endorse you and UP-TO-DATE FARMING for the great good you have done. To show my esteem of you we named our baby after you—Clarence Everitt Bozarth, and we call him "Everitt."

Yours truly,

Dixon, Ky. U. S. BOZARTH.

THE FARMERS have always been deceived. This is the reason they have always worked better for others than for themselves.

Those who have enjoyed the fruits of farmers' labors in the past don't wan't farmers posted. We DO.

The better farmers are posted; the more they think independently; and the less they follow false leaders, the better it will be for them.

HOW FAR CAN WE SAFELY GO?

On March 13 a joint meeting of the Society of Equity and the American Federation of Labor was held at Evansville, Ind. Guy Hamilton, organizer for the A. F. of L. presided and Chas. A. Speer was secretary.

The object of the meeting, according to the dispatch, was "to organize a labor conference to be composed of Equity members and labor trade unionists of the First Congressional district." Also further objects were as follows:

To establish an Equity Exchange, the farmers to agree not to buy non-union-made goods; all goods bearing the union label to be purchased by Equity members, and the labor trade unions to assist in every way possible the demands of the American Society of Equity. The labor conference elected Philip Wurster of this city, president, and P. D. Drain of Evansville, secretary. Both these men are prominent in local labor circles. Wurster is president of the Evansville Central Labor Union, and Drain is district organizer for the American Federation of Labor. Charles Kreutznigger of Mt. Vernon, a member of the American Society of Equity, was elected assistant secretary.

The convention adopted resolutions denouncing certain stores in towns in the district that failed to employ union clerks. The resolutions also declared against the recent decision of the United States Supreme Court, declaring labor unions to be trusts.

A resolution opposing the temperance wave that is sweeping over the country, including Indiana, and in favor of the breweries, was voted down at this meeting, but we find the following resolution was adopted at the regular meeting of the Evansville Central Labor Union the next day, March 14:

Whereas, the temperance wave which seems to be universal throughout the country, is bound to work a great hardship upon those employed in the breweries and distilleries, as well as many thousands of workers who will indirectly be injured if this unjust move be permitted to continue, therefore be it

Resolved, That the delegates of this conference do hereby denounce this action of these fanatics and pledge ourselves to assist the brewery workers and other organizations affected.

UP-TO-DATE FARMING and the Society of Equity (the true society) are friendly to organized labor and will embrace every opportunity to co-operate with them. But certain radicals have attached themselves to the society, who, if left to work their will, will hopelessly compromise the society and lead it into serious entanglements, or to destruction. But they cannot accomplish their purpose. Comparatively few members will sanction their course and thus the movement will be kept in safe and conservative channels. These people may retard the movement in a few sections for a time, but they cannot destroy it. Members in all localities where such unsanctionable activities exist should promptly place their stamp of disapproval upon them.

Improvements Galore

This year marks an epoch in the manufacturing of De Laval Cream Separators, the makers report, having improved it to such an extent that the capacity has been increased from ten to twenty per cent, and while it may seem incredible to those who have used a De Laval, there is also a noticeable improvement in the more complete separation of the butter fat from the milk.

The De Laval has been before the public possibly longer than any other separator, and its name has become a synonym for durability, stability and ability. Our readers will note their large advertisement in this issue. They make a feature of demonstrating their machines in your own home free. Before buying, write them for catalog and prices. Address De Laval Separator Co., 74 Cortland St., New York City, and mention this paper.

Buy stoves from the maker. In Indiana there are made some of the finest stoves in the country. They are sold on 30 days free trial and freight paid by the factory. Send for catalog to Hoosier Stove Co., 161 State St., Marion, Ind.

EQUITY EXCHANGES AGAIN

Ex-Secretary Tubbs, the father of the capital stock Equity Exchanges, with the plan of pricing farm products jointly by the producers and consumers, is in St. Louis, Mo. In a letter sent to members of the society, he offers stock in such corporation at 20 cents on the dollar to, as he says:

> Get away from the philanthropic, for-the-good-of-the-cause long enough to do some business on the cold dollars and cents basis, so the pioneers and promoters . . . will be paid for their energies and progressiveness.

We would not refer to this matter, except we consider it our duty to warn our readers against subscribing for any stock in such visionary and impractical undertakings, or we might say, wildcat schemes. We regret that some of the officers of the society and members may lose what they invested in them, but they cannot accuse this paper of being a party to recommend them.

From the same letter we quote as follows to show that the 1907 attempts have not been very successful until the present time:

> The Chicago Exchange is demanding help; the St. Louis Exchange is declining thousands of dollars worth of business for lack of funds to honor drafts; the start made at Cincinnati is in a precarious condition for want of assistance from headquarters, and Columbus, O., is in the same condition.

From a Chicago paper of March 10 we secure the following with reference to the renewed attempt:

> Stock will be sold at $1.00 a share, on which a dividend of 10 per cent will be paid. In addition to that every customer will receive rebates on the profits and the amount of purchases.

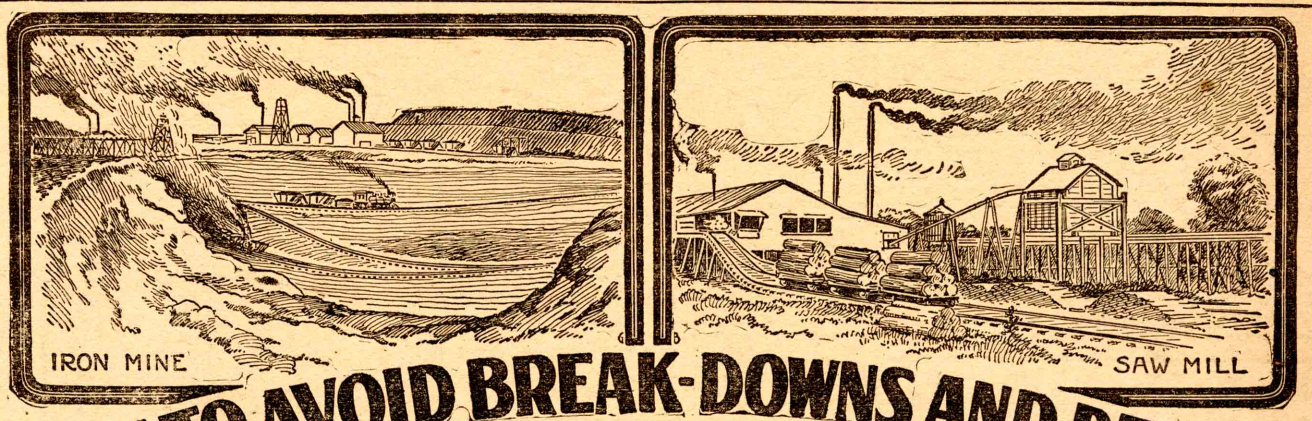
Part of the plan we obtain also from the Chicago paper and is as follows:

> The Equity Exchange Company proposes to acquire stores already established by offering the proprietors 50 per cent more than the inventory value and retain the former proprietors as store managers at a salary and commission.

Mr. Tubbs always was a Napoleon with figures. If paper plans and profits were all that his stockholders required, he would have Morgan and other famous promoters laid on the shelf for good.

Mr. Tubbs and his corporation undertakes to make a contract in advance with stockholders to pay 10 per cent dividends (and much of the stock they propose to sell on the basis of 20 cents cash and 80 cents water, hence this part is supposed to draw 50 per cent on the amount paid in), to rebate to the purchaser on the "profits and the amount purchases." But this is not the end of Mr. Tubbs' generosity. He further proposes, rather than follow out his first plan of starting new stores, to pay 50 per cent more than the store's value, and a commission and salary to the storekeeper. Of course it is not necessary to state that there will be hosts of officers to come in for their salaries and shares of commissions, rebates and rake-offs by this plan. It has them now and if it grows they must multiply in proportion.

A careful analysis of the scheme naturally brings up the question, what prices the farmers will get, and what prices the consumers must pay to carry this through? At present these must be matters of speculation. But there is no danger of the program being carried out. It is unsound from every safe, sane and conservative business viewpoint and entirely unnecessary. If farmers will organize to control their supply until the demand comes, they have done all that is necessary and they don't need to subscribe for any capital stock in anything. If farmers will do this single thing, we may trust the consumers to take care of themselves, the other end of the marketing proposition. To follow Tubbs and his plan is a wide departure from the Society of Equity plan and is going back to the old Alliance and Grange methods. We warn members against them, no matter where they may be proposed. The true plan of the society sanctions nothing like them, but some people are trying to use the society for their personal aggrandizement and profit.



HOW TO AVOID BREAK-DOWNS AND DELAYS AT HARVEST TIME

Every break-down at harvest time means time lost.

Every minute lost may mean grain lost.

Every bit of grain lost means profit lost.

You cannot afford to take chances on break-downs and delays with harvesting machines built of **doubtful materials.**

You don't have to.

Because the International Harvester Company has bought mines to get the best ore—built its own mills to produce the best iron and steel, bought timber lands and built its own saw mills—to give you material in your harvesting machines that you can **always** depend upon.

An individual manufacturing concern could not afford to take such precautions to protect you against poor materials, but the manufacturers of the

Champion, McCormick, Osborne,
Deering, Milwaukee, Plano,
Harvesting Machines

save you many dollars by putting always-dependable material into their machines.

The modern harvester is essentially a structure of iron and steel, and even as far back as the Mexican War time, the founder of one of the Company's plants, with only one factory turning out his machines, was compelled to join with two other manufacturers, in the erection of their own iron foundry so that they could give the farmers machines built of good iron.

Today, in order to give you the best materials in your harvesting machines, the International Harvester Company is compelled to own, in addition to its fourteen complete manufacturing plants:

—22,459 acres of coking coal lands in Kentucky

—100,000 acres of trees in Arkansas, Mississippi and Missouri, with a twelve-mile canal system, logging railroads, saw mills and other buildings

—40,000,000 tons of ore in Wisconsin and in the Mesaba Range with six standard gauge locomotives and steam shovels that strip the surface and heap a fifty-ton railroad car in ten swings

—a complete 93-acre steel plant with three blast furnaces, Bessemer steel mill, Blooming mill and Merchant bar mills, having a capacity of 500,000 tons of steel and 360,000 tons of iron every year.

The consumption of every natural product of the country is so far in excess of the supply that the cost of raw material is increasing annually, but by owning these properties and purchasing all other supplies in large quantities, this Company secures every advantage of highest quality.

Every bit of material—wood, steel, iron, malleables, paint, etc., is subjected to the most rigid tests in special testing departments before being used, so the farmer buying an International machine may be sure that the material is **always the best.**

Only large capital and a strong organization make these advantages possible, because an individual manufacturer would be compelled to take what he could get and pay whatever price was demanded.

In shipping, as well, the magnitude of this Company's operations insures a great saving of cost

Steel, iron and lumber are shipped to the various plants in train-loads, while copper, rivets, tacks, buckles, canvas, etc., are received in carloads.

In July, 1907, the lumber yards at one of the plants contained 56,500,000 feet of lumber of the following woods: Ash, birch, bass-wood, cypress, cotton-wood, fir, gum, hemlock, hickory, locust, maple, oak, pine, pecan, poplar, elm, spruce, sycamore and yellow pine.

About seventy-five per cent of the lumber is air-dried, which insures a very tough material.

These are but a few of the many advantages which mean the best quality in every International machine you buy.

The several plants have also been able to improve the principles of construction, to improve workmanship, and to employ every means that will increase the machines' efficiency and durability.

You get the benefit in the end.

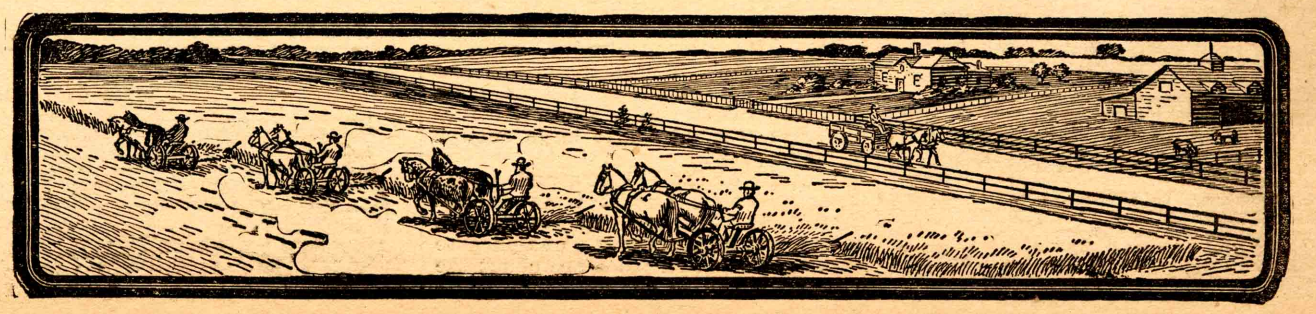
Call on the International dealer and get a catalog.

If you don't know an International dealer write us, and we will be glad to give you the address of the one nearest to you.

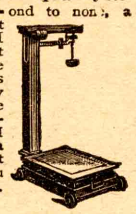
Equal in importance with a perfect machine is perfect twine. The most perfect twine made may be had in Champion, McCormick, Osborne, Deering, Milwaukee, and Plano, sisal, standard, manila and pure manila brands.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(INCORPORATED)
Chicago, U. S. A.

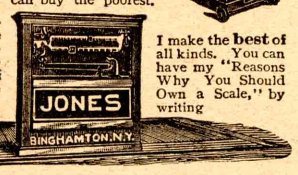
International Line:—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Feed Grinders, Knife Grinders, Cream Separators, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, New Bettendorf Wagons and Binder Twine.



The Name of JONES on a scale guarantees **quality** second to none, a **fair price**, and just treatment from me. I am the man who first **dared** to fight the **scale trust.** I was the **first** to sell my scales **on trial** to the farmer, and **I am today selling** (as I have for 43 years) a **first class** scale at a lower price than you can buy the poorest.



I don't ask a penny unless my scale proves to be **exactly as represented. Because of** these things, give me a chance to sell you.



I make the **best of** all kinds. You can have my "Reasons Why You Should Own a Scale," by writing

"JONES, HE PAYS THE FREIGHT"

WIDE TIRES
For Farm Wagons

No one thing pays better in actual dollars and cents than wide tire wheels for farm wagons. Increase carrying capacity of wagon more than half with same horse power. Last a lifetime without repairs; hence save money as well as earn it. We furnish wide tire steel wheels any size to fit any axle; a set will make your old wagon as good as new. Write for free catalogue telling about wide tire wagons and how they pay.
EMPIRE MFG. CO., Box 68 X, Quincy, Ill.

SAW MILLS

All sizes. Most work with least power and smallest crews. All latest improvements. Also Edgers, Trimmers, Planers, Shingle and Lath Mills, Cut-off and Rip Saws, Feed Mills, etc. Send for fine free catalogue.
American Saw Mill Mach'y Co.,
136 Hope Street, Hackettstown, N. J.
637 Engineering Bldg., New York City.

Hand-Made Harness
made in the good, **old-fashioned way,** takes longer, but lasts longer. A-grade, oak tanned leather used in every strap. Sold direct to the consumer at manufacturers prices. Why pay more? Thirty-three years selling direct to the user.
We pay the freight. Catalog free
SCHAFER SADDLERY CO, Box 106 Decatur, Ind.

FARM TELEPHONES
Direct from Factory to You.
Over 12 years successful use everywhere and an Iron Clad guarantee protect buyers of "Central" phones. Not in the Trust. Makers of reliable goods at correct prices. Write for FREE 60 Page Instruction Book.

Reral Desk 32, St. Louis, Mo. or Dallas, Tex.

STEEL MONARCH

Pulls stumps 7 feet diameter. The lightest and strongest machine made and guaranteed. Catalogue and discounts address,
Monarch Grubber Co., Lone Tree, Iowa

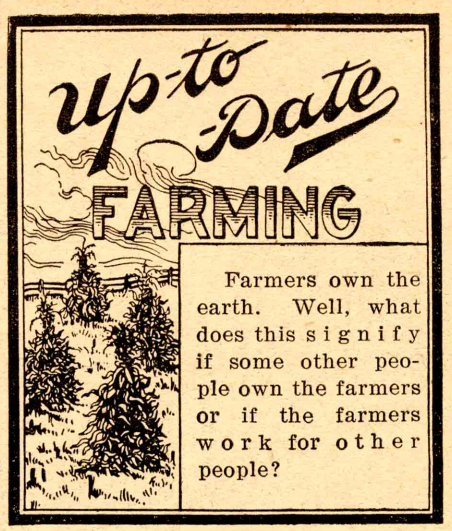
STEEL STUMP PULLERS
400% stronger, 60% lighter than old style. Guaranteed 3 yrs.

Hercules Mfg. Co., Dept. 11, Centerville, Ia., U.S.A.

CAPITAL GASOLINE ENGINES
For a short time only we will sell a 2 1-2 H. P. engine for **$60.** Other sizes at reasonable prices.
C.H.A. Dissinger & Bro. Wrightsville, Pa

2½ h.p.—$60

FURS Wanted; highest price paid; for price-list, also a book of 110 trappers' aids and tricks mailed free. **BLACK'S HIDE & FUR CO., Dept. 24, Durand, Wisconsin.**



Harness up the horses,
Brighten up the plow;
There's business in the cornfields
For everybody now.

CATALPA THE TREE TO GROW

I most heartily agree with the advice UP-TO-DATE FARMING gives in the article on page 10 in January 15th issue, "to be a-stickin' in a tree," but must object to the advice you give at the finish of the article, "to plant Locust trees above other kinds."

During the past three years I have set 150 acres of my own land here in the best part of Ohio to forest trees; this land is worth from $75 to $100 per acre for farming purposes.

Before I commenced planting these trees I spent several years investigating the whole subject of growing forest trees as a farm crop and I found that the Catalpa Speciosa tree was by far the most profitable one to grow.

I will give some of my reasons for preferring the Catalpa tree to any other: First, and most important, I found that the Catalpa was the fastest growing tree in America that has any commercial value; I found that Catalpa trees on suitable soil here in Ohio will grow one inch in thickness for each year's growth up to twenty-five years at least; second, Catalpa wood is suitable for more uses than any other American wood. This is a strong statement, but I have had tests made of the wood and find it to take the place of oak, ash and hickory for carriage makers' use; for handles of all kinds it is superior to ash, being stiffer and lighter than ash. As a bending wood it is also superior to ash, holding its place after being bent better than any known wood. For interior house finish, nothing can be more beautiful, and for all kinds of furniture, it is the equal of the common woods used for such purposes. For farmers' uses in the ground, Catalpa wood is the equal of Black Locust, and for telephone poles its lightness, combined with its durability and great strength, puts it ahead of White Cedar, which has been the standard for years.

I have had breaking tests made of Catalpa wood, comparing it with Hickory and Ash. In absolute strength it fell a little below Hickory and was far above Ash. In toughness, that is, the quality of bending and not breaking, it far exceeded Hickory.

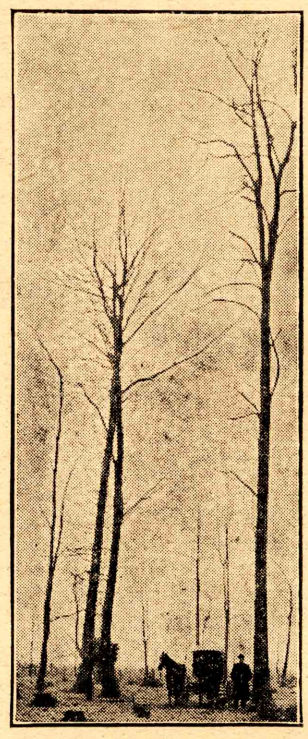
Last, but not least, the Catalpa tree has no borer enemies that injure its wood and kill the tree. The only enemy the Catalpa tree has is a worm that sometimes eats the leaves, but this never materially injures the tree.

In most of the Eastern and Middle States, the Locust borer has become so destructive to the Locust trees, that it is even chances at least, if they ever reach fence-post size before being killed. Mr. James Braden, of near Bellefountaine, in this State, has lost a twenty-acre field of Locust trees from the ravages of the borer, before his trees reached a size large enough to make posts.

In some of the Western and Southwestern States, Locust trees do not seem to be bothered as yet by the borers, but the Locust is a one-purpose tree, for posts and poles are about the only use it can be put to.

Understand me, I have no prejudice against the Locust tree, but do not consider it to compare at all with the Catalpa tree as a business proposition.

The most serious drawback to the planting of the Catalpa tree is the fact that there are three kinds of Catalpa trees and only one of them, the "Speciosa," has any value for timber purposes. The average nurseryman does not seem to know or care which kind of seed he procures when growing these trees, and the consequence is there have been millions of the "scrub" Catalpa trees set out by farmers, and of course, disappointment has come to them.



CATALPA SPECIOSA IN WABASH VALLEY, IND.

The seed of the common "scrub" Catalpa is very plentiful and easy to get, and the seed of the tall-growing Catalpa is scarce and hard to procure. Unfortunately, the small trees in nursery look exactly alike and there is no possible way of telling the two kinds of young trees apart.

I know that the land I am planting to trees will make me much more money, and make it easier, than I can make it by ordinary farming, and I know there are thousands of farmers who, if they only knew how easy it is to get a forest of trees started, would plant a part of their land to trees.

Lumber and all kinds of wood are high in price and will undoubtedly continue to advance, and the men who are far-sighted enough to prepare and be ready to supply the demand, which is sure to come, for timber of all kinds, will reap a rich financial reward.

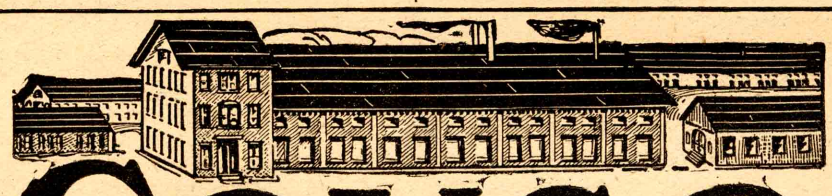
H. C. ROGERS,

MANURE HARD TO HANDLE

About every farm there is valuable manure that is allowed to go to waste because it is difficult to handle. Coarse stable manure mixed with straw, old straw or hay stacks, etc., are of this class. A good manure spreader will handle these admirably, and makes it an easy job and a pleasure to put them where they will do the most good, and it will put them there in the very best way. We wish farmers would learn more about manure spreaders. Whatever will convert waste material into dollars will add to the income and place farming on a higher plane.

We are in receipt of a copy of the "Separator News," published at West Chester, Pa. It is a very interesting publication, devoted entirely to the manufacture and use of the cream separator on the farm. It is printed in attractive colors and is fully illustrated.

The publishers will send this paper to any of our subscribers entirely free, if you will send them your name and address, and at the same time mention UP-TO-DATE FARMING. Alos they will send you their book No. 136, entitled "Business Dairying," absolutely free. You ought to have both. Write today. A postal will do.



CONGO
NEVER LEAK ROOFING

Sample Free

WHY CONTINUE to patch when a few rolls of Congo "Never-Leak" Roofing will put an end to all of that expense at very little cost over what you are paying for repairs?

You can lay it right over your old roof, it is so soft and pliable.

In these days of progress, articles which save *Time, Labor* and *Money* are what the busy man is looking for. And in Congo Roofing the three are most satisfactorily combined.

Congo will not leak or rot. It is pliable, non-shrinkable, unaffected by climatic changes, winds or water.

It is easy to lay, durable, and will give the most service at the least money.

Free Sample sent on request. Write today.

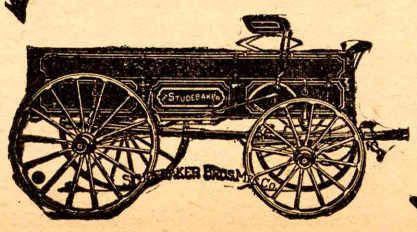
You Buy SATISFACTION when You Purchase a Studebaker



It has a reputation behind it—the reputation of the largest vehicle factory in the world which for over 50 years has put the best materials and skill into every farm wagon or buggy it has turned out. When you buy a Studebaker farm wagon you know you are buying the very best wagon that it is possible for human hands to make.

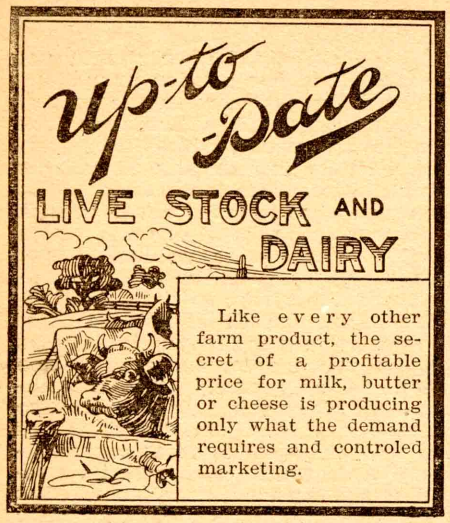
Examine a Studebaker wagon and you will see that it excels in strength, durability, correct proportions, perfect construction—a better and lighter draft wagon cannot be made.

SEE THE STUDEBAKER AGENT

Why not get a wagon that will last a lifetime? A Studebaker wagon will.

Studebaker Bros. Mfg. Co., South Bend, Ind.

If you will mention this paper and send us two cents in postage, we will mail you "Studebaker" 1908 Farmer's Almanac—Free.



NATURE'S MOTION PICTURE

Faithful Dobbin, patient Brindle,
And the youngsters frisking 'round
Make a springtime motion picture,
Painted on the grassy ground.

FORAGE AND PASTURE

Except upon the great grain fields of the northwest the question of forage and pasture is the most important one. On the high-priced, but actually impoverished lands of the middle agricultural region, farmers can scarcely compete in grain production, the small grains we mean, with the region first mentioned. The scarcity of farm labor also makes different farming necessary and the passing of the ranches and individual ownership crowding in upon the ranges, makes the opportunity for a change, and points to forage and pasture—the growing of more stock on the heretofore almost exclusively cultivated farms.

In this there may be at least a two-fold purpose—a saving of labor and a restoration of fertility to the soil. After the land has grown forage for a few years, clover, peas, or even timothy, then red top or blue grass and pasture for a few years more, it will be ready to compete with any land for a year or two in the production of wheat or corn. Meanwhile the additional stock grown and the saving in labor and wages, will put the bank account in far better shape than if the exclusive cultivation had been continued, with its attendant expenses and soil impoverishment.

For the region of which we are speaking, the middle agricultural States, on land that has not become too much impoverished, clover is the ranking crop. It can hardly be beaten cut green for soiling and cut at maturity and properly cured, it makes the best and richest winter feed for cattle, and each year brings it into greater popularity for horses. But there is every year such an increased demand for clover hay at almost constantly advancing prices as to make that quite too costly a feed for the purpose under discussion. We may remark here, not exactly in the line of this argument, that clover and timothy mixed make about the most profitable meadows.

For cheap forage, and to improve worn land, the field or cow pea ranks high. It is a strong nitrogen gatherer, poorer land than clover will, but it is a mistake to suppose that peas or any other crop will do better on poor land than rich. On very thin soil where the peas do not grow tall or vine much, it is well to pasture them down, beginning when the pods begin to yellow. But peas under such conditions do not furnish very abundant pasturage, but it is rich while it lasts, either for cattle or hogs. If the stock be taken off before it is eaten too close, and if there be seasonable rains, it will soon come out again. This process repeated for a few years, even on very poor land, will make a great change in its productiveness of any crops.

There are other forage crops that fit in nicely in such a system of farming, that we need not discuss here. The point is to have cheap feed for winter and rich pastures for summer, with enough, but not too much, young stock to be constantly growing and increasing in value.

SUGAR FEED

Some years ago the problem of a cheap grade of molasses on the sugar plantations of the South, a grade too inferior for use in any way as human food, was solved by combining it crudely with other feed and making of it what proved to be a valuable feed for horses. This matter has been taken up by some enterprising business men of Minnesota, who have had it studied scientifically, demonstrated the value of molasses (the sugar element) as a feed, and have built a $100,000 plant for its manufacture in scientific combination with other feeds. We give the following account of the opening of the plant:

The feeding value of molasses or sugar in combination with various grains has been proven beyond the shadow of a doubt, and has been recognized for a number of years. There has been, however, a great difficulty in finding a process that would put the molasses in a condition to be conveniently handled on the market and in feeding. The greatest problem to be solved, however, was to so select and proportion the grain and sweetening substance as to produce a scientifically balanced ration especially adapted to various purposes and to the different animals fed.

M. W. Savage, proprietor of the International Stock Food Company, has had his chemists working on this problem for a number of years. The desired results were attained last fall, and Mr. Savage incorporated the International Sugar Feed Company. He then secured the services of S. L. Frazier of Chicago, the father of the saccharine feed business in this country and the inventor of several machines used in the manufacture thereof. The contract for the erection of a $100,000 sugar feed plant was awarded to the McDonald Engineering Company of Chicago. In a remarkably short time the plant has been completed and the process of manufacture was begun February 1. The plant is a model of its kind and the engineers say that more work can be done with less manual labor than in any mill of any kind in the world.

It occupies an entire block leased by the company, and the building has a floor space of 140 by 160 feet. It is absolutely fireproof, being built of reinforced concrete. Its construction required the use of 150 tons of steel and 3,000 barrels of cement. The first floor or basement is 15 feet high, and on it is located much of the automatic machinery, including 25-horsepower motors, one individual motor being used to each unit of machinery. On this floor there is also a molasses cistern with a capacity of 125,000 gallons.

The molasses from the car tanks is dumped by gravity into this cistern, from whence it is pumped by steam pumps to a 6,000-gallon steel tank, where it is warmed by coils, when it is pumped to tanks above and flows into the molasses machine on the second floor. The grain is unloaded by power shovels and dumped on the elevator boot, from where it is lifted into any one of the fifty-seven bins which occupy the third floor. It flows by gravity from the bins into the Robinson's Steel Attrition Mills, where it is ground. From there it passes into another set of mills, and into the mixer, where the different materials are combined and passed on to the molasses machine, where the feed is processed and made ready to be bagged. The plant has a capacity of 300 tons of finished product daily, and there is room in the building for enough additional machinery to double this capacity.

The sugar feed manufactured will be of various kinds, including a balanced ration for cows, one for horses, one for swine and one for chickens. Besides the molasses, there will be used in the production of this saccharine feed the best grade of oats, barley, rye, corn, linsed oil meal and some other materials.

Remarkable interest has already been aroused in this plant, and the

company is already in receipt of a number of large orders for its product, and it is freely predicted that it will soon be working at its greatest capacity.

GOOD BUTTER AND THE OTHER

There is more than one kind of butter. Some people won't use butter unless they know who made it. That is a cranky notion, and we have often observed that those who emphasize it most are the ones whose butter you would not care to use. But butter making is a delicate operation, and one which requires conditions to be more nearly exact than almost any other work on the farm. If the cream is not just right, the butter cannot be right. Too hot or too cold affects both the churning and the butter, and if the cream is permitted to become too sour the butter may be actually spoiled. This is doubtless the one fault which, more than any other, sends country butter to the grease can. The smell of the cream is the test of this condition, and the good butter maker, or, rather, the maker of good butter, is one who has cultivated this sense and rigidly responds to its decision. No doctoring, no after treatment, can make good butter from rancid cream.

Of course it is important that the churn be clean and sweet smelling, and in order to keep it in that condition it should be thoroughly washed immediately after it is used, and well aired and dried—sunned if possible. The least bit of the remains of the former churning left in a crevice anywhere may spoil an entire churning. Stop churning when the butter is in granular form; after that the continued agitation destroys the grain and injures the butter. Take up the butter at this stage and immediately wash out the buttermilk, or the milk may be drawn off and cold water put in its place, and the butter washed in the churn. Mrs. Peters of Iowa, an expert butter maker, whose hints we have drawn upon above, tells the readers of Successful Farming that she uses an ounce of salt to every pound of butter, as butter, no matter how well treated otherwise, will soon get strong if not well salted; besides the addition of salt brings out the delicate butter flavor. Never put butter in a cupboard or ice box containing other than victuals; butter absorbs any odors that come in contact with it.

Mrs. Peters admits that every farmer may not have all the conveniences that some of the best butter makers have, but she contends that with care and good judgment the conditions can be improved so that on most every farm gilt-edged butter could be made. Most of the details necessary to make good butter on the farm cost no money and can be put in use by all. Everyone can see that everything is clean and neat; the pails, can, churn; and that the cream does not stand too long; that it is at proper temperature when churned; that it is not churned to death, that is, until the grain is all destroyed; that the butter is properly worked and salted. The butter maker controls all these things and these things are the most important factors in making good butter, and if these were observed there would be but little low-grade farm butter.

INTENSIVE DAIRYING

Many changes have been rung on the idea of intensive farming, and in many cases farmers have produced twice as much to the acre as is produced ordinarily. But it has remained for a Long Island dairyman to illustrate intensive dairying. He keeps 32 cows and has but one acre of land! He neither produces feed nor pastures his cows; his acre is used entirely as a lot. He buys all his feed, and he buys none but the very best, though it comes high. It is needless to say he keeps none but the very best tested cows. And he makes money. He gets 10 cents a quart for his milk, which is an extra price, but he proves there is an opening for intensive dairying.

NUMBER OF SHEEP TO THE FARM

In a well-written article in Successful Farming, H. Wheeler of Elgin, Ill., gives the following good advice as to the number of sheep to keep on a farm:

To the person who has never had any experience with sheep we would advise a start with a flock of from ten to fifteen strong, healthy ewes and one ram. It is well to start with a small flock and let your flock and experience grow together. Upon the average farm it is not best to keep over fifty breeding ewes in one flock. When more than this number of sheep are kept they should be divided up into flocks of fifty to the flock. A flock will thrive much better where not too many are bunched and housed together. It is also easier to detect a sheep when it is ailing or in need of care in a small flock than in a large one. Whatever be the size of your flock, see to it that they have ample shed room and are not crowded. Also see that feed racks and grain troughs ar eliberal enough to accommodate all at the same time. Where this is not the case the "bullies" will get the lion's share and first choice, leaving the refuse for the weaker. Strike the "happy medium" for the size of flock; don't be over stocked (or under stocked). In other words, keep only what you can keep well.

LIVE STOCK WANTED

Got some good stock you don't want to feed any longer? You can easily sell it through an advertisement in the Business Exchange.

A TALK ON PUMPS AND WELLS

The pump that supplies water for domestic use should be the best that money can buy. First in importance among all the problems of the householder is that of pure water. Yet many farmers, apparently, shut their eyes and pick out the location for the well after the manner of playing "Blind Man's Buff," disregarding all dangers of seepage from cesspools, barnyards and other sources of contamination. They put in a cheap wooden pump.

In this age of driven wells and sanitary iron pumps, no man of intelligence will revert to digging a well. The well digger has found less hazardous and more remunerative occupations.

The up-to-date farmer should not be satisfied with a wooden pump.

The difference between the cost of a wood pump and a first-class iron pump is the merest trifle—in comparison with the innumerable advantages of the latter. The mechanism of the iron pump has been improved to such an extent that a good one will last a lifetime. Repairs are seldom if ever necessary. The adjustment is so perfect, and the stroke so light, that little children can easily operate these pumps. The wood pump is always getting out of order and requires too much "elbow grease." The screeching, wheezing, coughing cry that so often comes from the dry throat of the wooden pump is most exasperating. In desperate cases which we recall it has been necessary to use hot dish water for priming, when no other reserve supply was available. A high-grade iron pump never asks you to "wet its whistle" before it condescends to "deliver the goods."

By all means install the best iron pump you can buy. Be sure the well is located in the right place.

Always Examine It

Before you invest any money in roofing of any kind, get samples and investigate closely to see that you are getting your money's worth. This is the advice of the manufacturers of Congo Roofing, and they are willing to compare their brand with any in the world. If you are in any degree interested, you ought to get their catalog and samples and make them prove what they say—they want to get a chance to. Write to United Roofing and Mfg. Co., 584 West Eend Trust Bldg., Philadelphia, and mention UP-TO-DATE.

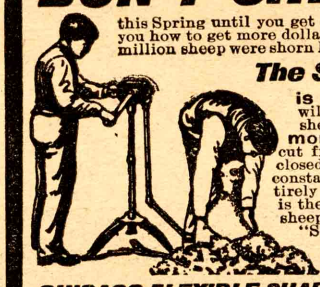
Those Good Old Days

How would you like to go back to those good old days of long ago? Days when the farmer gave his life for his farm, instead of making it give him a living. Back when you cut your grass with a scythe and threshed your wheat with flails. When you had a never-ending "crick" in your back as a result of swinging the cradle all day, and every summer got "over-het" binding oats. Pretty tough, wasn't it? And yet, in this the twentieth century of progress—you up-to-date farmers may not believe it—there are farmers who still scatter manure by hand, when an up-to-date manure spreader would repay them after one year's work. If you haven't a spreader on your farm, better find out about it right away. Send for circulars to those advertisers who use UP-TO-DATE FARMING. Address National Pitless Scale Co., 2066 Wyandotte St., Kansas City, Mo.; Wm. Galloway, 509 Jefferson St., Waterloo, Iowa, and Smith Mfg. Co., 158 Harrison St., Chicago, Ill.

DON'T SHEAR YOUR SHEEP

this Spring until you get our valuable new book—"How to Shear Sheep." It will show you how to get more dollars for your wool. It is **free.** Send for a copy today. Over 20 million sheep were shorn last year with the wonderful Stewart patent shearing machines.

The STEWART No. 8 SHEARING MACHINE

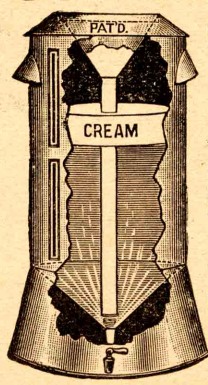


is Guaranteed for 25 Years. It will not cut or hack sheep like hand shears and **gets from 1 pound up more wool per head.** It has all gears cut from solid steel, file hard and enclosed safe from dust and dirt. They run constantly in oil and do away almost entirely with friction and wear. The shear is the only successful one made in America. If you have but five sheep it will pay you. Write a postal card right now and say "Send me your valuable book," and we will send you this free book and our big new catalog, showing the greatest line of shearing machines in the world. Send today for 1908 catalog. Send $2.00—we'll ship the machine C. O. D. for balance.

Only $9.75 Including 4 Combs & 4 Cutters

CHICAGO FLEXIBLE SHAFT COMPANY, 224 Ontario Street, CHICAGO

SAMPLE CREAM SEPARATORS FREE



Interior View

Owners of Cows We offer you a Sample Cream Separator that actually separates the cream from the milk by an automatic process that requires no ice, no chemicals, and no extra labor or machinery. All thrifty housewives realize the waste of butter fat unavoidably lost in the skimmed milk under a pan or crock method. Besides this money loss there is the back-breaking drudgery of washing pans and milk vessels, and the loss of valuable time that can be profitably devoted to other important duties. Now a

PEOPLES AUTOMATIC CREAM SEPARATOR

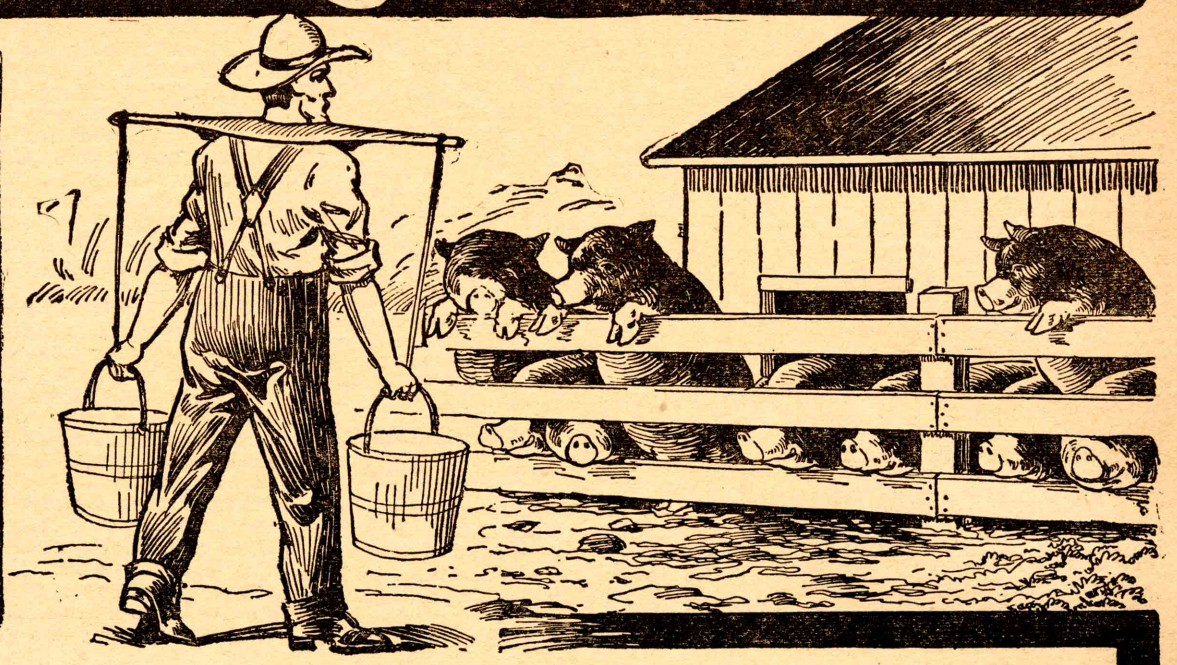
will stop this extravagant waste of money, cream and valuable time. It will increase your present yield of cream from 15 per cent to 20 per cent. It will give you the cream cool, sweet and fresh, directly after it comes from the cow, unaffected by chemical action. It will improve the quantity and quality of your butter all through the year. **It means more cream, more butter, less time. Result: More profit.**

REMEMBER It won't cost you a cent to take advantage of our free advertising offer as we will send one Sample Cream Separator into each community where we have no agent. **Write today as only one person in each locality where we have no agent may have the benefit of this free offer.** Send us your name, and the name of your nearest freight office. Address—

PEOPLES SUPPLY CO., Dept. F, Kansas City, Mo.

Before He Bought a Tubular

This Man Used to Carry Half Ton of Butter to His Hogs Every Year



THAT'S what Mr. McKerrow did for twelve years previous to 1903. Then he bought a **Tubular.** When he discovered how wasteful he had been with cream, he says that he felt like "kicking himself." Listen to him:

Herkimer, New York.

Gentlemen:—Did you ever feel like kicking your own self? I have felt like that every time I think of what I have been throwing away for the last twelve years. **Six tons of butter carried to the hogs in that time!** I made 315 pounds per cow in 1904, deep setting; 368 pounds per cow in 1905, using Dairy Tubular. 53 pounds per cow for 20 cows makes 1060 pounds; this, at 28 cents, makes about $300.00. I guess the Tubular has paid for itself all right. Skim-milk worth double too.

WM. MCKERROW.

This is not an isolated case. Thousands of thankful families all over the globe are rejoicing in the possession of this profit-bringing, cream-saving machine. It seems like a friend ever after the first week. Even one day's lack of use makes the dairyman or farmer miss it **tremendously.**

Ten Things a Tubular Surely Does.

1—Runs daily for months and months without a hitch. One man writes that in three years he paid out 40 cents for repairs.

2—It skims so clean we guarantee it to leave only one-half of that left by any other machine.

3—It turns easily requiring one-half the power needed by other machines.

4—It will run one-half longer without clogging than any other machine.

5—It delivers one-half less froth in cream than any other separator.

6—Needs only a tablespoonful of oil twice a week.

7—It requires little attention from the operator because every part is thoroughly tested and inspected by experts at our factory before shipping.

8—It requires one-tenth the time in washing required by any other separator.

9—The receiving can is lowest of them all and most convenient to clean and adjust.

10—A Tubular causes you no worry, fuss or muss. It's just a tried and true workman that is always on time; always sober.

A Tubular Will Pay for Itself

We don't care where you live. If you own eight or ten cows you can use a Tubular and pay for it in cream saved in a year. Buy the easiest machine to fill, to turn, to wash. A separator that skims clean, needs next to no repairs and saves you fuss, worry and trouble. It would pay to sell one of the cows and buy a Tubular.

Putting in Milk

No high lifting, no slipping milk pail and lost profits with a Tubular. The waist-low can solves the problem. Skimming is fun for the whole family from the six year-old up. It is a pleasant anticipation because the exercise is not exhausting and the operation is without fatigue.

This is the way one man views the "high up" kind:

"Gentlemen:—To say that we are pleased with our Tubular is putting it mildly. We have used a disc-filled, bucket bowl for several years. We find that we have been losing quite a percentage of cream besides **'climbing up to the top of the house and pouring the milk down the chimney.'** For ease of operation, rapidity, and thoroughness of separation there is no comparison between the two."

Washing a Tubular

Only three pieces in the bowl to wash, all easily gotten at. Nothing to rake and scrape your knuckles nor skin your wrists and fingers.

One man who owns a "bucket bowl" machine allows it to stand idle in his dairy house. That means $225 rusting! He uses a Tubular instead. Why? "Not for all the money in the Universe" says he "will I break my wife's back, ruffle her temper or spoil her digestion by requiring her to wash twice a day those 35 'pie plates' 365 days in the year."

Fill Out the Coupon

We have asked you questions which we suspect you are willing to answer. If you will fill out the coupon and forward to us we will see that you get just the treatment that will make you a lasting friend of ours. We shall not force ourselves upon you to make you feel unpleasant and under obligations. All we ask is for you to give the Tubular a reasonable trial along side of as many other separators as you wish, or alone. If it does not perform as we claim, you needn't keep it.

SHARPLES TUBULAR SEPARATOR

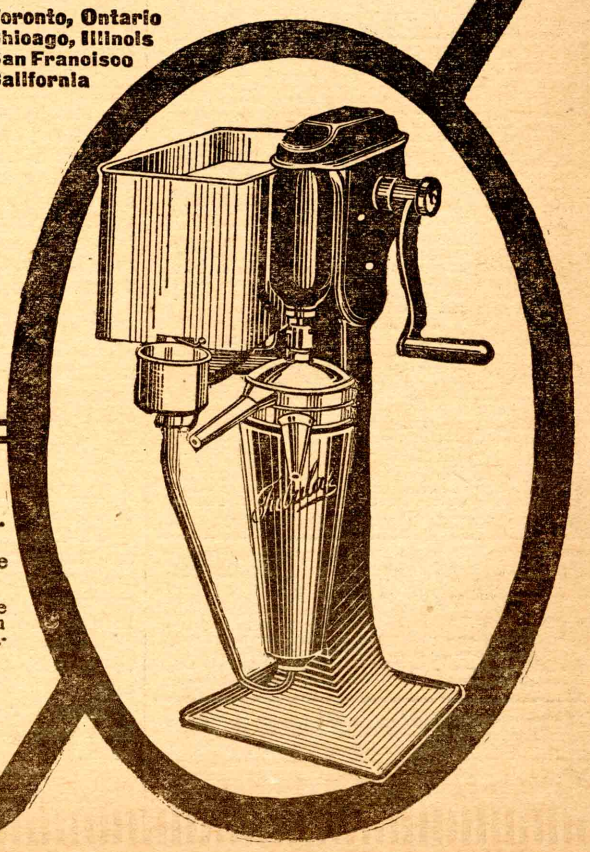
THE SHARPLES SEPARATOR CO.
WEST CHESTER, PA.

Toronto, Ontario
Chicago, Illinois
San Francisco
California

Turning a Tubular

All working parts run in oil. Every part is adapted so perfectly to the other that once got in motion it's a joke to keep the bowl spinning.

The oil compartment cannot possibly leak nor at any time allow the oil to spatter on or contaminate cream or milk. The machine takes care of itself and does not worry anyone with clogged oil holes or leaking bearings. Thus your cream and butter are free from the remotest possibility of ever being rejected because of machine-grease, odor or suggestion of rancidity. This one feature saves you much worry.



Application for More Information About a Tubular

.....190....

THE SHARPLES SEPARATOR CO.

Gentlemen:—I would like to know more about your Tubular Separators. In order that you may treat me intelligently I will answer the questions below which I deem proper.

1. How many cows do you milk?.....
2. Have you a Separator?.... What style?.....
3. Have you ever seen a Tubular skim?.....
4. Are there any of your neighbors who use a Tubular?.....
5. Is there a local agent near you who sells Tubulars?.....
6. How far are you from a railroad station?..... What is its name?.....
7. Send me your catalog No. 136, and other free literature explaining all about the Tubular.

I understand that this coupon with my signature attached does not obligate me in any particular. I am filling out this coupon to obtain information about Tubular Separators.

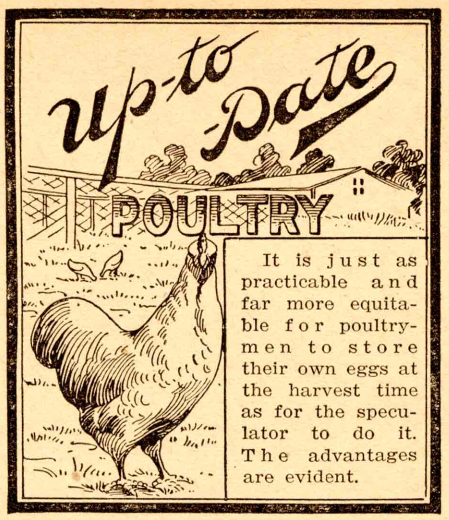
Wire Fence 29c

48-in. stock fence per rod only. Best high carbon coiled steel spring wire. Catalog of fences, tools and supplies FREE. Buy direct at wholesale. Write today.

MASON FENCE CO. Box 71, Leesburg, G.



It is just as practicable and far more equitable for poultrymen to store their own eggs at the harvest time as for the speculator to do it. The advantages are evident.

GEESE FOR PROFIT

Goose keeping is a branch that should appeal especially to those who have plenty of land available.

It is a mistake to attempt to keep either breeding stock or goslings upon a very limited area.

An English writer says that upon hundreds of farms scattered up and down the country there is a good deal of land which does not pay to cultivate and which is only used as an occasional sheep walk. On such land geese do remarkably well, as, however poor the soil, they are always able to find some animal or vegetable food therein. Besides they quickly make a great difference in the quality of the soil over which they roam.

It is claimed that an adult goose produces two cwt. of manure in a year; or ten birds between them produce no less than a ton per annum.

Despite the fact that it has right along been believed that geese kill land by their droppings, it has been proved that many a poor, valueless piece of land has been converted into a tolerably good pasture in the course of a few years, owing to its having been heavily stocked with geese.

To fatten young geese, place them in a pen not too large, so that they will not exercise too much, and feed three times a day all they will eat up clean.

A good fattening formula is cornmeal mixed to a dry crumbly state, and beef scraps amounting to 20 per cent of the bulk of the cornmeal.

While fattening young geese they should be kept as quiet as possible; no excitement whatever should disturb them. When feeding approach them quietly and do not irritate them in the least, or they will not fatten, but instead grow another crop of feathers.

At ten weeks of age, or when the tips of the wings reach the tail, they are ready for market, and should weigh between 8 and 10 pounds.

In hatching goose eggs by the hen, do not remove the goslings if the hen is quiet until all the eggs are hatched and the young dry.

Should the hen be restless, remove the young as soon as dry and keep in a warm place, such as a basket lined with flannel, and set near the fire. When all are hatched the mother hen and her young should be placed in a warm coop.

As the breeding season approaches, the first to the middle of March, plenty of vegetables, a little meat and not much grain are necessary to secure good eggs, and larger numbers than otherwise.

TURKEY CULTURE

Turkeys begin laying about the first of April.

Turkeys are apt to steal their nests, and must be watched.

Barrels placed on their sides make excellent nests; they should be placed in sheltered places.

As fast as the eggs are laid it is best to collect them, leaving only a nest egg.

Eggs for hatching should be placed in a cool place, packed in sawdust or bran.

In selecting breeding stock it is advisable to use hens in the second year if the birds are nearly related, but if bred from vigorous stock which have been carefully selected, young birds which are related may be mated together for one generation.

A good remedy for worms in turkeys is said to be turpentine and lard, followed by a dose of castor oil. Use one part turpentine to four parts lard, and give a grown turkey a teaspoonful, and young turkeys about half the quantity.

An Indiana turkey raiser says she occasionally mixes the following compound in the feed: One part sulphur, two parts black pepper and three parts charcoal.

Miller Purvis says that if Epsom salts were given to young turkeys once a week, as they were growing up, in about the proportion of a teaspoonful to twelve birds when they are small, and from that to a teaspoonful to six birds as they increase in size, a good many more would be raised to maturity.

The Bronze turkeys are good market birds, grow to be very large, and from a fancier's standpoint make a very beautiful bird.

The objections claimed against the Bronze turkeys are that they are great roamers, ranging too far away from home, especially during laying season. Hens seem to find the best place for their nests a half mile or more from home, and consequently the greater part of the eggs are lost.

The White Hollands are probably the most domestic of the turkey tribe. They range closer at home, have a gentle disposition.

The White Hollands are almost as large as the Bronze variety, are heavy breasted and solid, and make a very plump bird.

All successful turkey breeders, however they differ in methods of feeding and caring for the young, agree that cleanliness and freedom from lice are prime essentials.

EGGS WANTED

How about those eggs? Nice eggs, good stock and all, aren't they? Are you selling them at market prices? You are foolish if such is the case. Run a twenty-word ad in the Business Exchange and sell them to our readers.

SAVE INCUBATOR MONEY

The incubator book, "Hatching Facts," sent free for the asking by the Belle City Incubator Company, Box 79, Racine, Wis., tells how you can save $4 on the price of an incubator and brooder by ordering their 120-egg incubator and 100-chick brooder together. It is an offer worth investigating at once. If you think of buying an incubator, send them a postal.

The problem of securing a home has been solved somewhat by the Daniel Frazier Company, a firm that operates in farm property on a large scale in Southern New Jersey, where 5-acre farm plots are sold for $100, on installments of only $5 down, and $5 monthly. These farms are only 17 miles from Atlantic City, the celebrated all-year-round seaside resort, and that means a steady market for every kind of produce. The soil and climate is excellent and for garden farming — the kind that pays the best — this section leads. You should find out more about it by writing to the Daniel Frazier Company, 718 Bailey Bldg., Philadelphia, Pa.

"The clothes don't make the man—but they help." Good fences don't increase fertility, but they increase values. A good fence is the Brown fence. If you want a sample send to the Brown Fence and Wire Co., Cleveland, O., and tell them you read UP-TO-DATE FARMING. Test it every way, hammer it, file it, dip it in acid, heat it, and the fence you get will be from the same material. Send for big catalog—mailed free.

INCUBATOR FREE

To the person making the best hatch (largest per cent) with an incubator before May 1, 1908, we will refund the cost of his machine. This offer is made with the following conditions:

1. *Incubator must be bought after December 1, 1907.*
2. *It must have been advertised in Up-to-Date Farming.*
3. *Contestant must mention this paper in writing the advertiser for catalog and price.*
4. *He (or she) must be able to substantiate the report made.*
5. *Report must reach us on or before May 1, 1908.*

This is an opportunity for some up-to-date subscriber to get his machine free. It makes no difference whether it be large or small.

Go after this to win!

SETTING ORCHARD TREES

The first thing to be done on receiving the trees, says H. F. Grinstead in Farmer's Voice, is to cut with a sharp knife all injured roots as well as long roots, leaving none longer than a foot, and if a root is bruised remove it entirely. Treat the top the same way, heading back one-year-old trees to one straight switch two and a half feet high. If the trees are older, cut back the limbs to less than a foot, and shorten the top in proportion. Dig the holes for the trees in the fall before they are to be set, if possible, or as long before as practicable. The freezing and thawing will loosen the ground, and leave it in condition to receive the small roots when growth begins. It is not necessary to dig the hole much larger than the root system. After the roots are trimmed they should be moistened by setting the trees upright in a barrel or tub into which several buckets of water have been poured. A few shovelfuls of rich soil should be stirred into the water and kept in motion till all the trees have been set in the tub, when the sediment will settle on the roots, being much more effective than merely wetting them. If the trees are taken directly from this and set in the ground it will not be necessary to put water around the roots after setting unless the ground is extremely dry.

The tree should be set about two inches lower than it stood in the nursery row, and instead of heaping the earth around the tree should rather be a slight depression, which will catch and hold the rain water, thereby keeping the ground moist for a longer period after each rain than if there had been a mound to drain off quickly. Put fine soil next to the roots, but never strong manure. Spread the roots so that none of them will be cramped and begin to firm the dirt from the bottom, packing it hard as the hole is filled.

APPLE PESTS

The apple has both insect and fungus pests, the most prominent of which we mention below, with hints as to their treatment. They are named alphabetically, not in the order of their destructiveness:

Bud Moth, whose caterpillars feed on the unfolding leaves. It may be destroyed by spraying with Paris Green or Arsenate of Lead just before the buds open and again a few days later.

Codling Moth, or Apple Worm. This insect has a wide range, is very injurious to fruit, and is hard to fight. The caterpillars tunnel inside the fruit, especially about the core, and its presence may be known by powdery castings at the blossom end of the apple. Spray as soon as the blossoms fall with Paris Green or Arsenate of Lead in Bordeaux Mixture, keeping the foliage well covered with the mixture until the fruit has attained considerable size.

Curculio. The grub tunnels inside the fruit, making it gnarled and ill-shaped. Treatment same as for Codling Moth.

Canker Worm. This insect feeds upon the leaves, and falls when the tree or branch is jarred, and hangs by a thread of its own spinning. A tree badly infested looks brown and dead in mid-summer. Place sticky bands around the trunks of the trees in the fall, and spray in the spring as for Codling Moth.

Tent Caterpillar. It forms nests on the branches in May and devours the leaves. The egg masses may be destroyed in winter, or the nests should be removed whenever they appear. The spraying for Codling Moths is destructive of the Tent Caterpillar also.

Gypsy Moth. The caterpillars strip the trees of their leaves, but they may be trapped by placing burlap bands around the trunks and examining them each day to destroy the caterpillars. Egg masses may be found from August to May of the next year, and may be destroyed by applying creosote. Spraying as for Codling Moth will catch them while feeding on the leaves.

Maggot, or Railroad Worm. It tunnels through the pulp of the fruit. The remedy is to destroy all infested fruit.

Leaf Aphis. This is a louse that sucks the sap from the under side of the leaf, which then curls up and ceases to grow. Spray with soap and water or kerosene emulsion.

San Jose Scale. This is one of the most serious of orchard pests where it gets a start. The lime and sulphur spray is found to be the most effective. Akin to it but not nearly so bad, are the scurfy bark louse and the oyster shell bark louse. A spray of soap and water or kerosene emulsion is effective.

Flat headed and round headed borers burrow in the base of the trunk, and must be dug out with a sharp instrument. Their places may be found by castings that appear on the outside of the bark.

Bitter Rot is the worst fungus pest. It forms depressed rotten areas on the fruit and cankers on the branches. Beginning some thirty days after the fruit is set, spray heavily with Bordeaux mixture, being careful to get well into the top of the trees, for the spores communicate downward, and if started in the top soon affect the entire tree.

Black Rot causes mature fruit to rot, and often forms small brown spots on leaves, but it does its most serious damage by forming cankers on branches. No effective spray has yet been applied, but all dead limbs and twigs should be promptly removed.

Rust. This shows orange colored blotches on the leaves, and eventually produces minute fringed clustered cups imbedded on the under side. It spreads to the apple tree from the balls that form early in the spring on red cedar. For this reason cedars should not grow near an apple orchard. Spraying has not been found effective.

Scab. This produces scabby spots on fruit and leaves. Spray with Bordeaux just before the blossoms open, and again just after the petals fall.

Fine Work of the New Aspinwall Potato Machinery

The Aspinwall new No. 3 potato planter was placed on the market for the first time in 1907. It gave a most satisfactory account of itself. By reports it leaves little to be desired in the way of a planter. It handles a larger range of seed than ever before. The canvas hopper which takes the place of the old wooden one does away with all tendency to clog or bridge whether the potatoes be cut or planted whole. The misses are reduced to less than one per cent. The manufacturers are the pioneers in the building of potato machinery. They have ever kept ahead of the times with their innumerable inventions and improvements. If you are interested in potato culture, you should have their free catalog. Write to the Aspinwall Mfg. Co., 313 Salin street, Jackson, Mich.

Guaranteed Nursery Stock at a Big Reduction

The Iowa Nursery Co., Dept. 507, Des Moines, Iowa, has been offering in the columns of this paper some exceptionally big bargains in nursery stock. Those who have missed these bargains should write immediately to this reliable nursery company and ask for one of their bargain circulars and catalogues. It contains many fine assortments, such as $10 worth of fruit trees for $3.97, 75 grape vines and choice of 300 shrubs for $2.48, and several other good lots at prices that cannot be excelled. In addition to offering such big value, they give you a guarantee that all stock is true to name, and if any shrubs or trees fail to grow, providing it is not due to neglect or weather conditions, they will replace them from of charge and without argument.

TREES $5 PER 100, FREIGHT PAID Apple, Pear, Plum, Cherry, Peach and Carolina poplars, healthy, true to name and fumigated. All kinds of trees and plants at low wholesale prices. Remember we beat all other reliable Nurseries in quality and price. Catalogue free. **Reliance Nursery**, Box D, Geneva, New York

SEED OATS New Kherson, Sensation; Texas Red Rustproof; Early Champion and all the best varieties grown, at farmer prices. Big illustrated Catalog of Seed Corn and all farm and garden Seeds mailed FREE if you mention this paper. **Ratekin's Seed House, Shenandoah, Ia.**

SEED CORN We have originated some of the leading varieties of corn. Our corn all grown under strict conditions for seed. Following varieties are recommended to corn growers as big and sure yielders.

Pride of Indiana Vigorous, medium-sized stock. Ears are large with 16 to 20 rows. The corn is dent and beautiful white color. Great yielder and sure to please. PRICE: one-fourth bushel, 60c; bushel, $2.00; bag, (2½ bu.), $4.50; 10 bushels or more at $1.50 per bushel.

Central States Dispatch Yellow dent and greatest yielder of any yellow corn we have found. Withstands drought and storms to a great degree. Ears 8 to 12 inches long, very shapely and extremely deep grain. A splendid feeding corn. About 20 rows to ear. Plant a field or more of this great yielder.

Yard Long This is the longest eared corn in the country. Remarkable for its long ears. Frequently 18 inches long with 12 to 14 rows each. Large yellow dent grains. Good to feed and for market. Quite a novelty and interesting at Fairs. Get some of this.

Price On Central States Dispatch and Yard Long Corn: One peck, 50c; bushel, $2.00; 1 bag (2½ bushels), $4.50; ten bushels or more, $1.75 per bushel. All sorted and cleaned for seed. Order from this advertisement. Catalog free. Write for it.

NATURE

The bubbling brook doth leap when I come by,
Because my feet find measure with its call;
The birds know when the friend they love is nigh,
For I am known to them, both great and small.
The flower that on the lonely hillside grows
Expects me there when Spring its bloom has given;
And many a tree and bush my wanderings knows;
And e'en the clouds and silent stars of heaven;
For he who with his Maker walks aright,
Shall be their lord as Adam was before;
His ear shall catch each sound with new delight,
Each object wear the dress that then it wore;
And he, as when erect in soul he stood,
Hear from his Father's lips that all is good.

JONES VERY.

STARTING DAHLIAS AND CANNAS

If you are contemplating a dahlia or canna bed for next summer, now is the best time for starting it.

The dahlia should be a favorite in every flower garden, for it is not overly particular as to soil and will grow in sandy loam; in clay with a little sand or wood ashes, or in gravel with some fertilizer. In the dahlia we find almost all shades, colors and tints except blue, and its blossoming time is from June till October or until the frost kills it. If properly planted and given some little care, it will grow as high as twelve feet with blossoms from six to nine inches across. A hedge of these will do much towards hiding an unsightly back fence.

The ordinary way of increasing the number of dahlia plants is by division of the rootstalk. New varieties, and many of them, may be obtained by planting the seeds; and persons who wish a profusion of color and are not particular for perfect blossoms grow them this way. But for the lover of fine shapely blossoms the best way is to cut the main rootstalk into smaller bits. Care must be taken with the dahlia that a piece of the woody crown of the stalk is cut with each portion, otherwise it will not be able to develop any plant. These pieces of root should be buried about four inches deep and four feet apart.

Cannas are grown in much the same manner. It is best to leave three or four buds to one piece of root, as they thrive better when not divided too closely.

Put all of these cuttings into pots or boxes and keep in the warm in the house until danger of frost is over. In a short time after transplanting to the garden you will be amply repaid for your trouble by the lovely blossoms.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

FASHION HINTS

Your last year's gowns may be easily remodeled this spring by making them up with an overskirt of the same or a contrasting material.

If there is an old heirloom of a silver knee buckle in the family, you are indeed lucky, as these knee buckles are very much favored for belt buckles now.

Satin, silk and lace hats will be very much in evidence this spring. They are the most practical kind of hat one can buy since they may be worn in any season.

The small toque is being worn quite a little now and promises to be the leading shape for spring.

Sashes are becoming popular once more.

Among the new ideas in fabrics are seen plain Scotch ginghams with striped borders and white linen crash with a colored stripe border.

This is to be a season of colored costumes. White, of course, will be worn, but most often in combination with some delicate tint. Some of the shops now offer all-over embroidery semi-made robes that are very beautiful. Among the color combinations were white with blue flounce and waist trimmings, pink with tan, lavender with tan, white with lavender and robes of plain color.

TRIBUTES PAID TO WOMEN

Woman is the masterpiece.—Confucius.

Women teach us repose, civility and dignity.—Voltaire.

Shakespeare has no heroes; he has only heroines.—Ruskin.

If woman lost Eden, such as she alone can restore it.—Whittier.

Woman is the most perfect when the most womanly.—Gladstone.

A handsome woman is a jewel; a good woman is a treasure.—Sanidi.

There is a woman at the beginning of all great things.—Samartine.

The sweetest thing in life is the unclouded welcome of a wife.—N. P. Willis.

Heaven has nothing more tender than a woman's heart when it is the abode of pity.—Luther.

Woman is born for love, and it is impossible to turn her from seeking it.—Margaret Fuller Ossoli.

HIAWATHA ON THE FARM

Do you want to see a picture,
That is fair as any Eden—
That is bright as any vision—
In a dream or in a fancy?
Go you then in early morning;
Gaze you on a summer landscape,
When the sun has just arisen;
When the dew is on the flowers;
On the trees and on the grasses—
Upon everything around you.
Walk you out in Nature's bowers—
Wrap your mantle well around you,
For the air is chill about you—
Listen to the birds a-singing,
Listen to the music ringing,
From the brooks and from the treetops,
From the meadows and the hilltops—

Smell the air so sweet and fragrant,
Twice as sweet as any perfume
Bought from drug-shops in the city.
Watch the maids with shining milk pails
Tripping lightly to the pastures,
Listen to the song they're singing;
Do they not look bright and happy?
While the city maids are sleeping;
And the city wife is sweeping
Dust from off the floor and ceiling.
How she longs for light and sunshine,
For the windows must be darkened;
How she longs for rest and freedom,
Longs for something fresh to cheer her,
From the garden and the meadows—
From the orchard and the vineyard—
Something fresh and sweet and healthful.

Do you want to eat a dinner,
That is fit for any bishop,
King or queen of any nation?
Go you to some country farm-house
Where the cream is rich and golden;
Where the cheese is fresh and homemade,
Does not taste of grocer's handling;
Where the beef is sweet and tender,
Never owned by any butcher,
And the chicken is delicious—
Never hung in dusty windows.
Taste the berries and the honey,
Sweeter than those bought with money
In the towns and by the wayside.
And the fresh and crispy cabbage,
And the fresh and golden butter—
Just brought from the farm-house cellar.
And the bread so sweet and tender
Never soiled by any baker.

If at night you wish to rest you,
Go up to the farm-house chamber;
Sleep a sleep that will refresh you,
On the light and downy pillows,
In a room so bright and cheerful,
Where no drunken howls can reach you
In your slumbers so delightful.
Sleep a sleep so sweet and healthful,
Where no city smoke can choke you—
Where the air is pure and restful.
Sleep a sleep like Hiawatha
As he lies upon his hammock
Made of boughs of oak and hemlock
With his blanket wrapped around him
With his bow and arrow near him—
In his wigwam in the forest:
Just as sweet and just as blissful.

MYRTA M. CHANDLER.

GRAND BASEBALL OUTFIT FREE TO BOYS

This grand outfit contains seven full size pieces. The ash bat is 32 inches long. The mask is made of heavy wire, full size. The catcher's mitt is finely made. The ball is strongly stitched and finely finished. The cap is well made. A tanned leather fielder's glove and adjustable fancy baseball belt complete this dandy outfit. I will give you this splendid seven-piece outfit for a little easy work. Just write me to-day and I will tell you how you can get this great outfit.

A. M. PIPER, Sec., 325 Popular Building, DES MOINES, IOWA.

'CAUSE IT'S GITTIN' SPRING

The medder lark is pipin' forth a sweeter note to me,
And I hear the pewees over yonder in the cedar tree;
The popple leaves is quiv'rin' cause the wind is in the west,
And the robin's 'round a-hookin' straws to build his-self a nes';
The blackbird he's a-flashin' up the crimson on his wing.
What's the reason?
Oh, the reason's cause it's gittin' spring.

The old man's got the rheumatiz an' stiff as he can be;
Why it don't git settled weather's moah'n he can see?
But when it clears off splendid, then he's feared the crops is lost,
An' he reckons jest a little wind 'ud keep away the frost.
The kitchen door is open; I can hear Elmiry sing.
What's the reason?
Oh, the reason's cause it's gittin' spring.

The air is kind o' soft'nin' and you think it's goin' to storm;
Sometimes it's kind o' chilly, then again it comes off warm;
An' jest when it's the stillest you can hear the bull-frog's note,
An' it 'pears as if he wondered how the frost got in his throat.
The ducks and geese are riotous, an' strainin' hard to sing.
What's the reason?
Oh, the reason's cause it's gittin' spring.

BEN KING.

SOME LENTEN RECIPES

Egg Relish.—Boil fresh eggs one-half hour, remove the shells and drop in cold water for ten minutes. Cut in two lengthwise and remove the yolks. Mash the yolks fine and press through a seive. To six eggs add two teaspoonfuls melted butter, one-half teaspoonful of salt, a dash of cayenne, three boneless sardines mashed fine, ne-half teaspoonful of dry mustard, and a teaspoonful of lemon juice. Mix well and put into the hard-boiled halves of the eggs. Serve on lettuce leaves.

Eggs and Bread Sauce.—Simmer over the fire, for twenty minutes, two cups of milk, two tablespoonfuls of minced onion, a pinch of salt, a dash of pepper and one-half cupful of bread crumbs, add one-half tablespoonful of butter.

Put white bread-sauce in a granite pie-tin, break onto it fresh eggs, dust with pepper and salt and set in a moderate oven until firm. In another pan, brown one-half tablespoonful of butter and one-half cupful of bread crumbs.

Slip the sauce and eggs onto a hot plate, and sprinkle the browned crumbs over and serve.

RUTH RAYMOND.

"PATCHES"

Make your gingham apron strings as long and wide as possible. When the inevitable hole comes, you will have material for a patch.

In putting binding upon a dress skirt it is a good plan to first measure the hem, turn it up but not sew it and then put on the binding. One can then get at it easier and by keeping the hand in between the turned-up portion and the outside ther is no danger of sewing through.

To remove the color from a bruised spot, apply repeatedly, warm olive oil on absorbent cotton.

Soak lampwicks in vinegar, then dry thoroughly. This will prevent their smoking.

Iron mold can be removed from linen by washing the spots in a strong solution of cream of tartar and water. The linen should be dried in the sun.

Make your tablecloths and napkins wear longer by folding them an inch or more beyond the middle each time they are ironed. It is on the edges of folds where they always wear first and by folding beyond the middle a new crease will be made.

Do not allow fresh meat to remain in paper, as it absorbs the juice.

For ringworm try yellow dock, root or leaves steeped in vinegar.

To keep away red ants, sprinkle your shelves with a small quantity of green sage.

CASTOR OIL PLANTS

Castor beans should be planted now. They thrive best planted singly in small pots, from these being transplanted until they are in the five-inch size. By that time they can be bedded out.

WAYS OF EARNING PIN MONEY

In a former issue of this paper we asked our readers to tell us how they make their pin money. Here are some ways suggested by one of our friends.

If you have a creek or pond try raising ducks and geese. There is always a good price offered for pillows made of their feathers and they require less attention than turkeys or chickens and bring a better price at marketing time.

Raising onion sets and selling them to the grocery is an easy way to get pin money. If you have some old onions, set them out in the garden this spring and they will raise sets. Dry them when ripe, and put in a dry warm place, to sell next spring for ten or fifteen cents a quart. Turnip seed can be raised and disposed of in the same way.

If you are going to put out a new strawberry bed this spring, try growing yellow plum tomatoes and onion sets along between the rows. The ground has to be cultivated anyway and the tomatoes and onions will get the benefit of it. Yellow plum tomatoes are abundant in their yield and are easily sold for preserving purposes at the nearest village. They will bring thirty-five cents a pailful.

There is also a good profit in rhubarb, sold in early spring in towns. Put out a good supply of healthy bulbs this spring in a bed of rich soil and try the plan another year, if you have not already a good supply of it. Sell it at ten cents per bunch with about fifteen or twenty stalks in a bunch.

M. M. C.

WHAT TO PLANT IN APRIL.

Of course the sweet pea seeds have been in the ground several days, most people choosing St. Patricks day for the lucky sowing. All hardy flower seeds should be sown this month and during the latter part the half-hardy kind should be put out. Dahlias, canna and bulbs can be set out the last of April, but vine seeds being tender should not be planted until May if the April weather be cold or wet.

Cabbage plants, onion sets and asparagus roots should be set out now and if you wish your lawn to be pretty this summer, sow the seed at once.

Send for This Free Book

One of the handsomest and most practical incubator and poultry books we ever saw has just come to our desk. This book gives the subject of poultry raising on a money-making basis common-sense discussion, that will appeal to every one who ever raised a chicken. It is issued and sent free for the asking by the Queen Incubator Company, Lincoln, Neb., who is one of our regular advertisers. Mr. Otto Barth, farmer, poultry writer and who was formerly manager of another large incubator manufacturing company, is the writer of the Queen book and now gives his entire time and attention to making Queen incubators and brooders. These machines are distinct improvements over any he put out with his old company, and we can assure our readers of honorable treatment at the hands of the Queen Incubator Co. Mr. Barth has done business with UP-TO-DATE FARMING for four years and we know from experience he is a man of his word, besides being one of the best posted incubator and poultry men in the country. Write for the free Queen book and get acquainted with the Queen way of making money out of poultry.

Notwithstanding the splendid character of the work of earlier models of the United States separator, the improvements made in the 1908 machine promises even grander results in the manufacture of cream and butter, and consequently larger profits to the dairy farmer who is wise enough to comprehend the sterling merits of this marvellous cream and butter producer. For the Improved United States is undoubtedly the best separator now on the market.

A beautiful new catalog just issued can be obtained free by addressing the manufacturers of these machines, the Vermont Farm Machine Co., Bellows Falls, Vt., for catalog No. 187.

Get Trusted for This Washer

WE will trust any responsible party for a 1900 Gravity Washer. We will ship you the washer and prepay freight. Take our washer and use it a full month.

Wash your finest linens and laces. Wash your heaviest quilts and blankets.

And—if you don't find that our washer saves your time, strength and health—that it saves wear and tear on your clothes, saves mending and saves money—don't keep it. Tell us you don't want the washer and that settles the matter.

You don't take any risk because you don't send us any money in advance—nor do you send us any money after the month's FREE trial, unless you decide to keep the washer. If you wish to keep the washer—if you see how it will save enough to pay for itself in a short time—then send us each week or month part of what the washer saves for you.

We make this offer because we know our 1900 Gravity Washers are far and away better than those made by any other concern. We are willing to prove this, so we offer to send you a 1900 Gravity Washer and let you see for yourself all it saves. Thus our 1900 Gravity Washers sell themselves.

Then—if you send us part of what the washer saves until it is paid for, the washer really pays for itself.

In just a short time it is all paid for and, after that, the washer is yours and all it saves is yours.

Our washers are the only washers that sell, and pay for, themselves.

Don't waste your time and money with cheap washers that wear out clothes faster than they wash them.

Give the 1900 Gravity Washer a chance to prove to you what a comfort a washer can be.

Our new Washer Book tells all about our washers and shows how they work.

Your name and address on a post card mailed to us today brings the book by return mail, postpaid.

Write us now. Address—

The 1900 Washer Company, 1038 Henry St., Binghamton, N. Y. (If you live in Canada, write to the Canadian 1900 Washer Co., 355 Yonge St., Toronto, Ont.)

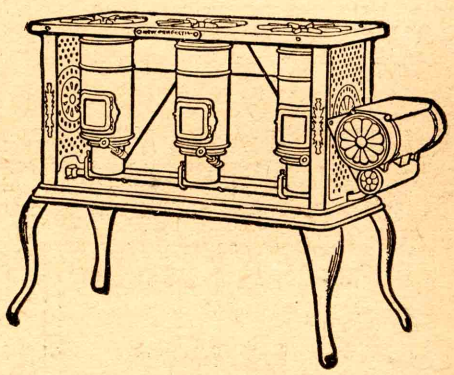
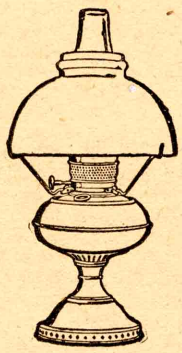
Put This Stove in Your Kitchen

It is wonderfully convenient to do kitchen work on a stove that's ready at the instant wanted, and out of the way the moment you're done. Such a stove is the New Perfection Wick Blue Flame Oil Cook-Stove. By using it you avoid the continuous overpowering heat of a coal fire and cook with comfort, even in dog-days. The



NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

is so constructed that it cannot add perceptibly to the heat of a room; the flame being directed up a retaining chimney to the stove top where it is needed for cooking. You can see that a stove sending out heat in but *one* direction would be preferable on a hot day to a stove radiating heat in *all* directions. The "New Perfection" keeps a kitchen uniformly comfortable. Three sizes, fully warranted. If not with your dealer, write our nearest agency.



The **Rayo Lamp** is the ideal lamp for family use—safe, convenient, economical and a great light giver. If not with your dealer, write our nearest agency.

STANDARD OIL COMPANY
(Incorporated)

GAMES! GAMES! GAMES!

Tricks and riddles will entertain the whole family, friends and neighbors. We own the assortment at a bankrupt price, and give you the benefit of it. Everyone can have games this season. **See what you get**—1 game Nine Men Morris; 1 game Fox and Geese; 1 game of Authors (48 cards in pack); 1 Chess and Checker Board and Men; 1 set Dominos; 1 game Pantomines; 1 game Tableaux; 1 game Clairvoyant 13 Magic Tricks; 1 game Forfeit; 1 game Fortune; 275 Select Autograph Album Verses; 50 Charming Conundrums with Answers; 11 Parlor Games; the great game of Rivals (size 12x18); Game of Letters; Magic Music; Assortment of Comic Cards--the Button Busters and Side Splitters, "Well, I'll Be Blowed," "The Missing Link," "Only Spooning," "It's the Man Behind the Gun that Does the Work," etc. All sent postage paid to anyone sending only 2 new subscribers to The Welcome Guest at 10c each. F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

UNION PRINTING TRADES UNION LABEL COUNCIL 83 INDIANAPOLIS

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

If you have not filled out the blank for report on beans as contained in March 15th number, please do so at once. Mr. Drake wants all reports in as soon as possible. See that number, page 22.

Dues to the F. S. of E. can be paid any time during the year. This in answer to many inquirers. But it is very unwise to delay the payment longer than absolutely necessary. The dues are $1.20 for each member. See first column in "Official Department" for full particulars.

Are you trying for an "Equity" chair for your hall? See offer in this issue.

In the F. S. of E. local union the member will learn parliamentary law and get practice. Also he will gain power in debating and his reasons in business matters and conclusions will be sounder. Notice "Order of Business on first official page.

All over the country the busy spring season has come. Farmers will now be busy putting out their crops and there will hardly be a cessation from work until they are harvested and—we almost said—and sold. But we do hope that when the time comes to sell the next crops, farmers will have the good sense to not dump them into the hands of other people to hold until the demand comes.

To provide for controlled marketing, which is absolutely necessary if the large visible supply is to be eliminated and profitable prices be obtained, it will be necessary to meet in the local unions and keep up the interest of the members, always looking ahead to marketing the next crop. For a fact the meetings should be more frequent in the spring and summer than in the winter. Once a week will not be too often.

One of the very first requisites to controlled marketing and profitable prices is pledging the crop. Unless farmers will take this step all the others will be impossible. Therefore UP-TO-DATE FARMING will announce a pledging campaign for all the chief crops as soon as practical and will prosecute the campaigns with all the vigor it can and for as great results as possible. Farmers are inclined to trust to some other person to work out their salvation. But it won't do in a movement of this kind. If they want relief from the boards of trade or industrial freedom, they've got to strike the blow that will break the shackels that bind them. In other words, sign the pledge to control their 1908 crops for profitable prices.

The pendulum can swing only to the limit of its arc, then it must return. Many people who have done iniquity can testify to the truth of this statement.

Where would you rather be, with the majority and in the wrong, or with the minority and in the right?

When a particularly valuable number of UP-TO-DATE FARMING is issued for your section you are invited to send for sample copies to distribute. A limited number will be supplied free; larger quantities at 1c a copy.

Some people are always giving farmers advice, but they are never careful to tell where it will lead them.

It is bad enough for the farmers to contend against all their natural foes when raising the crop, such as frosts, droughts, floods, blight, rust, etc.; these cannot always be guarded against. But if they will still be at the mercy of the gambler, speculator and dishonest handlers, it is entirely their own fault. This paper has shown them the remedy.

Farmers own the earth.

The majority of farmers have drudged from the time they could work and have not as much to show for it as those who produce nothing but handle their crops. Must this continue?

It need not continue. Farmers have first what all the other people must have and can take their profit if they will. But will they? And when will they?

Think about these things and don't dismiss the thought until you determine to do all in your power to help the only movement that can bring farmers freedom and independence in business.

"The man who borrows takes things easier than the man who lends." Unless he borrows trouble.

Dues to the Farmers Society of Equity can be paid any time during the year; but, of course, the earlier the better. The part of the by-laws covering this is as follows:

ARREARAGES

Article IV, Section 13. A member twelve months in arrears for dues or other charges shall stand suspended without action of the union. A member suspended for non-payment of dues may be reinstated by the payment of arreagages and penalties.

Will this number of UP-TO-DATE FARMING make you think?

Of course they'll deny it. But truth is mighty and will prevail.

Not too early to begin preparations for the 1908 convention to be held next October.

IT IS UP TO FARMERS TO ORGANIZE

If farmers need any additional stimulus to induce them to organize, they certainly had it in a meeting held not long ago in Kansas City. It was a meeting of representatives of the National Association of Agricultural Implement and Vehicle Manufacturers, the National Plow Association, and the National Wagon Manufacturers' Association, or at least the meeting is so reported in the public press.

And this is not the National Harvester Company either, but the meeting is said to have given the retail dealers to understand just what they must do or go out of business. Among other things, the retail dealers were told that "the farmer has been given too much time; you must make him pay up; he has the money; do business on a basis of shorter time and you will be able to deal with us on a shorter time basis."

In every step taken by the business and manufacturing combines in their onward march to power, the farmers get the first kick. Why? Because they are unorganized and everybody else is. The first apples pulled are those which hang lowest and are least protected; and, as things are now, that is the farmer every time. While each farmer is hoeing his own row, he must let somebody else price what he sells, somebody else must price what he buys, and somebody else determines how much time he may be given if he has to take advantage of his credit. The farmer is the one man in all the world that need not be consulted in a business way, and that is for no other reason but that he stands alone. To meet the business combinations that take advantage of his helplessness, he must organize so his voice can be heard beyond his own roof tree.

Equity offers the opportunity, UP-TO-DATE FARMING and his own intelligence point the way; has he the courage to follow the lead?

The Celebrated DeLoach Mill

The World's Standard for 20 Years

Saw Your Own Lumber
For lumber is lumber nowadays, and you can do it better than the other fellow, with our help.

We Set the Pace —Others do the Best They Can

A 15-year-old boy can operate successfully. Two hands cut 5,000 feet per day. 15,000 mills in use the world over. DEAFNESS CURED
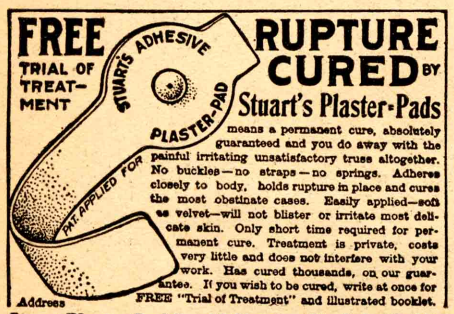
By New Discovery

"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, DR. GUY CLIFFORD POWELL. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they can be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators are astonished and cured patients themselves marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 799 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free

FREE TRIAL OF TREATMENT — **RUPTURE CURED** BY **Stuart's Plaster-Pads**



means a permanent cure, absolutely guaranteed and you do away with the painful irritating unsatisfactory truss altogether. No buckles—no straps—no springs. Adheres closely to body, holds rupture in place and cures the most obstinate cases. Easily applied—soft as velvet—will not blister or irritate most delicate skin. Only short time required for permanent cure. Treatment is private, costs very little and does not interfere with your work. Has cured thousands, on our guarantee. If you wish to be cured, write at once for FREE "Trial of Treatment" and illustrated booklet.

PRIZE WINNERS

Our March 1 rebus was even more successful than the one in February 15 number. There were a large number of competitors, and many good letters were received.

The correct answer is as follows:

No. 1—Nickel Plate Fence Co.
No. 2—Sharples Separator Co.
No. 3—Barrett Mfg. Co.
No. 4—Belle City Incubator Co.
No. 5—Chicago House Wrecking Co.
No. 6—Mead Cycle Co.
No. 7—J. Stevens Arms & Tool Co.
No. 8—Smith Mfg. Co.

Despite our conditions stated in each puzzle, many sent in correct answers, but neglected to write the article on the best ad in the paper, and these we were compelled to mark wrong.

Below are the names of the winners

First Prize, $1.50

John Knutson, Keosauqua, Ia.:

Second Prize, $1.00

Thos. A. W. Williamson, R. R. No. 9, Murfreesboro, Tenn.:

Third Prize, 50 cents

Robert Murphy, R. R. No. 3, Box 30, Merrill, Mich.:

MICHIGAN STATE MEETING
(Semi-Annual Meeting)

The Michigan State Union will meet at Reed City, Mich., April 2 and 3. This will be the most important meeting in the history of the society in Michigan. Mr. Everitt, the founder of the society, has been invited to be present and has sent his acceptance.

LEELAWAN COUNTY (Mich.) UNION will hold its quarterly meeting at Cedar City April 8th. All locals are requested to send delegates. Meeting will be called at 10 a. m., and important business will come before it.—Frank J. Beits, Sec., Provemont, Mich.

CHRISTIAN COUNTY UNION, F. S. of E., will meet at Baldknob, Ky., April 4, '08. Locals are requested to send a full delegation, as there is considerable important business.—Henry Grace, Sec., Haleys Mills, Ky.

ERROR

Some criticism has been made of this paper for printing the wrong date for the recent convention of the Kentucky State Union, at Henderson. By way of explanation will say that we fell into the error by copying from a Henderson paper which gave the wrong date.

END YOUR ROOF TROUBLES WITH Amatite ROOFING

A Roof that Really Protects

The more carefully you study the subject of Ready Roofings the more you will be convinced of the great superiority of AMATITE.

The average buyer sends to a few advertisers for samples, picks out one that looks tough, and sends in his order to the nearest dealer.

If the dealer doesn't keep the kind selected some other kind which he has is generally bought instead.

That is a good way to get a leaky roof.

The careful buyer is more particular. He knows that any roofing will last for a little while without attention, but he wants to postpone the time and cost of renewal as long as possible.

He is figuring next years's cost as well as this year's cost. He thinks of the money he will have to spend after a few years for a new roof if this one won't last any longer. If he can get a better roofing at equal cost that will last longer, he is so much the gainer.

That kind of calculation is called thrift. The thrifty buyer sees important differences between AMATITE and the other roofings.

The other roofings either require a coating with a special liquid every year or two, or periodical painting. Right there is a future expense to be counted by the thrifty buyer.

His judgment swings toward AMATITE, because it needs no painting either at the time it is laid or afterward. Once it is on you have no further bother or expense.

Then again, AMATITE has wonderful durability:—

First, because it has a mineral surface. Doesn't it seem reasonable to believe that a top covering of crushed stone will resist the wear of storms better than a roofing with a smooth or unprotected surface?

Second, it contains solid layers of Coal Tar Pitch—the material which is used by the best engineers for waterproofing deep cellars, tunnels, etc. Doesn't it seem reasonable to suppose that this offers better protection against water than materials which are never used for such severe service?

One more argument. Weight for weight, AMATITE is the lowest in price of any mineral surfaced Ready Roofing.

These, then, are some of the reasons why thrifty people buy AMATITE—It costs nothing to maintain; it has remarkable durability, and its first cost is very low.

Sample Free.

There are more arguments for AMATITE than these. Our Booklet tells them. Sent with Free Sample for a postal to nearest office.

BARRETT MANUFACTURING COMPANY TRADE B MARK

Cincinnati Kansas City Minneapolis New Orleans Boston London, Eng.

BELOW MAY CONCERN YOU

The Board of Directors of the A. S. of E. ruled in 1907, that all subscriptions to the official paper, UP-TO-DATE FARMING, should expire the end of 1907, and they paid for the paper on that basis.

There have been many complaints from subscribers about this rule, and if the subscriber understood he would receive the paper a full year, it is not equitable. Therefore I make the following offer:

If you expect this paper—UP-TO-DATE FARMING—a full year from the time of joining the society, fill out the below blank and send to me and your time will be extended accordingly.

J. A. EVERITT, *Editor.*

EXTENSION COUPON

PUBLISHER OF UP-TO-DATE FARMING,

Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely **nothing** but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them) and our Free Trial Certificate entitling you to this grand offer. RUSH FOR CALIFORNIA FRUIT FARM LANDS

Thousands of Acres Are to Be Thrown Open

LOS ANGELES, March 31.—Under a new system of colonizing, 25,000 acres of California fruit and farm lands are now offered to the public. By this new plan actual settlement is not compulsory. You can have your land improved and cultivated without leaving your present business until ready. Any person having $50 or more can secure five to forty acres without any payment for the land and for a small outlay can have their land cultivated, set to fruit trees and guaranteed a profit of not less than $25 an acre. If you will write to the National Homestead Association, A 624, Chamber of Commerce Building, Los Angeles, Cal., inclosing 25 cents, money or stamps, they will send you the National Homestead, a monthly publication, six months, their new plan book and free land certificate. These publications are worth hundreds of dollars to those seeking to better their condition. They tell how $100 to $500 per acre can be made from California orchards and farms. The opportunity is unusual and will bring independence or modest fortune to those seeking it, or those desiring to make a home in the genial clime of Southern California, near Los Angeles.

160 Acre FARMS IN Western Canada FREE

Illustration Showing Mixed Farming Scene in

WESTERN CANADA

Some of the choicest lands for grain growing, stock raising and mixed farming in the new districts of Saskatchewan and Alberta have recently been **Opened for Settlement** under the

REVISED HOMESTEAD REGULATIONS

Entry may now be made by proxy (on certain conditions), by the father, mother, son, daughter, brother or sister of an intending homesteader. Thousands of homesteads of 160 acres each are thus now easily available in these grain-growing, stock-raising and mixed farming sections.

There you will find healthful climate, good neighbors, churches for family worship, schools for your children, good laws, splendid crops and railroads convenient to market.

Entry fee in each case is $10.00. For pamphlet "Last Best West," particulars as to rates, routes, best time to go and where to locate, apply to

THE RACYCLE has 27 % less pressure on its crank hanger, ½ less strain on chain, it runs and climbs hills easier than other bicycles. Is the largest selling high-grade wheel in the world. Will last a lifetime. We make no cheap RACYCLES but you can get yours **AT FACTORY PRICES** by securing us an agent. Catalog and pamphlet sent FREE. It tells about the RACYCLE and how to get the $60,000.

THE RACYCLE MANUFACTORY, MIDDLETOWN, O.

MICHIGAN'S OPPORTUNITY

(*Continued from page* 1)

heavily; 26 beans; 19 apples; 4 peaches and 4 grapes. Three counties, viz.: Allegan, St. Joseph and Van Buren, produce a controlling portion of the peppermint oil of the country.

If the 28 counties producing potatoes heavily are organized, it will leave only 16 unorganized counties out of the 44 necessary. Thus we find that by organizing for one crop we practically organize for all the crops. If the potato and bean growers organize as they should, as they are the two chief crops, only 4 counties out of the 44 will remain. These are St. Joseph, Branch, Hillsdale and Kalamazoo. The first and last belong to the wheat group; the others belong to both wheat and apple groups.

To better understand this matter we refer the reader to the diagram. Twenty-eight counties producing potatoes are represented by the black column compared with the whole column representing the entire crop of Michigan. The same explanation for wheat, apples and beans.

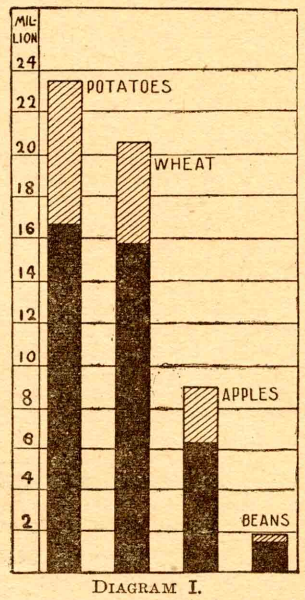

DIAGRAM I.

The problem is to organize 44 counties, but of course there will be no objection to organizing in other counties, and the movement will voluntarily extend into them. If the 44 counties producing important crops heavily, as shown by the map on first page, are organized, we may claim that the State is organized sufficiently to control the crops. Can 44 counties be organized?

My candid opinion is, under the old conditions, no. If the farmers of Michigan expect to organize any counties, they must have a State union that will undertake the job just like a set of men go into any other business undertaking. Organizing a State into the Society of Equity, pledging the crops, controlling them and marketing them at profitable prices means an organization for business just as truly as if you were opening a store, starting a factory, engaging in banking, or launching an insurance company.

Michigan will not be organized until you have a president, secretary, treasurer and State organizer who will make it their business to organize it, and we will say you will not get such officers until they see that they are going to be paid for their work. You must not expect a few men to give their time and pay their money to put all the farmers in a position to make more money and they get no more for it than those farmers do who give none of their time and money.

How are the workers to be paid? That is the important question that presents now.

Each of the 44 counties ought to furnish an average of 1,000 members or 44,000 members total.

The membership fee is $2.00. Therefore 44,000 members will bring in $88,000.

Can 44 counties be organized for $88,000?

Out of this the official paper must be paid, headquarters, national and State, maintained, organizers employed and and their salaries and expenses paid, newspaper and other advertising paid for, halls rented, etc. Also the local unions will be supported out of the fee. There will be much expense, but we are sure the job can be done for the price and everybody come out even.

Farmers should not balk at a little expense, because they are the people who make the big money. To illustrate: Let us take any good county in Michigan. It will produce, say, 2,000,000 bushels of crops and, say, 2,000,000 pounds of live stock or other crops that sell by the pound. Ten cents advance on each bushel and 1½ cent on each pound will make the net sum of $230,000, nearly three times as much in one county as is asked to be paid for organizing 44 counties.

This is the problem for the Michigan State convention. Every farmer in Michigan who wants industrial freedom and independence in marketing this year's crops, and who can possibly leave home, should be at the convention and see to it that officers are elected who have ability and who will enter into the work to succeed.

Conditions are favorable in the State; 27 counties already have local unions, and 10 have county unions. The pledging campaign should be started at once, also, wherever needed, companies should be organized to build warehouses against the time to store the next crop so it may be controlled.

This, we believe, will be Michigan's opportunity. Will she embrace it bravely? Will Michigan be a shining example this year to her sister States of what can be accomplished for controlled marketing and profitable prices?

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 5 Cents a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. ONE OF THE BEST AGENT'S ARTICLES ON EARTH!

Price Reduced to Agents

Best because they please your customers and are needed on every set of work harness. Big demand—quick sale. Do away with strap hame fasteners. They are out of date, troublesome in summer and an abomination in winter, when you wear gloves. No bother if you use our patent fasteners. "Fastened in a twinkle." One pair will outwear the harness and can be removed to new ones. Adjustable to dif-

ferent sizes. If you once use FERRY'S HANDY HAME FASTENERS, you will never try to get along without them. Mr. H. A. Carter, Franklin, Ky., writes: *"I bought a Handy Hame Fastener four years ago and have used it ever since. It is the thing."*

200% to Agents Sample mailed for 25c. Dozen $2.25 by express not prepaid. Money refunded promptly if not entirely satisfactory. Write for new agents' prices. One agent sells 24 dozen a week easily. You can do better. Order a sample.

Cooner & Fortune Co., Indianapolis.

Department of TOBACCO GROWERS

The slogan in the Stemming District is "It is coming our way."

James N. Banks, secretary, in the Henderson Gleaner says:

At the last meeting of the executive committee it registered two very important orders addressed to all the members in the five counties embraced in the association.

First—That the remnant of the 1907 pooled tobacco be steadily pushed to delivery to the end that the season might be closed on April 10.

Second—The committee gives fair warning: The books will be closed on May 1, and after May 10 the association's secretary will reject any pooling papers tendered.

The profits of the American Tobacco Company for the year ending December, 1907, is reported by the treasurer to have been $27,371,010.

During 1908 the United States Department of Agriculture will conduct experiments in Connecticut, New York, Ohio, California, Maryland, Virginia, Kentucky, Tennessee, Florida, Alabama and Texas for the purpose of improving types of tobacco, determining best fertilizers to use, proper rotation of crops, curing, judging and testing. Much of the effort will be toward better and larger production, but none toward profitable selling. While the National Government is thus engaged with its great sums of public money the growers in Kentucky are making strenuous efforts to control production to force fair prices. What an anomalie!

From the News-Herald, Owenton, Ky., we print the following:

At a called meeting of the board of council of the city of Owenton, Ky., meeting March 16, 1908, the following members were present: W. A. Lee, mayor; J. T. Walker, Dr. J. F. Rees, B. F. Holbrook, Frank Fullilove and J. B. Martin. At said meeting the independent tobacco buyers in and near Owenton were invited and were present. The tobacco situation was discussed at length and it was the unanimous opinion of the board of council and buyers present that it would be for the best interests of the city and county for the independent buyers to cease buying any more tobacco either pooled or non-pooled, and all of said buyers agreed not to purchase any of said tobacco and will close their business as soon as all of their outstanding purchases (which are very small) shall have been delivered. On motion meeting adjourned.

W. A. Lee, Mayor.
Jno. B. Martin, Clerk.

It is believed that this action will bring peace to the warring factions in Owen county. The paper also says "there is much rejoicing on the part of the citizens" and it is considered a great victory for the Society of Equity.

A bill, called the "Crecelius Bill," which provides a fine of $250 for purchasing or selling pooled tobacco that remained in the grower's possession, passed the Kentucky Legislature and awaits the signature of the Governor to become a law.

TO KENTUCKY READERS

Reply to S. B. Robertson

A. C. Schooler of Pleasant Home, Ky., writes as follows:

Mr. J. A. Everitt.

Dear Sir and Friend—When I say friend I mean it, for I believe you have done more for our society than any one. Find enclosed a clipping from Louisville Courier Journal from S. B. Robertson, secretary. I thought perhaps you would not see it. I don't believe some things he says.

The clipping referred to me to comment on is as follows:

Secretary Robertson assures his fellow Kentuckians that Mr. Barnett is still the president of the A. S. of E.

Why, bless him, we never said he was not. All we said was that he resigned, and so he did. It is considered that as long as a resignation is not accepted the person is the officer. As Barnett's resignation was to be held over until the February meeting of the board, and as at that meeting they did not have a quorum, hence could not transact any business, we suppose Barnett is president yet. For the same reason he is likely to remain president until another set of officers are elected.

But why all this ado about a president? Barnett has been at headquarters only three times since the convention and each time about three days, so he is not cutting much of a figure in the society's affairs. Robertson wants to deceive the people by saying Mr. Barnett is the president when we said he resigned. Mr. Robertson, did President Barnett resign?

Mr. Everitt never pledged his support to any officers who would conduct themselves as the officers of the A. S. of S. have and he never did indorse in advance, viz.: on Wednesday, the middle of the day, the subsequent actions of that convention. Let this be final. If I would indorse then, I would be a traitor to every true member and you don't need to be in doubt where Mr. Everitt stands. He is always found on the side with truth, justice and equity and for the TRUE AMERICAN SOCIETY OF EQUITY, not for a substitute or revised edition.

There is no fifty-year contract fastened on the society. But Mr. Everitt was right in opposing the attempts of that convention to annul a contract for an official paper that 99 per cent of the members wanted.

The second convention is referred to elsewhere in this issue. Read about it on third page. Your eyes will be opened if they are still closed.

Not a member whose name was reported to Up-to-Date Farming with subscription for 1907 has been dunned. Why don't Secretary Robertson explain the discrepancy of over a thousand names of members who he says paid the 1907 dues not being on the official paper subscription list? Why don't Robertson explain this? As long as Mr. Everitt submits quietly to be defrauded and have the members defrauded, and quietly bears abuse all is well. But as soon as he tells the truth then his enemies resort to falsification to deceive the members.

It is no credit to the Kentucky State convention to indorse the actions of the national convention. The Kentucky delegates to the national convention have got just two horns to close on. They either will back up the conspiracy that dominated that convention or repudiate it. They will either have to stand for Speer, Mulholland, Tubbs, Drayton, Nelson, Gentner, the Walrods and some others who run the convention, or repudiate them. At this stage of the proceedings we don't care much which they do, as it is a personal matter with the delegates. The members of the society can't be fooled all the time.

Will Mr. Robertson give proof that Mr. Everitt was opposed to pooling? This is strange when the idea was fundamental with the society, and that I was opposed to reduction of acreage when it was fundamental also with the society. I wrote, before S. B. Robertson probably ever heard of the scoiety, that **when a known surplus existed the acreage can be reduced."** But the farmers must be deceived. It won't do to have the farmers know the truth.

The Equity Farm Journal is not the official paper of the society, **except by the proclamation of a few individuals who have determined to consign Mr. Everitt and Up-to-Date Farming to oblivion.** Why? Answer: Because they could not force them to depart from the true A. S. of E. plan. It is about time for the members to assert their manhood and independence and not be deceived against their own best interests.

Mr. Everitt's purpose is to save the American Society of Equity. Was there any complaint about the growth of the society before Tubbs jumped the track and Speer took charge of organization? You old members, be honest now with yourselves and answer this question.

In conclusion, and we are sorry it is so, if you support the new edition of the A. S. of E. or any part of it, you are supporting something that the 1907 revolutionary convention LEGISLATED OUT OF EXISTENCE.

What are you intending to read next year? There are lots of papers, and they all read very much alike, but in Up-to-Date you find things that we know you like to read; they are truths you ought to know, but you don't find them in any other paper—Up-to-Date is not like any other paper. We are sure you will continue to read it, and that you will do us the favor to ask your neighbor to read it. Help us and we'll help you.

Winter tramping by stock in the pastures is responsible for the fact that pasture lands so soon grow up to weeds. It injures any land for stock to tramp it when it is muddy.

"Here's the way business men out West are talking.

"By Golly, Boys, She's Coming Fine."—says "Bill" Galloway, of Waterloo, Iowa, in telling about sales of his Galloway Wagon Box Manure Spreader—general business and the fertilizing subject.

"Farmers everywhere in this country are sending to me for my Galloway Spreader on 30 days' test at my risk. It fits any wagon truck and with my seven distinct patents is a great winner. I'm getting thousands of voluntary testimonial letters on the successes of my spreader as a most practical worker and lightest draft. I'm shipping thousands of Galloways direct from my factory to every state in the Union. I've got the factory that can make 'em right and I ship promptly on 30 days' free trial and the farmer keeps his money in his own pocket. All I've got to do anywhere to sell my Galloway is just spread the news. No notes. No obligations to keep my Galloway after 30 days' test.

"If you don't like it I pay the freight both ways. If you do keep it, you get my $25,000 bond guarantee that my Galloway is all that I claim for it—best materials — best workmanship — built to last years and work successfully. Besides that you know what it will do by trying it first. Here's one of them. Listen to it.

Claremont, Minn., Dec. 29, 1907.

Mr. Wm. Galloway, Waterloo, Ia. Dear Sir: I must say that the spreader I bought of you last spring is a grand spreader. I have spread all kinds of manure and even hard, frozen chunks and it will scatter anything of manure, and you can't break it. My neighbors all have large ones and they are always breaking down and the Galloway is the one you cannot break. I have a pair of three-year-old colts that weigh 950 pounds apiece and they will handle it easy. Now, if you wish to use this you can. Wishing you a Happy and Prosperous New Year. Yours truly. D. HISSAM.

"Right **now**, for 30 days only, (and this offer **stops** in just 30 days) I'll **prepay** the freight on one of my Galloways to every reader of this paper who writes me for my special proposition.

"Just write me your name and address on a postal—spend 1 cent to save $50—and I'll send you my Special Freight Prepaid Proposition and my new big Red Hot 1908 Galloway Manure Spreader Catalog free.

"Every farmer ought to have this big free book of mine, all about the fertilizing subject and about my Galloway Spreaders.

"I also keep your name on my free mailing list so I can send you all other literature free from time to time on the **fertilizing** subject, Government reports, improvments, etc., etc. Just write to me personally and say you want my free book and special proposition. It will pay you to know about this, and get both. Address, Bill Galloway, President, The William Galloway Company, Waterloo, Iowa, 509 Jefferson Street."

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

Dec. '07. If this date, or an earlier date is on your wrapper you will not receive another copy of Up-to-Date Farming unless you renew NOW. Renewal rate 50 cents to any subscriber.

GOOD MORNING,

Have You an Equity Chair?

Readers of UP-TO-DATE FARMING are Delighted with the opportunity to earn one of these grand Equity Chairs. Read Our Offer. **FREE**

This is an offer that doesn't come often. It will not do to delay. Start your club this very day. It will surprise you how easily you can get one of these grand chairs is yours—or both for a little effort. Note the thickness of the pieces in each. Not a thin stick used—made stronger than seems necessary.

EQUITY MORRIS CHAIR

This is one of the finest Morris chairs you have ever seen. It is made of finest materials. The back adjusts automatically. No rods, ratchets or springs. Made of quarter-sawed oak and the frame is as nearly indestructable as it is possible to make it—full piano finish and hand carved. Back is reversible.

WHY? We want to quadruple the circulation of UP-TO-DATE FARMING at once so it can compel profitable prices for the 1908 crops. Each new subscriber means added power; each new one makes each former subscriber more powerful, individually. That's our reason. **HERE'S OUR PLAN:** You want one of these chairs, we know you do. These are two of the most beautiful, most comfortable chairs you ever saw. They are honest chairs. The best material in each of them. They will be the pride of every possessor and a joy forever. The regular subscription price of UP-TO-DATE FARMING is 50 cents a year. It's worth it, too, as subscribers know. But others who have not read it don't know its value. It is these people we want to reach until it goes to every farm home in the country. You know them. Some of them are your neighbors. We calculate 30 or more are your neighbors. So we are going to make it worth your while to get them to subscribe. Read the following great offer.

OUR OFFER **FOR 30 YEARLY SUBSCRIBERS AT FIFTY CENTS EACH WE WILL SEND YOUR CHOICE OF THE CHAIRS ON THIS PAGE.** As soon as you see these photo reproductions of the chairs on this page, the word "Equity" on the front, and read the true descriptions, you will want one or both of them. We know you will. Won't they set your sitting room off, though? They are not too fine for any room, but their chief recommendations are strength, durability and comfort. They are appropriate in any place, no matter how plain or exquisite the furniture of the home.

There are 30 or more people in each community who can be secured as subscribers to UP-TO-DATE FARMING when you explain that it is the only farm paper that teaches the **marketing end of farming.** Every farmer ought to take this one paper no matter how many others he takes, because it is in a class by itself and is cultivating a field heretofore neglected. **And this field is the one that grows the crop of dollars.**

IF YOU BEGIN A CHAIR IS SURELY YOURS

You may say, Oh, I cannot get 30 subscribers; there is no use to begin. But you do not know until you make a real, genuine effort. You know that every farmer **OUGHT** to take UP-TO-DATE FARMING. Since this is so, why cannot you get his subscription? But suppose you don't get 30, you can get the chair anyhow. For instance, if you get only 10 subscribers send us 50 cents each, $5.00, and $5.00 cash extra, and either chair will be sent you; or 15 subscribers and $3.75 cash extra; or 20 subscribers and in addition $2.50 cash; or 30 subscribers and no extra cash. Subscriptions may be new or renewal.

LOCAL UNIONS INTERESTED

There are a great many local unions that this offer ought to interest. One or both of the chairs would be a great acquisition to the meeting hall, or we would send two alike, if preferred. The president and secretary would appreciate them very much. If your local union has not paid up yet, this is your opportunity. If the secretary will send 30 names for UP-TO-DATE FARMING at 50 cents each, either chair will be sent, or a less number and the small cash payment as explained.

DESCRIPTION OF CHAIRS

The photographs very faintly show the good points of these chairs. They are strong and massive and the lines are simple and attractive. Very handsomely designed, and made from the very best selected heavy quartered oak, full piano golden oak finish, and highly rubbed and polished. Seat is made of steel construction, with six 5-inch coiled springs.

ROCKER is upholstered in genuine fine black Chase leather, which is guaranteed for ten years, and filled with curled hair.

MORRIS CHAIR is upholstered in finest Velour, of green and black or red and black, and is guaranteed to keep its shape. Every article used in the construction of these chairs is high-class—made to last.

They are each equipped with patent adjustable back which marks the greatest improvement in chair manufacturing in 20 years. They are perfectly automatic, adjusting themselves to your every movement. You simply lean backward or forward or lie at rest and the chair follows. No rods, no ratchets, no levers or springs. Chairs cannot get out of order. These are simply two of the best chairs ever manufactured. Strong and durable, built for solid and enjoyable comfort. Something you will use for a lifetime, and be prouder of the longer you have it. Surely they are worth a little of your time.

WHY NOT BEGIN TODAY?

We ask you to work in a good cause. An "Equity" chair is worth the trouble, to say nothing about the sentiment that will always associate with it and the consciousness of having benefited every member of your club. We want every secretary, every organizer and many others to possess an "Equity" chair.

There are many spare hours and rainy, cold or odd days when you can't do anything but hang around the house. These are the times to earn an "Equity" chair and on these days you will find your neighbors in the house also and possibly grumbling because prices are down. The best way to boost prices is to boom the circulation of UP-TO-DATE FARMING.

WE WANT TO MULTIPLY THE CIRCULATION OF UP-TO-DATE FARMING BY FOUR AND DO IT BEFORE THE 1908 CROPS ARE HARVESTED.

We believe it can be done. Let us go at it to win and it will be done. Then we will have profitable prices for the 1908 crops and YOU will have one of these beautiful, luxurious "Equity" chairs to sit in when you enjoy well-earned prosperity that you cannot reach in any other way.

The chair is all ready to ship. Send in your club as soon as possible. If you cannot get enough at once, send what you can get and the balance in cash and then hold the cash back as you send others. Let us know if you are going to get an "Equity" chair.

MORRIS ROCKER

The photograph very faintly shows the good points of this splendid Rocker. It is strong and massive. Back is patent adjustable—perfectly automatic. If you want to lie down press back and with little effort the trick is done. Cannot get out of order. It is upholstered with genuine black Chase leather which is guaranteed 10 years. Made of quarter-sawed oak, full piano finish.

You May Want Both Chairs and it will take double the club to earn one of each. Or get ONE now and start in on another club for the other. You can do it as well as anyone else. Start today. See old subscribers for renewals; get new ones.

Other Benefits Nearly all the people who embrace our offer for an "Equity" Morris chair will be farmers. If we succeed in quadrupling the circulation it will give us nearly three-quarters of a million subscribers. This number of farmers reading this paper and knowing the minimum prices that will be set on the next crop, can compel profitable prices.

Don't Delay It behooves you to not delay. We have chairs for as many as earn them. To the alert and enterprising always goes the best rewards. A word to the wise is sufficient.

We want everyone to help. Don't think this is addressed to "the other fellow." It is a chance for YOU to sceure a luxurious chair and to increase the circulation of the best farm paper for farmers in the country.

We are depending on YOU, reader. Help us and help yourself.

UP-TO-DATE FARMING

Chair Dept. D. **INDIANAPOLIS, IND.**

OUR GRAND 1908 OFFER

NEW LUMBER

Bought at Forced Sales from Manufacturers. It makes us Headquarters for Thousands of Genuine Bargains in Lumber and Building Supplies. We save you money.

FIFTY MILLION FEET AT REDUCED PRICES

BIG SPECIAL SALE

Save 30 to 60 Per Cent. Buy Direct. Building Supplies of Every Kind.

The Chicago House Wrecking Co. purchased at forced sales, 50,000,000 feet of new lumber. We are making special concessions to those who buy at once. Our prices today are far lower than prices have been for years. Order now for immediate or future use. Quick action will save you big profits. Remember prices elsewhere, which are even now high, are bound to rise. We can quote you 30 to 60 per cent better prices for the same lumber than can be sold by your local dealer. We guarantee every carload to be exactly as represented. Inspection of our lumber stock invited.

Call at our warehouse and yards at Chicago and see the lumber we are offering and you will recognize that it is all we say of it. Make your own selection and see it loaded. It is not necessary to come to Chicago, however, unless you wish to. ***We can fill your order by mail*** with just what you want and guarantee you absolute satisfaction. Ours is the largest direct to consumer lumber headquarters in the world. We sell millions of feet annually. Orders filled from every part of the United States. No matter where you live you can save money by supplying your building wants here.

Balustrades, Barn Sash, Bath Room Outfits, Beams, Boards of all sizes, Building Paper, Casing, Ceiling, Cement, Flooring, Gable Ornaments, Glass, Green House Material, Hardware, Heating Apparatus, Hot Bed Sash, Imitation Brick Siding, Joists, Lathing, Mantels and Fire Places, Moulding, Nails, Paint, Pipe, Plumbing Material Porch Work, Roofing, Scantling, Sheathing, Shingles, Siding, Stair Work, Storm Windows, Studding, Timber, Water Supply Outfits, Window Frames and Sash, Wire.

We do not figure fancy prices, but quote figures that command your patronage. Whether your order is large or small we can save you money on it. Our tremendous business of millions of dollars annually is your best guarantee of complete satisfaction of every purchase from us. In our enormous stock of new lumber of every kind we have just what you need for every purpose. Don't buy a stick of material until you get our prices. We offer you everything in the lumber and building supply line needed for residences, farm homes, stores, churches, barns, out-buildings of every kind, sidewalks and fencing. In short any kind of a structure requiring lumber, at from 30 to 60 per cent less than your local dealers or lumber yards, ask for it.

Building and Barn Plans— Architects Advice

Lac Qui Parte Riverside Stock Farm,
Madison, Minn., Jan. 14, 1908.

The carload of lumber I ordered of you, got here and I find it is better than I expected. I am well pleased with it. There were many people to inspect it. Three of the parties told me they would place an order with you. I saved very nearly $200.00 on the carload. —T. B. MEAD.

Silver Creek, Neb., March 4, 1908.

Car of lumber I ordered from you received and unloaded yesterday. We were pleased with it. Mr. Antrim helped me unload and he will order a car right away and two other men said they will order soon. —DANA D. LITTLE.

Frankford, Ind., Feb. 13, 1908.

My car of lumber arrived yesterday and am very much pleased with same. I am going to build a house later and you will be quite sure of the bill. Quite a few people who saw this lumber, said they were going to order of you.

Thanking you for better lumber than expected, I am, —T. C CHAMBERS.

Janesville, Wis., March 4, 1908.

I received the car of lumber and have it all hauled home and it is all right. I am well satisfied. —J. M. HUGUNIN.

Building and Barn Plans— Architects Advice

IMPORTANT! Send Us Your Lumber Bill For Our Estimate. IMPORTANT!

Make up a list of what you need. Send it to us for our price. If you are putting up a building of any kind whatsoever let us figure with you. ***Our prices talk louder than words.*** Have your carpenter or contractor send us your list of what is needed if he has charge of your building. Don't pay exorbitant prices to the lumber trust with their long line of lumber yards all over the country. Don't let the local dealer soak you with his heavy profit. Remember: Chicago House Wrecking Company buys millions of feet at a time under circumstances of forced sales which mean sacrificed prices and enables us to sell even as low as cost without loss. You take no chances in dealing with the Chicago House Wrecking Company. Whether for $1 or $10,000 your order will be filled carefully. Our lumber and supplies are guaranteed exactly as represented. If you have no need for a whole carload yourself, get your neighbors to club in with you. By buying a carload you can save all kinds of money on freight charges. We have railroad trains running through our main warehouses and buildings and can load a car to good advantage for you. You can include in this same car, pipe, plumbing material, roofing, wire, fencing, furniture, hardware and merchandise of every kind.

We also furnish you building and barn plans absolutely free upon request. Write us for any information or advice you want and we will have our staff of architects answer every inquiry promptly. Our free book of plans is sent if you mention this paper. We simplify your building proposition.

Our business demands quick action. We must keep our stocks moving. This means prompt shipment — no annoying delays. Let us help you lay out your plans. We will relieve you of every detail. That is what our Special Builder Service is for. Be sure and send us your lumber bill for our estimate. Feel free to write for anything you want to know along the line of building and building supplies. All questions cheerfully answered.

Hundreds of Big Money Saving Bargains for Every Builder

WE PURCHASE OUR GOODS AT SHERIFFS' and RECEIVERS' SALES

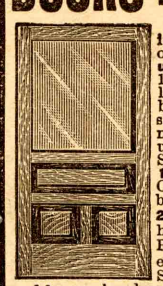
Rubberized-Galvo Roofing, $1.25 per 108 Sq. Ft.

The greatest Roofing value on earth. No higher grade manufactured. Unexcelled as to quality, wear and economy. Easy to put on. Requires no previous experience. Can be put on over shingles without removing them. Does not require a coating after it is on the roof. Weather-proof and fire-proof. Contains no coal tar, residuum or injurious compositions. This roofing is bought direct from manufacturers and is usually sold at double our prices. It is guaranteed to give lasting service. Rubberized-Galvo Roofing is slate color, tough, leather-like material, made of a combination of wool felt and highest grade of natural, pure asphalt. Makes buildings warmer in winter and cooler in summer. Not affected by acids or gases. Has rubbery surface and on this account we call it Rubberized-Galvo Roofing. It toughens and hardens with age. We furnish with each order, sufficient cement to make the laps and large head nails to put it on with. It is appropriate for any kind of building. **1 ply per sq., $1.25. 2 ply per sq., $1.40. 3 ply per sq., $1.75.** These prices are per sq. of 108 sq. ft. and are F. O. B. Cars, Chicago. Also have in stock 1000 sqs. of pure asphalt rock surfaced roofing, bought by us at manufacturers' sale. Put up two to five lengths to a roll and each roll contains 108 sq. ft. Price per 108 sq. ft., including nails and caps, **$1.50.** Red, rosin-sized, Building Paper per roll of 500 sq. ft., **45c.** Slaters Roofing Felt, per roll of 500 sq. ft. **75c.** Write for free samples.

DOORS 40c WINDOWS 20c



1,000 Good Doors, various sizes, secured by us in connection with dismantling operations, most of them with hardware. Prices range from **40c up.** Fancy front doors, all designs, **$1.50 up.** 10,000 window sash, **20c up,** all sizes. Complete line of everything in mill work. All brand new, best quality. Barn sash, 6 sizes, **25c up.** Cellar sash, **37c up.** Clear yellow pine mouldings, **20c** per 100 ft. and up. Porch columns, **54c up.** Stair newells, **$1.78.** Stair rail **10c** per ft. Pilaster casing O. G. base, **1 3-4c** per ft. Base blocks, **4c** each. Quarter Round **20c** per 100 ft. Hardwood thresholds, **4c.** Porch brackets, **3c.** Porch spindles, **4c.** We handle everything in the Building Supply Line, including light and heavy hardware. **Send us your lumber bill for our estimate.** Ask for our new special millwork catalog. It prices everything needed for building purposes. **Sent FREE if you mention This Paper.** Send us your order today.

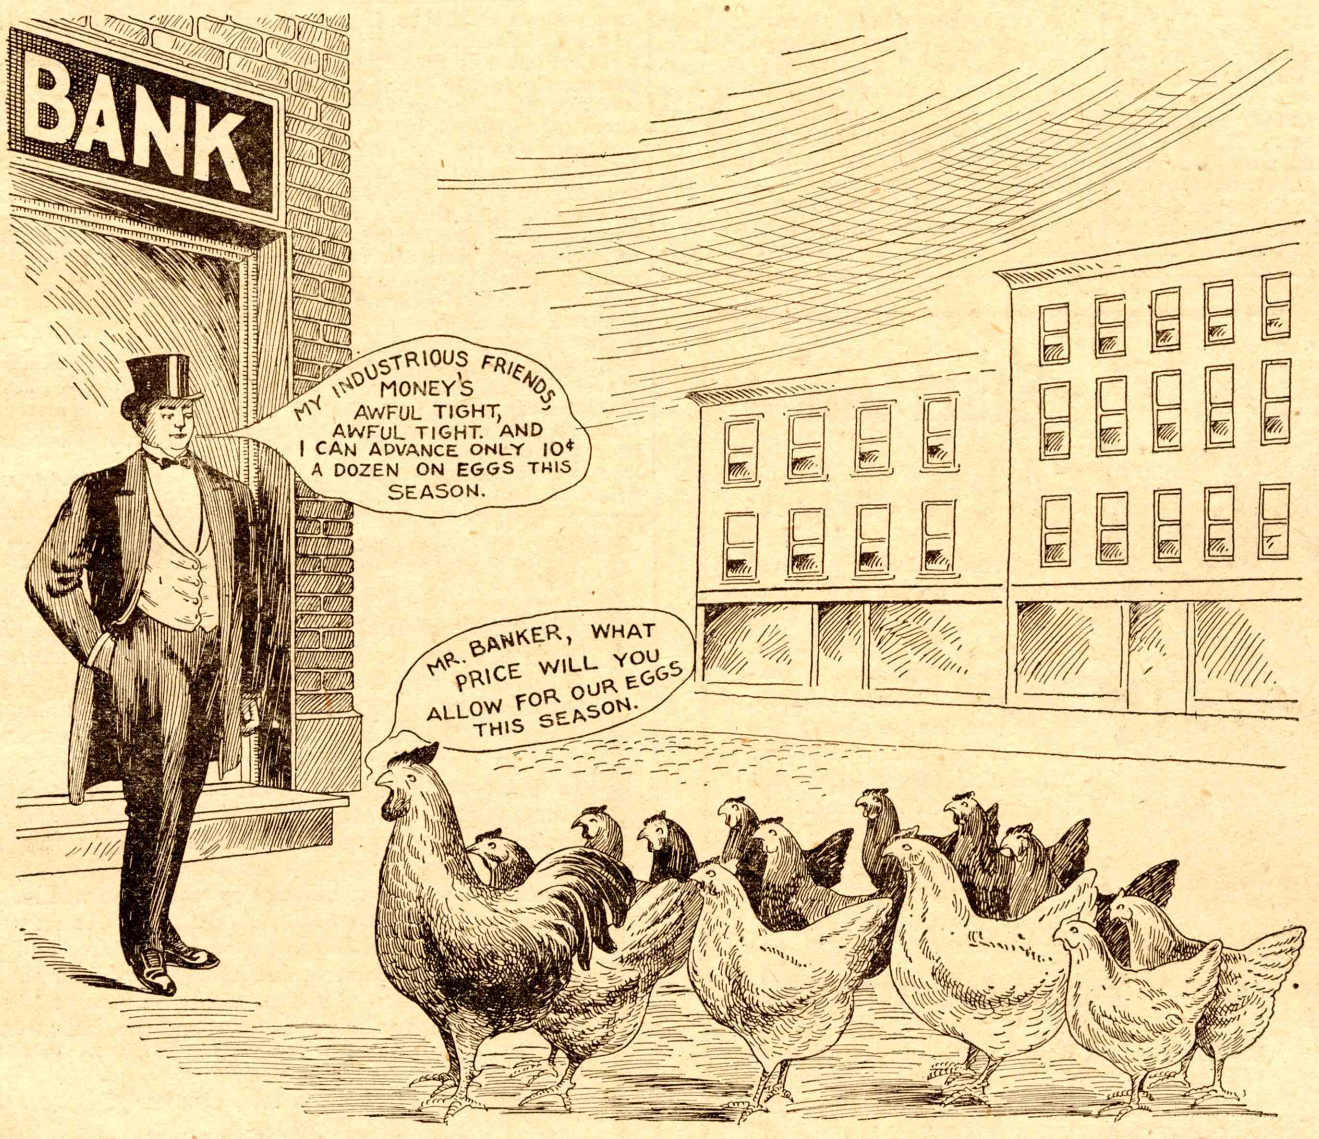
Making the Price For Eggs



WE presume more people in the United States are interested in the price that shall be paid for eggs than that which shall be paid for any other one commodity; and as a rule, the people most interested in that price depend more exclusively upon it for their income than any other. It would seem the price of such an article should always be on an equitable basis, and if there is any law, natural or otherwise, that fixes prices, the price of this commodity should be fixed in accordance therewith. But it is not. A meeting was held not long since at Des Moines, Iowa, a meeting of buyers and shippers, not of producers, who claimed and exercised the right to say how much should be paid for eggs, the president announcing that a price (naming it) had been "decided upon." Whom do you suppose had been cousulted before the price had been "decided upon?" Not the hen, though the prime factor in the production. Not the farmer who furnished the corn to feed the hen. Not the farmer's wife or daughter who cared for the hen and gathered the eggs, which were her chief dependence for "things of her own," as well as for much of the groceries for the family consumption, and some of the

(*Continued on page 2*)

MAKING THE PRICE FOR EGGS

(*Continued from page* 1)

clothing for the children. None of these were consulted. Who then? Read:

Mr. Douglas of Connecticut said, after a careful canvass for two weeks among New England bankers, it was his conviction they would be very particular about advancing money, and therefore buyers could not pay a high price for eggs.

Mr. Purcell of Chicago said:

On account of the condition of New York and New England banks, which are absolutely rotten, the Chicago banks would be extremely conservative in the matter of loans, making it necessary that the price of eggs be held low.

So the banks that were never known to feed a hen or hatch a chicken, were the powers consulted, and their rulings determined the price of eggs!

We are reporting this matter exactly as the meeting was reported by the Associated Press. Neither the producers nor the consumers had a word to say about the price. In the estimation of these people, it was enough for the producers to furnish the eggs without troubling themselves as to what they should receive for them, and it was enough for the consumers to pay the price charged or do without eggs.

This is a situation that must strike our readers, especially the woman whose heritage the poultry and its products usually is, as something rather peculiar. But that is not the only American industry that depends upon the banks and suffers because of adverse action by them. The fact is, as an industrial nation, we are a bank ruled and money governed people. The masses may plan, labor and execute, but they must look to the money holding powers for the result of it all.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR. A CLUB OF FIVE FOR $2.00

Foreign Subscriptions, including Canada, $1.00 per Year.

Clubs. Two subscriptions for $1.00; five for $2.00. These rates also apply to one person for two or five years respectively.

Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Profitable Employment. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

But the important lesson in this work of the Des Moines convention is, that the price of eggs is not an accident, that it is not determined by any law, that it is made by human beings and made arbitrarily; that supply and demand cut no figure in it, that the buyers are using some one else's money, and that they must obey those who furnish the money. Anyone who would expect equity under such circumstances ought to live in a purer world than this.

What does it mean? That market commodities are the playthings of speculation; that greed takes toll of them when they leave the hand of the producer and that it takes another toll when they go to the table of the consumer. In other words, the producing and consuming masses of the entire country are taxed at will by a horde of the most worthless citizens the country has: the gamblers on 'Change. One must almost despair of the courage and intelligence of a people that permits such a condition to exist.

And the remedy for this evil, as for practically all others that afflict the masses today, is in the hands of the farmers of our country. Why will they not exercise their right to regulate and power to remedy? They will when they stop following demogogues.

WITH UP-TO-DATE'S PUBLISHER

The "Subscription Blank" or "Renewal Blank" as sent with recent numbers was not intended for those whose subscriptions are paid in advance. This should be evident, but we make this explanation for the benefit of those who did not understand. UP-TO-DATE is mailed by a machine, and if we want the blanks to go to some we must put them in all the papers.

Enclose address clipped from your wrapper when renewing, if convenient. Write name and full address, *including county*, very plainly. If you cannot write plainly, then print the letters. Care on the part of correspondents will aid greatly in securing correct service.

The subscription price of UP-TO-DATE FARMING has been reduced from $1.00 to 50 cents.

Any subscriber in arrears to a date previous to 1908 can cancel all arrearage and pay in advance to the end of 1908 for 50 cents. Subscriptions expiring in 1908 will be extended one year from expiration on receipt of 50 cents.

If you approve of the mission of UP-TO-DATE FARMING, write for terms to club raisers and help to extend its circulation.

We have had a large demand for extra copies of April 1 number containing the article "Driven to Desperation," or "A Long Distance View of the Kentucky Night Riders." We still have some copies and will supply them at 1 cent a copy.

If your subscription expired January, 1908 (see address on wrapper), you will receive only one more number after this one. Of course we need not say that we hope all such will renew at once. If your subscription expired February, March or April, we also hope for a renewal at once.

We again remind our subscribers to always give their county when they write to us. Our correspondence and orders are filed by State, county, postoffice and name. The *county* plays an important part in the system.

Shall Be Damned

"Although I'm not with gospel crammed,
The Scripture plainly says,
The people surely shall be damned
Who do not mend their ways."

BURNS.

[Burns had in mind the farmers who wil not join the F. S. of E.—ED.]

Start on a New Line

Regular trains are now operated on the new Pacific Coast Line as far as Mobridge, Lemmon, Hettinger, Bowman, and Marmarth, in the Dakotas; to Terry, Miles City, Musselshell and Harlowton, in Montana.

Homeseekers' Excursion

Tuesday, April 21,

Tickets good 21 days and stop-overs allowed. Investigate **NOW** the openings in farming, stock raising and mercantile work along the **PACIFIC COAST EXTENSION** of the

Chicago Milwaukee & St. Paul Railway

On above date the round-trip fare from Chicago will be $26.90 to Mobridge; $30 to Lemmon, Hettinger, Bowman and Marmarth; $39 to Harlowton; $40 to Moore and Lewistown, in the Judith Basin, Montana. Fares to other points quoted on request.

Maps and descriptive books regarding the opportunities in this new country free for the asking.

Opportunities in the U. S. Navy

The bodily, mental and moral welfare of the enlisted men in the Navy is cared for in every way. Every officer is required to treat the men kindly and help them to advance.

There is frequent change of work and scene in the Navy. The life is a healthful one and by no means all work. There is time for sports, reading and other recreation.

In most respects, the Naval service pays as big rewards as the average man can win in civil life, and has this advantage—it absolutely assures a comfortable living upon retirement from active duty after thirty years' service.

If you enlist without having any trade, you will be sent to a training station and fitted to become a seaman. As an apprentice seaman you will be given a $60 outfit of clothes free and your pay to start will be $16 per month, including board and medical attendance. You can be advanced in time until you receive $75 or $80 a month, together with free board, lodging and medical attendance.

The term of enlistment is four years. Write for detailed information and addresses of Navy Recruiting Stations to

Bureau of Navigation, Desk 7, Navy Department,
Washington, D. C.

VALUE OF HOME ENTERPRISE

UP-TO-DATE FARMING has ever been a champion of home enterprise. Almost every community has within itself the seeds of prosperity if its people only had the resourcefulness and courage to plant and cultivate them. It takes organization and co-operation to do the work, and it requires friendliness toward and equity in our dealings with business and capital to successfully reap the ripened harvest. Where these elements combine and are in lively eercise success is as certain as any other effect to follow cause.

Had George William Curtis been writing to UP-TO-DATE FARMING instead of to the Chicago Record-Herald in describing what has been accomplished in a single county in South Carolina, he could not have more aptly chosen his words to prove the contention of this paper, nor to illustrate what follows the working out of its teaching, wherever that teaching is acted upon no matter who may have been the teacher. We refer to the doctrine that farmers should control their marketing, build up local enterprises and grow up with them. In this South Carolina case the cry was "Bring the mills to the cotton instead of taking the cotton to the mills," and Mr. Curtis thus writes of the result:

The gospel preached on that text impressed many men of capital and enterprise, and the consequences may be seen in the mill villages scattered all over the State, which have done so much to develop the character, improve the morals and promote the material welfare of a large portion of the population, as well as multiply their wealth. To the farmers especially have the mills been beneficial. They have afforded a home market to the cotton, and for everything in the way of food products they could raise. Take Spartanburg county for example, which used to be a lonely and dreary waste without anything that makes existence happy or profitable. The water power that nature supplied caused thirty-seven cotton mills to be built in that county, which annually consume 250,000 bales of cotton, which is five times as much as is raised in the county, and produced $25,000,000 in actual money last year. The mill villages are composed of comfortable frame cottages, neatly painted white or some color, with five or six rooms; and they rent for $1 a room per month to the mill hands. Each cottage has a quarter of an acre of ground, where the family can make a garden, and most of the corporations offer prizes to encourage their tenants in producing the best display of flowers or the greatest value in vegetables.

These cottages, situated on the highlands in the Piedmont country in a mild climate, are infinitely more comfortable than the crowded tenements of the factory towns of the North, and although the wages paid down here are considerably lower, the cost of living corresponds, and the operatives are able to save a good deal of their money if they are thrifty and economical. The fact that they do so is indicated by the $8,000,000 of deposits in the banks of Spartanburg county. But all that money does not belong to the mill families. At least half of it was deposited by the farmers.

About 50,000 bales of cotton are produced in Spartanburg county, which is carted directly to the mills and sold for cash. The money goes into the banks. Before the mills were built cotton was sold to local commission merchants to settle debts for food and clothing, implements and fertilizer, that had been incurred in making the crop. Upon such advances the farmer paid from 6 to 20 per cent and often more interest. Now, instead of paying interest to his commission man, he sells his cotton for cash and draws interest upon his money from the bank. Cotton is high just now. Ten-cent cotton used to be considered better than any gold mine; today cotton is selling at more than 11 cents a pound, and the crop of Spartanburg county is worth from two and three-quarters to three million dollars. To complete their supply the mills buy four times as much more from the farmers of the adjoining counties, and all roads in that section of the State lead to Spartanburg.

In addition to their cotton crop, the farmers have to supply food for a population of 20,000, which has been drawn into the towns and villages around the mills. The pay roll is regular and certain, and about one-half of the wages of the operatives are spent for what the farmer can furnish. He has a steady, certain market, and when he carries a wagon load of garden truck, eggs, poultry, butter and meal to town, he gets cash for it.

A significant fact is that while the mill population seven years ago was 61,468, and that it is now 126,288, there are only eleven more children employed in the mills now than there were then, a positive proof that the people are prosperous and do not have to burden their children with untimely labor.

The above is but a proof of what may be accomplished in an awakened agricultural community. South Carolina had advantages that many other communities have not, easily available water powers, but other communities have advantages South Carolina has not. All have something, and when capital and labor, farmers and merchants, mechanics and professionals, work together in the spirit of enterprise, the key will be found to unlock the storehouse of prosperity.

THE APPLE SITUATION

The apple situation, whether the crop of 1908 be good or bad, is not very reassuring. Orchardists well remember that the crop of 1906 — so large that the apples could not be handled, and that it was alleged the buyers formed a combine to prevent the purchase of enough of the fruit to overstock the speculative market, leaving the remainder to rot in the orchards. Then came the crop of last year so lean in many of the large producing sections that the growers had none for their own use, and there was none at all in such regions for the shipping demand. No one could have expected an oversupply in the winter and spring markets of this year. But early in March the Produce News reported the apple market completely congested. "The apple deal for 1907-08 is a sad, sad tale," said the News, "and it is estimated by the most conservative men in the business that the losses to handlers of apples in the United States, Canada and Nova Scotia this season will go far beyond the $2,000,000 mark." The News avers that there has not been such a disastrous year in apples in the history of the trade as will mark the present season. It is said there is not a man in the trade who bought apples at any time previous to the first of the year who has not lost money.

There was certainly nothing in the crop of last year to foreshadow any such condition, and we are almost ready to believe, though we revolt at such a thought, that the report is manufactured to prepare the way for forcing extremely low prices for the prospective crop of 1908. We confess it is a shame to intimate such a thing, but so much graft has been detected in late years, so many subterfuges have been resorted to, so many misrepresentations have appeared in journals devoted to special lines to deceive the public and play for gains to their backers, that we are almost justified in assuming anything. Market speculators have sent men into the cotton States to make false reports of the cotton crop, and into the wheat producing States to do the same regarding the wheat crop. Less than two years ago such hirelings reported wheat in the Northwest and even in Russia, heaped in piles at the shipping stations, with no protection, because the growers had so much they could do nothing else with it. Of course it was false, all false, but it brought down the price just the same; and if orchardists have apples next fall, and buyers begin to justify inordinately low prices by referring to reports like the above, they may begin to sip the milk in the cocoanut.

But there is a theory on which the above report may be justified, and it speaks but little better for the powers and influences that seem to have a grasp upon the destiny of the country. The following, which we clip from the same publication, seems to point to the second theory:

A year ago last February the movement of apples was very heavy, exceeding 1,500,000 barrels. The report of the movement for this February is not yet out, and while it will be large, it will not be so large as a year ago, and there are several reasons for this. Trade seems to be dull. Consumers can do without apples, which in many instances are used as a luxury.

If that is true the trouble may be real, and it is the result of under consumption, compelled by the bankers' dastardly panic of last fall. The apple is the health-giving luxury of the working people, and throwing millions of these people out of employment prevented their using apples as heretofore and left the fruit a dreg in the storage houses. If this is so, and it must be acknowledged a plausible theory, then every dollar lost by the dealers is chargeable to the present ruinous control of the money of the country, and every dollar the growers may lose because of lower prices next fall is chargeable to the same miserable source. It is a pity the lawmakers will not once in a while turn their faces toward the people instead of keeping them all the time so firmly set toward the powers that rule in wickedness.

But be the trouble what it may, the only remedy lies with the producers. It will only come through a sane system of control outside of the hands of the speculators and maintenance of equitable prices that will keep apples out of the list of luxuries. It is time now to prepare for this by providing storage facilities for the 1908 crop, which, in all probabilities, will be a good one, and organization of the growers that will allow a correct report of the crops to be secured when the price can be set fairly and the distribution intelligently directed.

SOIL EXHAUSTION

Forest destruction is to be greatly deplored, and the whole face of the country, if not the climate and rainfall, is being changed by it. But farmers are responsible for a more damaging thing than that — the exhaustion of the soil. That completed means the starvation of a race. Nature never exhauts soils. She has been building them up through all the years since creation, and would still be doing so if man did not interfere with her plans.

Soils should never be exhausted. Crop after crop may be produced, and each season find the soil more eager to grow another. But it must not be the same crop grown in the same old way every year. What is taken from it must be returned, either by the farmer himself or by the following crop.

Cultivated ground gets bad if it has no humus in it, and that calls for the plowing under of some crop to rot and make vegetable mold. It is likely to get sour and unproductive if it has no potash or phosphorous in it, and that calls for lime, ground rock or bone meal. It gets weak and has "that tired feeling," lacks energy, if it is deficient in nitrogen, and that calls for a few well-administered doses of the legumes—clover, peas, soy beans, alfalfa, etc.

But in any condition it calls for all the barnyard manure you make, and it wants it in such a shape that it can swallow it all. It is hard to properly dish it up without a manure spreader. Land freshly planted, however, given a good, even dressing of barnyard manure with a modern manure spreader, and then well harrowed, is eager to do its best with any crop. Farmers who reduce the above simple outline to practice, may have richer farms the longer they own them, and can never be charged with having robbed the coming generations by impoverishing the soil.

IT IS DIFFICULT

To start over.
To heed advice.
To be generous.
To have charity.
To make an apology.
To obey one's conscience.
To keep a high standard.
To know sham from real.
To keep out of bad habits.
To control a hasty temper.
To look for the silver lining.
To think first and act second.
To admit one is in the wrong.
To feel consideration for others.
To love one's enemy as one's self.
To smile when one has been unfortunate.
To think more of character than reputation.

But we ought to do it.

A BEAN ORGANIZING CAMPAIGN

Geo. G. Winans of Hamburg, Mich., State organier, is preparing to organie the principal bean producing counties of that State. These comprise 25 counties as follows:

Allegan, Barry, Calhoun, Clinton, Eaton, Gennesee, Gratiot, Huron, Ingham, Lapeer, Livingston, Macomb, Midland, Montcalm, Oakland, Saginaw, Sanilac, Shiawassee, Tuscola, Van Buren, and Washtenaw.

At the recent meeting of the Michigan State union the best conditions that the State ever enjoyed in favor of organization, were produced and Mr. Winans is the man to make the most of them. Capable organizers will engage in this campaign. Write to Mr. Winans and co-operate with him to arrange the campaign, which should be carried out successfully before a bushel of the 1908 crop is ready to market. We have recently received some letters from people who still have their 1907 crops, asking for advice. We cannot give definite advice as long as the growers are not organized. But if each grower will now do his duty, all apprehension about the future price and markets for beans may be spared.

To Escape Criticism:

Do nothing
Say nothing
Be nothing

ELBERT HUBBARD

Semi-Annual Meeting of Michigan State Union American Society of Equity

Meeting called to order by President U. S. Holdridge at 2 p. m.

Invocation by Rev. Niles of Reed City.

President Holdridge with a few appropriate remarks introduced Theodore Schmidt, mayor of Reed City, who gave the welcoming address and presented the convention with a key to the city. The response to the mayor's address was given by Howard Hovey of Hamburg, Livingston county.

President Holdridge then announced that the convention was formally opened subject to the will of the delegates. G. A. Emerson moved to appoint three delegates on credentials. This motion was carried and M. N. Drake, of Trufant; David Roush, Traverse City; W. E. Robinson, Evart, were appointed as such committee. Motion was made and carried that the delegates be seated by counties. The committee on credentials recommended that all persons who have been members within twelve months be seated as delegates. This motion prevailed and the delegates were seated.

The following committees were appointed:

Committee on Order of Business—N. M. Callahan, J. R. Ladd, C. A. Mastin.

Committee on Resolutions—E. W. Van Fleet, Wm. Lowry, F. P. Fox, John Vance.

Committee on Essential Oils—Geo. C. Wattles, Chas. Mastin, L. E. Dufer.

Committee on Beans—G. G. Winans, E. N. Ball, H. Hovey.

Committee on Potatoes—E. P. Fox, J. Vance, F. G. Farr, E. W. Van Fleet, Chas. Richards, N. M. Callahan.

N. M. Callahan announced to the convention that at 7 o'clock in the evening the Board of Trade of Reed City would give a banquet to the delegates of the convention at Congregational Church parlor. While the committees were at work C. A. Windle, national organizer of the A. S. of E., made an address before the convention. Following Mr. Windel, H. B. Sherman of Indianapolis addressed the meeting, after which the convention adjourned to meet at 8 o'clock a. m. April 3.

Morning Session, April 3

Invocation by Rev. Chatfield.

Move to dispense with the calling of the roll of delegates and carried.

Committee on order of business reported and the report was adopted as follows:

Appointment of standing and special committees.

Report of the committee on order of business.

Report of committee on essential oils.

Report of committee on the potato crop.

Reprt of committee on the bean crop.

Report of the special committees.

Report of committee on resolutions.

The committee on essential oils reported on peppermint oil only, as follows:

This branch has been inactive since the winter of 1906. The cause of this inactivity has been the failure of the growers supporting this branch and not marketing according to the plan.

Another cause of not carrying out the original object was advising too high price. While the buyers as a rule expected to pay the price for the 1906 crop and contracts and oil were bought and sold on the basis of the minimum price. At the same time they bluffed and quizzed the market, and the market on peppermint has been down ever since.

Where growers sold for from $2.50 to $2.75 (1906 crop) they increased the 1907 acreage enough so that conditions have remained about the same. As to the 1908 crop, it has become scattered and covers more territory, and without a system of crop reporting we cannot give information that can be relied upon.

This one thing is true: the plan of Equity marketing is bound to win out on all crops.

The report was adopted as above.

Report of the committee on the bean crop. Geo. G. Winans, chairman of the committee, made quite a report verbally as to the work that was done last year in reference to pricing of the bean crop. Mr. Winans stated that Mr. Ball, the second member of the committee, and himself took it upon themselves to issue circulars to be mailed advising the farmers all through the bean-raising section not to sell for less than $1.50 per bushel. Posters were also gotten out and sent to the different bean thrashers in many portions of the district, to be pasted on the machines, so that the growers and every one else could see what the movement was.

Mr. Ball, the second member of the committee, had several conferences with the secretary of the Bean Buyers' Association in Ann Arbor, and it was learned that in many cases the jobbers had contracts to deliver 500 carloads of beans for about $1.35 a bushel, thus fixing the price practically to be paid to the farmers at about $1.00 per bushel. Mr. Allmendinger, secretary of the Buyers' Association, stated that owing to the stand that we had taken in reference to beans at $1.50, it had a decided effect on the market in raising the price. While we claim some advantage by our organization, we also have to admit that the conditions of the weather in damaging the crop made it possible to advance the price for good beans up above $1.50, but the movement had much to do with price-making and there is no reason why Michigan should not control the crop of beans as thoroughly and as easily as Kentucky could the price of Burley tobacco. A considerable credit was given the members of the committee in the efforts they used in forwarding the movement in price-making.

Motion was made to appoint three as a committee on a business men's branch of the organization. This committee consisted of D. C. Richards, H. Hovey and M. N. Drake.

Motion made that the visiting men be allowed to speak during the remainder of the meeting. This motion was carried, and remarks were made by C. M. Barnett, president of the A. S. of E., of Hartford, Ky.; also by J. A. Everitt, publisher of UP-TO-DATE FARMING. Remarks were also made by C. A. Windell of Chicago and H. B. Sherman of Indianapolis, Ind.

A communication was read from the Ideal Light and Fuel Company to visit their plant between 6 and 11 o'clock that evening. The invitation was accepted and later many of the members availed themselves of the opportunity.

The chairman of the committee on resolutions offered the following:

We, your committee on resolutions, beg leave to submit the following report:

Whereas, we, the American Society of Equity of Michigan, in convention assembled at Reed City, Mich., this 3d day of April, 1908, realizing after due consideration and mature deliberation that the American farmers, like all other classes of people, are subject to the same form of government as all other classes, hence must be governed and controlled by a majority vote of their representatives. And realizing the importance of a national organization to carry out the noble principles of the A. S. of E. and the necessity of uniting farmers in the various States whose interests are alike, to the end that they may be a greater power in controlling the price of the products they produce, do hereby offer the following resolutions for your consideration:

1. That we indorse without reserve the patriotic and manly course of President Roosevelt as President of the United States in his efforts to suppress the lawless trusts and protect the American citizens in their rights.

2. We heartily indorse the action of our State officers, and pledge to them our hearty support in their fight and effort to place us farmers on the high plain of permanent prosperity, and earnestly beseech all lovers of the principles of the A. S. of E. to aid them in their work.

3. That we extend our thanks to the business men of Reed City for the very cordial reception extended to us on this occasion.

4. That we extend our thanks to Bro. M. M. Callahan of Reed City for the interest he has taken in the arrangements for this meeting.

5. Resolved further, that we extend the right hand of friendship to all classes of men who have honestly endeavored to assist us in the fixing and maintaining of profitable prices for our products.

6. That we heartily indorse the press of this State and county and extend to them our hearty thanks for the wide publication of this meeting.

7. Therefore, be it resolved that we, the American Society of Equity of Michigan, in convention assembled, do now renew our allegiance to the National organization of the American Society of Equity of North America.

Motion was made to accept the resolutions as a whole. Amendment was offered that the articles of the resolutions be taken up separately, and amendment carried.

Motion was made and lost that the convention resolve itself in a committee of the whole.

Motion made and carried that resolutions 1, 2, 3, 4, 5 and 6 be adopted, if no one offered objection. No objection being offered the same was carried and adopted.

Section 7 was again read by the secretary. The motion was made and seconded that the resolution be accepted as it stood.

Moved and supported that speeches be limited to fifteen minutes. Same carried. A substitute to the original motion was offered by H. Hovey and thus far neither the original nor the substitute were accepted.

As a compromise between the original and the substitute resolution, section 7 was made to read as follows, and the same was adopted:

Therefore, be it resolved, that we, the American Society of Equity of Michigan, in convention assembled, do now renew our allegiance to the principles of the society as originated and promulgated by J. A. Everitt; and be it further resolved, in the opinion of this convention, that the best interests of this society can be subserved by the adoption of UP-TO-DATE FARMING as the official paper for the society, and that our national officers and directors be hereby requested to take steps toward discontinuing the Equity Farm Journal and substitute UP-TO-DATE FARMING.

Report of committee on potatoes:

1. Resolved, first, that the acreage should be reduced about 10 per cent.

2. That, for potatoes from the field, we recommend a minimum of 40 cents per bushel until November 1. From November 1 to January 1, 50 cents. From that on, 60 cents per bushel.

3. We recommend a careful sorting and grading of all potatoes put on the market.

4. We recommend conservative marketing.

5. Resolved, that the influence of the American Society of Equity has held the price of potatoes as close to the minimum as the financial condition has permitted.

It was recommended that the Secretary of the State Union send blanks for acreage in the spring and for the amount of bushels for the crop in the fall, if such are to be gotten out and had. The secretary was also instructed to urge the local secretaries to be prompt in getting out reports and to use all means possible to interest the growers to join the organization and report their crops at least.

The auditing committee failed to make a complete report, owing to the length of time in which to make it and it was moved by Mr. Callahan that an auditing committee of two be appointed and meet one month previous to the regular meeting in October. This motion was carried and committee was to meet at the office of the secretary.

Moved that the president and secretary prepare a circular letter to be sent to secretaries of local unions.

William E. Robinson moved that a vote of thanks be tendered the Reed City people for the hospitable and entertaining manner in which we were treated while in their city. Vote carried by rising unanimous vote.

On motion the convention adjourned to meet in October.

E. N. BALL, Secretary.

THE DAWN IS BREAKING

The dawn of light is breaking,
The darkness disappears,
The sons of toil are waking
To drive away the fears.
Now all be up and working
With brain and tongue and arm
To make our union lasting
And guard it from all harm.

THE 1908 CONVENTION

Shall it be held in October or in December? By December the dumpers have dumped their crops and a great big club of visible supply has been created. This club will be used all the balance of the year to beat the prices down on the crops the other farmers hold. Dumping must be prevented, if possible. The way to prevent it is to have an early convention, agree on minimum prices and publish them to all the farmers of the country so they may know what to ask and hold for.

Without an early convention and prices set marketing will be like it was before the time of the society—each farmer his own pricemaker. But with prices set each farmer will have something to aspire for and the results must be good even while the organization is numerically weak. Let the convention be in October as heretofore. We want to hear from members and local unions. Discuss this matter in your meetings, resolve and report to this paper.

PANICS AND MEAT PRICES

When farmers and live stock men complain that prices for their stock are low, they are told that prices can not be otherwise on account of the money panic; and when consumers complain that they are required to pay high prices for meats they are told that meats are high "on account of the panic," and that consumers ought to be glad to get meat at any price. That seems to be a little inconsistent, it is true, but inconsistency is no jewel where buying and selling are both made by the same parties.

J. Ogden Armour, one of the packing house kings, went to Europe about a month ago, returning to Chicago only a week or so ago. The first thing that happened after his return is thus told by a Chicago market paper:

Dressed beef advanced $1 a hundred. Mutton and lamb went up from 3 cents to 5 cents a pound. Pork had 2 cents added to its price. The failure to boost pork higher is due to the fact that Chicago has received this winter more hogs than in four years.

When asked why meat prices took such a jump upward, Mr. Armour is reported to have replied:

I found sentiment greatly improved in New York over what it was one month ago. Now there is a complete change. The opening of the Knickerbocker Trust Company seems to have had a great deal of influence on sentiment and sentiment is a wonderful factor in business.

I believe business will improve from now on. Railroad earnings are as small as they can be and the next change will be for the better. I don't mean there will be any sudden change, or that it will be in two weeks, three weeks, or three months, for that matter, but if we have good crops everything will be better and there is no telling what will happen next year.

Mr. Armour is a thrifty man. He sniffs prosperity in the distant air, and he does not propose it shall slip up on him. He knows exactly how to "get there first." The advance made in meat prices on Mr. Armour's return is shown in the following table:

	March 24.	*The week before.*
Prime beef	$6.65	$5.90
Poorer class	5.60	3.60
Pork	5.15	4.40
Mutton	8.15	7.55
Choice lambs	7.50	6.95

The Chicago paper from which we quote tells us the packers say "the advance in meat prices is the aftermath of the recent financial flurry." But there seems to be no "aftermath" reaching out to the pastures and feed lots where the live stock is kept. That "aftermath" will not be apparent there until the prosperity breeze gets here, and then it is as apt to blow down as up.

It is surprising that a million people in a free country, engaged in raising live stock, should allow themselves to be made the playthings of a dozen packers, when the same means employed by the packers, organization, would enable them to control their own business! This condition will not continue longer than the people allow themselves to be influenced by popular agitators, and this will cease when farmers become independent thinkers.

The Farmer's Hope

The farmer's hope, the farmer's aim,
And need, our bond of union be,
And friendly converse feed the flame
That burns for us—bright Equity.

TO DECIPLES OF EQUITY

BEGIN the morning by saying to thyself, I shall meet this day with the busybody, the ungrateful, arrogant, deceitful, envious, unsocial. All these things happen to them by reason of their ignorance of what is good and evil. But I who have seen the nature of the good, that it is beautiful, and of the bad, that it is ugly, can neither be injured by any of them,—for no one can fix on me what is ugly,—nor can I be angry with my neighbor, nor hate him. We are made for co-operation. To act against one another, then, is contrary to nature; and it is acting against one another to be vexed and turn away.—*Aurelius.*

MICHIGAN LADIES' SOCIETY OF EQUITY

About two years ago was started in Wisconsin the Women's Auxiliary to the Society of Equity which is still maintained in that State.

Recently a similar movement was started in Michigan under the name "Michigan Ladies' Society of Equity," with headquarters at East Jordan, Charleovoix county, Michigan. The officers are as follows:

President, Mrs. James Howey, East Jordan; vice president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg; directors, Mrs. F. P. Fox, Williamsburg; Mrs. Frank Kidder, East Jordan; Mrs. Earl D. Adams, Traverse City; Mrs. U. S. Holdridge, Hersey; Mrs. M. N. Drake, Trufant.

From the constitution and by-laws we glean the following:

The membership shall consist of women over 16 years of age who are interested in the cause of the Equity Society. Also husbands, sons, fathers and brothers of members may become special members, but they must be in good standing in the main society.

Among the purposes is this: To co-operate and become co-workers with and aid the work of the main Society of Equity. Local, county and State unions are the organized forms. The membership fee is $1.00; the dues 60 cents a year. Dues are payable three months after joining and may be paid quarterly or yearly.

A beautiful sentiment put into practice is to give the local unions flower names. For instance the first union is called "Goldenrod." The first State meeting was held at Reed City at the same time as the State meeting of the men's organiation.

As the object of the ladies' organization is highly commendable and as there are striking illustrations already of great good coming from the ladies' activities in the society, it is desired to extend this branch of the movement all over Michigan and even to other States. We sincerely hope the time is not far distant when the Ladies' Society of Equity will equal the main society in numbers and that the members will, through their sweet and powerful influences, persuade the sterner sex to practice equity in all the business and social relations of life.

The president, Mrs. James Howey, East Jordan, Mich., will gladly correspond with any one desirous of organizing a union and will send copies of their constitution and by-laws, etc., free on request.

Parlin & Orendorff Company, Canton, Illinois

We are pleased to call the attention of our readers to the advertisement of Parlin & Orendorff Co. of Canton, Ill., appearing in this issue of UP-TO-DATE FARMING.

A representative of UP-TO-DATE FARMING visited their immense plant last week and finds that not only is the high standard of their product maintained, but raised. They manufacture, plows, harrows, planters, cultivators, etc., and have branch offices in Kansas City, Mo.; Portland, Ore.; St. Louis, Mo.; Indianapolis, Ind.; Dallas, Tex.; Des Moines, Ia.; Omaha, Neb.; Denver, Colo.; Minneapolis, Minn.; Spokane Wash., and Winnipeg, Canada. Their advertisement in this issue of this paper is of their celebrated Canton Sulky Plow, and will be followed by their full line of agricultural implements in subsequent issues.

Write for their book No. 41, giving a full description of their implements. It's free.

What would you think of a man who worked all summer, clear through July and August, in the harvest field and beneath the scorching sun, dressed in a fur coat, felt boots, woolen clothes and underwear, and in his winter clothes complete? Why, before the day was over he would be in the "bug-house."

And yet thousands of farmers torture their horses just this way. The poor horses have to pull the heavy plow back and forth all day, sweating streams and next morning be sore and stiff to repeat the same thing again, all because the owner didn't take his winter suit off, didn't clip that thick and heavy coat of long hair covering his body.

If for no other reason than this, you should have a clipping machine. They are cheap, and will repay their cost in a season. Write the Chicago Flexible Shaft Co., 224 Ontario St., Chicago, about them.

On another page in this issue our readers will note the advertisement of the American Separator Co., Box 1105, Bainbridge, N. Y. This company is a large manufacturer of the famous "waist-high" cream separators. They guarantee them to skim as close as any one made, and are offering them at very reasonable prices. In addition they are making an attractive 30-days' free trial offer. If you haven't already done so, look up their ad and write for their catalog, which is free for the asking. A postal will do.

We are just in receipt of a letter from the Daniel Frazier Co., 718 Bailey Bldg., Philadelphia, Pa., accompanied by a lot of literature describing a plat of land they are offering for sale between that City and Atlantic City. They are selling 5-acre tracts, suitable for truck farming and poultry raising, on very easy terms. Here is an opportunity for the hard-working renter to gain a home of his own and a livelihood of comparative ease. As an investment it looks like a good one.

If you want more details about this, write the above company and ask them to send you their free illustrated book.

WHEN you buy a harvesting machine, you naturally want to be *sure* that you are buying the *right* one.

You want a machine that will not make trouble and lose money for you at your busiest time.

You want a machine that will harvest *all* of your grain crops—and thus save *all* your profit for you with the least possible waste.

You want a machine that will be easy on your horses, and give you long service and good service in all conditions of grain—light—heavy—standing—down—tangled—in short, you want a machine that you can always depend upon.

The machine you buy cannot be all this—cannot be *right*—unless the *workmanship* in it is right.

Two things are the prime essentials to the best workmanship—they are the best tools and the best workmen—the best facilities and equipment and the most skillful mechanics.

The secret of success in the making of modern machines is in the machinery to make the machines.

Although the International Harvester Company organized with $60,000,000 worth of equipment, the demand for International machines has compelled the expenditure of $16,000,000 more on factories alone.

Tens of millions of dollars have been expended so that these factories shall have the best manufacturing facilities, and be as automatic as the inventive genius of man can make them.

In the productive activities of the Company, an army of 25,000 employes receive in their pay envelopes the immense wage of $15,000,000 every year.

Two of the fourteen plants give direct support to 3 per cent of the population of Chicago.

Is it any wonder that the International Harvester Company attracts to its factories the most expert workmen, the most skillful mechanics?

It is the enormous demand for

Champion, McCormick, Osborne,
Deering, Milwaukee, Plano,
Harvesting Machines

which enables this Company to maintain plants of the very highest efficiency and to employ workmen of the highest skill.

Such workmanship could not possibly be maintained upon the comparatively small demand that would come to one independent manufacturer.

In the manufacture of a harvesting machine, each one of the several thousand parts must be made exactly right or the machines will never give good service.

If you examine any part of an International machine, you will find each piece to be as carefully made as though an entire plant had devoted all its resources to making that one piece—every part of every machine being made with the utmost care and consideration for the work it must perform.

The wonderfully automatic machinery which ample capital has enabled this Company to gather together in its plants is the basic reason for this perfection of workmanship and economy of cost.

This Company has the most perfect equipment for making castings. At one plant 56,000,000 castings are made in a year.

Here tons upon tons of molten metal cool into sprocket wheels, bevel gears, frames and other familiar parts, and their quality cannot be excelled.

In the tempering and case-hardening rooms, the parts to be tempered are heated in molten lead and dipped in oil and brine—the fuel used for the furnace is hard coal, coke and fuel-oil—but the parts are drawn to temper in wood furnaces.

All sections, ledger plates, springs, etc., are hardened and drawn to proper temper.

By an unfailing system of double checking the vast product from the various plants is handled with comparatively few errors.

In large measure the efficiency and durability of a machine depends upon how carefully it has been tested. The purchaser of a machine should prefer the one which has been thoroughly tested before it is shipped from the works. The Company maintains laboratories at the steel mills and at each manufacturing plant. In these laboratories the raw materials are subjected to careful tests, the test at the works serving as a check on the steel mill test. The small manufacturer cannot afford to maintain such laboratories for the purpose of testing raw materials, and without such tests defective materials are certain to be found after the machine is put in the field. The rigid test given all material before it is allowed to enter into the construction of International machines is a guaranty as to their quality.

All finished machines must pass a critical inspection by competent men who devote their whole time to this work. Their trained eyes discover any imperfection, and by means of their check marks and numbers which are carefully registered, they are held responsible for the good work and material entering into the construction of the machines. By this arrangement it will be seen that no machines are allowed to leave the works that would reflect discredit on the inspector whose position depends solely on his watchfulness and care. This is a safeguard that saves the farmer much time and money in the midst of harvest when a serious breakdown would mean the loss of a whole year's profits.

The large space set aside for testing, elaborate equipment used, the efficient organization and the methods adopted make it practically impossible for a defective machine to be shipped out.

Not alone in workmanship, but in materials and principles of construction as well, International machines have the best of reasons for their undisputed superiority.

The manufacturers of these machines are able to own their own timber lands and saw mills, mines and steel mills, thus securing the best materials the world affords.

And for the same reason these manufacturers are able to maintain a $350,000 a year staff of inventors and designers to improve their machines from year to year, thus holding the place they have established as the standard through fifty years of superiority.
